It is not very often that any newspaper article creates a sensation. This week, however, we have had everybody that is anybody talking about one particular article. Probably the reputation of the *Pall Mall Gazette*, the youngest of our London dailies, has hardly reached as yet across the Atlantic. Brought out by Mr. Smith, the proprietor of the "Cornhill Magazine," and supported by a sort of secession from the *Saturday Review* staff, it represents very much the same school of genteel liberalism as the weekly journal in question. Bearing the name of the famous newspaper which Captain Shandon edited, and to which Arthur Pendennis and George Warrington were contributors, it professes, like its prototype, to be written solely for the upper ten thousand. Hitherto its success has not been brilliant. Somehow or other the "scholars and gentlemen" who were supposed to compose its articles in contradistinction to professional writers found that writing leaders was a pursuit like most others at which the professional beats the amateur. Still the *Pall Mall Gazette* has been eminently respectable and, in a feeble way, liberal. But up to lately it had failed altogether in making any mark in the world of journalism. The other day, however, by a happy inspiration, one of its writers struck on the idea of going himself to a London workhouse in the dress of a houseless tramp, and describing what he saw there. The experiment was tried and proved eminently successful. The narrative of "the night in a London workhouse," simply told, with an almost Defoe-like realism, has excited a strange interest amongst all classes. It is a very old proverb that one-half the world does not know how the other half lives. Of England this saying is eminently true. People were perfectly aghast at the revelations of the writer in the *Pall Mall Gazette*, yet they might have learned the same truths much more forcibly by perusing the reports of the police courts, or by using their own reasoning powers. But the truth is, it has come to be a sort of article of belief with our upper classes that, somehow or other, anybody, as a rule, is better off in England than he could be anywhere else, or especially in America; and any account of pauper sufferings was always explained away as being exaggerated. Even the protests which Mr. Dickens has often raised so nobly in his novels against the hardships of our workhouse system were called "sensational" and dismissed forthwith. But here, at last, in an eminently genteel organ, we have an account written by a gentleman of what he himself saw and heard in the assumed character of a pauper. On a bitter cold night he, in common with some threescore other houseless wretches who applied for lodging at the Lambeth workhouse, was forced to sleep in a half-open shed, on a stone floor covered with filth, with no covering except a rug. His description of the horrors he witnessed, the language he overheard, and the hardships to which he was subjected, is quite sufficient to explain the "unreasoning" aversion, as it is called, which the honest poor entertain towards the workhouse or, to quote the popular name, "the union." Of course, the Lambeth officials are indignant at this disturbance of their privacy. Bumbledom is in arms, and protests that the account is exaggerated; that any hardships suffered were due to some unavoidable accident; and that, as a rule, the receptacles for paupers err upon the side of being too luxurious.

The authorship of the article in the *Pall Mall Gazette* has been kept a strict secret. I have heard it attributed, "on undoubted information," to Tom Hughes, to Higgins the "Jacob Omnium" of the *Times*, to Jones Kennay, to Lord Milton, to George Sala, to the present writer, and to a score of other personages. I have myself more reason to believe that it is the work of Mr. Greenwood, a brother of the author of "Margaret Denzil," and sub-editor of the *Pall Mall Gazette*.

You will, of course, have seen the narrative of the dreadful shipwrecks we have had of late about our coasts. The loss of the *London* is one of those casualties which comes home to English people more, perhaps, than far greater catastrophes. The victims of the shipwreck belonged to the middle classes; and there are few people who read through that long ghastly list of the lost without a dread that some well-known name is among them. Poor Gustavus Vasa Brooke must, I should think, be recollected by many American play-goers. Latterly, circumstances which there is no good recalling had completely destroyed his reputation as an actor at home, and he was going out to Australia, as a disappointed and broken man, to try and retrieve his fortunes. Whatever the errors of his life may have been, he died nobly, as indeed everybody on board the ill-fated vessel appears to have

done. Much anxiety has been caused by a rumor that the *Atrato*, the Jamaica mail steamer which carried out the commissioners, had foundered at sea. The report has very little to rest upon; but we are waiting anxiously for tidings of this, as of every outward bound steamer which sailed within the last fortnight. The gales have lasted for nearly that time, and as yet there is very little symptom of their termination.

Politically, we have no news at all, except that there are renewed rumors of dissensions in the still incomplete cabinet. The other day Mr. Layard suddenly resigned his office as Under-Secretary for Foreign Affairs, and only resumed it in consequence of some arrangement whose exact nature is not yet known. Very little political knowledge is required to ascertain the probable motives of Mr. Layard's resignation. There can be no doubt that Mr. Goschen's appointment to the office of cabinet minister has given dire offence to many of the subordinate members of the Government. Mr. Layard is certainly the ablest of the younger members of the Palmerston Ministry; he has done good service to the Government for many years, and might, not unreasonably, expect that if any new man were admitted within the charmed circle of the cabinet he would be the person chosen. When he found himself passed over in favor of a young and untried colleague, he not unnaturally felt it incumbent on him to write a protest. The Nineveh discoverer has never quite realized his early reputation, but he is a vigorous speaker and a man much less wedded to traditions than the majority of our governing classes. Mr. Goschen is, probably, a more sincere Liberal; but yet Mr. Layard's election to the cabinet would have been a greater triumph for Liberal principles. Unlike Mr. Goschen, he has neither wealth nor commercial interests. Whatever position he holds he owes simply and solely to the force of his own ability. A sort of Liberal Disraeli, he is viewed with the same suspicion by the landed gentlemen who compose the governing class of England. Probably his threat of resignation will cause him before long to be raised in official rank. Earl Russell is not strong enough yet to quarrel with Mr. Layard.

January 27.

On Wednesday next, Parliament will meet for the session. For the first time since the death of the Prince Consort, the royal speech will be delivered by the Queen in person. There are many stories afloat as to the manner in which the Queen intends to combine the performance of this public duty with what has been called "her sacred prerogative of mourning." But everything connected with the court is always kept so profound a secret from the outer world that I see very little use in speculating on the manner in which the ceremonial will be conducted. The first few days of the session will be occupied by the swearing-in of the members and the election of a Speaker. The Government propose to nominate Mr. Denison for re-election, and, though he is by no means an efficient chairman of the House, I should think his return will be practically unopposed. The debate on the address will probably not commence till Monday. Meanwhile there is every prospect of a stormy and excited session. Foreign politics occupy at present less of public attention than they have for many a long year. The excitement of the great Transatlantic contest has ceased to disturb the public mind; the outlook of affairs upon the Continent is exceptionably tranquil; and the sort of truce which so long suspended all political action has obviously come to an end with the death of Lord Palmerston. Add to these facts the circumstance that the Parliament is new and untried, and the existence of a number of topics on which public feeling runs very high and on which action must be taken without delay, and it is easy to perceive that the halcyon days of the do-nothing Palmerstonian administration are over.

Let me specify the subjects which must first of all command the attention of Parliament. First and foremost there is this dreadful Jamaica business. Any set discussion will, doubtless, be adjourned till the report of the committee of investigation can be received; but questions are certain to be constantly asked with reference to the news from the West Indies, which will keep alive the discussion between the opponents and the apologists of Governor Eyre. Every day, indeed, seems to make the case clearer against the Jamaica authorities. Mail after mail has arrived. General Nelson has come over, communicated with the Government, and been sent back to the colony; and yet no official apology of any kind has been put forth in behalf of the impugned authorities. Now, Governor Eyre has many powerful friends; the sympathy of "society," which has immense weight with our governing classes, is in his favor; and the extent to which Mr. Cardwell has identified the Government with the governor by his ill-advised congratulatory despatch—all render it certain that no time would be lost in bringing forward any reports or correspondence which could prove either that the extent of the massacres had been exaggerated or that there was moral proof of the necessity for such wholesale extermination of the negroes. As it is, the non-official reports confirm more and more the justice of the outcry raised in England. We have got this week the report of the trial on which poor Gordon was sentenced to death. Some faint idea of the animus with which it was conducted may be given from the facts that the prisoner, who, by order of the governor himself, was carried off from the protection of civil law to be tried by a military court, was actually refused permission to consult a lawyer, and that the sapient tribunal, composed of two sub-lieutenants and one ensign, who sat in judgment upon him, actually took time to deliberate whether the unhappy man might be allowed to take notes of the evidence for the prosecution. The whole mockery of the trial is so apparent that even the newspapers which most distinguished themselves by the defence of Eyre are driven to suggest that probably there must be more to be said against Gordon than has yet been disclosed. Meanwhile, to a weak Government, like the Russell-Gladstone one, the very name of Jamaica must appear ominous of peril.

Then, again, there is the Irish question. Fenianism has been laughed at in our papers, and the humor of our comic writers has been exhausted—a task of no great difficulty just now—in holding up to ridicule the knot of lunatics who fancied they could overthrow the British Empire; and the movement has been suppressed, I am thankful to say, without the loss of a single life, and the whole affair has ended in smoke; and yet, gradually, the British public are beginning to perceive that Fenianism is a very serious matter after all. To judge from our newspaper reports you would suppose that the affair never had any real importance; but the tone of private intelligence is very different. I know that the private reports received by the Government are such as to inspire very grave uneasiness. Amongst the peasantry the sympathy with Fenianism is represented to be universal. The object of the movement, as far as Ireland herself is concerned, is considered to be rather social than political; but this fact renders it none the less significant. It appears now that any agitation which promises a reform of the land tenure will command the support of the Irish, no matter whether it is favored or opposed by the priesthood. In other words, Ireland never will be contented unless the proprietorship of the soil is virtually transferred from the landlord to the tenant. On the other hand, any measure by which this change could be brought about would be in direct antagonism to all our principles of government, and would be opposed to the death by the English landed interests, the most powerful one in the long run in the whole country. With the state of disaffection which is known to prevail in the sister kingdom, it is impossible to do nothing. On the other hand, it is almost as impossible to suggest what ought to be done, or what can be done, with safety, under these circumstances. I expect the Ministry will try to gain time and stave off the evil hour of settling upon an Irish policy by proposing a commission of enquiry into the condition of Ireland.

A similar expedient is hardly available in the case of the third dilemma with which the administration has to deal. The moment Parliament assembles there will be a cry for legislation on the subject of the cattle-plague. The experiment of a commission has been already tried, and has resulted in failure. Rightly or wrongly, the public has made up its mind that the Rinderpest, like small-pox, is propagated solely by close contact; and on this theory it is absolutely essential that all opportunities for communication between different herds should be precluded. In order to facilitate this object, the Government, by orders in council, has given power to the local authorities of the different counties to adopt precautionary measures. In consequence, the holding of markets and the conveyance of live stock has been prohibited in many parts of the country; but these remedies are found to be ineffectual so long as the prohibition is not uniform. A strong appeal, therefore, will be made to the Government to forbid all markets throughout the country and all removal of live stock from one place to another. How strong the feeling on the subject is in the agricultural districts may be estimated, by any one acquainted with England, by the simple fact that in Northamptonshire, where hunting is not a favorite pursuit of the landed gentry, but where it is the chief support of many of the smaller towns, there is a vigorous local agitation in favor of suspending all hunting while the Rinderpest rages, on the plea that the riders make gaps in the hedges, and thus allow the cattle to stray from one field to another. I hear, too, that the Conservatives intend to urge the necessity of a public loan to indemnify the farmers for the losses sustained by the pestilence. Such a proposition would be extremely embarrassing to the Government. Its acceptance would be extremely resented by the manufacturing districts, while its rejection would be almost fatal to the chances of the ministerial members for rural constituencies in the event of another election.

Last, but not least, there is the question of reform. The Government are now absolutely pledged to bring in a bill, and to dissolve Parliament in the event of its rejection. But they are still utterly at sea as to what basis of reform they ought to make their stand upon. As yet there has been

little evidence of any strong popular feeling in favor of reform, and the hostility of the half-and-half Liberals to any practical change is daily becoming more outspoken. The one thing on which the Ministry appears to have made up its mind is, that the bill shall not interfere with the present distribution of seats. Forthwith, the *Times*, which represents fairly enough the dread of the governing classes to any scheme which shall really increase the influence of the popular element in the representation, begins to plead that, if we are to have any change at all, it is idle to leave the question of the petty boroughs untouched. The real purport of these tactics is obvious enough. The *Times* knows that the Government cannot hope to pass a bill opposed by the representatives of from five-and-twenty to fifty boroughs which would have to be disfranchised if any attempt was made to render our electoral system somewhat less anomalous; and, therefore, it insists upon the necessity of disfranchisement as the indispensable condition of any bill deserving national support. A great number, too, of Liberal members, who are very fond of reform in the abstract, are extremely reluctant to have the subject entered upon at present, because the passage of a reform bill would render it necessary for them to undergo the cost and trouble of another election, and will, therefore, seize every opportunity of covertly frustrating the measure. If the Government has courage enough to bring forward a simple and straightforward bill, and to urge it vigorously upon the House, I think it just possible they may force it through Parliament; but if there is any appearance of hesitation or of divided counsels on the part of the Treasury bench, the defeat of the measure and of the Ministry is absolutely certain. And so far there has been no reason to credit the administration with decision or vigor of any kind. And, as if all this trouble were not enough, there is the further prospect that the repeated disclosures of mal-administration in our workhouses may force on the consideration of pauperism and of the parochial system—the most difficult and dangerous subject with which an English Government can well be called on to deal.

Other than political news there is hardly any which would interest anybody but home readers. Lady Palmerston has refused a peerage in her own right, with remainder to her second son by her first marriage, the Hon. William Cowper. Whatever judgment the world may pass upon the dead statesman, it is only natural that to the lady who bore his name the honor of being known only as the wife of Lord Palmerston should seem the highest of earthly distinctions. In the fashionable world the event of the week has been the christening of Sir Robert Peel's child, at which, in the reporter's phrase, "all the rank and fashion of the metropolis were assembled." I only mention the circumstance on account of the sensation produced at the ceremony by Mr. Gladstone's speech. The great English orator had to propose the health of the infant; and nobody expected that on so commonplace an occasion he could do more than utter a few graceful sentences. But to the surprise of everybody he made a speech about which all London is talking, and which it is credibly asserted set two colonels crying and disturbed the equanimity of a brace of bishops.

Sir Edwin Landseer, as I think I told you would be the case, has been offered the presidency of the Royal Academy, vacant by Sir Charles Eastlake's death, and will, it is thought, accept the honor. On Sunday intelligence was received of the death of Gibson, the sculptor, at Rome; and most of the Monday's papers had articles upon the loss thus sustained by art. It seems, however, that he is not dead after all, though I fear he is never likely to regain his strength. Americans who have resided in Rome will hear with regret of the death of Mrs. Charles Newton, the wife of the late, and the daughter of the present, English consul in that city. She was quite the cleverest of our female portrait-painters, and was very popular in the artistic world.

PARIS GOSSIP.

PARIS, Jan. 18, 1866.

THE spiritual "lion" of the Advent just over has been a Dominican monk rejoicing in the euphonious designation of "Father Hyacinth," a new man, previously unknown to fame, but selected by the chapter of Notre Dame, for his zeal and eloquence, to preach the regular course of "Advent sermons" in that fine old fane. The theme of the new preacher's discourses has been "Independent Morality," and his object has been to prove that there is no true "morality" out of the pale of the church, and that the most noble and excellent deeds, or what the common-sense judgment of the world would regard as such, are neither noble nor excellent unless they are done not because they are seen to be noble and excellent, but because they are prescribed by that sole depository of light and of authority, "the church." The new preacher being a young man of striking appearance, great scholastic learning, and vigorous delivery, the church-going world of Paris has been crowding to his sermons in greater numbers than have been drawn by any preacher since Lamennais, Lacordaire, and Ravignan; and so highly have they been approved by the ecclesiastical authorities that the Archbishop of Paris, after the delivery of the last of Father Hyacinth's orations, mounted the pulpit, and there expressed his entire approbation of all that the new preacher had said in these discourses, before dismissing the congregation with the "Papal benediction" duly sent on from Rome for the occasion. All the other churches of the capital have had their course of "Advent sermons," but none of them have rivalled, in public estimation, the outpourings of Father Hyacinth.

Advent and church-going being now successfully got through with, the Parisians are making the most of the unusually short carnival of the present year. The theatres are in full blast, and half-a-dozen popular novelties dispute the honors of the season. Patti, who has been fêted "to the top of her bent" in Italy, and was all but buried alive the other night, at Marseilles, under the cart-loads of flowers that were showered upon her from every part of the opera-house, is just re-engaged here, at the Italian Opera, at three thousand francs per night, a sum which is almost causing M. Bagier, the director of that renowned temple of song, to tear his hair. He ought, however, to be much obliged to the *diva* for letting him off with merely one-quarter of the total receipts of the theatre; for the public would insist on having Patti at any cost, and whatever she chose to ask he would be forced to give, even if she compelled him to pay her at the rate at which she lately mulcted the director of the opera at Lille, where she pocketed 24,000 francs as the price of a couple of representations! What the public of Lille were made to pay for their seats on those occasions has not transpired; but we learn that at Marseilles tickets for the stalls fetched as much as 200 francs, those for the first gallery 60 francs, and those for the pit 20 francs each.

The Marquis de Massa's new ballet, "Le Roi d'Yvetot," at the grand opera, has not equalled the anticipations which had been formed respecting it. The plot is of the slightest, and utterly incomprehensible, as is the want of ballets; the music, by Labarre, is very unequal; the dances, devised by Petipa, are wonderful in their way, but are so very statuesque as to occasionally suggest a wish that they might be transferred to the studio of some sculptor to whom the exhibition of the human frame might be more edifying than it can well be to the general public. So large is the portion of the "Africaine" which it has been found necessary to cut out, in order to bring Meyerbeer's posthumous opera within the capacities of performers and of the public, that the rejected *morceaux* would amply suffice for the fabrication of a two-act opera. An enterprising *librettiste* has offered to provide a plot for this purpose, to which the cuttings in question would be adapted. The proposition is under consideration, and rumor states that M. Fétis, the musical executor of the late *maestro*, is in treaty with Mme. Meyerbeer in reference to this suggestion. The accomplished professors who compose the magnificent orchestra of the French opera are paid for their arduous work in an inverse ratio of their talent, the pay they receive being so small as to be almost a derision. They have been agitating for several years in vain for an increase of salary, and have now hit upon a novel sort of strike, which they are employing with marked effect. They play so softly as to be almost inaudible, especially the passages which demand a vigorous rendering, and in which, while the unhappy leader works his *bâton* wildly in a frantic endeavor to galvanize the orchestra into the production of some grand burst of sound, the instruments give out but the faintest whispers. As it would be impossible to collect a new orchestra of equal talent on anything like the terms which these gentlemen demand, the manager dares not cashier them, but still refuses to comply with their demands, which, however, he will probably have to do before long.

The Théâtre Lyrique is beginning what appears to be destined to become a magnificent success, with an opera by Barthe, founded on Byron's "Bride of Abydos," and in which that unrivalled warbler, Madame Miolan-Cavalho, is pouring forth torrents of vocalization surpassing all her former feats, and only to be matched by a mocking-bird or a nightingale.

The transpontine Odeon, which ranks officially as "the second French theatre," is drawing unwonted crowds to weep over the sorrows of a specimen of the extinct class of *grisettes*, borrowed from the *Bohême* of their late historian, Henri Murger, and personated with equal charm, grace, and pathos by Mlle. Thuillier, who draws tears from the most flinty-hearted of her auditors, while those of a gentler mould are unable to get through the evening on less than half a dozen handkerchiefs. The vast new theatre of The Chatelet is crammed every night, from floor to ceiling, with a densely packed crowd, whose tickets have been taken a fortnight beforehand, to witness the brilliant marvels of a new piece called "The Magic Lantern," and in which one of the prettiest actresses of Paris, Mlle. Eugénie, personates our common mother, Eve, with the aid of the smallest modicum of green

crape whose existence could hope for recognition by the censors of the police. The largest of the Paris houses, the Grand Théâtre Parisien (which seats 8,000 people, and opened last year with a grand flourish of trumpets, proclaiming itself the "continuator of the traditions of the theatres of ancient Rome," apparently forgetting that the Circus Maximus seated 250,000 spectators, and the Colosseum 100,000!), has a "grand military drama," by Tessier, entitled "Puebla," which, with its 20 sieges, 31 sackings, and 400 discharges of artillery, is driving the east-end public wild with delight. The side-splitting "Review," at the little Théâtre Déjazet; the "Benoiton Family," at the Vaudeville; and the "Belle Hélène," at the Palais Royal, are pursuing their career as successfully as ever, and the manager of the theatre of the Porte St. Martin having announced his intention of celebrating the 300th representation of that marvellous fairy-spectacle, "La Biche au Bois," with a ball and supper, and private theatricals "interspersed with vivacious couplets," the demand for tickets, which has been unprecedented even in Paris, has attained still larger proportions since the appearance of the prospectus of the coming fête, in which the manager makes a particular request that "mothers will leave their daughters at home on this occasion;" thereby implying that the "vivacity" of the entertainment will be in stricter accordance with the prevailing taste of this particular portion of the planet than with the prescriptions of any very straightlaced code of proprieties. The opera balls, meantime, are in higher favor than ever. The interior of the French opera-house, boarded over so as to form a floor on a level with the stage and the first row of boxes, and thus converted into a vast ball-room, magnificently lighted with enormous chandeliers, opens its doors every Saturday night during the carnival, exactly at midnight, to the masquerading crowd who will dance wild dances, look out for adventures, or simply look on, from the comparative retirement of the boxes, on the bewildering whirl of uproarious merriment going on to the exciting strains of Strauss's unrivalled "Brass Band," and only ending in the broad daylight of Sunday morning.

But the great success of the moment is the new song of Thérése, the popular *diva* of the Alcazar Café, entitled "La déesse du Bœuf-Gras"—that is to say, the young woman in book-muslin who personates Venus in the chariot of Olympian deities that always forms part of the traditional procession of "fat oxen" on the three days of Shrovetide. This new ditty, of the stamp of her famous "Sapper," is even more in favor with the Parisian public than was that wonderful setting forth of the peculiar audacities commonly considered as constituting an essential part of the military career. Paris is going mad about this new ballad. Last night Thérése was recalled no less than six times, and was greeted each time with the most frantic applause and avalanches of bouquets.

The first court ball of the season took place yesterday, and is to be followed by the usual series of hospitalities at the Tuileries, including a fancy ball, concerts, and theatrical performances. The little Prince Imperial, who, being strictly limited in his allowance of pocket-money, and withal of so generous a disposition that he gives it away as soon as he receives it, and is thus almost always in a state of great pecuniary embarrassment, happened to learn a few days ago that one of the Zouaves now doing duty at the Tuileries had been robbed of 1,500 francs, the price of his re-engagement, which sum he was just going to send to his mother, and that the Zouave being a young man of excellent character and greatly beloved and respected by his comrades, the latter had made a subscription for him among themselves, the amount thus raised being, however, very far short of the sum of which he had been robbed. The generous little fellow, having just received his pocket-money, immediately sent for the colonel of the regiment, and, putting the sum of 1,500 francs into his hand, begged him to present it to the Zouave in his name, and to tell him that he "had great pleasure in making him this present, as he had learned what had been his intentions in regard to the money of which he had been so unfortunately robbed." The officer having promised to obey his little Highness's commands, called the company together on parade, and delivered the gift and message to the delighted Zouave, amidst the enthusiastic cries of "Vive le Prince Impérial!" proffered by the rest of the men, almost as much touched and delighted at their comrade's good fortune, the gracious deed of the little Prince, as that comrade himself.

Lovers of Biblical antiquities will rejoice to hear that the excavations now being made in Syria have resulted in the discovery, at Nadir-Sarape, of a Hebrew house dating from about the second century before Christ. Some of the rooms, with their contents, are in perfect preservation, among the latter being a number of Hebrew books, showing that the house belonged to a literary man. Besides the books of Moses and the Psalms of David, there is a collection of Hebrew poems, absolutely unknown to the Orientalists of our day. These interesting remains, many of which bear traces of Egyptian origin, have been sent to the Asiatic Society of London STELLA.

Correspondence.

AN IMPARTIAL CRITIC.

TO THE EDITOR OF THE NATION:

Your vindication last week of the conduct of THE NATION against the gratuitous arraignment of Mr. Wendell Phillips was convincing and ample. Had you chosen, however, to enquire why he essayed to play the champion for Mr. Sumner on this particular occasion, and, of all men, to stigmatize you as a "heartless and unfair critic" of that philanthropic senator, you might easily have removed from Mr. Phillips every vestige of an excuse for assuming either office. For, in the first place, while *he* regards and publicly brands President Johnson as virtually a traitor to his country, who deserves immediate impeachment and trial, Mr. Sumner declared, when seeking to justify his epithet of "whitewashing:" "*I have no reflection to make on the patriotism or the truth of the President of the United States.* Never in public or in private have I made any such reflection, and I do not begin now." And this, surely, Mr. Phillips must regard quite as bad as "whitewashing," and to the taste like wormwood!

But the *sang-froid* of this novel partizanship is quite refreshing in view of Mr. Phillips's severe, not to say savage, assault upon Mr. Sumner in the spring of 1863, when he exclaimed:

"Peel off Seward, peel off Halleck, peel off Blair, *peel off Sumner*—yes, *Massachusetts senators as well as others.* No, I will not say peel off our Massachusetts senators; but I will say their recent action has *very materially lessened my confidence in their intelligence and fidelity.* I will tell you why. When the Government called on New England for a negro regiment, and we went from county to county, urging the blacks to enlist, one Massachusetts colonel [Stevenson], dared to say, down in South Carolina, in the face of the enemy, that he had rather be whipped without negroes than conquer at their side—a Massachusetts colonel, in that hour of emergency and critical issue. His case within twenty days went before the Senate of the United States, and the very week that his apology was filed in the War Office at Washington, *Massachusetts senators begged their reluctant brothers to make him a brigadier-general.* Yes, Massachusetts senators, thoroughly informed and *put upon their guard, against the repeated remonstrance of their fellow-senators,* INSISTED *on rewarding the mutineer!*"

Again:

"Thus we see high-handed defiance of the Government's policy enter the Senate as a colonel and come out a brigadier. Sigel, Fremont, Butler, Hamilton, Phelps, and a host of others idle, yet *a negro-hater promoted on the plea of necessity to get good officers! When Mr. Sumner let personal feelings lead him to such a step,* HE BETRAYED THE NEGRO."

Again:

"*Massachusetts senators reward the mutineer* TO CONCILIATE HUNKER TREASON."

This aggravated statement and damnatory criticism Mr. Phillips was not satisfied with rehearsing to public audiences in various cities, but he was careful to make them a portion of the last speech contained in the volume of his "Speeches, Lectures, and Letters" published the same year, and thus designedly to send them down to posterity, aspersing the motives, impeaching the integrity, and blackening the conduct of Messrs. Sumner and Wilson, who had done and suffered more in the anti-slavery cause than any other two public men in the land, and whose illustrious career, as well as upright character, should have shielded them from such a merciless attack. This was all the more wanton and inexcusable because Mr. Sumner, we are told, and also others whose testimony was unimpeachable, minutely laid before Mr. Phillips all the facts in the case, placing an almost totally different aspect upon it, and relieving "the Massachusetts senators" of all suspicion of intentional wrong-doing in the appointment of Col. Stevenson, who, however betrayed in a moment of excitement to say, in a private conversation, what Mr. Phillips imputes to him, promptly forwarded to the War Department his humble apology, as Mr. Phillips admits; and who laid down his life in the service of his country in the spirit of a brave soldier and a true patriot. In relation to Mr. Sumner in special, is this to be a "heartless and unfair critic"—or how shall it be characterized? When, on a certain occasion, at an anti-slavery celebration, Mr. Phillips contemptuously said of Henry Wilson in his speech, "I could make a better senator out of the sweepings of a bar-room caucus," because Mr. Wilson had said or done something displeasing to him, was this a just appreciation of one who, by his inherent energy and manly character, had succeeded in exchanging a cobbler's shop for the Senate Chamber of the United States, and to whose indomitable zeal and tireless industry, accompanied by sound discretion and admirable tact, the cause of freedom, in its broadest signification, owes its most important legislative triumphs?

Instances like these might be multiplied by any one who should take the

pains to search Mr. Phillips's later speeches for them, or should simply recall that in his phraseology Mr. Lincoln was once "the slave-hound of Illinois," and a certain Massachusetts major-general "a strolling mountebank." It is one thing to be a comprehensive statesman; another to be an eloquent rhetorician. Mr. Phillips not unfrequently mistakes sweeping condemnation for courageous censure, a love of paradox for a bold enunciation of the truth, and extravagance of impeachment for fidelity to the claims of the oppressed. This habit is growing upon him in proportion to the lack of provocation; while he is still listened to for his oratorical ability, his criticisms are daily becoming less valuable and less regarded. AN ABOLITIONIST.

THOMAS FLEET.

TO THE EDITOR OF THE NATION:

In the interesting communication of Mr. Wheeler, in last week's NATION, upon "The original Mother Goose," he speak of Thomas Fleet as having been a man of considerable wit. In the course of my reading lately I came across one or two instances verifying your correspondent's remark, a few of which I note for the benefit of your readers.

Thomas Fleet, the son-in-law of Mother Goose, first established the *Boston Weekly Rehearsal* in 1731, and afterwards the Boston *Evening Post*. Massachusetts was then a slaveholding country, and Fleet owned several negroes, two of whom he instructed in the art of printing. Their names were Pompey and Cæsar—the only two *Romans*, I believe, who ever belonged to the printing fraternity. These honest fellows lived and printed until after the war of the Revolution, having become freemen by the constitution of Massachusetts of 1780. Fleet was droll and witty in the conduct of his paper, especially in his advertisements. Witness the following advertisement of one of his negro women for sale: "To be sold, by the printer of this paper, the very best negro woman in this town, who has had the small-pox and the measles; is as hearty as a horse, as brisk as a bird, will work like a beaver."

There was a common evil existing in those days, which, it is to be feared, has now become chronic. People were prone to omit paying for their newspapers. Fleet had often to complain even against men of great religious professions. On one occasion he read them quite a severe lesson upon their injustice and oppression in this respect. "Every one," says he, "thinks he has a right to read news, but few find themselves inclined to pay for it. 'T is a great pity a soil that will bear *piety* so well, should not produce a tolerable crop of honesty."

It is, moreover, slanderously reported in the ancient chronicles—in spite of Mother-in-law Goose and her ditties—that Fleet was not blessed with the most beautiful and sweet-tempered wife and daughters in Boston. On one occasion he invited a friend to dine with him on *pouts*, a kind of fish then esteemed a great delicacy, and of which he knew his friend to be remarkably fond. His domestic matters, however, did not move along very smoothly that morning, and when they sat down to table, the gentleman remarked that the *pouts* were wanting. "Oh no," said Fleet, "only look at my wife and daughters!" WM. L. STONE.

NEW YORK, Feb. 8, 1866.

Literature.

LITERARY NOTES.

PHILADELPHIA has just lost one of her oldest and most respected citizens by the death of Mr. George Ord in his eighty-fifth year. Mr. Ord's retiring disposition withdrew him from the public gaze, but for more than half a century his name has been known and esteemed in his own country and in Europe by all who, through a similarity of tastes and studies, were brought in contact with him. His chief published work was the memoir of his friend, Alexander Wilson, the naturalist, whose great work on the birds of America he edited and brought into its present shape, and to whose memory one of the most interesting pieces of biography in our language was consecrated. Mr. Ord's favorite pursuit was ornithology; his acquirements in that science well fitted him for the post of president of the Academy of Natural Sciences, Philadelphia, which he filled for many years, being, at the same time, a prominent member of the American Philosophical Society, a fellow of the Linnæan Society of London, etc. Of English philology Mr. Ord was also a devoted student. Though he never published any separate work on the subject, his co-operation was largely given to the Rev. H. J. Todd's enlargement of Dr. Johnson's dictionary and to the lexicographical labors of Dr. Webster and of Dr. Latham, whose dictionary is now in progress in England. Mr. Ord retained to an advanced age a youthful freshness of interest in his studies and in public affairs. His last days were cheered by the return of peace and prosperity to his country.

—An important work is now proceeding through the press of Messrs. T. & T. Clark, of Edinburgh, exemplifying a combination of German and American scholarship. The historical geography of Syria and Palestine, contained in Carl Ritter's world-renowned "Erdkunde," is well known to scholars as the most thorough and exhaustive examination of the Holy Land in every respect that is needed by the requirements of the Biblical critic and commentator, and of all who are engaged in the study of the Divine oracles, that has ever been produced. The bulk of the work has hitherto been the chief obstacle to its translation. This, however, has been undertaken by an American scholar, Mr. W. L. Gage, who was an attendant of Ritter's course of lectures at the University of Berlin, and is already favorably known by versions of two of his minor works published by Messrs. Gould, Lincoln & Co. and Messrs. J. B. Lippincott & Co. Some condensation will be used in Mr. Gage's translation of the Palestine, but this will be more than compensated by the additions of the editor, who will add to the work the latest results of recent explorations among the sites of sacred history, now proceeding with much energy, from various sources. Mr. Gage's familiarity with continental literature and the geographers of Germany, as Kiepert, Petermann, etc., will give him great facilities for this task and enable him to bring forward much matter entirely new to English readers. The work will form four handsome volumes in octavo, and will be accompanied by maps drawn for the work by A. Keith Johnston. Mr. Gage has also in view, at no distant date, the publication of a life of Carl Ritter, with extracts from his correspondence, etc.; and, in fact, seems to have dedicated himself to the task of extending the fame of one of the great men who create a science and impress themselves ineffaceably on their age.

—Messrs. J. B. Lippincott & Co., of Philadelphia, announce the early appearance in this country, in conjunction with the English publishers, of Mr. Baker's important book of "Explorations at the Nile Sources," recently mentioned as forthcoming in London. They have just published, in elegant library style, the works of Philip Lindsley, D.D., late president of the University of Nashville, edited by Leroy J. Halsey, D.D., with introductory notices of his life and labors, in 3 vols. octavo, divided into "Educational, Religious, and Miscellaneous Discourses and Essays;" a new book by Dr. W. L. Plumer, "Jehovah Jireh, a Treatise on Providence;" the collection of hymns authorized by the House of Bishops, at the last general convention of the Protestant Episcopal Church in the United States; "The Student's Practical Chemistry," a text-book on chemical physics and inorganic and organic chemistry, by Henry Morton, Secretary of the Franklin Institute, and Albert R. Leeds; "Mosaics of Life," by Elizabeth A. Thurston; the "History of Usury," from the earliest period to the present time, with a statement of the conflict of laws in different States and countries and an examination into the policy and the effect of them on commerce, by J. B. C. Murray, and a large number of English books brought out conjointly with the London publishers.

—The interminable foreign copyright question has again come up before the Court of Queen's Bench in relation to the proprietorship of an opera by the German composer Nicolai, the owner of which sought to stop a surreptitious publication. Music and books are both subject to the same form of legal procedure; in fact, for many years the law of foreign copyright depended on a decision growing out of the contested right to publish Bellini's "Sonnambula." As it is a question of importance to a large class in the United States, we give the points relied on by the lawyer for the piratical defendant, that claimants from this country may see the technicalities required. "Mr. Coleridge said he was prepared to prove that there was no English copyright on the original works or any of them; and that, assuming there was such copyright, the plaintiff had not got it; and thirdly, that assuming there was an English copyright, and that it had been assigned to the plaintiff under the provisions of the act, he should, beside the entry of the assignment, make an entry of his proprietorship, and that he had made no such entry. Next, that the place of publishing the original was stated to be Berlin, but there were several places called Berlin. Next, that in the assignment the name of the assignee was stated, but not the place of abode, as required by the 13th section of the act. And, lastly, that the date of the original publication, within twelve months of which the registry should take place, had not been fixed." It will be seen by this that the objections are all founded on matters of detail, the principle of the late decision in "Law *vs.* Routledge," that foreigners *can* hold and transfer a copyright in England being distinctly recognized by all parties.

—Messrs. Thomas Nelson & Co., of Edinburgh, who have for many years conducted in this city, with marked success, an agency for the sale of their

publications, announce "that, in order more thoroughly to accommodate themselves to the requirements of the American trade," they are about to add to their business as importers that of manufacturers of books in this country as American publishers. They issue in England the writings of Mrs. Charles, the authoress of "Chronicles of the Schönberg-Cotta Family" and other works, whose sudden popularity among all classes of readers in this country now equals that of Mrs. H. B. Stowe in the palmy days of "Uncle Tom's Cabin." Messrs. Nelson are also publishers of the series of books by a lady who writes under the signature of "A. L. O. E.;" these, though perhaps not very familiar to the older branches of a family, find readers by the hundred thousand among the young, and take their place in every Sunday-school library in the land. They commence their career as American publishers by the issue of a new work by this "well-known and favorite writer," "Rescued from Egypt," in the present month.

—It is announced on competent authority that the entire mass of manuscripts left by Walter Savage Landor has been placed in the hands of John Forster, to be used at his discretion in the preparation of a memoir, etc., of the late venerable Nestor of English literature. The bulk of these materials, including journals, diaries, letters, etc., is so extensive as to fill ten large cases. The correspondence, in particular, is very ample; for though Landor passed a large portion of the later years of his life abroad, he never ceased to keep up his interest in, and connection with, his native country. Personal relations, probably, as well as fitness for the task, have directed the choice of a biographer. For many years past the communications, often wayward and erratic, of Walter Savage Landor have found an honored place in Mr. Forster's paper, the *Examiner*. It may be feared that a work of this nature may yet further retard the appearance of the "Life and Journals of Dean Swift," so long promised and so repeatedly delayed, from his pen, and also the library edition, enlarged and re-written, of the "Lives of the Statesmen of the Commonwealth," of which the recent biography of Sir John Eliot (2 vols. 8vo, 1864) may be taken as a sample of what they are to be in their improved state. Mr. Forster is now in the prime of a working literary life, somewhat past his fiftieth year, but he has, besides too great variety of occupation, two excellent excuses for procrastination—a lucrative public appointment as Commissioner of Lunacy, and a fine private fortune in right of his wife, who was the widow of Mr. Henry Colburn, the celebrated publisher.

—Mr. Murray has just published an elegant volume, with illustrations from the antique, "The Agamemnon of Æschylus and Bacchanals of Euripides," with passages from the lyric and later poets of Greece, translated by Henry Hart Milman, D.D., Dean of St. Paul's. It is just forty years since Dean Milman published the last of the poetical dramas, "Anna Boleyn," that constituted his titles to literary reputation in the early part of this century. Since that time he has taken rank among the first historians of the age by his standard works on the Jewish nation and early and Latin Christianity. The recurrence to former pursuits after so long an interval of severer studies, and at the advanced age of seventy-five years, is an interesting example of literary activity of mind and the persistence of early tastes through changes of time and object. Dr. Milman's versions are marked with the spirit and elegance that characterize all his productions, and display no symptoms of senility in the writer.

—An announcement of interest appears in Messrs. Longman & Co.'s last list of forthcoming publications: "Lord Macaulay's Works. Complete and Uniform Library Edition. Edited by his Sister, Lady Trevelyan. 8 vols. octavo, with Portrait." As no mention of any new unpublished matter accompanies the notice, it is probably in vain to expect at this time much accession to Lord Macaulay's acknowledged writings, though if the collection merely includes the works already published in so many different forms, it is not very apparent what need there can be for an editor at all. The next generation will probably be more familiar with the correspondence, etc., of Macaulay than the present, as it is easy to understand how a decorous reticence may keep back from publication much that may have been written by one so honest and thorough in his likings and dislikings of public men and measures, whether of past centuries or of the present day, and so unguarded in his expression of them. An intelligent search among the periodicals and the *Times* newspaper about the period of Macaulay's college career would undoubtedly be rewarded by some additions to his works. Only a portion of his papers in "Knight's Quarterly Review" has been reprinted. Mr. Bohn has preserved a clever election squib or *jeu d'esprit*, written in 1826, in his edition of "Lowndes's Bibliographer's Manual." An early volume of "Macmillan's Magazine" contained an elaborate critical estimate of Warburton's "Divine Legation of Moses," copied from the fly-leaves of a volume read by Macaulay for the first time, in India, and which was sold at the disposal of a portion of his library shortly after his decease. It was found, when too late to recover them, that many other of the books sacrificed at the same time were enriched in a similar manner with annotations; but as Macaulay, like most people who really use their books, was comparatively indifferent to their appearance and condition, a large part of his collection presented a very poor appearance to the eyes of a bibliomaniac, and this, without examination, was sapiently consigned to the auctioneer and irreparably scattered.

—A translation of Prof. Hagenbach's "Church History of the Eighteenth and Nineteenth Centuries" is in progress, undertaken by Dr. B. H. Nadal and Rev. J. F. Hurst, whose "History of Rationalism" was lately published by Messrs. C. Scribner & Co. Contemporary history of any description is always the most difficult to obtain a correct knowledge of, and Dr. Hagenbach's work is perhaps the only accessible form in which the great spiritual movements that underlie much of the temporal and political history of the last century and a half can be studied. A portion of the book has been translated in Edinburgh, and published separately under the title of "History of German Rationalism." The whole will be included in Messrs. Nadal and Hurst's version, with copious indexes and other helps to facilitate its currency among American readers.

—Mr. George W. Carleton announces as in press and shortly to appear a number of new works, principally in the departments of light literature, of which his establishment has poured forth so ample a supply. Among them are, "The House by the Churchyard: a Novel," by J. Sheridan Le Fanu, we believe; "Josh Billings, his Book," a collection of the humorous writings of Mr. Henry W. Shaw, extensively circulated under that pseudonym; "Recommended to Mercy" and "Beyminstre," two new novels; a new illustrated edition of "The Culprit Fay," and "Jargal," one of Victor Hugo's early sensational romances, hitherto unpublished in this country. Mr. Carleton's "Artist in Cuba" furnished the public with some acceptable memoranda from his sketch-book of a visit last winter to the Queen of the Antilles. He has recently started on an excursion to Peru, and will, we hope, find exercise for his pencil among the belles and beaux of Lima and the Pacific coast. He will also issue later in the season a new edition, complete in one volume, of "Souvenirs of Travel," by Mme. Octavia Walton Le Vert; an uniform impression, in three volumes, of Mr. Newell's "Orpheus C. Kerr Papers," that are now puzzling the English critics in the cheap non-copyright reprints; and "Adrift in Dixie," by Edmund Kirke.

—A fair opportunity was lately afforded for the exercise of Dean Stanley's peculiar talent as a great historical word-painter, on an occasion that was well calculated to call out all his powers. On Thursday, December 28, last, he addressed a crowded and attentive audience on the *eight hundredth* anniversary of the inauguration of his own church, the building where his audience were that day assembled—the new Abbey of Westminster, rebuilt by Edward the Confessor on the 28th December, A.D. 1065, a few days before his own death and a few months only before the Battle of Hastings. Of course but little remains of the original fabric of the building in the present well-known structure. Enough, however, is preserved to satisfy the sense of unbroken identity and historical continuity. This was well applied in Dr. Stanley's discourse, in which, by a picturesque and brilliant historical survey, he impressed on his hearers the solemn sense of national continuity. He painfully brought before them the character of the pious but weak and mystic Confessor; the heavy pressure of doubt and gloom which hung over the nation in anticipation of his approaching decease as the first assembly gathered within those walls; the great crisis that so rapidly followed; and the whole grand stream of national life that was colored by influences then at work, till it mingled with the eddies and currents of the passing hour. Dr. Stanley's text referred to an earlier dedication, and was taken from John x, 22, 23, "And it was at Jerusalem the feast of the dedication, and it was winter, and Jesus walked in the temple in Solomon's porch." He drew a parallel of the feelings with which the Jews, and probably Christ himself, regarded the feast of a dedication of the one temple (not the original foundation, but a rebuilding by Judas Maccabeus), occurring in the same wintry season with those recalled by the history of the renowned building where he then spoke; and while enlarging eloquently on the faith and hope in which the great abbey was founded, and the charity it had dispensed in past days, did not omit to appeal for the charitable institutions of the present. The discourse is in press and will be published.

—In the brisk competition of trade, the influence of literature is accommodated to strange uses. An enterprising dealer in London announces a volume elegantly "got up," with beautiful vignette monograms, colored engravings, etc., entitled "Essay and Essence," containing a poem, "Odor of Hybla; or, Floral Sprites," and says that "the volume, besides its literary

and artistic attractions, contains within it a casket of new and choice perfumes appropriately called 'Floral Sprites.'" This beats the well-known boast of Warren, the blacking-maker, that "we keeps a poet," and it has been left for the present age to offer the public a sample of the intellectual and material wares of the manufacturer tastefully combined.

RELIGIOUS LIBERTY IN MASSACHUSETTS.*

THE popular knowledge of the religious history of Massachusetts begins, it may be safely asserted, with the landing of the Pilgrims, in 1620, and ends with the hanging of Mary Dyer, on Boston Common, some forty years afterward. When you have mentioned these two considerable enough events, there comes a general pause in the conversation—much as if "Connecticut" and "Blue-laws" had been suggested to the same company; nor is it quite certain that you, reader, or we, the present writer, could break the awkward silence except that Mr. Buck has written a book for the purpose of enlightening us, and there is no longer any excuse for our being ignorant on the subject. It is not a bulky volume, yet it covers the whole ground of ecclesiastical law. Moderate in text, it is copious in reference. The work of an Orthodox Congregationalist, it is unsectarian, and displays a wide familiarity with the tenets and internal experience of other denominations. The compromise between the lawyer and the historian is happily effected. The narrative flows along with a steady interest, with every now and then a ripple of humor that makes one forget the grave theological warfare—the bitterest and most implacable in which the human mind can indulge—that underlies this peaceful discussion.

The political enemies of Massachusetts have found it convenient to lash the men of this generation over the backs of their Puritan forefathers. The bloody intolerance shown towards the Quakers, though it lasted hardly a score of months, has been, *mutatis mutandis*, imputed in a right line to those whose real inheritance has been a love of liberty, of general education, and of honest industry. Contemptible as is this imputation, it is a tribute to the vitality of the Puritan influence, and so not altogether baseless. Indeed, this book will have few readers outside of the profession from which it emanates who will not be constantly and heartily surprised by the recent date of statutes, cases, and judicial decisions which seem to belong to the seventeenth rather than the nineteenth century. It is understood, of course, that the law was seldom the measure of religious freedom, which, in the periods when it slumbered, outgrew it; but this only made its awakening at the summons of litigation all the more formidable and all the stranger.

The religious welfare and instruction of the people, and their participation in the forms and burthens of divine worship, were as much a concern to the early colonists as their attention to civil obligations. There were, from 1693 to 1711, as many as fifty grants in aid of feeble churches. The statutes of 1800 contained exact and definite penalties for such towns as neglected to supply good preaching to their inhabitants. Indictments were not uncommon, especially in Essex County. Taxes were assessed and levied for the support of the Gospel as of the Government. All landholders, whether resident or non-resident, were subjected to this impost, albeit they might never have seen the minister nor entered the meeting-house. This rule was mitigated in 1811 for the latter class, who were taxed to support a minister of their own denomination, if such there was in the town. Corporations were taxed, like individuals, even as late as 1831, and the woollen factory and the nail factory were reckoned *pro rata* among the faithful. Statutes subsequent to the Bill of Rights (1780) permitted a man's tax to be paid to the minister of his own sect, provided he was a regular attendant on his service, but otherwise it must go to the Congregational preacher. The statute of 1799 authorized the town to omit taxing those who belonged to dissenting churches, or gave ministers leave to recover from the town treasurer the taxes derived from their parishioners. Not till 1811, the date of the "religious freedom act," might one leave, independently of scruples, the old established Congregational society for an Episcopal, Methodist, Baptist, or Universalist society in the same town, with the certainty that his tax would eventually reach his own minister. Meanwhile, no man could escape contributing. Walpole ordered in town meeting, in 1832, a tax for the support of the Gospel, and arrested a Mr. Fisher who refused to pay his portion. Neither could any citizen with impunity avoid going to meeting. The statute of 1791 fined all able-bodied men ten shillings for an absence of three months; and it was not repealed till 1835. Such was the force of tradition and custom that when the constitution was revised in 1820, and the Bill of Rights had been amended by inserting the enabling act of 1811, the people threw out the amendment by a large majority, and, by a still larger, voted that the overseers of Harvard College should not be taken from all denominations.

The nice discrimination of the man who could not be moved to tears by a pathetic discourse, because he was not the parson's parishioner, was an enviable quality "in good old colony times," and even later. Originally the parish was territorial, and a person who wanted to attend a different meeting had to be transferred, lands and all, to a new parish. In 1828, a member of the Orthodox society of Malden, having formally retired from it, applied for admittance at the First Parish, but was refused. Judge of the astonishment of the parish when it learned in court that it could not help itself—that everybody who could not show that he belonged elsewhere was presumably and *ex necessitate* a member of the oldest parish. But the question of membership was most alarmingly brought home in 1835, when it appeared that parishioners were individually liable for the debts of the parish; and owners of bank stock ran races with the sheriff, in haste to dissolve their membership before the hammer fell. But the Revised Statutes of the following year declared that no one could be a member of a religious society without his consent in writing.

Though the greatest reverence was formerly felt and manifested towards ministers in Massachusetts, they were not by the law regarded as a separate class. They were simply laymen exempt from watch and ward, and military and jury duty. Their tenure, unless specified in terms, was for life, and determinable only for some good and sufficient cause, or by the consent of both parties. Time has hardly lessened the legal difficulties in the way of getting rid of one who is resolved not to quit his pulpit except under constraint. As for settling a minister, the good people of the State reposed for two centuries in the delusion that no practice could be more firmly or uniformly established. Simultaneously, however, with that great political unsettlement called the Missouri Compromise, the religious world was visited with an upheaval with which heresy had only a casual connection, though reaping instant and singular advantages. It had been the custom from the beginning for church and parish to unite in settling the pastor, and the question of a schism had never come before the courts till 1818, when Dedham parish elected a Unitarian against a majority of quite two-thirds of the church members. In that year and the following, on appeal from the church, the pleadings and facts in the case were duly considered by judge and jury, and in 1820 it was argued before the full bench of the Supreme Court. The final decision, like the two first, was adverse to the petitioners, and declared that the church by seceding had lost its existence—having none, in fact, apart from the parish—and forfeited its property. Such was the law in "Puritan" Massachusetts, and the result of this memorable exposition was that half the towns in the eastern part of the State saw orthodox churches ejected from their meeting-houses. This, it may well be imagined, was a hardship grievous to be borne. It was attended with every degree of aggravation. In one instance, in 1830, the orthodox church and minister seceded, leaving only two male members behind; yet they had to abandon their house, records, and communion furniture. More intolerable than the loss of their possessions, or the breaking up of old associations, must have been the thought of the desecration of the sanctuary by the false faith by which they were extruded.

When no controversy raged between the church and the parish, sometimes the parish and the town were at loggerheads. Here the moot point was the ownership of the meeting-house, which was judicially decided to belong to the former. The town could not complain if the parish refused its house for municipal purposes, even the most patriotic, as to celebrate the Fourth of July. Nay, when the town had used and repaired the meeting-house during seventy years, it still was not allowed to have suffered wrong when the parish pulled the structure down about the municipal ears.

Reverting for a moment to the ministers and the respect accorded to them, it remains to be added that, by the colony laws, they were not permitted to solemnize marriages till 1695, and then co-ordinately with justices of the peace. The present statute confers the requisite authority on "any minister of the Gospel ordained according to the usages of *his* denomination, who resides within the State, and continues to perform the functions of *his* office;" and wherever reference is made to a minister in this capacity, *he* is the pronoun regularly employed. Since Mr. Buck's work has appeared, the question has curiously arisen whether, under this statute, a woman can lawfully perform the marriage ceremony. Miss Olympia Brown is the ordained and officiating pastor of the church at Weymouth Landing, and is said to have tied the matrimonial knot on more than one occasion. The doubts engendered by a strict interpretation of the law occasioned last month the introduction in the Massachusetts House of Representatives of an order instructing the Committee on the Judiciary to consider whether any legisla

* "Massachusetts Ecclesiastical Law. By Edward Buck, of the Suffolk Bar." Gould & Lincoln, Boston; Sheldon & Co., New York. Pp. 310. 1866.

tion was needed upon the subject. The committee unanimously reported to the contrary, and thus gave a generic instead of a sexual significance to the ambiguous part of speech.

The General Statutes of 1860 and 1865 exhibit perhaps most forcibly in the chapters on the observance of the Lord's Day the vigor of the Puritan tradition. Whoever should endeavor to obtain from them an accurate idea of the actual observance of that day would be not a little misled. They are, however, potentially operative, as the citizens of Boston became aware, not long since, under the administration of the new State Constable. But the annoyance to which their enforcement gave rise, and the ridicule which it brought upon the officials, practically soon put an end to the attempt to regulate the manners of to-day by the old-time restrictions. The business of the age, in demanding greater facilities for travel and wider opportunities for recreation, has enlarged so that they can never be restricted within their former proportions the liberties of the day of rest. The foreigner still remarks the funereal air of Boston when church bells are tolling and, in sombre procession, the black-robed citizens wend their way to the house of prayer. "A l'heure du prêche," says a writer in the *Revue des Deux Mondes*, quoting from his diary of Dec. 11, 1864,—"à l'heure du prêche, les familles défilent en silence, la tête basse, habillées de noir, comme une procession d'enterrement. Cependant les églises sonnent les offices en volées lentes et tristes comme un glas funèbre." Yet the horse-car rumbles through the streets, while in Philadelphia, that never hanged a Quaker on any of its parks, the church and the suburbs alike must be reached on foot by whoever cannot command a carriage. Already it has been earnestly sought to open the reading-room of the Public Library on Sunday. These are but signs of the changes which public sentiment has undergone "dans la vieille colonie puritaine" in regard to "dimanche, jour lugubre."

In taking leave of this pleasant book, if we glance at the case of Abner Kneeland, 1834–38, it is only to remark that it is not possible that any person should be again imprisoned in Massachusetts for such "blasphemy" as was detected in his avowal:

"The Universalists believe in a God which I do not; but believe that their God, with all his moral attributes, aside from nature itself, is nothing more than a chimera of their own imagination."

In 1829 the Universalists were almost as obnoxious as their infidel critic, for their testimony was objected to in the courts, though without success. In 1848 atheists were excluded. But the law now suffers anybody to testify, with the understanding that his credibility may be affected if possible by a representation of his peculiar belief. Great steps have been taken by Massachusetts toward religious liberty in the interval bounded by the gibbet in 1660 and the open witness-stand in 1860. Instead of asking what obstacles to this progress must be attributed to the Puritan colonists, it would be wiser to enquire how so much progress could have been so prudently and quietly made without the Puritan obedience to conscience and to law. The society which they founded contained the germs of the nobler development we now admire: they were not borrowed from without. The bench they instituted gives tone to the judiciary of the country; their pulpit ministers to the Pacific coast.

MARTIN'S HISTORY OF FRANCE.*

It is now too late to offer any criticism, even if any were needed, on M. Martin's history. It has long since taken its place as the greatest, in fact we may say the first, history of France, and will probably hold it. The task of narrating the entire history of any country from the earliest period to our day is one from which writers every year shrink with greater and greater dread. The publication of private correspondence, discovery of fresh records, the closer and more careful examination of national archives, are constantly increasing the quantity of material available for the history of every civilized state. And as materials increase, the labor of sifting and arranging them increases also; the chances of mistakes and oversights multiply; and criticism becomes at the same time only more and more exacting. No man with the smallest regard for his reputation would now dare to write history as it was written a century ago. Anybody who in our day sits down to write the history of a nation has to make up his mind to devote his life to it, and, what is still harder, to familiarize himself with the chance of his life proving far too short for the task. And then he can rarely enter on it in youth. The judgment, the critical acumen, the lore, the knowledge of languages, of law, of men and manners and literature; the acquaintance with libraries, archives, and other great mines of authority, and the reputation necessary to gain access to them, come to few men before their working years are half over. Youthful historians of any mark are all but unknown. Consequently, as but few men are content with posthumous fame, and but few feel within themselves the courage to grapple with whole centuries of national life, the tendency of writers to restrict themselves to monographs on particular periods increases every year. We have abundance of histories of revolutions, of certain reigns, of short and interesting crises, but not many complete histories. M. Martin would, therefore, be likely to wear his laurels undisturbed, even if his claims to them were less indisputable.

It is therefore not his work, but Miss Booth's translation, that calls for any notice here. We confess we were not deterred from an examination of the manner in which she has executed her task, either by M. Martin's commendatory letter, or the scarcely less laudatory "opinions of the press" by which it is followed in the publishers' advertisement. M. Martin is himself hardly competent to say that the translation "is elegant without artificiality, vigorous without stiffness, and always clear," and the relations of the press with publishers are generally so enchantingly cordial that one is apt to take up "book-notices," both in the daily and weekly papers, with almost as much expectation of getting from them a true idea of the value of the works reviewed, as of getting a fair analysis of the character of the principal guest from the president of a public dinner. What we read may be all true, but then critics are so dreadfully good-natured.

Now we feel bound to say that Miss Booth's translation is most faithful and accurate, but, with all respect for M. Martin, it is unquestionably "stiff," and the French peeps out through the English very frequently with unpleasant plainness. It is for instance incorrect to say (p. 2, Vol. XV.) that the Duke of Orleans "had nothing that belongs to the leader of a party." Of course he had a great many things in common with the leader of a party. In accurate English this should be expressed, none of the distinguishing characteristics of a party leader. Nor is it correct to say that his "self-love was at stake," in the contest between him and the Duc du Maine. It was the power of the regency that was at stake; the self-love of the Duke of Orleans was "roused." Nor do we talk in "elegant" English of a man's being "possessed by a fixed idea, which he carried to monomania." The fixed idea produces monomania. Nor is it usual to say in decent English, "that we are seized with vertigo on thus contemplating the audacity," etc. (p. 54). This is a strictly French expression, which rendered literally in this way has a very comical sound. In idiomatic English one does not get beyond being amazed, confounded, astonished, or overwhelmed, or thunderstruck, by any amount of audacity. One never thinks of describing the physical accompaniments of his emotions, or, if he does, he simply says he "grows dizzy."

We might point out hundreds of blemishes of this sort, but they would be but slight blemishes after all. The translation is on the whole eminently faithful and accurate, and even the faults we have found with it might, on at least one theory of a translator's duties, be defended, we do not say successfully. The way in which the discussions of some of the financial and philosophical questions are rendered is a very remarkable example both of knowledge of French and command of English.

The two volumes before us are devoted to the most interesting period in French history—perhaps, we might even say, in the history of the civilized world—the decline of the monarchy beginning with the death of Louis XIV. and ending with the Revolution. There is no other such description of that "great awakening," and there is certainly no such description and analysis of French society as it existed immediately before the Revolution. When we quoted Montesquieu last summer as an authority upon the meaning of the phrase "republican form of government," as it was used by jurists and philosophers in the last century, and inserted in our Constitution, some sage writer in the Boston *Transcript* pooh-poohed him with the most amusing ignorance as a "Frenchman," and raved a good deal over our impiety in quoting him. If that luminous expounder of the Constitution still keeps his piercing eye on The Nation, let us recommend him to peruse faithfully M. Martin's chapter on the great French jurist and his influence. He will there find out what place Montesquieu occupied in the eyes of his contemporaries both in Europe and America, and why he occupied it, and why it is that there is no better authority than he for the sense in which every term of political science was used from the appearance of the *Esprit des Lois* until the close of the century.

* "History of France from the most Remote Period to 1789. By Henri Martin. Vols. XV. and XVI. *The Decline of the French Monarchy.* Translated from the fourth Paris edition by Mary L. Booth. Boston: Walker, Fuller & Co. 1866.

A NEST OF SINGING BIRDS.

At this inclement season, when all the influences of nature are averse to song, when the robins and larks and blue-birds have gone away to beguile the tedious moments of reconstruction to our Southern brethren, and when musical gentlemen and ladies plead sore-throats in all companies, we find our book-table vocal with poets, breaking into loud notes of treble and bass

It is a concert without which we could be happy, at moments; but, on the whole, we are not disposed to complain. The human organism becomes habituated to great degrees of suffering, and a new poet causes us comparatively little uneasiness. We take him up, and let him go through one or two of the little things he has arranged from Tennyson or Browning, and put him as softly down as we can. We trust we are not often harsh or unfriendly in our touch, for we aim always to be patient. If sometimes a frail wing is broken, or delicate plumage ruffled, we think it is the hard truth that is at fault, and we are sorry that there should be any truth in a world that poets live in.

Let us, however, putting sensibility aside, turn to our task, and attend to the singers accumulated since our last publication.

"Maromin"* is the name of a tale in verse, and of the lovely Indian maid who marries one of its army of heroes. The story is descriptive of pioneer life in Minnesota, of scenes in the rebellion, and in the massacre of the Minnesota settlers by the Sioux. We have read so far into the history of all this as to be in at the death of the wicked enemy whose wiles drove Richard Thornton away from Syracuse, in this State, to the far West, who pursued him thither, and who fell before the rifle of Uncle Darling, afterwards bushwhacked and slain in Kansas. We have also (having a perennial interest to know what becomes of people in romances) glanced at the close of the book, and learned that

"There comes a sound of marriage bells"

after much tumult of battle; but what are the incidents of the poem, we leave the reader to enquire for himself. The author will scarcely believe that we have for the most part found him very commonplace; but he will perhaps be persuaded that we think him by no means destitute of poetic feeling, that we like his boldness in seeking to poetize a theme of everyday life, and that we sincerely lament the want of culture which is partly to blame for his failure. He tells us in his preface that he is the commercial editor of one of the St. Louis journals, and he frankly confesses defects which are obvious enough. We willingly believe that he has of himself hit upon some æsthetic truths exemplified in the poetry of Wordsworth and Patmore, but we cannot help wishing he had sought in literature other sources of inspiration than the newspapers and "Harper's Magazine," and that he had tried to shape his utterance rather less according to the "progressive, individualizing ideas" of the West; for, after all, the use of the English tongue is something that all sections have in common.

"The late Park Benjamin," says a note in "Grondalla,"†—"the late Park Benjamin, whose literary taste and ability as a critic are well known," had the temerity to advise the publication of "Grondalla," having read it in manuscript, and found it "as interesting in narrative as Tennyson's late poems." The candor of this judgment we shall not impugn; but of its worth, and of the quality of "Grondalla," let the reader judge from the vivid interest of a passage taken at random from the book:

"During the time the words above were said,
Were two young ladies wandering alone.
'O Edith,' Clara said, 'one thing is sure,
That Ella loves young Dorset; 'tis for him
My brother is deserted; marked you not
How gentle were her words whene'er to him
They were addressed,—how very sweet her smile?
Far more so than such friendship would require.
All, all is manifest; I see it now;
She has been faithless to her early love
For a new suitor, who can never be
What Julian is and would have been to her.'

"'Stay, stay, dear Clara,' Edith did reply,
'Be not so hasty: recollect, my friend,
That Ella ne'er had seen young Dorset when
Thy brother's oft repeated letters came.
Thou hast forgotten; many months went by
Ere Dorset at Grondalla did arrive.'

"'Ah, so it was,' said Clara; 'viewing him
As but a near connexion, I did not
With care regard the circumstance, although
I recollect his interest at the dance;
Yet that, may be, was natural. But e'en so,
She surely loves him *now*; thou must, I think,
Have noticed what will lead thee to arrive
At that conclusion.'"

We do not, ourselves, find this cast of thing so interesting as Tennyson's late poems, and upon the whole we should prefer the quiet fable of the laureate's romances to the thrilling narrative of "Grondalla;" and if you come to poetic feeling and art, we think that he has again the advantage.

Mr. Robert Leighton‡ gives us "Musings" and "Sonnets," but no poems, so far as we have been able to learn, though his work has every external appearance of poetry. He is evidently a man of cultivation and good taste, and we have reason to think that he does not differ from some millions of other cultivated and refined people, but that he is "fed with the same food, hurt with the same weapons, subject to the same diseases, healed by the same means, warmed and cooled by the same winter and summer," as they; he apparently bleeds like them, being pricked, and laughs like them, being tickled. There is nothing to prove him born in Arcadia or created with a vocation to song. We suspect, however, that his verse is the worst thing about him; but this is terrible, being always diluted and respectable to the verge of Tupper and the "Country Parson," as the reader need not go further than the first page of the book to learn:

"The records of a life should be a poem;
We need not go abroad for stones to build
Our monumental glory; every soul
Has in it the material for its temple.
The universal beauty is our own;
We steep our thoughts in sunsets, and we hang
Our adoration on the morning star,
And yet from us they get that alchemy
Whereby they strangely move us. Nought is ours
But that which has gone from us. Therefore 'tis
That disappointments often tread upon
The toes of expectation. Things without
Are bare until we clothe them. Let us seek
Each one our gods in our immediate heaven:
There is no breathing for us in another;
But either is the air too coarse and weighs
Like nightmare on our thoughts, or 'tis too fine,
And, like the atmosphere of mountain tops,
Usurps the brain, and finds insidious way
Into its chambers, pressing out the soul,
Till death o'ercome us in the guise of sleep."

The badness of heart laid to the charge of him

"Who first wrote satire with no pity in it,"

cannot be justly attributed to the author of "The Omnibus,"* a poem in which the follies and vices of London town are touched with as little severity as we have ever known follies and vices to meet. The satirist mounts outside a London omnibus, and rides through the thronged thoroughfares, viewing the motley life of the capital, and noting boot-blacks, match-boys, and policemen, and chiefly the feeble sculptures exposed in Trafalgar Square; and then, descending from his perch, he listens to prominent preachers, and comments upon their opinions and ideas. The greater part of the satire is devoted to this discussion, and we learn with satisfaction that the author's feelings are in favor of liberal and progressive Christianity. In fact, we like his views much better than his wit, which we do not find very pungent, even when printed in italics, and pointed with marks of admiration. Occasionally, moreover, the heroic verse is not well managed, and the poem lacks finish as well as vigor.

Social Life of the Chinese. With some Account of their Religious, Governmental, Educational, and Business Customs and Opinions. With special but not exclusive reference to Fuhchau. By Rev. Justus Doolittle. Two vols. (Harper & Bros., New York.)—It cannot be said of this work as of a recent French publication (*Etudes sur la Chine contemporaine*, by M. Maurice Irisson), that it is "the most philosophical and most rigorously analytical work of which the Middle Kingdom has hitherto been the subject or the pretext;" nor of Mr. Doolittle's chapters as of these ten studies, that they are "linked in the strictest sequence (*enchaînées par un ordre sévère*)." In the first place, our American author, lacking the facilities of the secretary and interpreter of Gen. de Montauban, had a narrower field of observation, and honestly refrained from generalizations beyond his experience. Next, he preferred the *rôle* of narrator to that of philosopher, and was especially concerned to portray the "social and religious practices and sentiments of the Chinese," with which fourteen years of missionary life at Fuhchau had made him familiar. And, lastly, the contents of these two volumes first saw the day in the columns of a Hong Kong newspaper. The fact that in their original form they were so highly approved by English and American residents in China as to cause them to solicit the writer to collect and republish them, is Mr. Doolittle's best excuse for having done so without the leisure to re-write, re-arrange, and condense them. A tolerable literary man-of-all-work, however, could easily have accomplished this job, and might with advantage have been employed. While repetition and a want of order and conciseness thus fatigue the reader, and rob him of the full measure of his enjoyment, he will readily admit that he has made a considerable addition to his previous stock of information. Somewhat laboriously, indeed, he will have arrived at a pretty clear conception of that society in which filial piety seems almost the only virtue, and female infanticide the most prevalent vice not connected with popular superstitions; while the commonly peaceful and inoffensive Chinaman, if scratched (like your Russian, whose skin covers a Tartar, or your quondam Southern chevalier, a Legree below the cuticle), reveals the cruel and revolting barbarian. Mr. Doolittle's office is to preach, but he was wise enough to see that the moral of his narrative needed no lengthy pointing from him. He sets forth plainly the obstacles to the progress of Christian civilization, but we cannot wholly agree with his method of overcoming them. He protests, as every one must, against the opium traffic, seeing how infamous it was in its conception and how disastrous it is in its effects on the habits and character of the Chinese—how hostile, in short, to any effort for social reform and religious and political enlightenment. But

when he asks (ii., 361): "Ought not Protestant Western Christians to be willing to spend as much money annually in the missionary work in China as is annually made by Protestant Western merchants in China from traffic in opium?" we are not ready with our affirmative. "A few hundred individuals," he adds (p. 362), "actuated by the love of Money, are annually doing very much more to demoralize and destroy the Chinese than all the millions of Christians in Christendom, constrained by the love of Jesus, are doing to benefit and save them." It seems to us that these unprincipled devotees of Mammon are, then, the first objects of missionary labor, and, after them, the governments of Great Britain and the United States, which protect their citizens in importing opium into China. The present competition between trade and the Bible is manifestly (if Mr. Doolittle's statement be true) unequal and, for the latter, almost hopeless.

Science.

SCIENTIFIC NOTES.

Motions in plants have been long recognized, some of them by all who have taken the trouble to use their unaided eyes, and others only by such as have had recourse to the microscope. Among the latter movements are those of the spores or seeds of some of the lowest members of the vegetable kingdom, produced by means of slender, vibrating filaments—movements by which such spores are driven through the water, just as are many of the infusorial animals, for which even Ehrenberg mistook some of them. Among the motions visible to the naked eye are the infinitely various movements seen in the slow opening and closing of the petals of most flowers, or the quicker motions of the stamens of the bearberry, of the leaves of Venus's flytrap, or of the sensitive plant, which follow so readily the touch of an insect or of the point of a pin; and, finally, the truly wonderful motions of the *hedysarum*, an East India plant, the leaflets of which, sometimes slowly and sometimes quickly, according to their condition and exposure to light and heat, revolve in ellipses occasionally, as observed by De Candolle, as often as once in a second. One can hardly look at such a plant without the feeling that its activity is closely akin to that of a voluntary movement.

The motions of the tendrils of some of the vines was noticed by Dutrochet, Mohl, and other botanists, and have recently been studied by Professor Gray. Mr. Darwin, who justly ranks among the best and most trustworthy of living observers, was induced by the observations of this last-mentioned naturalist to make a series of experiments of his own, which have led to very remarkable results, not only in regard to tendrils, but to climbing plants in general, showing that they are endowed with properties strikingly analogous to, if not of the same kind as, certain qualities of animals.

First of all, it may be premised that climbing is effected by a real motion in the plant and not by a continued growing around a support, as commonly believed, and that these motions may have their seat either in the stem, the leaves, or the tendrils. Only a few examples of them can be given here, but for full details the reader is referred to Mr. Darwin's admirable memoir (Nos. 33 and 34, Vol. IX., o the Journal of the Linnæan Society; Section, Botany).

As an example of a stem-climber the common hop may be taken. When a young vine rises from the ground, or a new shoot pushes from a cut stem, the first three joints are straight and stationary; but the fourth, after attaining a certain size, begins to bend to one side, and then turns in succession to all points of the compass, moving with the sun, and describing a complete circle. The first motions are slow, but soon acquire greater speed, when an average revolution is completed in two hours and eight minutes. These motions are kept up for about five days, when the joint in which they began straightens up and becomes rigid. In the meantime other joints have been developed, and have in turn taken up the motion; and as long as the plant grows this process is repeated. Mr. Darwin has recorded his observations on more than forty species of stem-climbing plants, in which there is much variety, some moving slower and others quicker than the hop. A species of *phaseolus*, for example, finished its revolutions in one hour and seventeen minutes, while other species belonging to other genera required eight, ten, or even sixteen hours.

The most remarkable instance given of the distance traversed by a revolving stem was in a *cereopegia*. This was allowed to grow out free thirty-one inches from its support. Even after it had attained this length it continued to revolve at rates between five hours fifteen minutes and six hours forty-five minutes for each revolution. The tip thus described a circle more than five feet in diameter, or about sixteen feet in circumference. Assuming that the circuit was completed in six hours, it moved at the rate of about thirty-two inches per hour.

The end gained by these motions is as follows: The plant needs support; if it simply grew upwards it would soon bend by its own weight, and *might* fall upon what it needed, though the chances would be against its so doing; but by its revolutions it feels about, as it were, and thus secures the benefit of any support within a circle of which itself is the radius. While, however, its support may thus be secured, its motion onward is arrested; but the tendency to bend continues, and thus it is coiled around whatever it touches, somewhat as a rope swung in a circle coils about anything it strikes; only the plant coils through a property of the stem itself, and not by a momentum imparted to it from without, as in the rope.

The leaf-climbers, of which the different species of *clematis* are examples, not only have in some cases revolving stems, but, in addition, the leaf-stalk is irritable and moves when touched. Mr. Darwin found in one case that the pressure of a loop of thread weighing only the sixteenth of a grain was sufficient to excite it to activity. If the leaves come in contact with a support they immediately begin to bend so as to grasp it, and once they get hold, the leaf-stalk becomes rigid and thenceforth immovable. Thus we have here not only a revolving stem to increase the chances of contact, but pairs of leaves like outstretched arms, ready to seize upon anything which will serve to support the weight of the vine.

The tendril-climbers are the best known of all, since instances are to be found in many of our cultivated vines, as the pea, the grape, the Virginia creeper, etc. For the most part tendrils revolve in circles, ellipses, or spirals, always in search of a support; they have a high degree of irritability, contracting upon anything with which they come in contact, and always bending toward the touched side. All are familiar with the manner in which a tendril secures its hold by coiling its tip around whatever it touches. The motion, however, does not stop here, for it still continues to contract and is twisted into a close spiral which answers a double purpose, viz., to protect the vine by its spring against the effect of violent motions, and by its shortening to lift the vine, just as a man, in climbing, is raised by the bending of his arms.

In *bignonia speciosa*, Mr. Darwin observed a very remarkable movement, which, he rightly says, would be compared with the instinctive motions if it occurred in an animal. The tendrils of this plant continually feel about, as it were, in search of any dark hole into which they can thrust their tips. Into such holes they are sure to insert their tendrils, sometimes after having moved over a large surface. For this purpose the terminal portion, a half or a quarter of an inch in length, is bent at right angles on the barrel part very much as a man would crook his finger for a similar object. Sometimes he has seen a tendril withdraw from a hole it had occupied several hours, and seek and find a new one. While it appears from Mr. Darwin's observations that the light of the sun has some influence over the movements of plants, such as are noticed above, this influence is by no means so uniform as generally supposed, and certainly is not the immediate cause of them. Of about forty species of stem-climbers, more than two-thirds moved from left to right, or against the sun, while nearly all the others revolved in the opposite direction. One plant moved against the sun, while another of the same species moved with it. A species of *hibbertia*, on May 18, followed the sun, on the 19th and 20th moved against it, and on the 26th followed it for two-thirds of a circle, and then returned to its standing-point. In some cases the light seemed to retard, and in others to hasten, the movements. A *convolvulus* required fourteen minutes more to complete the half of its circle of revolution which was towards the light than that which was from it, while in an *ipomæa* the half of the revolution from the light required four hours and a half, and that towards it only an hour.

The tendrils of *bignonia capreolata* seem to have an aversion to light,

for if a dark surface was placed near them they turned to it, and when a plant, having three pairs of tendrils pointing in different directions, was placed in a box open only on one side, and that turned obliquely to the light, the tendrils all bent towards the darkest corner of the box. Mr. Darwin says: "Six tattered flags could not have pointed more truly from the wind than did these branched tendrils from the stream of light which entered the box."

—Much interest has been felt by chemists and meteorologists in the discussion of the many questions concerning the presence and functions of ozone in the atmosphere. Unfortunately, chemists are not all agreed about the trustworthiness of the tests which are used to determine the presence of ozone in the air. In spite of this uncertainty, however, systematic ozonometric observations are being rapidly multiplied. M. Le Verrier lately announced to the French Academy that the Minister of Public Instruction had authorized him to cause ozonometric observations to be made by all the meteorological commissioners of the department of France. Ozone is known to be destroyed by decomposing organic matters, and a large part of the interest which attaches to it is derived from its apparent antagonism to malaria and those insidious products of organic decomposition which are supposed to have something to do with epidemic diseases. Dr. Richardson, of London, has drawn up a list of "the most reliable facts known up to this time respecting ozone," which is interesting as presenting a physiologist's view of the matter, though many persons would demur at some of his statements. We make a brief abstract of his views, as follows:

Ozone is always present in minute proportions, say about one part in ten thousand, in natural air. It is destroyed in large towns, and with special rapidity in crowded, close, and filthy localities. When diffused through air in greater proportion than is natural, though still in minute quantity, it produces on inhalation distinct symptoms of acute catarrh—common cold. When animals are subjected to ozone in large quantities, at a temperature of 75°, the symptoms produced are those of inflammation of the throat and mucous membranes generally, and at last congestive bronchitis, which in carnivorous animals is often rapidly fatal. When animals are subjected for a long period to ozone in small proportions, the agent acts very differently on different animals. The carnivorous die after some hours, from disorganization of the blood; but the herbivora will live for weeks, and will suffer from no acute disease.

The question whether the presence of an unusual quantity of ozone in the air can produce actual disease, must be answered cautiously. Science has as yet no actual demonstrative evidence on the point. But the facts approach to demonstration that common cold—catarrh—is induced by this agent. All else is as yet speculative.

During periods of intense heat of weather, the ozone loses its active power. On dead organic matter undergoing putrefaction ozone acts rapidly; it entirely deodorizes it, and, at the same time, hastens the organic destruction.

There is an opposite condition of air in which the oxygen is rendered negative in its action, as compared with the air when it is charged with ozone. Air can be rendered thus negative by merely subjecting it, over and over again, to the respiration of animals. The purification of such air from carbonic acid and other tangible impurities, does not render it capable of supporting healthy life, but ozone restores the power. In this negative condition of air, the putrefaction of organic matter is greatly modified, and the offensive products are more abundant than is usual. Wounds become unhealthy and heal slowly in such negative air. There is no demonstrative evidence, as yet, that any diseases are actually caused by this negative condition of air, but the inference is fair that diseases which show a putrefactive tendency are influenced injuriously by a negative condition of the oxygen of the air. It is also probable that during this state decomposing, organic poisonous matters become more injurious. As ozone is used up in crowded localities, and as it is essential that this substance should be constantly supplied in order to effect the removal of decomposing substances and their products, Dr. Richardson urges that no mere attention to ventilation, or to other mechanical measures of a sanitary kind, can be fully effective unless the air introduced be made active by ozone. In his opinion, fever hospitals and other large buildings in towns should be artificially fed with ozonized air.

TRY IT!

Moore's Rural New Yorker,

The great Agricultural, Horticultural, Literary, and Family Newspaper. Ably conducted, finely printed and illustrated—(over FORTY Engravings in the four numbers for January). Adapted to whole Continent—both Town and Country. Largest circulating Journal of its Class in the World, and thousands added every week—its cash receipts for 12 days ending Jan. 6, 1866, being $33,859 51! Send $3 for a year—or, if you wish to know more of it first, the 13 numbers of this Quarter (January to April) will be sent, *on trial*, for only 50 cents. TRY THE RURAL and see if it is not THE BEST.

PROF. AGASSIZ' NEW WORK.

Published this Day, by

CHARLES SCRIBNER & CO.,

124 GRAND ST., N. Y.,

THE STRUCTURE OF ANIMAL LIFE:

Six Lectures delivered before the Brooklyn Institute, by Prof. LOUIS AGASSIZ.

One vol. 8vo, 46 Illustrations, $2 50.

CONTENTS:

I. Four different Plans of Structure among Animals.
II. Relative Standing or Gradation of the Animal Kingdom.
III. Remote Antiquity of Animal Life as shown in the Coral Reefs.
IV. Physical History of the Earth.—Man the Ultimate Object.
V. Triple Coincidence in the Succession, Gradation, and Growth of Animals.
VI. Evidence of an Intelligence and constantly Creative Mind in the Plans and Variations of Structure.

Also ready this Day,

New Editions in 12mo size, printed at the *Riverside Press*, uniform with "My Farm" and "Wet Days at Edgewood" (from new stereotype plates), of

IK MARVEL'S

REVERIES OF A BACHELOR. One vol. 12mo, on tinted paper, cloth, $1 75.
DREAM LIFE. One vol. 12mo, do., $1 75.
Also, the Cabinet Edition of these popular Books in 16mo, and bound in green vellum cloth; price, $1 75 each.

C. S. & CO.'S LATEST PUBLICATIONS:

I.

ELEMENTS OF POLITICAL ECONOMY. By ARTHUR LATHAM PERRY, Professor of History and Political Economy in Williams College. One vol. crown 8vo, price $2 50.

II.

HISTORY OF RATIONALISM: Embracing a Survey of the Present State of Protestant Theology. By the Rev. JOHN F. HURST, A.M. One vol. 8vo, price $3 50.

III.

A new and revised edition, with a Supplement, of the

CYCLOPÆDIA OF AMERICAN LITERATURE. By E. A. and G. I. Duyckinck; embracing personal and Critical Notices of Authors, and selections from their Writings, from the earliest period to the present day. 2 vols. royal 8vo; cloth, $10; half calf, $16. The Supplement sold separately when desired; 1 vol., $2 50.

IV.

BY PROF. GEORGE P. FISHER.

ESSAYS ON THE SUPERNATURAL ORIGIN OF CHRISTIANITY, with special reference to the Theories of Renan, Strauss, and the Tübingen School. 1 vol. 8vo, price $3 50.

V.

TIMOTHY TITCOMB'S NEW WORK.

PLAIN TALK ON FAMILIAR SUBJECTS. Uniform with "Titcomb's Letters to the Young," "Bitter-Sweet," "Lessons in Life," etc. 1 vol. 12mo, cloth, price $1 75.

VI.

THE VICARIOUS SACRIFICE; GROUNDED ON PRINCIPLES OF UNIVERSAL OBLIGATION. By Horace Bushnell, D.D., author of "Sermons for the New Life." 1 vol. 8vo, price $3.

VII.

NATURAL HISTORY AND ZOOLOGY. By Prof. Sanborn Tenney, A.M. With over 500 engravings, in 1 vol.; school edition, $3; library edition on tinted paper, $4 50.

VIII.

LIFE AND TIMES OF DR. SPRING.

PERSONAL REMINISCENCES OF THE LIFE AND TIMES OF GARDINER SPRING, Pastor of the Brick Presbyterian Church in the City of New York; with a fine steel portrait; 2 vols. crown 8vo, on tinted paper, price $4.

Copies sent by mail, post-paid, on receipt of price, by

C. SCRIBNER & CO., NEW YORK.

THE NEW HISTORIES.

NOW READY, A SECOND INSTALMENT OF

MARTIN'S HISTORY OF FRANCE,

Being the part following the AGE OF LOUIS XIV., published last year, namely,

THE DECLINE OF THE MONARCHY, 1715—1789.

2 volumes royal 8vo, $8.

☞ The Chapter on the AMERICAN REVOLUTION contained in this part is worth the whole cost of the volumes. Of the general value and importance of this great work there can be no question. A fine steel portrait of Louis XVI. and a map of France accompany the volumes.

Also, the concluding volume (Vol. 4) of the

YOUTH'S HISTORY OF THE REBELLION,

By the author of the "Pioneer Boy," with four spirited illustrations, $1 50. This valuable family history is now complete, in neat box, for $6.

No boy or girl in the land who can read should be without this book.

Also, another volume (the third) of

MARTINEAU'S HISTORY OF ENGLAND.

This carries the History forward to 1835. The fourth and concluding volume (which will contain a complete INDEX to the whole four) will be issued this month. It is impossible to over-estimate the value of this, the *only history of the present century*. As some reviewer has aptly remarked, "No well-informed American can afford not to read it." Price per volume, $2 50.

LATELY PUBLISHED:

ROME. A new volume of the "Spectacle Series." With twenty choice illustrations. $1.

HYMNS FOR MOTHERS AND CHILDREN. Second series. With thirteen exquisite drawings on wood. $3.

THE LORD'S SUPPER AND ITS OBSERVANCE. Edited by Rev. E. E. Hale. $1 50.

REASON IN RELIGION. By Rev. Frederick Hedge, D.D. 12mo. cloth. $2.

FINANCIAL REVIEW.

NATION OFFICE, Saturday Evening, February 10, 1866.

THE feature of the week has been a decline in foreign exchange. Bankers' sterling bills have fallen to 107¼ and 107½. They have not been as low as this since the dead-lock of 1861, when the approach of the war rendered exchange unsalable, and gold was imported from England. The par exchange between the United States and England is about 109⅜ for sterling bills. At 110 gold can be shipped without loss, but with small prospect of profit, except in the case of firms which pay no commissions and but little insurance. To import gold profitably from Great Britain, bankers calculate that they must buy bills here at 106 to 106¼. At this figure, allowing for loss of interest, commissions, and insurance, sovereigns may be imported. Twice within the past few years exchange has fallen to and below 106, and

on each occasion gold has been imported from Europe. But it has generally been re-exported "in the original package." Its mere appearance has had the effect of stiffening the exchange market to such an extent that it has been itself the best of all remittances. In the event of a continued decline in exchange, it remains to be seen whether the same result will follow now, or whether our enormous cotton supply will not make some difference. One thing is certain. When London hears of the decline in exchange, the alarm of January will be considerably increased. It will hardly then be claimed, even by the most besotted British prints, that the trouble arises from undue extension of credit to the United States. Our English friends will then realize the plain fact that the exchanges of the world are gradually tending in favor of the United States; that capital is flowing hither from Europe; and that henceforth New York is going to compete with London for the supremacy of the financial world. The practical results will be obvious. In view of the actual heavy drain of coin from England to India and of the probable drain from England to the United States, the Bank of England will probably advance the rate of interest—possibly as high as 10 to 12 per cent.—and all the loose parcels of 5-20s, Erie, etc., to be found in the London market will come here for sale. It is somewhat doubtful whether the latter will aggregate many millions. No *bona fide* holder of either 5-20s or Erie will sell his property for the sake of easing the London money market. The stronger our financial position becomes, the more firmly will Europeans hold their American investments. Such lots of bonds and stocks as may be held in bankers' or brokers' hands on speculation in London will, of course, be exported to this country; but they are not likely to amount to much. On the other hand, an advance in the Bank rate to 10 or 12 per cent. would prove efficacious if it succeeded forthwith in restoring the exchanges to the side of Great Britain. But if, by chance, the people of England continued to want of us more cotton and more 5-20s than they sent us dry goods and general merchandise, then the advance in the Bank rate would merely embarrass British trade and industry without altering the relative positions of the two countries in the commerce of the world, and would naturally, if prolonged for any length of time, drive to this country a considerable amount of British capital and labor.

Gold has fluctuated between 139 and 140¾, closing at 139 this evening. It has been maintained at this premium exclusively by the policy of the Secretary of the Treasury, who has now over $55,000,000 of gold in his vaults, absolutely dead to commerce. Gold has been worth from ¼ to ⅜ per cent. a day throughout the week, notwithstanding Government sales of $1,500,000 or thereabouts, yesterday and to-day.

Money has been easy throughout the week, the general rate for call loans being 6 per cent. Early in the week thirteen millions of greenbacks were sent from the Sub-Treasury in this city to the head office in Washington. Nothing has transpired with regard to the cause of this transfer. But as no heavy payments on any account are made at Washington, the theory has been started that these thirteen millions are to be cancelled at the Treasury Department, as a commencement of the policy of contraction. No progress has been made with the financial bill in Congress. It was to have been reported on the 8th, but did not make its appearance, owing, it is said, to radical differences of opinion among the members of the Ways and Means Committee.

The following table will show the course of prices during the week in the stock, gold, exchange, and money markets:

	Feb. 3	Feb. 10.	Advance.	Decline.
United States Sixes of 1881	103¾	104⅝	⅝	....
5-20 Bonds, old	103	102⅝	....	⅜
5-20 Bonds of 1865	102	102⅝	⅝	....
10-40 Bonds	94⅛	94⅜	⅜	....
7.30 Notes, second series	99⅛	99⅛	....	....
New York Central	87¾ ex d.	88⅛	⅜	....
Erie Railway	77	78	1	....
Hudson River	99¾	100	¼	....
Reading Railroad	99¼	100	¾	....
Michigan Southern	68¼	69	¾	....
Cleveland and Pittsburg	82	79¾	....	2¼
Chicago and North-western	27⅛	27¾	⅛	....
" " " Preferred	54¼	54⅝	¼	....
Chicago and Rock Island	99⅛	101¾	2¼	....
P., Fort Wayne, and Chicago	92¼	92	....	¼
Canton	43⅜	43⅛	....	....
Cumberland	44¼	44⅛	....	⅛
Mariposa	10⅜	12⅛	1⅝	....
American Gold	140	139	....	1
Bankers' Bills on London	108⅛	107¾	⅞	....
Call Loans	6	6	....	....

The stock market continues feverish and unsettled, but the course of prices during the week has been generally upward. A natural reaction has followed the universal decline of January. It is reported that some of the leading roads will show some improvement in their February traffic, and though public opinion in regard to the course of prices has undergone no change, the disposition to sell for the decline is temporarily checked. On the one hand, the failure of Congress to act upon the financial bill on the 8th inst., as announced, has led to surmises that contraction may not, after all, prove the policy of the day; and on the other, the excessive sales of the bears have tempted many speculators to embark in the fatal but seductive enterprise of a "corner." Michigan Southern has been manipulated by a clique, which at one time put up the price to 70¼. The earnings for February are said to promise rather better than those for January. But no dividend on the stock need be expected this year. Cleveland and Pittsburg has fallen. The clique in this concern now owns all or nearly all the floating shares, and their policy has been such that there is little or no short interest in the stock. On the one hand the bears are afraid to sell, and no one, in or out of Wall Street, is willing to buy. When the clique undertakes to "unload," a decline of 15 to 20 per cent. will be inevitable. New York Central has improved, on purchases for account of a party in connection with which Commodore Vanderbilt's name has been used. There is this to be said in favor of New York Central. It is a safe stock, which has always paid dividends to its stockholders, and, notwithstanding its recent decline in net earnings, an impression prevails that a stoppage of the leaks which existed under the Corning régime might result in a considerable increase in its income. Erie is somewhat higher. At one time during the week it sold as high as 79¼. The advance was mainly due to over-sales by the bears, which created an artificial scarcity of the stock on the 8th. It is pretty well understood that the clique have quite a large quantity of stock unsold, and that any advance will bring it out. Small lots of Erie are arriving per each steamer from England, and the export has for the moment been checked. The earnings of the road continue large, and were there any reason for expecting a decline in the expenses, the future prospect of dividends might be looked for hopefully. An active contest is going on in the stock of the Philadelphia and Reading Road. At one time during the week it sold down to 97. This figure brought the Philadelphians to the rescue, and their purchases, assisted by speculative operations based on the excessive short sales of the bears, carried up the price to 101. In Philadelphia the prospects of the road are considered very bright; and, indeed, there are but few roads in the country which can show $11,000,000 of gross earnings on a capital (including debt) of $28,000,000. Whether these earnings would continue in the event of a decline in the price of coal to the old average, is a problem. The Reading Road, however, is well managed. No money is thrown away. Every department is narrowly scrutinized; and the company may now, in fact, be said to control the anthracite coal trade of this country. This has not prevented one of the shrewdest operators of the Street from selling several thousand shares short on long options. Rock Island has improved, and has been taken in large amounts by a leading house. No reasonable doubt of the April dividend can be entertained, but it will be strange if, with the Mississippi open, the summer earnings should keep up to the average of the past year or two. We note a further advance in the stock of the Chicago and Alton, which is now quoted at 118 to 120. No securities are more popular with investors than really sound dividend-paying railway stocks.

An active movement in Pacific Mail is expected to result from the announcement of the opposition line to California, organized by Mr. William H. Aspinwall and his associates. The Pacific Company have sold their two idle boats—the *Baltic* and *Atlantic*—have increased their surplus to over a million dollars in cash, and are prepared, it is understood, to fight the newcomer from the start. On the other hand, Mr. Aspinwall and his associates are not men to be frightened off. There is thus a prospect that the rate of fare to San Francisco will be very much reduced this summer, and that the comforts of travellers on the route will be more carefully watched over than has been heretofore the case. A fall in Pacific Mail, which has been lately selling at 185 to 190, as against 300 a year ago, would likewise seem a probable incident of the fight.

Thirty-first Dividend

NIAGARA FIRE INSURANCE COMPANY,

OFFICE, 12 WALL STREET,

JANUARY 10, 1866.

The Directors have This Day declared a Semi-Annual Dividend of

SIX PER CENT.,

FREE OF U. S. TAX

(Reserving all unexpired premiums), payable on and after MONDAY, the 15th inst.

THE MERCANTILE MUTUAL
INSURANCE COMPANY.
OFFICE, 35 WALL STREET, NEW YORK.

Assets, January 1, 1866 . . . . . $1,366,699

ORGANIZED APRIL, 1844.

The Company has paid to its Customers, up to the present time, Losses amounting to over

EIGHTEEN MILLIONS OF DOLLARS.

For the past nine years the cash dividends paid to Stockholders, made from ONE-THIRD of the net profits, have amounted in the aggregate to

ONE HUNDRED AND TWENTY-ONE AND A HALF PER CENT.

Instead of issuing a scrip dividend to dealers, based on the principle that all classes of risks are equally profitable, this Company will hereafter make such cash abatement or discount from the current rates, when premiums are paid, as the general experience of underwriters will warrant, and the net profits remaining at the close of the year will be divided to the stockholders.

This Company continues to make Insurance on Marine and Inland Navigation and Transportation Risks on the most favorable terms, including Risks on Merchandise of all kinds, Hulls, and Freight.

Policies issued making loss payable in Gold or Currency, at the Office in New York, or in Sterling, at the Office of Rathbone, Bros. & Co., in Liverpool.

NATIONAL LIFE AND TRAVELLERS' INSURANCE CO.,
243 BROADWAY, NEW YORK,
OPPOSITE CITY HALL PARK,
Authorized Capital, - - - Half a Million,

AGAINST EVERY DESCRIPTION OF ACCIDENTS that can happen to me on Sea or Land.

I can ensure my life on the purely Mutual Plan, either by an Endowment, or a Life Policy, or a Ten-year Non-forfeiture Policy.

$25 secures a General Accident Policy for $5,000, with a Weekly Compensation of $25.

$10 secures a Marine Policy for $10,000 for a voyage to any European port, covering loss of life at sea from accident.

$167 35 per annum secures an Endowment Policy for $5,000, with profits payable at the age of 50, or at death to a person 25 years of age.

$96 90 per annum secures a Life Policy for $5,000, with profits, to a person 25 years of age. A Loan of one-third of the Premium, or Life, or Endowment Policy will be given, if required, without note.

POLICIES ISSUED AT ONCE.

NO MEDICAL EXAMINATION REQUIRED for General Accident Policies.

GREAT NATIONAL SAVINGS BANK.

CASH CAPITAL, - - - $1,400,000 00

THE UNION MUTUAL LIFE INSURANCE COMPANY

is one of those well-established and prudently managed Life Insurance Companies which distinguish this nation for enlightened benevolence, practical wisdom, and disinterested philanthropy. It offers superior advantages to the life-ensuring public. It is based upon fundamental principles of soundness, and gives abundant security in large accumulated funds. Through the admirable economy of its management large dividends are secured to policy holders. It is prompt in payment of losses, and accommodates the assured in the settlement of their premiums in life policies by receiving a note for one-half when the premium amounts to over $30.

THIS COMPANY offers PECULIAR ADVANTAGES to persons intending to ensure their lives.

Since its organization it has paid (chiefly to Widows and Orphans) for losses by death,

$912,342 00,

and

$412,748 00

in Dividends—a total of over

ONE AND A QUARTER MILLION

of Dollars, and now has, in its Capital and Accumulations, securely invested for the Payment of Losses and Dividends, a fund of

$1,400,777 16.

This is one of the oldest wholly *Mutual* Life Insurance Companies in the United States, and has been uniformly successful, having always made large returns in Cash dividends to all the policy holders.

The Nation:

A Weekly Journal of Politics, Literature, Science, and Art.

THIS journal will not be the organ of any party, sect, of body. It will, on the contrary, make an earnest effort to bring to the discussion of political and social questions a really critical spirit, and to wage war upon the vices of violence, exaggeration, and misrepresentation by which so much of the political writing of the day is marred.

The criticism of books and works of art will form one of its most prominent features: and pains will be taken to have this task performed in every case by writers possessing special qualifications for it.

It is intended, in the interest of investors, as well as of the public generally, to have questions of trade and finance treated every week by a writer whose position and character will give his articles an exceptional value, and render them a safe and trustworthy guide.

A special correspondent, who has been selected for his work with care, is pursuing a journey through the South. His letters appear every week, and he is charged with the duty of simply reporting what he sees and hears, leaving the public as far as possible to draw its own inferences.

TERMS:—Six Dollars per annum, in advance; Six months, Four Dollars. When delivered by Carrier in New York or Brooklyn, Fifty Cents additional.

JOSEPH H. RICHARDS,

PUBLISHER,

130 Nassau Street, N. Y.

WILLIAM KNABE & CO.'S

Celebrated Gold Medal

GRAND, SQUARE, AND UPRIGHT

PIANOS.

SCHOOL FURNITURE!

Lecture-Room and Sabbath-School Settees

IN EVERY STYLE,

MANUFACTURED BY

ROBERT PATON,

24 GROVE STREET, NEW YORK.

THE BEST SEWING-MACHINES IN THE WORLD.

THE WEED MACHINES,

With all their valuable improvements, entirely overcome all imperfections. They are superior to all others for family and manufacturing purposes, simple in construction, durable in all their parts, and readily understood. They have certainty of stitch on all kinds of fabrics, and are adapted to a wide range of work without change or adjustment, using all kinds of thread. Will hem, fell, bind, gather, braid, tuck, quilt, cord, and, in fact, do all kinds of work required by families or manufacturers. We invite all persons in search of an instrument to execute any kind of sewing now done by machinery to inspect them, and recommend all parties engaging in the sale of sewing-machines to make sure they secure the best by examining the WEED before purchasing. They make the shuttle-stitch, which cannot be excelled for firmness, elasticity, durability, and elegance of finish. They have received the highest premiums in every instance where they have been exhibited in competition with other standard machines. The company being duly licensed, the machines are protected against infringements or litigation.

Reliable agents wanted, to whom we offer great inducements. Every explanation will be cheerfully given to all, whether they wish to purchase or not. Descriptive circulars, together with specimens of their work, will be furnished to all who desire them by mail or otherwise.

WEED SEWING-MACHINE CO.,

STORE, 506 BROADWAY, N. Y.

GROVER & BAKER'S

SEWING MACHINES

WERE AWARDED THE HIGHEST PREMIUMS

At the State Fairs of

New York,	Illinois,	Virginia,
New Jersey,	Michigan,	N. Carolina,
Vermont,	Wisconsin,	Tennessee,
Pennsylvania,	Iowa,	Alabama,
Ohio,	Kentucky,	Oregon,
Indiana,	Missouri,	California,

And at numerous Institute and County Fairs, including all the Fairs at which they were exhibited the past three years.

The GROVER & BAKER ELASTIC-STITCH SEWING MACHINE is superior to all others, for the following reasons:

1. The seam is stronger and more elastic than any other.
2. It is more easily managed, and is capable of doing a greater variety and range of work than any other.
3. It is capable of doing all the varieties of sewing done by other machines, and, in addition, executes beautiful embroidery and ornamental work.

Agents wanted.

Improvements in Piano-fortes.

One of the simplest and most truly valuable improvements yet made in the Piano-forte is that invented and patented by

DECKER BROTHERS, 91 BLEECKER STREET,

in this city. By correcting the only imperfections arising from the use of the full iron-plate, and that, too, by not detracting in the slightest degree from its many positive advantages, the Messrs. DECKER have developed in their instruments a tone at once admirable for its purity, fulness, prolongation, and sweetness, and the high estimation in which their improvement is held is well shown in the rapidly increasing business of their firm.—*Tribune.*

MARVIN'S

PATENT FIRE AND BURGLAR SAFE.

Superior to any others in the following particulars

They are more fire-proof.

They are more burglar-proof.

They are perfectly dry.

They do not lose their fire-proof qualities by age.

Manufactured only by

MARVIN & CO., 265 Broadway.

721 Chestnut Street, Philadelphia.

Send for a descriptive Circular.

Saleratus.—B. T. BABBITT'S SALERATUS, 70 Washington Street, N. Y. If you want healthy bread, use B. T. Babbitt's best medicinal Saleratus, made from common salt. Bread made with this Saleratus contains, when baked, nothing but common salt, water, and flour. B. T. BABBITT, 64, 65, 66, 67, 68, 69, 70, 72, and 74 Washington Street, N. Y.

Economical Housekeepers Use

PYLE'S SALERATUS. | PYLE'S O. K. SOAP.
PYLE'S CREAM TARTAR. | PYLE'S BLUEING POWDER.

Articles designed for all who want the best goods, full weight. Sold by best Grocers everywhere. Each package bears the name of JAMES PYLE, Manufacturer, New York.

The Horace Waters

Grand, Square, and Upright PIANOS, MELODEONS, HARMONIUMS, and CABINET ORGANS. Wholesale and retail, at reduced prices. To let, and rent allowed if purchased. Monthly payments received for the same. Second-hand Pianos at bargains, prices $60, $75, $100, $125, $150, $175, $200, and $225. Factory and Warerooms, 481 Broadway. Cash paid for second-hand Pianos.

UNIVERSAL CLOTHES WRINGER,

WITH COG-WHEELS.

The World's Fair in London, the Mechanics' Institute, and Eleven State Fairs have decided that the U. C. W. is THE BEST.

We also WARRANT IT THE BEST and most durable Wringer made. Over 200,000 have been sold, and each family can testify to its superior merits.

"It saves its cost in clothing every year."—ORANGE JUDD.

"One of the most useful articles in my house."—MRS. HENRY WARD BEECHER.

"I heartily commend it."—REV. DR. BELLOWS.

Call or send for illustrated circular, with testimonials, retail prices, and terms to salesmen.

Money can be made rapidly selling them in every town.

HENRY OWEN, Sole Agent.

STEINWAY & SONS'

GRAND, SQUARE, AND UPRIGHT PIANO-FORTES

Have taken Thirty-two First Premiums, Gold and Silver Medals, at the Principal Fairs held in this country within the last ten years, and in addition thereto they were awarded a First Prize Medal at the Great International Exhibition in London, 1862, in competition with 269 Pianos from all parts of the World.

That the great superiority of these instruments is now universally conceded is abundantly proven by the FACT that Messrs. Steinways' "scales, improvements, and peculiarities of construction" have been copied by the great majority of the manufacturers of both hemispheres (AS CLOSELY AS COULD BE DONE WITHOUT INFRINGEMENT OF PATENT RIGHTS) and that their instruments are used by the most eminent pianists of Europe and America, who prefer them for their own public and private use, whenever accessible.

STEINWAY & SONS direct special attention to their

PATENT AGRAFFE ARRANGEMENT,

which, having been practically tested in all their grand and highest-priced Square Pianos, and admitted to be one of the greatest improvements of modern times, will hereafter be introduced in EVERY PIANO MANUFACTURED BY THEM WITHOUT INCREASE OF COST to the purchaser, in order that ALL their patrons may reap its benefits.

STEINWAY & SONS' PIANOS are the only American instruments exported to Europe in large numbers, and used in European concert-rooms.

WAREROOMS, 71 & 73 EAST FOURTEENTH ST., between Union Square and Irving Place, New York.

JOSEPH H. RICHARDS, PUBLISHER, 130 NASSAU STREET, N. Y.

The Week.

MR. POLLARD has managed to procure from the President permission to resume publication of the Richmond *Examiner*, on promise of exceedingly good behavior. General Grant has, however, issued a general order directing the various commanding officers to keep their eyes on the Southern press, with the view of punishing such newspapers as are guilty of continued attempts to excite hatred of the Government and sow ill-will between North and South. This may, at the present juncture, seem a necessary precaution, but we doubt very much whether the muzzling of the press will do much towards putting the South in a good humor. The theory of despotic governments is that, by carefully preventing all public expression of disloyal feeling, the feeling itself will be at last extinguished, but the plan has never succeeded, though it has been tried in a dozen countries ever since the invention of printing. Nor will it succeed in the South. The only antidote that we know of for the raving of Southern zealots, is the maintenance of free speech by the strong hand in every part of the country. Let Southern editors say what they please, but give those who differ with them a chance of making themselves heard, also, with safety, if not with comfort. Mr. Pollard writes as he does, and his readers feel as they do, solely because for years before the rebellion no man dared to gainsay any of the teachings by which the country was at last plunged into civil war. Can the Reconstruction Committee and Congress not see that this must be the basis of all plans for the social or political regeneration of the South?

THE reports of the proceedings of Congress sound oddly occasionally as given in the daily press. Mr. Lawrence, of Ohio, for instance, is described as having introduced a bill "to provide punishment for throwing cars from railroad tracks," from which one might conclude that this was a species of amusement which was being carried a little too far, and which the law had to interfere to restrain. We believe, however, that it is in all the States a crime for individuals, and that impunity attends its commission only when corporations indulge in it. If Mr. Lawrence could provide for the appointment of inspectors of railroad tracks, who would be sure to do their duty, and care more for the public than for the companies, he might safely leave the punishment of throwing trains off the line to State laws.

WE recommend to the Citizen's Association the plan adopted by our Irish fellow-citizens who desire clean streets for their procession on St. Patrick's Day. They have sent in advance to the Mayor an exact description of the route they will take, with the request that he will see to clearing it of all unnecessary filth. No reply could have been more prompt or gracious than his Honor's, as no precaution could have been more thoughtful than this, which was taken a month in advance of the time. Now if Messrs. Hecker, Cooper, and Stewart will only give their employees a holiday, say on the 18th of March, on condition that they shall parade through the streets which our Irish benefactors avoid, and warn the Mayor betimes, we may get the whole city tolerably cleaned, and so far prepare it for the coming of the cholera.

GEN. LEE has made his appearance in Washington, for the first time since he deserted the United States army, and has given evidence before the sub-committee touching the state of Virginia. His reflections during his visit to the city must have been painful, and his expression of a wish that the Government "may endure for all time," was, if sincere, considering how he has spent the last four years, an act of humiliation that might satisfy a Dominican confessor. His account of the state of feeling in Virginia adds nothing to what we know already.

JOHN MITCHEL writes from Paris to congratulate Mr. O'Mahony on "having got rid of the title of president, and of the constitution, and of the senate." We trust that this magnificent contempt for the law and the authorities will not animate the "executive" after they get installed in Dublin. We recommend the Irish people to exact the most stringent guarantees from both Mitchel and O'Mahony before they let them drive the English out of the island. Mitchel is a desperate man, and if he were once allowed full discretion in dealing with the English, there is no knowing how he might behave to the republic afterwards. The agent of the Fenian finance department reports the investment of fifty dollars by an "intelligent darkey" in the bonds of the republic. The "darkey" in question must not only be "intelligent," but of a highly speculative turn, and a person of considerable means.

THE New York *Times's* correspondent sends that paper an account of the state of society in Texas which is so horrible as to be almost amusing. He calculates that out of 14,000 inhabitants of Galveston, 2,000 are "murderers, vagabonds, and thieves." Murders and murderous assaults are the order both of the day and night, and the inhabitants begin to talk of a vigilance committee. The Germans through the State feel very bitterly over the treatment experienced by them during the war. Large numbers—larger than we have any idea of here—were murdered for refusal or unwillingness to join the Confederate army.

THE iron-clads at League Island are either ice-bound or stranded, and in either event most uncomfortably situated either for preservation or for use. The gift of that mud-bank to the nation for a navy yard is one on which Philadelphians pride themselves, but it had best be looked in the mouth before it is accepted. The site could be made tenable only at great cost; it is not readily accessible at all seasons; is deficient in depth of water; exposed to floating ice; of doubtful healthfulness, and its fresh water seems to be its only recommendation. But there is no point of the comparison between it and New London in which it has any advantage, while in many it is vastly inferior, and especially in this of serving as a haven for laid-up iron-clads. The harbor on the Thames is highly sheltered, the river never freezes, and communication with the sea is always open. The experience of this winter ought to hasten the action of Congress, which is already familiar with the merits of these rival stations from the reports of various naval committees.

THE Chamber of Commerce of Charleston met last week for the first time, we believe, since the war, and Mr. George Trenholm, on moving

a set of resolutions, spoke magniloquently of the service the South had rendered the negroes during the existence of slavery. He said "it had educated them; took them barbarians, and returned them civilized and Christian to those from whom we received them." He added that the Southerners "could give no better evidence of the manner in which they had acquitted themselves of those duties than is afforded by the judgment of others as to the qualifications for citizenship of our emancipated slaves." Mr. Trenholm is evidently a little of a wag and a good deal of a sophist.

Apropos of the remarks on another page about wasting the President's time with objectless or unnecessary calls, a Washington correspondent relates that a company of ten New York Congressmen called one evening last week on Mr. Johnson "for a friendly consultation." "They came away," it is added, "without being able to draw him into conversation." The fact deserves to be recorded in that article which is now a favorite selection with country newspapers—"remarkable escapes of great men."

A person named Fleming has announced in the papers that he was the person whom Senator Wade accused of an attempt to assassinate him, but that the whole foundation of the story was that he took out a jack-knife in Mr. Wade's presence, cut off a "chew" of tobacco, and spat in the fire. After the performance of these harmless and genteel acts, finding Mr. Wade cold in his manner and absorbed in a newspaper, he wished him good evening and left the room, and he boldly insinuates that the attempt to assassinate and the kicking down stairs only took place in Mr. Wade's imagination. The public had, however, only begun to enjoy the relief caused by this explanation when the senator announced that Fleming was not the man, and thus we are again plunged in gloom and uncertainty.

The internal revenue returns for the last year have brought out the fact that the five Eastern States have contributed nearly three times as much to the national coffers as the Western. On the other hand, the West, we believe, contributed a larger proportion of fighting men during the war, but the revenue returns from some of the Western States seem suspiciously small. It is an odd thing that Illinois should pay little over one-half as much taxes as Ohio.

Mr. Timothy G. Churchill, the treasurer of the Lincoln Monument Fund, writes to us to say that the sum now on hand is $15,000, invested in United States seven-thirty bonds, and that, with a view of "securing at an early day" such additions to the fund as may be necessary to complete the monument, the committee has been enlarged by the addition of the one appointed by the Union League Club. The committee is now composed of twelve prominent citizens of New York. We do not know what the nature of the monument is to be, but we fear that there is a good deal of work still to be done in raising money if the scheme is to be worthily carried out.

One cannot help censuring the Speaker of the Tennessee House for joining in Saturday's debate without leaving his chair, and for using such unparliamentary language toward a member as "d——d old liar," "lying scoundrel," etc. But for merely "accompanying the words with his mallet, which he hurled with considerable force at the head of Mr. Mullens," who straightway drew a pistol on him, some praise may even be accorded. When two Southern men fall out and only one proves to be armed with a deadly weapon, it is a sign that the old-style civilization is giving way to something better. In the present case it were much to be wished that Mullens had retorted with his inkstand.

The sub-committee deputed by the Committee on Reconstruction to consider the case of Tennessee has reported a bill admitting that State to the Union and fixing her representatives at eight until another apportionment of the representation according to actual enumeration. The full committee, however, require the insertion of a clause in her constitution providing for the equality of her people, and the repudiation of the rebel debt. But if Tennessee has now to be declared by law a State of the Union, what has been her position during the last four years?

The long-talked-of race between the *Winooski* and *Algonquin*, or, as one might say, between Mr. Isherwood, of the Navy Department, and Mr. Dickerson, took place on the Sound on Tuesday and Wednesday of last week. We suppose it was "just her luck," but the *Algonquin* was fearfully distanced; steered wildly; broke part of her machinery, and went through her usual chapter of accidents. It is thought now that the controversy is settled, and we observe that the reporters for the press who have danced attendance on the two vessels heartily pray that it may be so. But the defeated party chose in advance to decline the issue of speed for that of economy, and we do not despair of further and very lusty wrangling.

The Fenian excitement continues in Ireland, and is, if anything, on the increase. It is, of course, fed by the organization in this country, and will probably not die out until the Brotherhood here have really tried their luck in arms on some spot of British territory. What the result of any such attempt would be, it is, of course, easy to predict. In the meantime, the agitation is doing some good by shaming even English conservatives into a calm and serious consideration of the "Irish difficulty." The *Saturday Review* has at last been driven to acknowledge that there is behind the Fenians something which the Fenians can neither belittle nor make ridiculous; that the condition of Ireland is a disgrace to Great Britain, and that all means taken to change it hitherto have been next to worthless. Some of the liberal journals acknowledge, with a half shudder, that it seems as if nothing but the transfer of the land to the tenantry, in fee, would be sufficient to solve the problem. Mr. Mill has declared that this is perhaps the only possible solution, and the effect of the spoliation of the aristocracy in France on the physical condition of the French people would seem to be a strong argument for it. But then this would be a social revolution, and what English minister dare propose it?

Mr. Peabody has increased his donation for the benefit of the London poor by £100,000, making in all a quarter of a million of pounds sterling. Whether this is in consequence of the failure of the original outlay to reach the class for which it was intended—*i. e.*, the very poor—or because Mr. Peabody is satisfied with what has been done, we cannot say. His gift, even if rightly applied, could relieve but a small proportion of those who are either homeless, or unwilling inmates of tenement-houses. The London *Times* is unspeakably astonished at his liberality, which is, indeed, without a parallel.

The *Eco del Pais* describes the appearance of Prim's insurgent army at Bodonal, on the Portuguese frontier, as that of great dejection and exhaustion. The general had not quite a thousand men with him. All were eager to reach the border, and none anxious to contest its passage with the Queen's troops. Some boys at Bodonal fully responded to the cry of the troops, "Long live General Prim; hurrah for freedom; down with the imposts!" and one citizen joined his voice to theirs. "Oh yes," said the general bitterly, "you hurrah me, but you do not follow me with your weapons in your hands, to fight for liberty and the good I would win you." A peasant working in the fields, by the road along which the insurgents passed, came out, and, taking Prim's horse by the bridle, asked him what ends he proposed to achieve. The general answered him: "Liberty; the happiness of the people; the reduction of the imposts; four years' service for the soldiers who follow me, and the suppression of the town-dues." But it appears, from his present course, that General Prim proposes to himself to do all this good thing in Portugal rather than in Spain. We cordially invite him to come here and open a regenerate kingdom in this city. He must have enough money left to pay the rent of a furnished house for two or three years and get bonds printed.

Mr. Cassius M. Clay recently visited Moscow and was given a banquet by the leading merchants of the ancient Russian capital. It came out, in the after-dinner speeches, that America and Russia had

always been great friends, and would always remain such, since they had no conflicting interests; just as at international banquets in England it appears that both people have a common ancestry and both speak the language of Shakespeare and Milton. The dinner, of course, had no political importance.

THE domiciliary treatment of the sick and infirm of the poor in Paris is growing in favor with men of science. The report, recently made, of the director of the *Assistance Publique*, declares that the larger number of recoveries takes place when invalids are allowed to remain with their families, and that the superior care of hospital attendance is counterbalanced by the encouraging influences of familiar scenes.

A CONFLICT between the Prussian Crown and Parliament has already arisen. A pestilent deputy has asked to know how Lauenburg came to be united to the crown at a time when Parliament was not in session, and in spite of the constitutional provision declaring that the King cannot become sovereign of foreign states without the consent of the Chambers. Von Bismark has made no reply whatever to this demand.

A FACT significant of a friendlier feeling than has heretofore existed between the Italian and Austrian courts is, that Francis Joseph has ordered mourning for twelve days as a token of regret for the death of the Duke of Monferrato, son of Victor Emanuel.

THE *Italie* denies that the Pope has accorded an amnesty to the political convicts in the pontifical prisons. His Holiness has not even forgiven the offenders born in the Romagna and the other territories united to Italy in 1860, who happened, at the time of the union, to be in the galleys at Civita Vecchia. The Pope is sick, but he is not yet a saint.

AN Imperial edict addressed to the Czar's lieutenant at Warsaw orders the establishment of public schools in Poland, in which the Russian and Polish languages and the histories of the two countries shall be taught indifferently.

CONGRESS.

WASHINGTON, Feb. 17, 1866.

THE debate upon the proposed constitutional amendment fixing the basis of representation still continues at great length in the Senate. The vote will probably be taken upon it during the coming week. Meanwhile another important constitutional amendment has been reported by the Joint Committee of Fifteen, the discussion of which will be commenced in the House as soon as sundry election cases and appropriation bills are considered. This second proposed amendment lays the foundation for a direct regulation of civil rights in the States by the federal Government, but does not touch the question of suffrage. The committee is divided in opinion as to the present expediency of a radical measure extending the elective franchise to men of all races and colors, and it is not probable that such an amendment will be recommended at the present session of Congress.

It is understood that the Joint Committee agreed to report early next week in favor of a "recognition" by Congress of the loyal State government now organized in Tennessee, as asked for in a memorial presented the other day in the Senate from four of the eight representatives elect from that State. It is important to explain that this step is not, as might otherwise be supposed, in entire consonance with the President's wishes and policy, and Mr. Patterson, senator elect from Tennessee, and a son-in-law of President Johnson, declined signing the memorial to Congress. The President's theory is that Tennessee, like the other rebel States, has never been out of the Union in any sense, and that, consequently, no recognition or re-admission of it as a State is proper at the hands of Congress, whose sole duty in the premises consists in the immediate admission of its chosen senators and representatives. The memorial of Mr. Horace Maynard and his colleagues, and the report of the Joint Committee of Fifteen, on the other hand, assume the right in Congress to recognize or reject the State government organized in Tennessee. The memorial goes further, and asks that Congress will not only recognize it as "the true and proper government" of the State, but will "guarantee its perpetuity." Now, there are only two ways in which Congress can guarantee the perpetuity of Gov. Brownlow's government. One is, by sending enough United States troops to the State (and keeping them there) to maintain the loyalists against the disloyal majority, which, by the united evidence of trusty witnesses, including the governor himself, still exists there. But is this a republican form of government? The other way is for the black population to be invested with the elective franchise. It is a knotty question, and the report of the Joint Committee upon the recognition or re-admission of Tennessee will be the entering wedge to a discussion which will probably outlast all the rest, and will open up difficulties which are very likely to prevent any precedent of reconstruction being established at the present session.

The petitions just presented in the Senate from Virginia loyalists, praying Congress to resume control of the government of that State, on the ground of the utter disloyalty of the majority as represented by the existing Legislature, afford a pregnant lesson to the hasty reconstructionists. When even the President, whose magnanimous policy was summed up in the watch-word, "We must trust the South," finds it necessary to suppress newspapers and nullify laws by military edict, in a State lying within sight of the national Capitol, is it not fair to conclude that his theory of the indefeasible rights of the "restored" States is subject to pretty wide exceptions?

The general bankrupt act reported by Mr. Jenckes, of Rhode Island, in the last Congress, and amended in much detail by the House at the present session, encountered an unexpected obstruction to its passage (previously regarded as certain) by a single concise sentence from Thaddeus Stevens. He said: "This is not the time, when all rebeldom is indebted to us, to pass a law to free them from their debts."

The appointment of a Select Committee of Seven, in the House of Representatives, to consider and report upon the subject of a National Bureau of Education, is a noteworthy sign of the tendency of the times. Gen. J. A. Garfield is chairman of the committee, and its other members are Messrs. Patterson, Boutwell, Donnelly, Randall, Moulton, and Goodyear. This is a strong committee, but the bill referred to them, providing for the organization of the bureau, is not a very strong measure. It merely provides for a National Commissioner of Education, with sundry clerks, under the direction of the Secretary of the Interior, whose duty it shall be to collect and diffuse facts and information regarding popular education and the conduct of schools throughout the States and Territories.

DIARY.

Monday, Feb. 12, 1866.—The two Houses of Congress met in joint session in the hall of the House of Representatives, in commemoration of the late President Lincoln, this being the anniversary of his birth. A memorial oration was pronounced by George Bancroft. No business was transacted by either House.

February 13.—In the Senate, Mr. Morgan presented the credentials of Lewis E. Parsons as a senator from Alabama. Laid on the table. Mr. Wilson's bill to increase and fix the military peace establishment was passed to a second reading. Mr. Fessenden, from the Joint Committee of Fifteen, reported the following proposed amendment of the Constitution: "The Congress shall have power to make all laws which shall be necessary and proper to secure to the citizens of each State all privileges and immunities of citizens in the several States; and to all persons in the several States equal protection in the rights of life, liberty, and property." Laid on the table. The Committee on Commerce were instructed to enquire what legislation is needed by Congress to protect life from danger by explosion of tubular boilers. The naval appropriation bill passed by the House was referred. Mr. Sprague's motion to reconsider the passing of the bonded warehouse bill came up, when he opposed the bill as intended to regulate prices, and as giving the foreign importer unfair advantages over the domestic manufacturer. The constitutional amendment, regulating the basis of representation, was taken up. Mr. Sumner offered an amendment to it, exempting from taxation all persons excluded from the right of suffrage on account of race or color.

In the House, a resolution declaring against the French protectorate in Mexico, and looking to an alliance of all the republics on this continent, was referred to the Committee on Foreign Affairs. A motion to admit to the privileges of the floor Col. T. M. Johnson, claimant of a seat from Arkansas, was defeated—yeas, 70; nays, 78. The Joint Committee of Fifteen reported to the House the constitutional amendment already cited in the Senate proceedings. Recommitted, with leave to report at any time. The rest of the day was consumed in a Michigan contested election case.

February 14.—In the Senate, Mr. Sumner presented a petition from women, asking an amendment of the Constitution to prohibit any State from disfranchising any their citizens on account of sex. Mr. Sumner remarked that he did not think this

proper time for the consideration of this question. Many petitions were presented praying for universal suffrage. Mr. Grimes presented a memorial from Horace Maynard and three other representatives elect from Tennessee to the House of Representatives, asking that the present loyal State government of Tennessee may be recognized by Congress, and its perpetuity guaranteed as the true and proper government of that State. Referred to the Joint Committee of Fifteen. Bills were passed to incorporate the Metropolitan Insurance Co. of the District of Columbia, and to grant public lands to the State of Wisconsin to aid in connecting the waters of Green Bay with Lake Michigan. The Senate resumed the special order, being the constitutional amendment fixing the basis of representation. Mr. Henderson spoke at length against it and in support of his amendment prohibiting the States from disfranchising citizens on the ground of color. He said the amendment of the Committee of Fifteen was a compromise, which surrendered the rights of the negro out of the hands of the general Government into the hands of States not fit to be entrusted with them. Mr. Clark advocated the amendment, on the ground that it was virtually granting to all the people of the country, both white and black, the right of suffrage. He held that the rebellious States had forfeited their political rights, and it would not now be safe to restore them to the Union.

In the House, the bill granting the use of United States vessels to the Commissioners of Quarantine was passed. Mr. Garfield offered a bill to establish a National Bureau of Education. Referred to a Select Committee. A bill was passed increasing the clerical force in the Post-office Department. A joint resolution was passed authorizing a commission to be appointed to select a site for a Post-office and United States Courts in New York city, and to report the cost to the Postmaster-General and Secretary of the Interior. The Senate bill to authorize the sale of postage stamps on credit in the Southern States was discussed, without result. The Michigan contested election case was resumed, the question turning upon the validity of soldiers' votes, given in camp in the South, in pursuance of an act of the Legislature of Michigan. The House affirmed the validity of the election of the sitting member, Mr. Trowbridge (Rep.), by a vote of 108 to 30. The consideration of the bankrupt bill was resumed. Mr. Stevens opposed it on the ground that "all rebeldom is in debt to us, and this is not the time to free them from their debts."

February 15.—Mr. Wade presented the petition of 500 colored soldiers in the regular army, praying for the same rights as are accorded to white men. Referred. Also a memorial of the Friends' Association, of Philadelphia, praying that the right of suffrage be conferred without distinction of color. Referred. Also resolutions of the Legislature of Ohio against the assumption of the war debts of the States by the general Government. Mr. Sumner presented the memorial of George T. Downing, Fred. Douglass, and other colored citizens of the United States, protesting against the constitutional amendment now pending, as introducing, for the first time, into the Constitution a grant to disfranchise men on the ground of race or color. Laid on the table. The bill to increase and fix the military peace establishment was taken up, but, without acting upon it, the Senate resumed the order of the day, being the constitutional amendment fixing the basis of representation. Mr. Williams, of Oregon, argued in favor of it as the best measure before the Senate. He was for proceeding slowly in the work of reconstruction, and thought the President had pardoned far too many rebels. He did not think the negro now fit to vote, nor his master either. The Senate passed a bill to prevent and punish kidnapping of the freedmen, by a fine of from $500 to $5,000, and imprisonment not exceeding five years.

In the House, the miscellaneous appropriation bill, to meet deficiencies of the current fiscal year, was considered and amended. Messrs. Newell, Strouse, and Defrees made speeches upon reconstruction.

February 16.—In the Senate, Mr. Howard presented the memorial of 175 citizens of Alexandria (Va.), and eleven other petitions from that State, in favor of the establishment of a territorial government for that State. Referred. A bill was reported granting lands to the Iron Mountain RR. Co., of Missouri. The Senate passed the bill to extend the benefits of the pension laws to artificers in the service of the United States. Also the bill relating to the Court of Claims, and providing for an appeal to the Supreme Court in certain cases. The Committee on Commerce reported a bill granting to the International Ocean Telegraph Company the exclusive right for twenty-five years to lay and operate telegraphic cables from the United States to the West India Islands. Laid over. The proposed constitutional amendment was taken up. Mr. Hendricks opposed it, arguing that the proposition did not rest the right of representation upon population, nor upon property, nor upon voters; that it was a proposition to perpetuate the power of the Republican party, and intended as a punishment to the Southern States. Adjourned to February 19.

In the House, a bill was offered and referred to punish the crime of throwing trains from railroad tracks. Also, to punish larcenies and robberies of securities and other property belonging to the United States. Also, a bill to establish United States revenue courts. Also, a bill to reimburse the loyal States for debts contracted in support of the war. A resolution was passed to enquire into the expediency of making an appropriation for a medical and surgical history of the rebellion, to be compiled by the Surgeon-General of the United States. A bill to establish a uniform system of sewerage in the city of Washington was referred. The rest of the day was consumed upon the contested election case of Koontz *vs.* Coffroth, each claiming to represent the sixteenth Pennsylvania District.

February 17.—The Senate was not in session.

In the House no business was transacted, but speeches on reconstruction were made by Messrs. Cook, Lawrence, and Cullom. Adjourned to February 19.

THE FREEDMEN.

Gen. Swayne reports from Alabama that the prompt arrest of men, in various counties, for plundering and otherwise abusing negroes has had an excellent effect. He joins with his fellow assistant commissioners in protesting emphatically against the removal of the troops, and urges the superior advantages afforded by cavalry over infantry garrisons. Gov. Patton has manifested his determination to co-operate heartily with the Bureau by vetoing numerous objectionable bills sent him by the State Legislature. That body has appropriated one million dollars, contingent, for the relief of destitute inhabitants. The United States will assist with a limited number of rations. The State is quieting down, and if loyal sentiment is not decidedly on the increase, there is an abatement in what the agents of the Bureau feel bound to repress. The commingling of the freed people during the holidays caused a spread of contagious diseases, especially small-pox, but their progress has been everywhere stayed by the exertions of the medical officer.

Gen. W. P. Richardson, commanding the military district of eastern South Carolina, has exercised a very happy influence on the relations between the planters and the freedmen, taking as his guide the views promulgated by Gen. Howard in his Charleston letter of Oct. 24.

The January report for the District of Columbia shows that there are forty-five colored schools now in operation, with one hundred and six teachers and fifty-five hundred and eighty-eight pupils.

—More than four thousand colored persons, of both sexes and all ages, are attending day and night schools in Macon, Georgia. The *Messenger*, of that city, reports the freedmen of Crawford County to be working well and seemingly contented. There are no troops in the county, and the agent of the Bureau is one of the citizens.

—The minimum wages for freedmen in Texas are said to be fifteen dollars in specie per month, besides their board. Along the rivers colored laborers are working on shares, sometimes for half the crop after all expenses have been paid. The Germans are hiring them in small sets. Some planters offer a bonus of twenty dollars for good colored men. The testimony of a negro was recently admitted in a Galveston court, to convict a white man accused of having murdered a stage-driver. The attorney-general argued that the slave-code which would have excluded him had perished with slavery.

—Gen. Palmer writes to the Louisville *Journal* that, after the most careful enquiries, he has been unable to hear of a single instance in which the civil authorities have punished the authors of outrages on negroes in any part of Kentucky. He knows of the murder of two negroes by white men who are beyond the reach of justice because of the legal incompetency of colored persons as witnesses. Gen. Fisk is said to have received by a single mail letters reporting fifty-two distinct outrages on freedmen in that State. The accounts were wholly from citizens of Kentucky, men of respectability and standing, who were appointed agents of the Bureau on the recommendation of members of the Legislature.

—It appears that the rumor concerning the assault on Rev. Horace James, in Washington, North Carolina, was without foundation. Gov. Graham has written a letter favoring the admission of negroes to the courts "on the higher ground of right." The House of Commons, which had voted to deny them this right, reversed their action, after a very full and interesting debate, by a vote of 56 to 47.

—Gen. Howard delivered an address on the freedmen at the Cooper Institute in this city on Saturday evening, under the auspices of the Young Men's Christian Association. It was a dispassionate, unbiased review of the task imposed upon the Bureau as soon as it was established, of its subsequent well-rewarded efforts to restore the material prosperity of the South by encouraging the freedmen in the ways of thrift and industry, and of the present attitude of the Southern people toward their late slaves. His humane and philanthropic remarks were fully responded to by the audience. Mr. Greeley gave a fitting close to the meeting in a few words of exhortation not to suffer the great work of elevating and protecting the freedmen to fail, whatever might be the fate of the Bureau or of any other favorite instrumentality.

Minor Topics.

Four columns of the *National Intelligencer* of February 8 were occupied by a letter dated November 25, 1865, from Dr. J. C. Nott, M.D., of Mobile, to Gen. Howard, written to prove that the negroes have always been, are, and will always be, an inferior race. The first position

of the Southerner is always on high moral grounds; Dr. Nott therefore calls the attention of Gen. Howard to the gross injustice of the establishment of the Freedmen's Bureau, of calling upon the South to educate and support the blacks whom we have turned loose upon them, of a burthen thrown by us upon their shoulders, exhausted as they are by a war waged against them by us. "By what moral right do you impose such terms upon us?" he asks, and states that the Bureau is the most mischievous institution ever established in this country, a remark which, he rather unnecessarily adds, surprised Gen. Howard when he heard it from the doctor's lips in Mobile. Indeed, we infer from the conversation with the general, which he reports, that he must have surprised him very often. "You remarked to me, among other things, that you had never seen a people more anxious for education than the 'people of Alabama.' There was something in your manner that struck me, and I asked you if you meant by the 'people of Alabama' the negroes of Alabama.' You hesitated, and replied, 'I said the people of Alabama.' I rejoined, 'Let me understand you; do you mean by the *people of Alabama* the freedmen of Alabama?' To which you replied, 'I do.'" This Dr. Nott says was an insult, and it is certainly easy to understand his difficulty in believing that the white people of Alabama were desirous of education. He had lived too long in the State to credit such a report.

The historical and physiological arguments on which Dr. Nott relies are, first, that the negroes have always been an inferior and degraded race, hence that they must leave the country or be reduced to slavery; second, that they have much smaller brains than the Caucasians, hence that their inferiority is stamped upon them for ever. The late Dr. Morton, of Philadelphia, collected about a thousand skulls, measured them carefully, and arrived at certain results as to the average size of the brain of different races. Only two of these measurements we think it is worth while to give:

	Mean cubic inches.
Negroes,	83
Ancient Egyptians,	80
Cubic inches in favor of the negro,	03

Now these three inches the negro may waste, if he please, in the posterior part of the brain, which he is said to be in the habit of doing, and still have as much brain as the ancient Egyptian, a race whose high state of civilization Dr. Nott insists upon. The only want of logic apparent in this craniometry is in taking the mean as test. Let us rather apply it to the individual. For instance, let there be in every county in the South a craniometer; let every one over twenty-one years of age be forced to report himself for measurement. If he falls below say eighty-four inches, be he Malay, Tartar, Negro, Fellah, Mongol, or Taltecan, let him be labelled servant; let those who can boast of eighty-four and upwards be masters. This scheme affords an easy method of utilizing that hitherto useless, idle, and thriftless part of our population, the idiots; they would probably be found in most instances to fall below the standard, or the law might by presumption assume incontrovertibly that the idiot's brain was always less than eighty-four inches, and thus time and money now thrown away in attempting to educate and elevate this irretrievably ignorant class (which has never in the history of man risen to any dignified position) would be saved. Happy, they would till the soil and sing the joyful song of the slave.

It would be as well to deduct always the cubic contents of the posterior lobes; thus, if the total be eighty-four inches, but those lobes should measure six inches, seventy-eight would be the true register. If this method should be thought too rude, a more perfect scheme would be to prescribe a certain number of classes—six might be found sufficient—the first, from the ninety inch up, to be the priestly and political class; the second, eighty-eight to ninety inch, to be the legal and medicinal; the third, eighty-seven to eighty-eight inch, the merchants; and so on down to eighty-three and under, the agriculturists. A registration office for foreigners should be established, lest confusion should arise, and we should have eighty-three inch emigrants going into the church, or eighty-seven inch ones attempting law.

Dr. Nott makes some statements so new and important that they deserve attention. He says that the colored preachers are the worst class in the South; that the negro who cannot read and write is more moral than one who can; that the recent Jamaica troubles were caused by the colored preachers; that Frederick Douglass is a pestilent fellow and spits out the venom of a blackguard; that the negroes make their nearest approach to civilization in slavery; that they do not take care of each other in sickness and that parents neglect their children; that the white people of the South profess the same religion as those of the North. This last we do not understand at all; Christianity, without reference to race or color, is the religion of the North.

The conclusion is, that the Freedmen's Bureau and United State troops (particularly blacks) must be removed as speedily as possible from the South, and the relations between the races be left to settle themselves—and then the Southerners must be assisted in feeding and clothing colored paupers. It is only fair to state that Dr. Nott is an emancipationist at heart, but believes liberty for the blacks in the United States is such a curse that he has always opposed it.

Mr. Saulsbury, of Delaware, with that thirst for knowledge for which he has always been distinguished, enquired last week, in the Senate, if anybody knew what authority there was for calling negroes "colored" people. The authority is usage, and there is none better. The term is a euphemism into which people have been gradually drifting in order to avoid the tinge of contemptuousness which the term "nigger" has gradually communicated to that in itself perfectly proper term, negro. The process by which the change has been effected is one which may be witnessed in the case of many other terms. How few people live in houses; how many "reside" in "residences" or "mansions." How few schools there are left; how many "academies," and "institutes," and "establishments." The race of women is nearly extinct, while "ladies" swarm all over the land. Such a thing as a fowl is now hardly ever seen on a dinner-table; the oldest cock that is ever served up is sure to be a "chicken." Mutton, too, is becoming scarcer and scarcer, "lamb" more plentiful. There has not been for many a day such a thing in the United States as a storekeeper or shopkeeper; the smallest pedlar is now a "merchant." We hardly ever hear of anybody in the newspapers, not a day laborer, who does not "move in the very best society" and who does not boast "fine talents and dignified manners." Nobody now delivers a speech or an address on any set occasion; he delivers an "oration." The President is fast ceasing to be President, having been promoted to the office of "Our Chief Magistrate." There are even very few men of moderate attainments; most men who lay claim to anything beyond a common school education, and are not actually engaged in business, are spoken of as "ripe scholars," and if they at the same time do not spit or chew, and abstain from morning "drinks," they become "accomplished gentlemen." If anybody advocates negro suffrage, he "takes his stand on the platform of the brotherhood of man." Stewed oysters and chicken salad are neither a supper nor a lunch, but an "elegant collation." Sermons are nearly all—or at least all those that are considered worth speaking of—"powerful discourses." Even wives are gradually disappearing; men write themselves down in the hotel books as being accompanied by their "ladies," whatever that may mean. In most parts of the West even "academies" and "institutes" bid fair to become extinct, their places being taken by "universities." No girl now ever leaves school; she "graduates." Inns and taverns have disappeared long ago; we find nothing but "hotels" in all directions. There are even signs that bar-rooms will soon be superseded by "sample-rooms." The process has already begun in New York. People do not teach things now; they are "professors" of them. Corn-doctors are "chiropodists." Barbers are not to be found in any of the large cities, while "hair-dressers" abound. Members of Congress and politicians even are becoming somewhat rare. They are gradually becoming "statesmen." Some people think we are falling off in our manners, but in our language at least the "high polite" was never more successfully cultivated.

The special attention of the reader is directed to the Financial Review on another page. Its place among the advertisements is by no means significan of its value, but is resorted to only that we may obtain the latest intelligence of the market.

Articles on any of the subjects usually discussed in this journal will be received from any quarter. If used, they will be liberally paid for; if rejected, they will be returned to the writers on the receipt of the requisite amount of postage stamps.

THE RIGHT OF SUFFRAGE FOR STATE CONVENTIONS.

THERE is an old story to the effect that a number of philosophers disputed vehemently as to the reason why a tub of water with a fish in it weighed no more than a like quantity of water *without* any fish. They argued the matter orally, in writing, and in print. There were at least seven distinct theories upon the subject, each of which was ably maintained and bitterly opposed. Long was the contest and doubtful the result, until, at last, a simple-minded man suggested that none of the disputants had ever weighed the two tubs, and that it might be well to do so before carrying the argument further. The advice, though at first received with scorn, was ultimately followed. The philosophers assembled in conclave. Two tubs were produced, filled with water, placed in the scales, and their weight equalized to a hair. With careful hand the simple man placed a large fish in one of the tubs, when lo! instantly the scale descended, and the cause of controversy was found to have no existence.

The moral of this story has had a thousand applications, and will bear yet another. The great controversy upon the question of suffrage in the Southern States has been conducted throughout upon the same principle as that which governed the philosophers in dealing with the fish question. It has been quietly assumed, as the very basis of argument on all sides, that free American citizens of African descent had no right to vote at any election whatever in any of the so-called Confederate States, unless such right should be conferred upon them by the express authority of the United States. Or, at the very least, it has been taken for granted that they could not be deemed voters under any circumstances so long as the constitutions and laws of these States, as they existed in 1860, remained in force. Not only has this been the basis of President Johnson's action, but even Senator Sumner has accepted it without question. All the argument upon the subject has been either in favor of or against *conferring* suffrage upon the negro. No statesman has even seemed to think that the constitutions of 1860 can be recognized, and yet the negro have any right to vote.

Against such a weight of authority it requires some courage to hint that the powers that be have not looked into the foundation of their arguments, or, to revert to our story, have not "weighed their fish." Yet such appears to be the fact. Both sides have overlooked a consideration vital to the case.

President Johnson has acted upon the theory that the States in rebellion did not lose their corporate existence thereby, but that all their acts since the ordinances of secession were passed have been utterly void. He has, therefore, directed each State to start from the point of secession, as though all the intervening time had been a blank; and he has assumed that the constitutions and laws then in force are still existing. He disclaims any right upon his part to add to the number of voters in these States, though he has excluded many from voting.

Let us, for the purpose of this argument, accept every one of these acts and doctrines of the President. Let us assume that his proclamations were correct in every detail. Bearing in mind that the people of each State were summoned to elect not a governor, not a legislature, but simply *delegates to a constitutional convention*, let us enquire who, under these proclamations, were entitled to vote:

1. It must be taken for granted, in this discussion, that free colored persons of American birth are American citizens. The Federal Government has explicitly and solemnly recognized them as such. The Attorney-General has given his formal opinion to that effect, and the Secretary of State has issued passports accordingly.

2. It must be further assumed that all the colored people of the lately rebellious States have been free for a long time past. The Executive Department so declared them in 1863, and has ever since maintained the validity of that declaration.

3. In no one of these States was there, at the time of its revolt, any regulation concerning the qualifications of electors for *delegates to a State convention* either in its constitution or statutes. Whenever heretofore a State convention has been called, it has been by a special statute, prescribing the qualifications of electors for that occasion only, and expiring with that occasion. We do not believe that there is a general law upon the subject in any State, and we are certain that there is none such in any of the "seceded" States.

In North and South Carolina and Georgia the constitutions (in 1860) did not declare the qualifications of electors for any offices other than governor and legislature. The right of suffrage for inferior officers has been regulated purely by statutes.

In Alabama, Florida, Mississippi, and some other States, the constitutions declare that certain persons shall be "qualified electors," and that certain officers shall be chosen by these electors. But these constitutions do not in terms undertake to regulate elections for delegates to State conventions, and, for reasons which, we shall presently show, cannot be extended thereto by implication.

4. The theory of government upon which all the States have acted since 1776 is, that no constitution, charter, or law can fetter the right of the people of each State by the action of a convention to frame their fundamental law anew from time to time at their discretion. The constitution of this State, adopted in 1821, provided a single method of amendment, which, by all rules of legal interpretation, excluded amendment in any other mode. Yet the people entirely disregarded this provision, and in 1846 summoned and held a convention, which framed a new constitution. Some conservatives insisted that this action was unconstitutional, and so, as a matter of fact, it was. But the old constitution had no power to restrain the action of the people, and was rightfully disregarded. Some State constitutions have even gone so far as to prohibit the holding of conventions except at specified times, but these restrictions have been uniformly disregarded.

The principle upon which all these proceedings are based is, that the *people* are supreme over all laws, organic or otherwise. So long as the people act through a legislature, they act *under* the constitution, and are bound by it. But when they act through a convention, they are *above* the constitution, and meet for the very purpose of abrogating it. The convention is, in short, the embodiment of the people in the exercise of their right of revolution, and this *is* the revolution to which the American doctrine of government asserts the popular right.

This doctrine is explicitly asserted by the constitutions of most of the Western and Southern States, including Alabama, Florida, Mississippi, Arkansas, and Texas.

5. If we are correct thus far, it follows (and is, we think, indisputable) that the election of a State convention is not controlled by the State constitution, as to the time or manner of election, the qualifications of electors, or the qualifications of members. In short, the members of a convention are not officers under the constitution, but are altogether above it; and the people, in choosing them, are equally free from its restrictions.

6. There being no law of any kind in force in any Southern State regulating the right of suffrage for a convention, it remains to be asked by what right free colored men were excluded from voting at the elections recently held. No legislature, national or local, authorized it. Even usage cannot justify their exclusion in North Carolina, Tennessee, and Georgia, for they voted there for delegates to the conventions which framed the constitutions existing in 1860. Besides, a usage which should have such a tremendous effect must be a universal and immemorial one, whereas colored men have always had a right to vote in seven States, and had originally such right in nearly all the old thirteen States. It appears, then, that this exclusion was the act of the provisional governors—officers unknown to the law and invested with no shadow of authority over the subject.

7. The sum of the whole matter is, that if the proclamations of President Johnson had been properly interpreted, all male citizens of sound mind, twenty-one years of age, and permanent residents of the State, would have been allowed to vote, upon taking the prescribed oath.

8. For examples which show that the doctrines here presented are not new, except in their application to the colored race, we cite the discussions in the Dorr controversy of 1842, the Michigan case in 1836,

the Lecompton case in 1858, the Topeka case in 1856, and, above all, the action of California in 1850. California had laws regulating the manner of electing public officers which were in force in 1849. Yet a State convention was elected by the votes of men nine-tenths of whom had no right to vote under those laws, nor would have had, if the existing laws of California had then been in force. Nevertheless, the action of the convention thus elected was sustained by the people and by Congress, and is now the foundation of California's existence as a State.

9. The exclusion of colored men from voting in Georgia was a usurpation of peculiar magnitude. The constitution of that State, as it existed in 1860, did not exclude colored citizens from the right of suffrage for any office whatever. Yet they were not allowed to vote at the recent elections.

We have thus briefly gone over the main branches of our argument. It might be amplified by illustrations from the history of several States, and by citations from eminent authorities. But it is unnecessary to add more until that which is already stated has been controverted. Nor will we at present undertake to define the probable result of the practical enforcement of these doctrines. They might partially fail to accomplish the desired result. Conventions thus elected might impose restrictions upon their constituents. But whether they should do too much or too little cannot affect the question of absolute right which is involved. And if the conservatives of the North are really anxious to abstain from tampering with the suffrage, and to leave it to be regulated by the existing law, here is a path of unquestionable legality upon which all honest conservatives and radicals may agree.

It may be said that our argument is of little importance now that new constitutions have been adopted in all the Southern States. But as long as Congress refuses to consider these constitutions as satisfactory, and refuses to re-admit the revolted States under them, and has not decided the conditions on which they may be admitted, everthing which might ever be done, may still be done, or, at all events, ought to be considered, if the Committee on Reconstruction are ever to agree upon any general plan.

MR. BANCROFT'S EULOGY.

Mr. Bancroft delivered in due course the funeral oration at the memorial services in honor of Abraham Lincoln, at Washington, last week. The greatest fault of the address is that there was very little in it about Lincoln. One or two facts about his birth, parentage, and education; a few sentences about his journey to Washington in 1861, and his inauguration; a brief analysis of his character at the close—in short, about two-fifths of the speech is all that has any more bearing on the life and official career of the late President than on those of Andrew Johnson or General Grant. There is no public ceremonial connected with the war, from the celebration of an anniversary to the interment of a hero, for which the remainder of the address might not be made to serve with perfect appropriateness.

We fear, therefore, that a large body of persons who are now tolerably familiar with the origin of the republic, and with the influences which have presided over its growth; with the causes of slavery and the feelings which the fathers entertained towards it, and who have got an inkling, since the outbreak of the war, of the manner in which England and France conducted themselves towards us during its progress, will wish that the orator had expended a little more of his analysis and description on Mr. Lincoln, and a little less on the condition of the civilized world during the century preceding his birth. One of the most singular of the social phenomena of our day is, that the reluctance of orators and writers to give the public credit for being tolerably well informed seems to grow in the direct ratio of the diffusion of education. There is, probably, no country in the world in which so intimate a knowledge, at least of their own history, may be safely imputed, even to a popular audience, as in this; but there is, perhaps, none in which most speakers more lovingly hug the assumption that they cannot safely discourse on any theme without starting either from Plymouth Rock or the Declaration of Independence. We doubt if there be anybody in the United States capable of reading the English language, who does not possess a fair acquaintance with the circumstances which led to the American Revolution and the formation of the present Government, as well as with those which made the election of Mr. Lincoln the signal for the outbreak of the rebellion; and even if there be any such person, we think the nature of the occasion would have justified Mr. Bancroft in ignoring his existence.

For much the same reason we doubt the propriety of repeating to the city and the world the indictment against France and England. It was every word of it true, too true; but there are occasions when the time may be better spent than in reading it over. Neither France nor England appreciated Mr. Lincoln during his life; but Mr. Lincoln would certainly have been none the better of their doing so, and their failure to do so certainly exercised no influence on his character or conduct. It was just on this very point that he showed his immense superiority to most of his admirers. There was nothing in which the greatness of his soul, that moral dignity of his which made him not only the foremost man of his age but one of its truest gentlemen, was better illustrated than in the wonderful abstinence from railing which he displayed during the whole period of his administration, and under circumstances, too, of unheard-of provocation. He had his private opinion, we believe, of France and England, and it was not complimentary to either of them; but he never spread it out in his state papers. The insensate abuse of their press, and the insensate prophecies and admonitions of their statesmen, never wrung from him a single indication of anger or even of pique. And we cannot help believing that if it were permitted to him to be present at his own funeral rites, there could hardly be any feature of the proceedings less grateful to him than such a "scathing" exposure of the misdeeds of his enemies as that to which Mr. Bancroft treated the public.

Nor can we say we consider the comparison with Lord Palmerston very happy. Comparisons are always odious, and they are doubly odious in a funeral eulogy. Lincoln was so rich in glory that he could well afford to dispense with that infinitesimal addition that Mr. Bancroft made to it, by showing how far short Palmerston fell of reaching his moral level. In fact, we do not know what there was in the position or career of the two men to suggest the comparison except that both lived about the same time, and both occupied the highest positions in the government of their respective countries, and both died within the same year and had public funerals. Palmerston, it is true, was greatly admired by the English people, but he certainly was not reverenced; and, in order to make him a proper object of comparison with Lincoln, he ought to have been charged with the duty of carrying England through a period of revolution, and have either succeeded or failed in it. That he would have failed in it, we have no sort of doubt. Nations do not fling themselves in their agony on natures as cold and shallow as his; but if he had had to encounter the ordeal, he would certainly have furnished stronger proofs than Mr. Bancroft was able to cull from his singularly tame and spiritless existence, of the immense superiority in all the higher qualities of the statesman's character possessed by the poor Illinois rail-splitter. As it is, Mr. Lincoln might as well have been compared to anybody who was premier in England for the last sixty years. To bring out the great lines of his career in full relief, he has to be set side by side with Cromwell, or Napoleon, or Cavour, or Washington, or, let us add, Jefferson Davis. It is only when there is something common to two men, either in their circumstances or history, that there is any profit to be got from contrasting them. There might be a very fine contrast drawn between Marshal Radetzki and Garibaldi, but what would it prove?

Criticism of a funeral oration is always an ungrateful, and generally an unnecessary, task, and if Mr. Bancroft's address had been simply this funeral oration, we should have been very well content to have refrained from comment on it. But in reality his address was rather a sketch of American history during the last eighty years, interspersed with digressions upon the polity and condition of neighboring nations, than what it professed to be—an official expression of American feeling over the grave of one who was, save Washington, the best beloved and most sorely tried of our Presidents. The result has been that it cannot, we think, be pronounced a success, either as a funeral oration or as a historical study. There is neither feeling nor concentration enough in it for the one, nor accuracy nor impartiality enough in it for the other. Of Lincoln we only get a dim glimpse through a mist of disquisition and invective, and of the history of slavery and of the war we only get a rough, though gaudy, sketch. That Mr. Bancroft is disposed

to be thankful for "sma' mercies," we infer from the fact that he dwells with magniloquent satisfaction on the circumstance that Prince Kung of China testified his sympathy with our Government by shutting out the rebel privateers from the imperial ports. We confess we should take greater comfort in this mark of esteem if we had the smallest assurance that Prince Kung had the least idea what our war was about, cared one straw which side won, and was not ready to acknowledge whichever got the upper hand as the legitimate power, with both solar and lunar impartiality. Prince Kung's adhesion to our cause we judge to have been of about the same value to us as that of the "father-in-law of Prince Metternich," whose approval of President Lincoln was announced in leaded type two years ago by the daily papers, though the silence which was preserved with regard to the sentiments of his Highness's mother-in-law leads us to fear that our lamented President died in the shadow of that lady's displeasure.

THE FUTURE OF GREAT CITIES.

The immense proportions which great cities are assuming in all civilized countries promises to make the arrangement and management of them the most important of all the problems of social science. It is a problem, too, which the experience of mankind offers little or no help in solving. The population of the most famous cities of the ancient world has dwindled, in spite of the romancing of the old writers and modern novelists, into what we consider insignificance, under the hammer of modern criticism. Even ancient Rome would, in number of inhabitants, make in our day only a city of the third order. Magnificent as were its appliances for the supply of water and for drainage, its engineers had no such demands made on their skill and ingenuity as those of the great modern capitals have to meet.

The proportions to which London, New York, and Paris have already attained must be ascribed mainly to the increased facilities for locomotion and for the transmission of news afforded by steam and the telegraph; and yet we are only just beginning to see what railways and steamboats may be made to accomplish. They have built up great cities, and are building them up with a rapidity which is almost appalling, by simply giving persons greater liberty in the choice of their place of residence, and enabling goods to be distributed over wide tracts of country from one or two great depots instead of a dozen.

This tendency to concentration in commerce is accompanied by a corresponding tendency in society, especially amongst the wealthy classes. All over the world people who can afford it, or can compass it in any way, are moving into the great cities, and the country is being more and more abandoned to the poorer classes. There was in most European countries even half a century ago what was called "good society" in every county and province, composed of gentry resident on their estates throughout the year, and rarely visiting the capital. No such thing is now to be met with. Country life in England for the few families who still cling to it has become insufferably dull, except in the hunting season. In France it no longer exists at all. Wealth, fashion, intellect, and industry all crowd into the capital.

In America the distaste for country life seems to increase with every generation. This distaste has been so often commented on, explained, and deplored that we need only mention it. Every farmer's son and daughter, many farmers themselves, want to get to New York, and are willing to strive there for social preferment in almost any capacity. We heard, the other day, of a man sixty years old selling his paternal acres on the Hudson, an excellent farm, including the old house in which he was born, and coming to this city to fill the place of conductor on one of the street railroads. Nor is there the slightest probability that this tendency will not rather increase than diminish.

The responsibility of making the necessary provision in advance for this state of things, seems not to be felt in the slightest degree. On the contrary, with regard to nearly all questions of city improvement, the most indolent, the most careless, the most temporizing policy generally rules. The engineers employed to plan our city improvements are, nine times out of ten, loafing politicians, both unwilling and incompetent to devise anything original, comprehensive, and forereaching. We are not even beginning to meet the most obvious demands of our present population. The means provided for getting rid of municipal filth, for instance, are, in every American city, but most of all in the largest, perfectly contemptible. They do not meet the necessities of the case in the present day as well as those in use fifty years ago met the necessities of that day. What is before us is better seen in London and Paris than anywhere else. Large parts of both of these cities are being completely reconstructed, at an expense of many millions, to remedy faults in their original laying out. Yet these same faults and far worse faults may be found in the streets now being laid out in New York, Chicago, and San Francisco.

The number of fares collected on the street railroads and omnibuses of New York last year was much more than the number of the inhabitants of the United States, yet the accommodation of vehicles was cruelly inadequate to the demand, and the whole arrangements were supremely inefficient, slow, and to the last degree uncomfortable. Various projects are discussed for increasing the amount of accommodation, none for improving its comfort, and none of the schemes yet proposed contemplate any considerable increase in the demand. Yet before the least of them can be carried out this demand is likely to be nearly doubled.

The most serious problem of all connected with city life is undoubtedly the provision of dwellings for the working classes in the neighborhood of their work. Supposing ever so many railroads or boats to be provided, there will always be in every large city an immense number of persons whose means will not permit them, even if their occupations do, to live far from the scene of their daily toil. And even if they possess the means, they will not possess the time to go into the country. Two hours, even, taken out of a working-man's leisure for travelling to and fro, and thus lost to social enjoyment, would be a serious blow to his comfort, and this is, nevertheless, the very least space of time which it must be expected to take to reach the suburbs of any great city hereafter, from the business centres, and get back again.

Consequently it seems plain that the plan of covering an immense area with separate houses, and giving each family a large number of feet from the earth up to the sky, must ere long be abandoned, if not by all, by nearly all. We must go up into the air more than we do now. Families must live above or below each other, and not next door. In other words, we must give up owning "houses and lots," and fall back on the system of "flats" so long in use in France and Scotland. The great objection to it is the common staircase, but an ingenious suggestion has been made that we should have streets in the air—that houses should be built immensely high, and that iron galleries should run along each story, bridging the streets between the blocks, forming a thoroughfare on which each family might have an outside door, and on which there might even be stores, and on which people might saunter, shop, and promenade, leaving the noisy earth to the vehicles and more ponderous kinds of business. There might be omnibus elevators also at certain intervals to carry people up and down. The plan is well worth studying by those who are interested in the welfare, both moral and physical, of the unborn as well as the living millions who are fated for weal or woe to live and die in the great cities, and who must find their health and happiness far away from green fields or purling brooks. One thing is certain, that the streets of New York or London will present a century hence an appearance widely different from that with which the present generation is familiar.

TOO MUCH OF A GOOD THING.

Making due allowance for the motives of those whose visits to the White House are now daily chronicled for whom it may concern, we think that they are guilty of no little imposition on the President and the public. Not that his accessibility is in itself to be deprecated. It is of too recent a date to be lightly given up, and, besides, it has its uses. Six years and more ago, indeed, a citizen jealous of his good repute might well have hesitated to be known as having called on what was by courtesy styled the head of the nation; for, as advice must have been thrown away on one who was only nominally a ruler, he would have incurred the suspicion of friendship or complicity, which was no slight matter in the case of a Buchanan or a

Pierce. And, fortunately, if honest men desired to avoid having anything to do with these functionaries, they were favored by the natural exclusiveness of an Executive controlled by a slaveholding aristocracy, not less than by his powerlessness in a time of peace. But on the accession of Mr. Lincoln all this was changed. Democracy had at last elected its candidate. In the crisis which ensued there was safety in the multitude of counsellors. The absolute authority with which the President was invested could neither have been so effectively exercised nor with so little odium if he had refused to listen to the instructions, the complaints, and even the menaces from every quarter. That the privilege accorded was incessantly abused by the impertinent, was to be expected; that it was the safety-valve of a vast amount of conceit and self-importance, we all know; that it has come to be looked upon as a popular prerogative, though in quite an altered condition of affairs, the present Administration is witness.

It must be admitted that, apart from the peculiar circumstances of his promotion, President Johnson is responsible for a considerable share of the visitations which have consumed his leisure. Had he promptly surrendered to Congress the task of re-organizing the society which rebellion had disintegrated, men would not have been so solicitous to press their opinions and grievances upon him. He would have escaped promulgating a policy sure to produce contention at the North, and to subject him to "elderings" from one party and adulation from the opposite. As it is, the not unwelcome delegations which paid their respects to him immediately after the assassination, have been followed by an almost steady stream of visitors, beginning with the host of pardon-seekers, and ending (we use the expression relatively) with the varied calls of the past fortnight.

We appeal to the "distinguished senators" who hold conversations with Mr. Johnson, to the Master Cokers who sing their little songs to him, to the citizens of this or that ambitious Territory, to the members of dissatisfied churches, to our colored friends themselves, who all and several manage to take up a good deal of his time, and to get his remarks, apothegms, and speeches transmitted by electric telegraph all over the Union,—we appeal, we say, to these individuals and committees to have some consideration alike for him and for the community at large. Let them remember that in these days of the Associated Press, often made a semi-official medium during the past five years, there is nothing hidden which shall not be revealed. Since the President has so willed it, his words are anxiously listened for by the millions of the North and South, and if spoken they will be overheard and repeated throughout the nation. Of all the gossip for which our newspapers expend their capital, that from the White House is most certain of being read. Coming at proper intervals it would have a piquant flavor, but retailed every week, and almost every day, it begins to be somewhat of an infliction.

We are aware these gentry to whom we address our reproaches may retort that again the President is at fault; that even if they are long-winded, he might, without offence, indulge in optional brevity. This does not excuse them. With no disrespect to Mr. Johnson, we cannot withhold the only too common observation, that he lacks the happy faculty possessed by his predecessor in so eminent a degree—whose sayings were ever terse, pithy, and compact, and compare with those of the Tennesseean much as did his immortal speech at Gettysburg with Mr. Everett's oration. When the new-made President assured and reassured the representatives of the loyal States that treason was a crime that must be punished as a crime, there was strength and inspiration in the repetition. Latterly his iteration has got to be excessive. It is enough to be told once—we were all but going to say, too much—that he is opposed to negro suffrage in the District of Columbia, that he has always been a friend of the colored man, that he anticipates a war of races, that he has reached the pinnacle of his ambition, etc., etc. We do not blame him for being prolix, but we do expostulate with those who, knowing his weakness, tempt him to so frequent an exhibition of it. It is appalling to estimate the amount of trouble this causes—to your reporter, who takes down his every word; to the President himself, if he cares to revise what he has said; to the telegraphic operators, a hundred or more; to the night editors and the printers; and, last but by no means least, to the readers of the newspapers, who must ponder the entire document if only to discover that it does not weigh an idea more than the last previous utterance from the same source.

All these processes require time, from the principal actors downward; and time costs more than money at this juncture. Congress could not for ever be taking recesses in honor of successful generals who are introduced there, and neither can the President be interrupted without a loss to the nation beside which his personal annoyance is of little account. If he has duties, it is plain he cannot attend to them faithfully. If he has powers—and he has some of the highest—he may be led to exercise them without the necessary deliberation. When so many interests hang upon his most trivial declarations, it is important that these should not be crude and ill-digested, as they are apt to be when unexpectedly elicited from him. Great harm may follow from a chance indiscretion on his part, and at all events he is constantly exposed to the awkward disadvantage apparent in his interview with the colored deputation, whose well-written reply contrasted too palpably with his confused and rambling delivery. As far as possible, therefore, he has a right to be protected from slips of the tongue. He and the people will be gainers if he writes ten messages for every speech likely to transpire, and if bores, well-intentioned and otherwise, will give him time to study his proper domain, arrange his thoughts strictly and concisely, and bend all his magnificent energies to the restoration of the Republic.

THE APPLAUSE FROM THE OTHER SIDE.

Philosophers of all generations, from Confucius to Rochefoucauld, have cautioned mankind against overlooking the wholesome lessons to be drawn from the praise of their foes.

At a time when the line between difficult justice and facile expediency is more than ever confused and blurred; a time when the instincts of politicians are prompting them to avail of the languor which follows exertion—to trade on the generosity which is begotten of victory—through coalitions which shall ensure their own advancement to power; a time when the very grandeur of the national achievement is so dazzling to our eyes that we may fail to see, or see but imperfectly, the duty and the means of reaping its legitimate and most righteous fruits—at such a time it becomes instructive in a high degree to observe the tone of those English organs of opinion which, whether on one side or the other, were such earnestly interested spectators of, and commentators upon, our civil war.

These organs may have been, in some instances, mistaken in their facts. At a period of great excitement, when partizanship respecting our quarrel ran high, and its bearing upon or analogies to English domestic questions were perhaps somewhat exaggerated, it was natural that wishes should often father thoughts, and that a false expectation touching ultimate results should correspond, in general acceptance, with the superior numbers or influence of those who were opposed to the national cause. Discriminating Americans make fair allowances for this, and remember with gratitude how far great earnestness and, it may be added, sheer intellectual force went towards counterbalancing the serious disadvantages under which our English friends labored. But however it may have been with details or with prophecies, the zeal of the advocates was great on both sides. There could not be a doubt as to the depth of their convictions regarding the rights of the question or the ardor of their desires as respected its settlement.

Such convictions and desires were inseparably associated in their minds with principles which they deemed of paramount importance; the association, as has been suggested, may have been carried too far; but it existed, and was perhaps inevitable. The termination of our struggle, disappointing to many, did not, however, involve any change of theories, any surcease of principles whereof the disappointed ones were advocates. Facts might no longer be strained or distorted in their support, but the theories and principles are as faithfully upheld as before; and in the expression of this fidelity is found the instruction to which we refer.

Mr. Roebuck, in a public speech made at Sheffield, and which was reported in the London *Times* of June 10, ult., said: "My reason for desiring the acknowledgment of the South was this: I wanted the

great republic of America to be split in two. I honestly and openly confess it; and if it had been so, it would have been better for us." This flagrant declaration was merely a concise and explicit epitome of the feelings which too many of the orator's countrymen had cherished, but which they were not, in general, disposed so bluntly to avow. They desired to see the United States broken into fragments, and they dwelt with force and sympathy upon what would substantially conduce to that end. They are not without hope that, in spite of our late triumph, the seeds of disintegration are still alive, if dormant, in our political soil, and that by judicious manuring and fostering they may yet fructify to our ruin. The same instincts which led to their warm espousal of the Southern cause still exist, and whatever is promulgated through their organs respecting affairs in this country is presumably faithful to them.

When we find, then, that all the leading journals of London which opposed us most bitterly in the late struggle are now equally unanimous in their view of the most important problems which we have to determine as its consequences, is it not the part of wisdom thoroughly to consider such a circumstance, to weigh carefully and to sift to the bottom all the probabilities and inferences suggested by it? It would be too sweeping and ungenerous, for example, to draw a conclusion unfavorable to President Johnson's patriotism, because all the newspapers which advocated secession now advocate what is styled his policy of reconstruction, but surely the coincidence is worthy of our careful attention. Still more significant and deserving of reflection is the circumstance that every newspaper and every man of any note in England who steadily and pertinaciously stood our friend through the hard fight is now daily expressing apprehension and anxiety with regard to our future. It is plain that those long-tried and staunch supporters of the cause which we and they thought so just are filled to-day with an honest dread lest the nation should be deprived of the tangible and only valuable results of its victory.

Now, there is a large class of persons among us who have been most unsparing and violent in their denunciations of the *Times* and *Saturday Review* for their hostile tone towards this country during the war, but who seem at present to be quite gratified and comforted to find that those presses have become the hearty endorsers of President Johnson and his policy. Such persons, and the prints which are their exponents, appear to think that the leopard may change his spots; that there is a diametric change in opinion, and yet no inconsistency, on the part of our quondam foes; that at worst there is nothing in their conduct more sinister than the mere everyday and commonplace baseness of truckling to success. Such persons, too, were ever ready to quote the *Spectator* when it combated in our behalf what time the strife was sorest, but they altogether omit to refer to the accents of grave warning and solicitude in which that publication has discussed our prospects since its definitive close.

It is, of course, quite within the bounds of possibility that British admirers of Mr. Johnson should not be absolutely inimical to the perpetuation of the Union; but surely neither they nor any one else can complain if we find a suspiciousness in the fact that avowed enemies of the Union during its battle for life should so universally step forth as eulogists of its present Chief Magistrate and his peculiar line of policy or set of principles to-day. It is conceivable that our devoted English friends may be frightened at shadows; but the unanimity of their sentiments entitles them to respect, if former services do not. We at least know that they never wished our country harm—which cannot be said of their political opponents.

Generally speaking, it is safe to believe that few radical changes of conviction have taken place in the hearts of those who command leadership on either side of the ocean. The couples may have changed places in the quadrille, but they have still the same relative situation, still the same *vis-a-vis*. They may go through all manner of bewildering evolutions, but they will still preserve the same juxtaposition and cherish the same affinity. And they are to be recognized, classed, and trusted in two categories: the one which *fears* and the other which *hopes* that the name and painted image of Liberty shall, in the greatest civil convulsion known to history, have been fought for and gained, without its spirit and essence; the one which, from its very nature, must worship always at the simple shrine of justice; the other which, from a law equally immutable, must to the end of the chapter burn incense on the sophisticate altar of policy.

FRANCE AND AMERICA.

THE following extract from a private letter recently received from M. de Beaumont, the life-long friend of M. de Tocqueville, and his companion during his first tour in this country, is interesting as expressing the opinion upon our affairs, at the present juncture, of a class of Frenchmen whose influence on the affairs of their own country we hope to see some day regain its legitimate power:

I reproach myself for having so long delayed acknowledging the two works sent me through the American Minister, "The Story of the Great March," and the report on the sufferings of your prisoners in the hands of the Confederates.

If I have deferred thanking you, I have not delayed reading them, and once opened, I continued their perusal without allowing myself to be interrupted until I had finished them. I value them much, and shall preserve them with care. The journal of Sherman's campaign is more interesting than any romance could be, although it is simply history. If there could be collected something analogous to it relative to each of the great military operations of which America has been the theatre during the war, what a magnificent history one could write from it! and how the historian who could truly describe these combats of giants, and bring into bold relief the heroic deeds and civil virtues of your heroes, would distance the epics of antiquity and all the records of mere slaughters, ancient or modern!

I confess that if I were ten years younger, and were not intimidated by the grandeur of the enterprise, its beauty would tempt me to undertake it. But for such audacity it needs a younger hand than mine. I must limit myself to offering my best wishes to the more able historian who may take up this grand subject and immortalize himself with it.

I do not doubt that this work will be done by some one worthy of it, who will comprehend that he has not alone to recount the battles, marches, and victories, but the motives under which the war was made by a free people, the sentiments which animated them, and the passions which supported it. Assuredly what has enlisted my entire sympathy and enthusiasm in this struggle and this victory has been the triumph of the cause of humanity in the abolition of slavery; but there is one thing which has perhaps inspired even greater admiration and joy—it is that you have escaped the great danger of military usurpation, and that the day of victory has also been that of the resumption of your civil rights. All the future of American liberty, and, indeed, of the liberty of the world, centred there!

You can hardly form an idea of the grief and disappointment which the friends of absolutism in Europe feel now after having counted upon your coming under the yoke of a dictator!

Thanks to you, not merely the republican but the liberal cause still exists, and from your shores its reflection reaches ours!

How much, after the sufferings and anxieties of such a war, you must now enjoy peace and victory!

Why cannot I, by a magician's wand, be restored in 1866 to my condition in 1831 when I visited America! How I should fly to your shores, and with what happiness should I see your fine and great country and the men who to-day illustrate its honor and glory!

In the midst of all the joy and sympathy which I feel regarding your country I cannot, however, help experiencing a certain anxiety in regard to the effect of these events upon our Mexican situation, in thinking of what may happen in that quarter—in spite of the wishes of our two nations and of their governments—to produce dangerous complications. I am convinced of two things: 1st, that Napoleon, who got engaged in this enterprise in opposition to the universal sentiment of France and even of his own counsellors, sees his mistake and bitterly regrets it; 2d, his speech to the Corps Législatif signifies, I am preparing to quit Mexico—*let me only have time to do so honorably!*

What seems to me equally plain is that neither Mr. Johnson nor Mr. Seward means, by any ill-advised proceedings, to precipitate a war which neither France nor the Emperor desires; and that your Government, which has enough else to do besides fighting in Mexico, is well disposed to accept the pacific solution thus offered; but what I fear is, the passions of the American people and that intoxication so natural after such splendid victories. I feel that never was there a time when the united efforts of all your wise men were so necessary as now to prevent a conflict so full of sadness which would ensue between two nations whose true interests are to be friends, and yet who, once engaged in strife, would each only see its flag. May the gods avert such a future!

THE LIGHT-HOUSE.

O'ER waves that murmur ever nigh
My window opening towards the deep,
The light-house with its wakeful eye
Looks into mine, that shuts to sleep.

I lose myself in idle dreams,
And wake in smiles or sighs or fright,
According to my visions' themes,
And see it shining in the night.

For ever there and still the same
While many more besides me mark—
On various course, with various aim—
That light that shineth in the dark.

It draws my heart towards those who roam
Unknown, nor to be known, by me;
I see it and am glad, at home,
They see it and are safe at sea.

On slumberous or on watching eyes
It shines through all the dangerous night
Until at length the day doth rise,
And light is swallowed up of light.

Light of the world, incarnate Word,
So shin'st Thou through our night of time,
Whom freemen love to call their Lord;
O beacon steadfast and sublime!

In temporal things—grief, joy, or care—
Enrapt we dream, but turn to thee,
And straightway where and what we are
By thine unfailing radiance see.

Some see thee from life's sheltered shore;
Some watch thee, doomed to sail life's deep,
Whose cruel waters rage and roar,
Or o'er sharp reefs in ambush creep.

And men of every land and speech,
If but they have thee in their sight,
Are bound to thee, and each to each,
Through thee, by countless threads of light.

E. Foxton.

THE FOOL'S PARADISE.

The subject of railroad accommodations and refreshments must be, in great part, treated speculatively, for, in great part, railroad accommodations and refreshments exist only in the abstract. As far as this want of reality relates to accommodations, it is the fault of the railroad management; but as far as it relates to refreshments, we fear it is the fault of the public. It seems scarcely possible that a nation, not bent upon indigestion, could long endure the present arrangements for the promotion of delicate health, at the stations where the trains stop "fifteen minutes for refreshments!"—and we imagine that a change will take place as soon as it is actually demanded by a contrite public appetite.

The other day an acquaintance had the mi ortune to go to Boston—Boston is well enough, but the going thither is the evil—and he ran into a restaurant, near the station, to get a bite and gulp of breakfast, before setting out on that perilous journey. He secured his bite and gulp, and had a moment's leisure to attend to the fellow-sinner at his elbow, while that impenitent gave his order. In a place where he might have had steak or chop, or, at the worst, cold, choking chicken, he demanded, "A cup of coffee and a piece of apple-pie!" A human being, born in the nineteenth century of the Christian era, thought it just to offer his system a breakfast of coffee and apple-pie! As in this world many innocent persons suffer from the sins committed by others, such depravity reacts upon the whole community, corrupting the restaurateurs and debauching and destroying their customers; and we have heard of one gentleman who suffered from the evil principle of coffee and pie, for breakfast and lunch, to an almost incredible degree. He stopped at one of the appointed places for refreshment, on the Shore Line to Boston, and found that coffee and pie were the sole restoratives to be had; there was not meat, hot or cold; there were no sandwiches, there was no bread, there was, in fine, not even any water; there was but coffee and pie!

On the way to Boston you stop twenty minutes for refreshments at Springfield, and you find on either hand two small cabins, erected within the station, containing the ticket-offices, the waiting-room, and the lunching-rooms. It is because these are rather good of their kind that we speak of them, though we do not speak of them to praise them. It is true that you are there waited upon with something like civility and promptness, and that the young ladies who preside over the coffee-pot, the tea-urn, the pie, the cake, and the fruit, are singularly free from that crushing *hauteur* of manner characteristic of young ladies in public employments. But though you have twenty minutes for refreshments, you are denied the privilege of sitting down in these moments of restoration, and are forced to refresh yourself at a counter in the midst of a tumult of refreshment. As for the viands, they are much like the things provided everywhere for the weary traveller, and they present a variety certainly passing the standard fixed at the refreshment stations on the Shore Line We suppose that all this is as the travelling public desires to have it, or the travelling public would have it different. But as we stood edgewise before that counter at Springfield the other day, and ate some oysters, fried each in five times his bulk of flour-batter, and washed down the repast with something that neither looked nor tasted like coffee, but was, nevertheless, so called (jocosely, it is possible, as, in cheap restaurants, pork and beans are called "woodcock"); and as we meditated the purchase of a desiccated sandwich, a vision of better things stole over us, softening and subduing us. It was the memory of a little station, somewhere on the road between Paris and St. Michel, where we stopped fifteen minutes for breakfast, one winter morning. The guards of the train cried out the time of the halt several times distinctly, and did not leave it to the intuitions of the passengers, as the conductor does in this country; and so we all got down, and went into a warm room, prettily appointed with tables to seat each four persons, and with flasks of dark wine, delicate bread, and clean napkins beside every plate. Did you care merely for coffee? They served you such coffee as might have grown on the uplands of Paradise. Did you wish something yet more satisfying? There was *bouillon*, bright as honey, clear as amber. Our appetite being for solids, they gave us a dainty cutlet, served in some delicious sauce, if it was sauce, or gravy, if it was gravy; and opened for us a flask of the dark wine, and filled us a bowl of the creamy coffee for the parting benison. There was abundant time, for the people at the station were as well prepared to receive us as if they had been making ready for us ever since we left America; as if they had grown the grape and bottled the wine expressly against our coming, and had known, to a second, when to pop the cutlet on the fire for us. It was more than satisfactory, it was flattering; and, in this way, travel is expected and complimented throughout France. The cause is plain: the French nation will not suffer outrage, and famine, and indigestion at the hands which are paid to feed it well and courteously. As soon as we make up our minds to have justice, we shall have it. We now have famine, and outrage, and indigestion because we want them. There is no sadder error than the delusion that French cooks and cooking came of themselves. The enlightened public taste created them, as with us the popular will could call something just as good into existence.

That our travelling community does not desire wholesome and savory provision against its hunger, is manifest in the sort of stuff which is brought into the cars to sell. There is no reason why the boy who relieves the tedious routine of offering magazines and illustrated newspapers to the passengers by offering them candy and tobacco in packages should not also have something besides these dainties with which to tempt appetite. Why, then, should unhappy travel have nothing else submitted to it? Unhappy travel, if candid, would confess that it wants nothing else, unless it be pop-corn, which it gets; pop-corn, which fills without satisfying, and makes you feel like a sack of chaff, which is the emptiest and merest of vanities. We know, of course, that flying boys appear and disappear, at the way stations, with baskets of tarts and cakes; but are they not merely a part of the great system of coffee and pie in the restaurants?

Possibly, a vague idea that journeying by railroad is a kind of festivity inspires us to live on sweetmeats and dessert, and holiday fare, while upon our travels. If this be the case, it seems to us that we are mistaken in our notions of jollity. Such mortal gaiety as properly belongs to the dance of death likewise belongs to railroad travel, but it is in no other sense festive. On the contrary, it is work, cruelly hard and extremely dangerous, not only to life and limb, but to health; and it should be a matter of serious thought before setting out on a journey whether or not the end to be accomplished justifies the means. Sometimes, however, people must travel, and as it is no longer possible to travel in stage-coaches, and as in winter it is not always practicable to journey by water, they must go by rail. A voyage to Liverpool, by sea, is rather less uncomfortable and perilous than a journey to Chicago by land; but then you cannot take a Cunard steamer to Chicago; and there are many other places inland which you can reach only by rail.

In the first place, the waiting-room of the station is an outrage to those who have known better things. The simplicity of its appointments is as severe as those of a state apartment on the stage. Around its dingy wall goes an obdurate benching, cut into sections to contain each one person, whom wooden bars defend from encroachment and forbid to encroach. There are no chairs, and if you wish to warm your feet you must stand before the stove (a flaming monster in the middle of the room) on one leg, as the

stranger did, who sought to surprise the Athenians, and burn one boot at a time. In this chamber of desolation there is nothing to eat, nothing to drink, nothing to smoke. There is nothing with which to divert your mind but the long slender advertisements of rival railroad lines, printed on cardboard and framed in gilt, and hung upon the wall side by side, and flanked by the announcements of the accidental insurance companies.

In Italy, which we complacently look upon as a country far behind our own in the comforts and elegancies of civilized life, you would find as good accommodations for the peasants, in the third-class waiting-rooms of the railroad stations, as you find for ladies in our dépôts. As for the second-class and first-class *salles d'attente*, we have nothing in the whole length and breadth of the republic to compare with them; for these rooms in Italy abound in cushioned seats, and are well warmed and lighted, and have a pretty *caffè* attached. In France it is all as comfortable, and in Germany, and in almost any country but our own. Even in Egypt and Spain the travellers by railway are better cared for than in America, where they are, for the time, treated like outcasts and abandoned persons.

The car in which we leave the station is heated by a stove near either door. It is hot to suffocation when you enter, but the motion of the train cools it directly, and presently the only warm men in the car are the men who sit before the stoves and put their legs on them. Or if the gentlemanly and obliging brakeman consents to stoke and keep the fire alight, the tops of the passengers' heads receive the greater part of the heat, and their feet freeze, while champion draughts meet and fight over their devoted legs. The floor of our car is bare and stained with deluges of tobacco-juice. It may happen, too, that it has been newly splashed with water, and that the ice formed upon it remains unthawed during the whole journey; and a gentleman who had the pleasure to travel with his family in such a car from New Haven to Hartford, assured us that they all remembered the journey in coughs and rheumatism for a month.

At the end of the journey you find the same absence of all persons connected with the service of the road which you have possibly observed before setting out, and while upon the way. At the station there is only the baggage-master, a man of austere and commanding address, who forbiddingly gives and takes checks, but who is far from being a porter; and the brakemen of the trains are as little to be approached with a heavy carpet-sack or an angular package as the conductor himself. In fact, there are no servants of the company to wait upon the passengers, whom all the gentlemanly officials, from the conductor down to the newsboy of the train, snub with the utmost severity.

Far be it from us to point out a remedy for these things. As we have said, we believe that the travelling public likes to have its stomach insulted and abused; and it is barely possible that it is somewhat responsible for the other personal discomforts it suffers. In no other country are such long journeys made by railroad, and in no other country is there such wretched provision for passengers. The restaurants are horrible; the waiting-rooms little better than cattle-pens; the cars uncomfortable in plan and cruel in construction, without any appointments for relaxation or repose. Take into account, with these things, the perils of broken rails, of collisions, of feeble bridges and misplaced switches, and it must be confessed that travel, in our country at least, has been well called "the fool's paradise."

ON PAINTING ROOM WALLS.

It is generally more expensive to paint room walls than to paper them. We purpose in the present article to enquire under what circumstances paint is rather to be used than paper, in spite of its higher cost.

It is not to be used on the walls of rooms which are required to look "stylish" only, a plain, light tint of oil-color being thought more elegant than a pretty harmony of colors on paper. A few years ago this weighty reason determined the question in favor of paint, whenever the house-owner felt himself rich enough and found his walls good enough. Defective plastering and a shallow purse were the only inducements sufficiently strong to lead any one to use paper-hangings instead of the cold grey, raw yellow, or other colorless color which the house-painters stood ready to apply. Now, if a house-owner be determined to have a perfectly plain, unvaried color on his room walls, he can still do better by using paper than paint. Very pretty flat tints of bright and of subdued colors are for sale in cheap kinds of wall paper. If the plastered wall be thoroughly well prepared, colored washes, indeed, look as well as the paper and are cheaper still, but these rub off easily and soil everything that touches them. Painting, whether in oil-color, as universally in times gone by a generation or so, or whether in water-color, as now becoming general, is more costly, and it is hard to give any reason for using it rather than paper. But whatever else is adopted or rejected, let common oil-painting be entirely rejected and put out of the question. Its ugly gloss and unpleasant no-surface, all ridges and bristle marks, make it the worst wall decoration yet discovered.

Further, paint is not to be used on the walls of rooms too lowly in altitude or in importance to receive a somewhat elaborate style of decoration. What such decoration may be and ought to be, we shall see further on in our discussion; but, for the present, observe that any simple pattern, offering harmonious combination of colors in flat tints only, can be nearly as well produced on the surface of paper as on the best fresco ground. Any of those patterns which we briefly described in treating of wall papers, two weeks ago, look as well on the papers as they could be made to look in painting on plaster as it is practised by the artisans in the decorators' employ. And some of those patterns would be very costly and troublesome to execute in painting, particularly those in which much gold is used. There is a splendid pattern on paper covering a wall in Paris which may be easily described, and is as follows: Ground of pale purple, almost like the modern color mauve; bands, nearly half an inch wide and five inches apart, cross each other obliquely all over the ground, dividing it into lozenges or diamonds; these bands are deep red with dots all along them, of the ground color, which are twice as large at the crossing of the bands as elsewhere. In each lozenge of pale purple comes a smaller lozenge of dark purple, and in it a flower-de-luce of the ground color, the lighter purple; and outside the dark lozenge, between it and the red band, is a line of the dark purple. If the reader will draw this pattern, he or she will see that it is very fine. But it is only the background. The real pattern covers it in gold, printed on without any regard to the lozenges and *fleurs-de-lys*—circles fourteen inches in diameter, with quatre-foils and beautiful Gothic flower patterns within them. It is splendid as a decoration in flat pattern of the walls of a large room. Any one who has had any good wall painting done can give a shrewd guess as to whether it would be costly or not to have this design produced in modern dry fresco or in any other way of hand-work or stencil painting. But it would not be an unreasonably high-priced paper, if printed like the one from which we describe. Even at the present rates, such a paper could be put upon the walls of a room for about three dollars a roll; so that the walls of a large room—say a billiard-room of the proper size, eighteen by twenty-four feet and fifteen feet high—would take about sixty dollars' worth of such paper, and perhaps forty dollars' worth of gilt mouldings. It would be very simple dry fresco painting of the same walls that would cost only five times as much.

The actual beauty of fresco painting is, indeed, superior to that of wall-paper. The surface of carefully laid dry fresco is much more beautiful than the surface of the best printed paper. But the use of painting is to do what no machine-made or block-printed fabric can, except under unusual circumstances and at heavy cost—adapt itself perfectly to a particular place and fit it with a decoration which would not be suitable elsewhere. This is true of its simplest application, but the simplest form of mural painting leads insensibly to higher and higher developments of the art, until historical fresco painting is reached. The best thing in wall-paper that the manufacturer can make to-day from a skilful architect's design is as good, or very nearly as good, in all essential particulars as he will ever make. But the best dry fresco painting of to-day on some wealthy gentleman's library ceiling or billiard-room walls is a step towards infinite and as yet unimagined splendor of art by-and-bye.

It is recognized by all those who have in any spirit of thoroughness and truth studied the arts of design, that modern painting is terribly astray in its almost complete divorce from mural painting and from decorative application. A generation of cabinet pictures is but an inglorious and perishable era; it is little more than vanity, and nothing comes of it in the end but vexation of spirit and quarrels of connoisseurs. But a generation of fresco painting is a part of the history of the world, and the cabinet pictures which such an age produces as play amid its serious work share in its glory and its worth. It is recognized as one of the necessary steps in the revival of art to get back to wall-painting again. In those countries where the revival of art has made any progress the leaders feel their highest achievements to be the few mural paintings they have successfully achieved. And of these—though some are in oil, as, for instance, the famous "Hemicycle de l'Ecole des Beaux Arts," by Paul Delaroche—the greater number in France, in Germany, and in England are in fresco or some form of painting akin to fresco. Now, the difficulty with all these works has been the exceeding strangeness of the material to the artists who were suddenly called on to paint in it gigantic pictures of historical or religious subjects. Modern German art is, in general, cold enough in color; but no one can suppose that the great frescoes in Munich and Dresden would have been so valueless in this respect if fresco painting had not been in a great measure a "lost art," revived by the very

men who had to paint, at royal command, the "Last Judgment" and the Nibelungen story and the acres of pseudo-classic decoration in loggie and cabinets. Modern English art is, in general, unorganized and undisciplined enough, and its works of little permanent value; but things would have been better if it had not been necessary to experiment and blunder and grope in the dark after a medium of painting sufficiently enduring to resist damp and to preserve the historico-legendary imaginings of Dyce, Maclise, Herbert, and Ward until their children could see them.

It will be long enough before there is any demand for mural fresco paintings in our cities; long enough for us all to learn how to use water-color on wet plaster and on dry, and to invent a host of processes as good as, or better than, stereochromy. It will be well if all the decorative painters, "bosses" and journeymen, get to understand all kinds of painting on plaster, and if all the "artists," popularly so called, learn the processes from them, that when our Leys or Watts comes to paint our history for us on the walls of some future capitol, which shall be to the present one what great art would be to the scene-painting now in honor there, he will find assistants ready to his hand, and a thoroughly understood and trustworthy process ready for use.

For ordinary purposes of in-door decoration dry fresco is sufficient—*fresco secco*, or painting on a surface of hardened plaster, which is wet piece by piece as the color is to be applied. True fresco, or painting on a freshly spread surface of plaster, remains as yet unrivalled for brilliancy and purity of tone. By either process, properly carried out, a colored surface is produced which is hardly to be injured by water, is almost indestructible except by dampness, which permeates the whole substance of the wall, and is far more beautiful than the surface of an oil-colored wall. We shall be safe, then, if we decorate our large and handsome drawing-room or billiard-room or hall with dry fresco. Of what character, next, should be the designs, and what sort of patterns are at our disposal, easily to be obtained from the workmen we have?

The designs most easily to be obtained, those, namely, which the workmen have at their fingers' ends, and will execute for you without instructions or explanations, are very commonly of one character, and that a very bad character indeed. The few houses in our great cities which a real estate broker would call "decorated" are all treated within to a sort of scene-painting which seeks to assert something quite false and, indeed, incredible about the make and surface of the walls and ceilings. The application of these histrionic effects seems to be universal. The ideal perfection of them is to be seen only in the drop-scenes of our larger theatres, which have sometimes quite a deceptive appearance of being what they are not, as stone, or marble, or panelled wood walls, pierced with windows and decorated with arcades. But more or less successful imitation of the same kind is common in our more expensive houses, and is not unknown in our churches.

The semblance of masonry of any kind is popular, however, only in the churches and great halls of meeting, and in the entries and vestibules and other half out-of-door parts of a house. It is not thought suitable for more private apartments. For these the favorite decoration is an affectation of a construction peculiar to wood-work, namely, panelling. It is not necessary to this that there should be direct imitation of wood; the color and grain of the wood may be imitated or may not be. Libraries are often painted completely in sham black walnut, and dining-rooms in pretended oak; but the drawing-room walls and ceilings have, oftener, the look of the wooden construction without the look of the wood. No material is imitated; the material is confessed as plaster, painted pale pink, or pale blue, or French grey, or of two or more such faint shades of color. But relief is imitated, and the huge panels are supposed to be sunken two or three inches below the level of the surrounding wall, the edge of the projection heavily moulded. That is the type; there are many ways of varying it and enriching it. Sometimes the mouldings seem to be carved with varied ornaments, and picked out with brighter colors and gilded, bouquets are put into the corners of the panels or festoons hung across them, or wreaths hung up in the middle of them. One panel within another is a common contrivance, which would, indeed, be expensive enough in reality, and would involve the necessity of a very thick wall, but is easily compassed in deceptive painting. The highest achievement of this system of ornament is reached when a female figure, somewhere between a dancing-girl and a nymph or goddess, occupies the middle of every panel, with gauzy crimson or blue robes that complete the chord of color.

The walnut-finished libraries and the oak-finished dining-rooms and offices are better and worse. Better, because consistent in wrong-doing, because sticking to one imitation; worse, because more nearly deceptive and more evidently intended for deception. There is considerable boldness in the way these latter humbugs give the lie to what we know is true about them; there is also skill to help to keep in countenance the brazen imitation Possibly the long reign of this particular piece of self-contradiction is partly due to the skill with which it has been managed; possibly the sheepish quality in human nature which leads men to follow each other blindly, would not alone have sufficed to perpetuate it. It still keeps good company. Not, however, as good company as it once kept. All these imitations of costly materials have lost some of their importance. Their enemies have prevailed against them so far as to banish them from the best society. When Sir Walter Scott would found a baronial family and build a family seat, and Abbotsford resulted from his study of mediævalism and Melrose Abbey, he never suspected that his work was not thoroughly Gothic and thoroughly good, but much of the inner decoration of that building to which he gave such loving study was mere imitation of oak and of marble. The use of the deceptive painting was so naïve and unconscious that some part of the sin of such work is taken from it; but, also, all the beauty the interior might have had is taken from it, and discredit is cast upon all the antiquarian treasures with which the building is filled. Some friend sent to Scott beautiful oak wainscoting of the fourteenth century; there was not enough of it to line the whole room, it was eked out with plaster disguised by the painter's and grainer's brush and fingers. The ceilings of some of the principal rooms are still, to the careless eye, all of old oak, the heavy frame-work of massive carved beams exposed, and decorated with armorial shields, also of oak, all dark and venerable with time; it is only a careful look that detects the plaster surface and the brush marks. Flat stones were laid to pave a passage—laid as carefully and the edges adjusted as accurately as possible; then the surface was painted in imitation of marble, the painted joints quite independent of the hidden real ones. In this latter case "the stones cried out against him," as Scott himself said. The real slabs dislocated the false joints by insisting on their own.

If Sir Walter Scott were to build Abbotsford now, he would not err in that way. We are confident, too, that if the trustees of the British Museum were to build a new building to contain the treasures in their charge, they would not, in their main hall of entrance and on their principal stairway, contrast with real, enduring, adamantine red granite from Egypt a pretty imitation of it. That is to say, decoration by delusions has lost something of its good reputation. But with us in America it holds its own. We are not at all sure that in a new Astor Library building the mistake of the present one would be avoided, and the marble coping of the entrance stairway no longer disgraced by a plaster-and-paint semblance of itself. If Boston were to build a new City Hall, the hollow wooden columns on the stairway to look pretty, with the slender iron ones inside them to do the work, would probably be perpetuated. The bodies of our carriages will for a long time yet be disfigured by basket work of split cane, or by an imitation of it, put on with thick projecting color, where even real basket-work would be meaningless and a sham. And, in like manner, we can see no reason to suppose that fewer rich men will have their dining-rooms "panelled in oak" this year than last.

In considering how we ought to decorate by painting, let us stick to our billiard-room. Let us assume that there is a wooden wainscoting three feet high, in order that chairs and other movable furniture may be pushed back, if at all, against woodwork rather than against breakable plaster. Let us also suppose, to soften the angle between walls and ceiling, a cornice of some material, no matter whether wood or plaster, stamped metal or terra cotta, *papier mâché* or vulcanized rubber, but small, not more than eight inches high and a foot on the ceiling. Now there must be a border, a frieze, a broad band of the richest decoration and the brightest color, used along the top of the wall. There is no really successful design without it. We did not advise it in papering rooms, only because there are no pretty borders in paper to be had. From the days of the Panathenaic bas-reliefs, belted around the cella wall of the Parthenon, to the modern Polynesian savage, whose skilful carving of his paddle, which shames modern civilization, has for its first principle a border within which all the main design is contained, all true decorators have felt this need. The border may, perhaps, be an arcade—not in relief, not with shadow, but in pure flat color. Suppose, for instance, a row of semi-circles like arches, just bands of color an inch wide, alternately red and blue, and so interlaced that they continually make pointed arches half red and half blue. Suppose that each meeting of two red or two blue semi-circular arches is upon a floral similitude of a capital of the arch-blue and a little orange, and the *quasi* capital above a spiral hint at a shaft of the arch-red and a little green. Suppose that all this is on a pale buff ground; all perfectly shadowless and flat; the whole breadth of the band so designed about two and a half feet—that, or something like that, would make an excellent border.

The color, and something of the pattern of this, ought to be repeated, in a narrow band about six inches wide, just above the wainscot. There are

left nearly eight feet in height of wall between this latter narrow band and the border. This, the principal wall surface, is to be the simplest in pattern in our room decorated with flat decoration only. A design quite like a good design for paper will be good here; one unit or two or three units of design often repeated. Or, if the whole is divided into high and narrow panels (to use an inaccurate but customary word), every panel may have a different design within it, and will be better so if they somewhat agree in character and harmonize in color.

Space fails us, but the subject remains hardly touched upon. We hope to revert to it at another time.

THE "GERMAN" AS A SCHOOL OF MANNERS.

When Ethiopian serenaders first entranced the public in England, and crowded houses nightly attested the attractions of Jim Crow and his million of successors; when Lady Clementina practised "Villikins and his Dinah," while Capt. George listened admiringly—*Punch* described Ethiopia as a district consisting of six or twelve chairs, situated on a platform behind footlights, and inhabited by creatures with lamp-black faces, who sang absurd songs and made very stupid jokes. Just so to-day, when one reads the heading of this article, every intelligent mind understands that this is no attack upon an innocent nation or individual peaceably given to smoke and beer, but it has reference to another collection "of six or twelve chairs," inhabited by the best society, robed in tulle, silk, and broadcloth.

We all are aware that towards the close of a ball, when chaperons are greedy for bed, there comes a lull which the uninitiated might suppose meant a general breaking up. The knowing ones know better. Chairs emerge from corners and quarters unsuspected and range themselves around the room. Sandwiches of young men and young women are seen to occupy these chairs; first "a youth," then "a maiden," until the magic circle is complete and the business of the evening begun.

The scene is harmonious, to all appearance; faces shine brightly with anticipation; and the tired mammas prop themselves against the wall and pray for patience. No matter what is the figure with which the leader chooses to open the ballet, it is sure to be pretty and graceful. The male dancers and the *coryphées* are ready, and, holding the *première danseuse* well in hand, he whirls off.

"Do n't take out Julia Jones," whispers the divinity in scarlet roses; "she wants to come into our set, and she sha' n't."

Her partner nods assent, and then unceremoniously catches up a half-dozen beauties and ranges them in accordance with the half-dozen gentlemen whom the fair persecutor of Julia Jones has already manœuvred into place. The word is passed from lip to ear, and Julia Jones has a sombre time of it. She sits, as it were, apart from the crowd, and, until her "turn" comes, might as well have gone home an hour before. And she is not the only victim. There are more Julia Joneses than one in so large an assemblage, and not a few feminine natures are made to feel the pin-pricks of girlish rivalries.

What says Aytoun?

> "Men hate, because in act or strife
> They cross each other's path.
> Short is the space for jealousy,
> And fierce the hour of wrath.
> But woman's hate runs deeper far,
> Though shallower at the spring.
> . . . . . .
> A fairer face—a higher place—
> More worship—more applause—
> Will make a woman hate her friend
> Without a deadlier cause."

And hating her, whether friend, foe, or stranger, what field like the German for exercising the delights of vengeance?

One method we have just noted; another is to arrange matters in the figure so as to force Louisa to dance with Charles, whom she refused yesterday, or with Laurence, who jilted her last summer. But then what right has Louisa to look so fresh and wear such a lovely dress, when she, Jane, is conscious of a *toilette manquée* or *soupçon* of rouge? With the male inveterates, taking it for granted that there lurks "a deadlier cause," the results are pretty much the same. The Carlyles cut Tom Perkins at their last ball; here is the occasion for Tom to lame Bob Carlyle, as innocently as possible, just by bringing his heel unconsciously down upon Bob's patent-leather toes; and as for Mary Carlyle, how easy it is to pause long enough before her to make her half rise and hold out her hand, expectantly, while Tom looks surprised and gives his to the lady next door! All these small incidents, and dozens like them, are enacted with smiling cheeks and smooth brows. And they are so many lessons taught to govern the days of one's life. You observe that disdain, envy, malice, and revenge have their pretty, petty triumphs, and the little tiger-cubs of both sexes taste the blood on which they mean to live and fatten.

We saw, the other evening, a German conducted on the best principles, offensive and defensive. A great, wide, brilliant circle. Ex-soldiers in late uniforms; generals, still in the service, gold-laced and gilt-buttoned; gentlemen, not military, in black and white; handsome women rustling in *ruches* and ribbons; stylish women stunning in strange devices of costume and coloring; plain women smiling in spite of fate, and doing their best to make one forgive their neglect of what somebody sets forth as a woman's duty, "Will I, will I—look pretty?" The *mise en scène* was really perfect—flags upon the wall, wreaths upon the ceiling, draped chandeliers, flowers, and a waxed floor. The German was inaugurated! Lightly sprang to their feet, at the call of the leader, a dozen dancers. Variegated scarfs floated from their uplifted arms, and then pink danced with pink, and blue with blue, until the seven couples were mated, made their giddy round, and the airy mantles fell on other shoulders. Had we been an ordinary mortal, this would have been all that our eyes and ears could discover; but, gifted with that power that one assumes with the pen, we saw and heard the by-play which kept even pace with the plot. We noticed that, having begun at the extreme end of the room, all the fun continued there. Again and again the same dancers took the floor and kept it. Patiently the scores of sitters sat on, fringing the dowagers against the wall like gay stripes upon a sober-hued Balmoral. Unweariedly the leader and the ladies, with the partners thereof, got up and waved the bright scarfs, and made momentary tableaux, and floated around. Green skirts and blue, white skirts and yellow, swam and sprawled, and somebody said to somebody else, "It must be dull for those over there."

"Who cares?" asked a sweet voice, and a gay laugh rang out defiantly.

At length, half tired of the sport, one gentleman ventured to choose a dancer who was waiting for her turn "afar off." The queens of the ballet consented, and the outsiders were gradually taken in because mesdames the *premières danseuses* wanted rest.

And now we watched a little woman, a stranger, whose bright glances had steadily followed the manœuvres of the German. Her lithe figure, supple yet robust, and the graceful play of arms and waist, could show the most unpractised eye that she was a dancer. Evidently, also, she was there *to* dance. Her dress, in exquisite taste, had attracted much attention—too much, perhaps, for arrayed against her now was the sense of feminine jealousy.

"What business had she there at such a time?"—we had long seen a spirit of impatience "ride sparkling" in her imperious eyes—an hour had passed since she took her seat to dance the German, and she had never yet moved.

A stray gentleman, leading the figure, the eternal scarfs dangling from his hand, drew near—and passed on, singling out her neighbor. Another and another, right and left, they were finally permitted to use their stiffened limbs, but no relief came to this beleaguered sentinel.

Then we saw her rise and take her partner's arm—a stranger like herself—and make her way to her chaperon, who was dancing, and *had been dancing*, with one of the managers of the ball. "I am going home," she said curtly. "So soon! Are you tired of the German?" "Very—of looking on. I have sat for one hour and twenty minutes watching a performance in which I have been permitted to take no part. It does not amuse me to see the young ladies' ankles, and, having no daughter to look after, I have not the fortitude of the sleepy matrons who have daughters. It does not suit me to wait another hour for the privilege of thrusting a scarf into the unaspiring hand of some one of these gentlemen, who have with commendable unanimity declined including me in a dance which I presumed was open to all present."

"I suppose your being a stranger—"

"Pardon me, because I *am* a stranger would, in the country from which I come, be a claim upon civility, not a barrier to it. Were you to take your seat in a German there, you would be singled out repeatedly, from the fact that good manners inculcate, as they spring from, consideration of the feelings and rights of others."

She courtesied low, and we saw her sweep from the hall. "Consideration for the feelings and rights of others." A grave deduction from so light a subject. It is the moral of this German.

AMERICAN CATTLE.

Some account having been given in a previous number of the importations of short-horns and the effect they have had in improving the common stock of the country, it remains to consider the importation of other breeds and to point out how far they have influenced the cattle of the United States.

We have alluded to the effort of the Hon. Henry Clay to introduce the Herefords into Kentucky in the year 1817. That, as we have seen, was in the early days of the short-horns, and before their unrivalled merits were fully understood. In 1824, Admiral Coffin, of the Royal Navy, sent a superior Hereford male and heifer to the Massachusetts Society for Promoting Agriculture. These animals were kept at Northampton, in the Connecticut Valley, and left a numerous progeny, which was highly esteemed in that neighborhood, where distinct traces of it may be seen to the present day.

But the largest importation of this breed was made by Messrs. Corning and Sotham, of Albany, N. Y., in the year 1840. This lot consisted of five males and seventeen females. Other additions were made to this herd in subsequent years, and a considerable part of it is still in the hands of Mr. Sotham, we believe. Hon. L. A. Dowley, formerly of Boston, now of New York, also imported several fine specimens of Herefords, which were kept at Brattleboro', Vt. A part of this herd went afterwards to the State Farm at Westboro', Mass., and from there into the hands of Merryman, the bridge-burner, of Baltimore Co., Md. The Herefords are not adapted to the wants of a section of comparatively small dairy farms. They are not adapted to New England, except, perhaps, to small localities devoted to grazing, which are limited in that part of the country. In point of symmetry and beauty of form they may be classed with the improved short-horns, though they are, perhaps, a little slower in coming to maturity. Still they take on fat with remarkable rapidity, and their beef is of higher quality than that of the short-horns, and brings a correspondingly higher price in the Smithfield market. It is a curious fact that the "cuts" for the rich in England come from the Herefords, the Devons, or the West Highlanders; while those for the people come from the short-horns or other classes.

The North Devons have been introduced into this country in greater numbers. There are many who are inclined to think they laid the foundation of the common stock of New England, and that the prevailing color of New England cattle, which is red, is an evidence of this. As a race the Devon dates much further back than its history can be traced; but the modern improvements, as in other breeds, are of comparatively recent origin. However much it may have been given to milk in its earlier history, it is now bred almost exclusively for beef. The oxen, when broken to labor, excel all others in quickness, docility, and beauty. They are rather numerous in the vicinity of Baltimore, Md., where Mr. Patterson has bred them for many years with special reference to the dairy, and has developed or preserved whatever milking qualities they originally possessed; but the result is a very different animal from the modern improved Devon, as it is commonly accepted in England and this country.

The Massachusetts Society for Promoting Agriculture also imported a herd of North Devons some years ago. They were kept together a few years and then disposed of. The milking qualities of this breed not proving satisfactory, it has never become a general favorite in New England. The production of beef being an entirely secondary object, any imported breed must have other qualities to recommend it. They are good as working oxen, to be sure, on account of their quickness and ease of motion, but the New England farmer has an almost equally good stock for this purpose in his "natives." They give rich milk, but the Jerseys give richer. It must be admitted, however, that the Devons have been extensively crossed with the common stock of the country, and that they have exerted a powerful influence upon it.

The Ayrshires were imported into this country many years ago, and have proved a success in regions of small farms devoted to the dairy, particularly where the production of milk is an object of pursuit or where cheese-making prevails. The Ayrshires, crossed with the common stock of New England, have proved also to be remarkably good, and well adapted to the circumstances in which they are placed. One of the cows of this breed, originally imported by the late John P. Cushing, of Watertown, near Boston, gave in one year 3,864 quarts of milk, beer measure, or over ten quarts a day for the year, an average much larger than that of the common stock of the neighborhood at that time. The first Ayrshire cow imported by the Massachusetts Society for Promoting Agriculture yielded sixteen pounds of butter a week for several weeks in succession on grass-feed alone, while a cow imported by H. H. Peters, of Southboro', Massachusetts, in 1858, gave an average of 49 lbs. 3 oz. of milk per day for 114 days, beginning on the 1st of June, 1862. In three days in July her milk yielded 6 lbs. 3 oz. of butter.

These are rather rare and exceptional cases, it is true, but they serve to show the characteristics of the breed; and when it is considered that the animal is hardy, of small size, and yields a greater amount of milk in proportion to the food consumed than any other distinct breed, it will naturally be inferred that this cow is admirably adapted to the majority of farms in that part of the country where, it must be borne in mind, the demand for milk, for consumption in the numerous cities and factory villages which line the course of every stream, is very great and constantly increasing. Indeed, the Ayrshire may be taken as the type of the New England cow, as the short-horn may be regarded as that of the Kentucky or Western cow.

The Ayrshire has, therefore, been pretty extensively imported into the Eastern States, where it has been kept and bred in small herds, from which it has gone out into the hands of dairy farmers and been extensively crossed with the common stock, which it has almost invariably elevated and improved. But it is not in New England alone that the Ayrshire has been widely introduced and exerted a strongly marked influence. It has gone into New York, and some of the leading breeders of this class of stock are to be found there devoting their attention with great enthusiasm to the improvement of their herds. Many of the finest Ayrshires in the country have been bred around Baltimore, a section admirably adapted to them.

It remains to speak of the Jerseys, another favorite dairy breed which has had a wide influence within the last few years upon the stock of the northern and middle Atlantic States, and is destined, on account of its rising popularity, to become one of the leading breeds of these sections. The Jersey is the gentleman's cow. No animal surpasses it in richness of milk and the high color and delicious flavor of its butter. Where a man keeps but one or two cows for the purpose of supplying his family with milk and butter, where quality is more of an object than quantity, this is the cow of all others, and hence it is fast increasing in numbers around the large cities, at the fashionable watering-places, and the favorite summer country resorts of gentlemen from the city.

The Jerseys have been imported in great numbers within the last fifteen years not only into New England, but into New York, New Jersey, Pennsylvania, and Maryland. Not unfrequently a specimen or two will be found at the homesteads of the great short-horn breeders of Kentucky and the West, and if any surprise is manifested, as if they were out of place, the reply will be that they must have something to furnish a little milk and butter for the family.

To show how far this favorite breed has increased within a very recent period, it may be mentioned that in 1853 there were but about seventy-five pure-bred Jerseys in Massachusetts. They are now numbered by the thousand in that State, while since that date the price has increased more than a hundred per cent., and the supply at the present moment is far below the demand. The same is true, to nearly as great an extent, in the other Atlantic States where the breed is known.

Though quite out of place even on a dairy farm devoted to the production of milk for sale, in those localities where butter is extensively made, the Jersey is an important addition to the herd, either in the form of one or more pure-bred animals, or in a mixture of the strain of Jersey blood through the dairy herd. In either case the improvement is quite remarkable. One or two pure Jerseys in a herd of twenty will exert a marked influence on the quantity and quality, the color and flavor, of the butter.

The milk of the Jersey is different in mechanical or chemical composition from that of the Ayrshire. The butter particles rise through it with greater facility. It contains less caseine. In the attempt to make cheese from it, as compared with the milk of the Ayrshire, the farmer would find it to be a failure; not that a very rich cheese cannot be made from it, but that the quantity would not bear comparison.

This difference is apparent even to the naked eye, for if we take two specimens of milk, one from the pure Ayrshire, the other from the pure Jersey, and set them in favorable conditions for the cream to rise, for the requisite time, say twelve to eighteen hours, and then skim the two, we shall find the former will give us less rich cream than the latter; but the skimmed milk will still be comparatively thick and white, the color being due to the caseine which surrounds the butter particles and holds them in suspension, while the skimmed milk of the Jersey will be blue, thin, and watery. In other words, the one is still rich, and would make a very fair skimmed-milk cheese, the other of very poor quality.

To consume in its natural form, as milk, we regard the product of the Ayrshire the better of the two—more nutritive and more wholesome. This is evident from the fact that the Ayrshire milk contains a larger proportion of caseine than Jersey milk; for it is to the caseine, chiefly, that we are to look for nutritive elements, the butter or oily constituents adding flavor and delicacy, what we call richness, to the taste. The flesh and muscle forming

constituents are to be found in the caseine. This is a nitrogenous substance very nearly analogous in composition to fibrine, gluten, and albumen, and almost identical in chemical constitution with flesh. It is one of the most important elements of nutrition, in fact, and it is well known that cheese, which is the product of the caseine in milk, is one of the most nutritive of substances, more nutritive, even, than butcher's meat. The Jersey milk will make a rich cheese, but it will not make so much as that from Ayrshire milk.

There are some other European breeds that have been introduced into this country to a limited extent, but no others that have exerted anything like the widespread influence of those already mentioned upon our common stock. Among them the Dutch may be mentioned as one of the most prominent. These cattle are large in size, the prevailing color black, with more or less white, either in patches over the body or one great sheet of white extending over the back. They are usually great milkers and great consumers, but their milk is thin and of rather poor quality. They are also difficult to fatten off for the butcher after their milking days are over, more so than any of the breeds upon which we have dwelt. The proportion of food required to bring them into condition is altogether out of proportion to the results. As a breed it was at one time rather popular in England, but it has almost entirely lost its hold upon the estimation of dairymen and others there, and it will soon cease to be regarded as of any account in comparison with other and more profitable breeds in that country.

The number of pure-bred Dutch cattle, and of any other recognized breeds, is so small in comparison with those above alluded to, and the influence they have exerted upon our stock is so slight, that it is not necessary to dwell upon them further.

If, now, we take a casual glance at the improved stock of the country, we shall find that the beef and dairy breeds have been distributed in sections where we should naturally expect to find them—the former, most largely represented by the short-horns, having taken possession of the fertile plains of the great West, Kentucky, Ohio, Illinois, and other grazing and corn-growing districts still further West and beyond the Mississippi, while the latter have been more generally, though, of course, not strictly, confined to the older Atlantic States. There are a few successful breeders of short-horns even in New England; but they look rather to a distant than a home market, with the exception of a few well-defined localities which may be regarded as adapted to this large breed.

New York also has the credit of possessing some of the finest short-horn herds in the country, few breeders anywhere having a wider or more enviable reputation than Col. Thorne, of Washington Hollow, and several others that might be named, whose efforts are an honor to the country. The breeding of this class of stock has, for the most part, been confined to enterprising persons who are able to keep pretty large herds, and who make it a specialty to a great extent, and they bring to it great skill and judgment, and conduct it with a degree of system which ensures success. The owners of Jerseys, on the other hand, have hitherto made the breeding of stock rather a secondary object of pursuit, subsidiary to the practical purposes of the butter dairy, or of supplying themselves with milk and butter. Hence these cattle are more seldom found in large herds, but are kept in small numbers by a large number of people. Within a range of twenty-five miles of Boston or New York, for instance, hundreds of gentlemen might be named who keep one, two, or three pure-bred Jerseys, while there are very few large herds where the object is to supply the demand of the public for these choice cows.

The same is true, to nearly as great an extent, of the Ayrshires. And yet no one can deny that it would be of great public advantage to have certain large breeding establishments, each devoted exclusively to some one pure-bred class, where a gentleman could go with entire confidence in the quality and the purity of the stock he wishes to obtain.

There are, in nearly every State, certain public establishments, like the State almshouses, the lunatic hospitals, and other public charitable institutions, having farms connected with them as a part of the system. In a large proportion of these institutions extensive herds of cows must be kept for the purpose of supplying the wants of the inmates. It is the duty of all such public institutions to keep only the breed of cows best adapted to supply them with milk, and adapted also to the farms in their respective neighborhoods. They would, by so doing, accomplish two great public objects instead of one. They would produce an equal amount of milk, and at the same time become great breeding establishments, where a high class of stock would be raised, and they would exercise a widespread and elevating influence upon the cattle of a large extent of country. In what way could they serve the public more directly and practically?

If we are permitted to look to Europe for examples of liberal public spirit, we shall find that very many of the governing classes have adopted the system of establishing large breeding herds of pure stock for the purpose of developing and improving the neat cattle of their respective countries, under the impression that this branch of agriculture really lies at the foundation of all rural prosperity. The late Prince Albert, for instance, established a magnificent herd of two hundred short-horns at the Home Farm, near Windsor Castle; another of ninety pure-bred Herefords at the Flemish Farm, two miles away; another of a hundred pure-bred Devons on an adjoining estate called the Norfolk Farm; and all those herds were bred with extraordinary care.

The late King William of Würtemberg began as early as 1824 to import and breed short-horns with the conviction that they would be the means of developing a taste for farming pursuits in his subjects and of improving the stock of his country. His example was soon imitated by the emperors of both Russia and Austria, and subsequently by the unfortunate Louis Philippe of France, and by Napoleon III., who has not only bought extensively and at enormous prices, but hired celebrated males from the famous herd of Booth, of Warlaby.

The King of Sardinia has done the same; while Spain has more recently made the attempt to build up and improve her Andalusian cattle by similar means. Other examples of public spirit in this direction might be named, all going to show that it is regarded as of great public importance that such efforts should be made to improve the stock of the farm. In this country we have nobody to undertake these great enterprises for us, and there is the more reason why we should undertake them ourselves. There is no place so appropriate as upon the farms connected with our public institutions. The expense would be too trifling to constitute any objection. In fact, after the herd were once well established, it might be made a source of actual profit to the institutions. It costs no more to raise a pure-bred animal than it does a scrub; while, after it is old enough to sell, it will bring a far larger sum.

At a recent public sale of two herds, one of Ayrshires and another of Jerseys, in the State of Connecticut, the calves of the former breed averaged over $70 a piece, those of the latter $85. The Ayrshire cows sold at an average price of $193, and the Jersey cows at an average of $293. When it is considered that one of these herds, the Ayrshires, was sold under very unfavorable circumstances, being for the most part in very low condition, it will be apparent that cows of either breed must be more profitable to raise than such as are commonly kept at our public institutions.

But the question of profit, though worthy of consideration, is entirely secondary to the main object which these establishments should have in view so far as their farming operations are concerned, which is the good of the public and the elevation and improvement of the stock of their respective localities. A branch of farming which involves so vast an amount of capital as that of the stock interest of this country cannot be regarded as of small importance, nor is its development unworthy to command the highest intelligence and the most consummate skill. The rewards of success are ample and encouraging, whether they may belong to public institutions or to private enterprise.

PARIS GOSSIP.

PARIS, January 26, 1866.

THE new "season" may now be fairly regarded as begun, the first of the state balls, given every winter at the Tuileries, having just taken place. The enemies of crinoline will be sorry to learn that the prospect of the downfall of that obnoxious institution seems to be further off than ever, as the display of skirts at the ball in question was greater than ever, thus settling the "vexed question" of "to be" or "not to be" inflated for the next twelvemonth. The hooped petticoat is now made very small at the top, almost resting on the hips of the wearer, and falling straight in front, so as to do little more than keep the superimposed draperies from actually touching the knees, but forming a train behind far more extensive and comet-like than anything heretofore attempted in the way of "tails." The cage thus prepared and extended now receives a second "tail," fastened on behind about a foot from the bottom of the skirt, and forming a train that projects fully a couple of feet beyond the furthest extremity of the cage itself. This supplementary tail comes quite down to the ground, on which it drags as the wearer moves. The object of this latest achievement of petticoat engineering is to enable its wearer to display a "train" of silk, satin, velvet, or tulle, of from three to four feet. Above it is worn a flounced skirt, so long as to stream out a little way beyond the outermost wire of the crinoline—ladies of particularly insatiable vanity often wearing two, three, and four of these upper skirts, each longer and fuller than the one below it. Upon this ponderous framework is displayed the skirt of the dress, cut rather short in front and at the sides, but streaming

out behind like a meteor. This skirt is gored from top to bottom, some of the breadths being sloped on both sides, others on one side only. It is enormously full at the bottom, while diminished so much at the top as to form but a few plaits. The front breadth is often made without any plait, being sloped so as to lie flat across the body.

One favorite style of dress, the "robe princesse," is made entirely without plaits, each breadth being gored so as to fit the substructure of skirts (the latter being gored in like manner) without any fulness. Flounces are not much in favor at present, preference being given to flat trimmings, of some according or contrasting color, sewn upon the bottom of the skirt, and trimmed with gold, silver, glass, spangles, or feathers. In some cases the *corsage* is made quite plain, in others a drapery is worn much resembling the "Greek folds" of twenty years ago.

Glass beads are "a rage" at present; glass fringe in the drapery, long double or treble rows of large glass beads on the neck and arms, and glass beads in the hair. These beads, especially the colorless ones, of crystal, which shine and sparkle very brilliantly under lustres and chandeliers, though very cheap, are worn by the grandest dames, who, like Princess Metternich, will go to the Tuileries one night loaded with more of these cheap ornaments than would content an Indian squaw, and the next will dazzle beholders with a couple of millions of francs' worth of diamonds.

Gold and silver cord, spangles, zecchins, white jet, Cluny lace, covered with imitation pearls, which are sewed thickly upon it, so that the lace seems almost to be made of pearls; ribbons with patterns of gold or silver, fringes made of gold, silver, steel, or glass beads, or pearls, are the favorite trimmings. Garlands and bouquets of flowers are still used, and bands composed of black or colored feathers. Satins are decidedly in favor, velvet being now considered only as *demi-toilette*. Striped silks are more in favor than patterns; but for ball dresses, gauzes, organdies, and other transparent tissues, with bouquets or spots scattered over the transparent white ground, are in great request. For *demi-toilette*, zouaves and other styles of jacket are fashionable; and basquines are coming in again, with high bodies.

The hair is worn much higher at the back of the head, and covered with little close curls, in the style of the First Empire and of Louis XIV. These curls are not very costly; they are sewed on narrow bands of ribbon, and sold at so much per yard. For fifteen or twenty francs one has enough to impart to the head the desired resemblance to the fur of a Newfoundland dog. Bands of ribbon, or gold, are wound about the head, over these curls, and often produce a very pretty effect. The fashionable wreaths for the hair are now made long enough to hang down behind and pass round the neck under the chin, to the other side of the head. Chains of jet are also wound about the head and neck in similar fashion; but this new style being inconvenient and unbecoming, is hardly likely to become general. Masses of false curls, false braids, and false *chignons* are still worn; but hair-dressers affirm that the present fashion of loading the head with false hair must, ere long, be brought to an end by the impossibility of procuring the necessary supplies of hair. Already the difficulty of obtaining hair has brought certain enterprising "hair-hunters" (as they are technically termed) into trouble, as has been shown by an incident that occurred a few days ago, on the Boulevard Montmartre, where a young girl was found by a policeman, weeping so bitterly as to excite the inquisitive pity of that functionary. Questioned by the guardian of public order as to the cause of her tears, the girl replied that she was an orphan, that both her parents had recently died of cholera, leaving her in the utmost poverty, and that having made the acquaintance of a certain D. he had offered to place her with his wife as a housemaid; that she had accepted this offer, and had gone with D. to his house, but had seen nothing of his wife, who was, he said, gone into the country for a day or two; that D., on pretext that she might be hungry, had given her a piece of bread and a glass of wine, which latter had "got into her head" in a very strange way, and had caused her to become unconscious for an hour or two; that, on coming to herself, she found that her hair, which was jet black and very luxuriant, had been cut off while she had been asleep; and that D., on finding her awake, had ordered her to go away, telling her she had no business to be there, and had pushed her out into the street, telling her, in answer to her reproaches for the theft of her hair, that she was a drunken jade, and that he did not know what she was talking about. The policeman, having heard the girl's story, which she confirmed by taking off her cap and showing him that her hair was cut off close to the roots, gave information to his chiefs of the assault that D. had committed, and proceeded, with a couple of his brethren, to the house indicated by the girl. Through their investigations it was ascertained that D., who is a hair-dresser, is also a dealer in hair, and that he has obtained large quantities of this article by frequenting the public balls, making acquaintance with the women he meets there, and contriving, by the offer of small sums of money, to induce them to sell him their locks. Latterly, the demand for hair increasing, and the supply falling off, this zealous caterer to the folly of the hour has adopted the violent mode of proceeding which has brought him into uncomfortable contact with the arm of the law. It seems that he has latterly been in the habit of prowling about the lowest quarters of the capital, where he watches for any girls whose appearance betokens poverty and friendlessness, and having inveigled them to his lodgings, contrives, either by the offer of a trifling sum of money, or, if that is rejected, by violence, to possess himself of their hair. A great number of curious letters were found at D.'s lodgings. One of these billets ran thus:

"Monsieur, you are a scoundrel. You have stolen my hair, and left me to starve. You know well enough that, up to this hour, you have not paid me one *sou*. ERNESTINE."

A certain countess writes as follows:

"Monsieur, you have not acted honestly. The hair you have sold me is doubly false, for it is dyed, and stains my neck. I warn you that, if you do not change it, I shall summon you before the tribunal for deception in regard to the quality of the goods you have sold to me."

Another correspondent addressed the hair embellisher in these words:

"Infamous brigand, you nearly strangled me while cutting off my hair by force, and you leave me without a farthing. If, by six o'clock this evening, you have not sent me two Napoleons, I will denounce your villany to the police. [illegible] TH."

The evidence against the too enterprising "hair-hunter" [illegible] seemed conclusive, D. was sent to prison, where he now is to await [illegible]

But, to return from this digression. Bonnets are worn [illegible] ller than before. The "Empire" is the "rage" of the moment, a[illegible] es to hide the ears and the top of the head. Birds, flowers, cha[illegible] cameo-buttons, and rows of beads are the principal elements of t[illegible] little ornaments (modern bonnets are really nothing else!), satin an[illegible] being the two most fashionable materials. An attempt is being m[illegible] curtail still further the already minute proportions of ladies' head-g[illegible] suppressing that part of the bonnet which covers the ears; the bonnet [illegible] consisting merely of a tiny crown, which lies upon the top of the *chign* (the latter now being worn on a level with the top of the head), and of a shallow rounded rim, the whole only sufficing to cover a few inches of the upper part of the head. This last absurd invention of Parisian eccentricity is styled "the Pamela bonnet;" but the *houris* of the boulevards not yet having adopted it, its success is by no means certain.

Cloaks are worn very short, generally fitting the shape. Fur trimmings, and imitations of astracan in curled worsted, black or grey, are worn on the edges, and round the armholes and pockets. Collars and sleeves are still worn very small, the former being usually a sort of Vandyke affair, with two long points in front.

The ambassadors from Morocco, who have been lionized at grand official dinners, at which they sat smiling, and evidently delighted, but refusing to taste anything but a little tea, have just left us, enchanted with all the wonders they have seen. One of the lionesses at the circus gave birth to three fine cubs, a couple of nights ago, during the performance, the male lions being with difficulty prevented from devouring the interesting infants, which, when rescued by the keepers, and held up to the view of the two-legged spectators, were by them saluted with enthusiastic *vivats*. The baby-lions seemed as wide awake and as collected as though being born were an everyday thing to them; and being confided to a large Newfoundland bitch which had been provided as wet-nurse in waiting to her feline majesty, the three little creatures began sucking with a zest and vigor that were audible throughout the building.

A great excitement was created, a few days ago, at the Garden of Plants by the discovery that one of the bears was on fire. Some mischievous rascal had thrown down into the pit where the bears are kept one of those dangerous toys called "Pharaoh's Serpents;" the serpent lodged in Bruin's fur, and the terrified animal was instantly in a blaze. The guardians went down into the pit, and succeeded, though not without difficulty, in putting an end to the conflagration by tumbling Bruin into the water-tank that serves the bears as a drinking-trough. STELLA.

PARTIES IN ITALY.

CHAMBER OF DEPUTIES, FLORENCE, Jan. 22, 1866.

THE deputies' benches and the public galleries are crowded to hear the financial statement of the new Minister of Finance, Signor Scialoja, and while the "verification of powers" is going on we shall have time for a glance at the physiognomy of the new House of Parliament, which met for the first time on 19th November, 1865, overthrew the Ministry on a question of detail on 19th December, then voted a fortnight's Christmas holidays,

which the Government prolonged by another week, and is now re-assembled to verify the new elections and proceed to the business of the session. When the House was prorogued about eighty colleges remained vacant; some of these are filled, others remain to be balloted for, but the result alters scarcely at all the relative position of parties in the House. At the time of the presidential (or speaker's) election the "left" boasted that they could cast 130 compact votes; the right about the same number; the remainder belonging to the centre, left centre, third party or Ratazzians, who enjoy the privilege of turning the scales in favor of whichever side they prefer. As, then, the late elections have given six members to the right and half-a-dozen to the left, it becomes a question of life or death to conservatives and *progressisti* to win over this party to their side. The Ratazzians or third party were the liberals in the Piedmontese chamber when Cavour, then Minister of the Navy, shocked his premier, the conservative but patriotic D'Azeglio, by holding out to them the hand of fellowship. They accepted it, and worked with the great statesman till his death, when the compact and well-ordered ranks of the moderate party split into fractions, and called themselves "Ratazzians," "Ricasolians," "Lamarmorians," etc., each in turn taking their lease of power, doing their utmost to upset each other, only combining when the dread spectre of the red shirt rose before their eyes. In that first Italian parliament the "left" can scarcely be said to have had a collective existence. At the elections of 1861 the radicals were far more anxious for a summons from Caprera than for an arm-chair in *Palazzo Madarua*. Some twenty or thirty radicals did take the oath to the "King, his heirs, and the constitution;" but they were undisciplined and disorganized, did some good service as *bersaglieri*, and no more.

But Sarnico and Aspromonte seem to have taught the members of the liberal party that the *plebescite*, while it imposed on the King the duty of freeing Rome and Venice, gave him also the right to choose his own time; that hence, as war can only be proclaimed by his government, the speediest way of making war is to seize the reins of that government. If we except two or three ultra republicans who deem monarchical unity fatal to Italy, all the prominent men of the party of action echoed the cry "To the urn—to the urn!" Mazzini urged his friends to choose members who would insist on immediate war for Venice; Garibaldi *item;* the nation answered their appeal, and our left benches are now thronged with men who, in exile, prison, or on the field, have worked for their country's liberation. Twenty-three Garibaldian officers are there; I see a handful at the extreme left—Colonels Corte, Guastalla, Pianciani, and Chiassi, and Majors Guerzani and Cairoli—who will give their moderate leaders a mint of trouble ere they allow them to celebrate the proposed marriage with the left centre. This, however, is the formal programme of Crispi and Mordini; excluding Ratazzi as the minister during Aspromonte, they invite the Piedmontese faction and the remnants of the third party to join them, and together ascend to power. No answer has as yet been vouchsafed; but if it is given in the affirmative, the hours of the present Ministry are counted. As it is, Lamarmora is looked on with no favorable eyes; it was his menace, "to dissolve the House if necessary," that led to the late crisis; and his remaining in office is unhesitatingly attributed to the negotiations with Austria for something more than commercial concessions, and to fresh overtures from the Pope, in consequence of which the bills for the suppression of seminaries, proposed by Natoli, and the bill for the suppression of monastic orders and the administration of ecclesiastical property, brought in by Cortese, are, it is said, to be withdrawn. In any case the present Ministry does not possess the elements of success; and if the proposed coalition of left and left centre is carried into effect, we shall have a radical Ministry before the end of the session. I, for one, shall deeply regret such a premature event; the members of the left are chiefly new to parliamentary life, and of administrative routine they are totally ignorant. It may be said that Mordini and Crispi had some experience during Garibaldi's dictatorship, but that would avail them little as ministers of a united Italy, with an empty treasury, for the solution of the question of Venice, or the how to get Rome and yet keep faith with the signers of the convention of September 15. Like all *ultra* parties, the radicals are in too great a hurry; they have no decisive financial programme; no war programme; no well-organized system of internal reform, so necessary in this transition state, where administrative and legislative unification demands that the best laws of each state shall be extended to the whole.

The ministers have just taken their seats. Lamarmora reads over the names of the members of the cabinet, and Scialoja rises to make his financial statement, of which, at the close, I must give you such a report as can be drawn up in this ill-conditioned reporters' gallery, where only one word in six reaches the ear. Scialoja commenced his speech by assuring the House that the rumors of a new loan were false, that such a measure would be most unadvisable under present circumstances and unnecessary, since it is his opinion that the close of 1866 may be reached without recourse to any extraordinary expedients. He stated that the deficit of 1866 would amount to 266,000,000f.; that, avoiding all empirical remedies, the Ministry proposes two schemes for balancing revenue and expenditure, *i. e.*, the augmentation of the former, the reduction of the latter. As to the 443,491,000f. of public debt, that cannot for the present be touched, as nations can no more fail than individuals in their engagements; neither can the 7,932,000f. for pensions, half-pay, etc., nor the 21,714,000f. for prisons, galleys, etc., be reduced. The necessary expenses he divided thus: 230,000,000f. for the army and navy, 166,000,000f. for all the other branches of the administration. On comparing the balance of 1864 with that of 1866, we find a reduction of expenditure amounting to 150,000,000f., but the nation has not felt the benefit thereof. Between the war and navy, and other offices, another 57,000,000f. may be saved by means of organic reforms; 2,300,000f. are to be saved by changes in the treasury service; 2,500,000f. in the foreign office; 2,084,000f. in the home office; 2,168,000f. by the abolition of the sub-prefectures; 300,000f. by re-organization of the civil engineering service; 1,500,000f. in the post-office and telegraphic departments; 30,000,000f. in the war and navy departments. These economies, amounting in all to 57,000,000f., would reduce the deficit to 211,000,000f., which must be provided for by other means than by a loan. As for existing taxes, it would be difficult to augment them, though by a better and juster distribution they may be made more profitable. Our three chief taxes are property, or, strictly speaking, land tax, income tax, and stamp tax. The land tax would be rendered more productive by being organized on the latest *catasto* (or census of landed property), the income tax must be reduced from 15 to 10 per cent., the window tax, proposed by Sella, withdrawn, but all the others are approved and are expected to produce 20,000,000f. A new tax on wine is to produce 40,000,000f.; minor taxes, 35,000,000f.; Sella's famous tax on the grinding of corn *macinato* is not to be rejected without a hearing, and thus the deficit is to be reduced to 80,000,000f. if the measures proposed be adopted without delay. Such is a faithful, though brief, report of Scialoja's speech, which terminated with an appeal to all parties to unite against the greatest present enemy of Italy—the *deficit*.

The death of the poor little deformed Prince Oddone was announced, in consequence of which the House is to be closed to-morrow. J. W.

Correspondence.

WHO WAS DON QUIXOTE?

To the Editor of The Nation:

Readers of Cervantes' immortal novel who have any acquaintance with the peculiarities of Romanist doctrine cannot have failed to observe therein a great deal of sly allusion which at least smells strongly of heresy, and are quite willing to believe the tradition that he once observed that his book should have been twice as good were it not for the Inquisition. Whether he had not a more peculiar and personal aim is a question to consider.

It is to be noted that the mental condition of his hero is undecided. Cervantes affirms him to be mad; but whether a physician would not pronounce him as sane as St. Theresa or Francis of Assisi is not clear. His creator was fond of telling anecdotes about madmen, and evidently knew the external signs of lunacy well, but has given him no unmistakable feature thereof. All his delusions might be explained by supposing him subject to hallucination, like Swedenborg and Colonel Gardiner, men universally considered sane. Coleridge pronounces him not mad, but one in whom the imaginative faculty had acquired a tyrannous mastery over the perceptive powers. In short, he is a visionary enthusiast to the utmost extreme of sanity, and perhaps beyond it.

We are apt to overlook the influence exercised over great minds by the political and theological events of their time, even in literary matters; perhaps it may come of our slight understanding thereof. But Cervantes was a Spaniard to the core, intensely interested in what was of important concern to his nation. Indeed, there is in all the novel an undertone of sorrowful disappointment—a sense of failure not merely in his own life but in his nation's. When he was young, Spain was in her very pride of place. He himself had been in the great sea-fight that finally thrust back the Turk; and after that it seemed as if not only Spain and Portugal, but France, England, Holland, and Italy, would all be ruled from Madrid. All this had passed away. The heretic English and Dutch swept the seas; Maurice and

Henry of Navarre had proved themselves too much for the Spaniard. And France—not absolutely heretic, but as much hated as if she were—was confessedly coming out first in the race. All this gives its tone to, and is re-echoed in, the work of Cervantes' age—of a time when thoughtful men saw their glory departing, and, like his hero, looked back to a magnificent and heroic past. But there were other matters of temporary and local importance, and what these were I will endeavor to show.

The Spanish population was then divided into three classes: first, the hidalgos, or "petite noblesse," who claimed to descend from those who had reconquered the land from the Moor; second, the pecheros, descended from those Romanic and Gothic Christians who had submitted to Tarik and Musa, and lived under them as tolerated subjects; third, the new Christians, sprung from converted Jews or Moors, and held in much social disesteem—looked on, in fact, like persons known to be of mulatto descent with us. Now, whether from chance or choice, the Jesuits (organized four years before Cervantes' birth, and for a long time predominantly Spaniards) drew their recruits mainly from the new Christians, playing the same game that the Northern churches propose to play in the South. So much was this the case that, in 1573 (Cervantes being then in his twenty-sixth year), they attempted to make Polanco (of Jewish descent—indeed, it would seem, himself a convert) the general of the order. The disgust of a young hidalgo at such proceedings may be guessed. But in four years a Neapolitan (Aquaviva) was made general, and the management of affairs concentrated in Italy, thus overthrowing the influence of the Spaniards, old Christians or new. Then they quarrelled with the Dominicans on the score of their Augustinian (*Calvinist*) theology, and themselves took that rationalistic and Pelagian line which brought down on them the lash of Pascal in later times. Then the Spanish Inquisition pitched into them. And then the order went over to Henry of Navarre, and formally allied themselves with France and Venice. Just about this time came out the first part of the "Quixote." As to the second, it was published ten years after, when Cervantes lived by the patronage mainly of the Archbishop of Toledo, who hated the Jesuits by necessity of position. Still—although not yet canonized—Loyola was held in great reverence in Spain, and any palpable sneer at him would have brought the jester into unpleasant nearness to the rack and stake. But that did not hinder much sarcastic allusion, of a kind only noticeable by keen observers, and capable of being disclaimed with security.

Ignacio Loyola was, indeed, not an old bachelor but a young soldier, a duellist and an amorist; not merely an intense lover of romances, but had actually written one himself—though in praise of the Apostle Peter. He had chosen for himself a dulcinea—who probably knew as little of it as Aldonza Lorenzo—but she was in rank as he says "more than a duchess." When recovering from his wounds, and perceiving that he could no longer be a soldier, he dreamed of imitating the penances and feats of Francis of Assisi and St. Dominic; but, it would seem, very much as a matter of ambitious adventure. And when he had forsaken house and friends, and gone off in pilgrimage to Montserrat, he thought fit to hang up his armor and hold a vigil; not according to the usage of the Church, nor to that of knighthood, but in precise imitation of an adventure in "Amadis de Gaul." So, afterward, he had hallucinations equal to any of the knights—he conceived himself to have seen the Virgin, Christ, and the Trinity, with his own corporeal eyes. Afterward he became more reasonable and more pious; but these things remained on record, and we may guess the way in which they were regarded in later times by a hidalgo of education, and of humorous and sceptical tendencies, who hated the Jesuits for other good reasons.

It may be said that there is nothing convincing in this. Doubtless not; but had Cervantes written anything *convincing* he would have figured in the next *auto-da-fe*. Whether they do not amount to a *probability* is another question, and one which must be left to the judgment of readers.

S. T.

THE WEST POINT MILITARY SCHOOL:

ITS ABUSES AND THEIR CORRECTIVES.

To the Editor of The Nation:

No similar institution, perhaps, in any country has undergone such scrutiny as the national military school at West Point. The butt of personal or partizan enmity on the one hand, and of ignorance or prejudice on the other, it has been a theme for vituperation both within and outside of Congress. State legislatures have turned aside from their own sphere of action to recommend that their representation in Congress should oppose appropriations for it. Several special commissions have been raised in Congress to investigate and report upon its condition. Even militia conventions in several States have presented the edifying spectacle of passing resolutions solemnly calling upon Congress to abolish this the only national establishment for cultivating and diffusing military science.

That any institution should have existed for over half a century under such persistent assaults, and have undergone such scrutiny with so little that was in any way damaging to its reputation or interests, is not the least remarkable part of this record. But what is not less striking, is the contrast between this condition of things with us and what is seen in every other civilized country in the world, where military schools are carefully fostered by their governments as an essential element of their military system. In France, a country socially more democratic than our own, the Polytechnic, the mother of her scientific military schools, was founded during the fiercest period of her revolutionary struggle, and there is not, probably, a peasant even there who does not regard it with admiration and speak of it with pride. Why in a country like this, where intelligence is so universally diffused, where there is no disposition to withhold a liberal support from any object of national utility, where the annual reports of boards, selected from all sections of the country and from all classes of the community, to investigate the condition of this school, are made public through the daily press, this opposition should still so long have been kept up, can be accounted for hardly upon grounds that are creditable to the common sense and sagacity that we show in most other practical matters.

With all these sources of intelligence, however, and all these discussions respecting what are popularly known as the "Military Academy" and as the "Cadet," strange as it may seem, there are but few persons who know what the one or the other is, as established by law.

The Military Academy is a body of men constituted for the purposes of the cultivation and diffusion of the military art and the sciences pertaining to it, and is composed, by law, of the Corps of Engineers and of certain professors named in the law.

The term and office of cadet are borrowed from European services, and appear upon our statutes as early as 1794, when youths bearing this grade, which is that of a military warrant officer, were assigned to a corps of artillerists and engineers provided for by law at that time.

The Military Academy was created by law in 1802, and West Point was assigned as its permanent location. Subsequent to its establishment, cadets from other arms of the service were also sent to it to receive military instruction, and by a law passed April 29, 1812, it is provided that the cadets of all arms "may be attached, at the discretion of the President of the United States, as students to the Military Academy." That an understanding of the legal import of these two terms is not unimportant, will be apparent from the fact that, either through ignorance or misapprehension of them, grave arguments have been made, both in and out of Congress, against the constitutional power to create a military college; when no one, it is presumed, would question the power to provide any corps with the suitable means of instruction for the duties assigned to it, or object that officers of any grade, from any other corps, might be temporarily attached to it, for the purpose of better qualifying them for the discharge of their appropriate duties. Such, in fact, is the working of what is popularly known as the Military Academy.

Now, whether this could be better accomplished in some other way, and the expense of the military school at West Point be avoided, is a question that has been long agitated in this country. Various measures have been proposed, but, practically, they may be reduced to two.

One is to appoint to commissions of the lowest grade young men who have served a certain period in the ranks of the army.

The other, to make these appointments directly from civil life.

In either case the candidate for appointment to pass an examination of a specific character.

A very cursory glance will suffice to show the inferiority of either of these modes of appointment to the one which is secured through the Military Academy. It may be said, granting you could find young men to enlist with the proper ability and qualifications to prepare for an examination for a commission, what are the opportunities that a barrack or camp, crowded with common soldiers, would afford them for pursuing any severe mental occupation? They would learn, it is true, the military duties, and acquire the discipline of their station, but, in the nature of things, very little else. The difference between their pay and rations and that which the cadet now receives would be very trifling.

In the case of the appointment being made directly from civil life, it cannot be doubted that generally, at least, young men of higher attainments, and of better abilities, would offer as candidates for commissions.

They would thus enter upon the duties of an office which the cadet reaches only after four years of severe military training, not in one branch alone but in every division of the military art: engineering, artillery, cav-

alry, and infantry, in which he has been taught all that is essential as a foundation for the theory of these branches, and has gone through all the practical exercises, from the duty of the common soldier up to that of the commander of a battalion, squadron, and battery. Where can the youth, appointed a lieutenant from civil life, make these acquirements before entering the service? What are the probabilities that in four years, the cadet period, he will have made them in either garrison or camp life? As to the pecuniary item, during these four years, the difference is greatly in favor of the cadet.

But the comparison of the two modes does not stop at this initiatory stage. Confined to it, in view of the light responsibilities resting on a lieutenant, any difference could be but of trifling importance. The great contrast will appear in the highest grades, where important commands, embracing several arms, are to be exercised. In the one case you have a person to command who has been trained in the principles and practice of all of them. In the other, one who, in all probability, knows but little or nothing of any but of the arm into which he was first appointed.

Such, it is believed, are the essential questions in any comparison that can be made between the various modes, proposed and tried, for officering an army. That the results from a properly organized military school, supplied with properly qualified subjects to make use of its advantages, would be the best, not only reason would seem to concede, but, it is thought, the records of even our limited military experience would conclusively show. But this being conceded, we are brought only to the beginning of the difficulties connected with a national military school in this country. These have been so lucidly and strongly stated by a recent writer in THE NATION that to enlarge upon them can add but little strength to his already impregnable positions. Still, if any remedies can be found for the abuses and defects connected with the present school, and which he has so ably pointed out, they can only be hoped for by keeping them so constantly under the public eye as to attract a general acquiescence in the necessity for some salutary changes.

The great defect, the one for which, if there be no remedy, there can be none for most, if for any, of the minor deficiencies in the present institution, is in the mode of appointing cadets from Congressional districts, and virtually by the members from those districts. It is needless to point out the abuses to which this system is open. To any one acquainted with our institutions they are patent. How far it has failed in its results, the proportion of those who have graduated at the institution to those who have been admitted to it is the most unerring criterion for determining. *The proportion, going back for the period of the last twenty-five years, is about one to two; or, in other words, only about one-half of those admitted to the institution have succeeded in accomplishing the courses of instruction taught at it.* That this result is due entirely to the system of appointment, there can be no question; for there is nothing in the courses of instruction or in their amount which any youth of average abilities and average industry ought not to be able to master, even with the very meagre acquirements now demanded for admission into the school.

If this untoward influence ended with the appointment to the institution, it would be bad enough; but it not only insists upon sending incompetent persons to the school, but, in too many cases, in keeping them there after their incompetency has been fully shown by an impartial examination. This abuse had become so glaring, and its evil effects so palpable, that a law for its correction was passed a few sessions since, prohibiting any cadet who had been pronounced deficient either in studies or in habits of good conduct by the faculty of the institution, and who had been recommended, because of incompetency, to be discharged, from being continued at or returned to the institution. This attempt at limiting, by law, an unworthy exercise of patronage was but short-lived. It was repealed at the last session of Congress by an amendment in the House. That the arguments for the repeal were conclusive, in the opinion of the body to whom they were addressed, must be presumed, from the fact that when the amendment was thrown out by the Senate, and a committee of conference asked for, the members of the House upon it, so report goes, offered those of the Senate either to give up their objections or to see the appropriation bill for the institution fail to pass. After this showing, need the writer referred to, in his article in THE NATION, December 28, 1865, wonder at what he states "is a strange fact, that, while many professional soldiers admit all the evils of the present system, they declare themselves unable to see any remedy?"

This is rather a desponding view, it must be confessed, for professional soldiers to take who know what are the sources of these evils. There are but two of any prominence, and those easily remedied by legislation. The first is the present mode of appointing cadets. The second is the restoration of cadets who, for incompetency, have been recommended for discharge. The latter is, perhaps, the greater evil of the two. It has been repeatedly and strongly animadverted on in reports of boards of visitors. Attention has been frequently asked to it by the faculty, who, in a special report made by them in 1862, make the following statements:

"Cadets openly asserted their confidence that they should not be discharged under any circumstances, however unfavorable to them; and such was the increase in the number of deficiencies in conduct (notwithstanding the decrease in the number attributable to each delinquency) as to induce a special report on this subject, by the Academic Board, to the Hon. Secretary of War, in January, 1861.

"An examination of the records of the Academy, for many years, shows that, of those who have failed in the two lower classes (the first and second year's course), and been allowed the privilege of another trial, about *one-third* only have succeeded in graduating; and that, of these, few have reached a high standing in their respective classes. The others remained at the Academy from *one* to *three* years—not only subjecting the Government, for this period, to useless expense on their account, but depriving it, for the same length of time, of the services of their successors.

"The small number thus succeeding, after a second trial, is the more remarkable when it is considered that most of those to whom this privilege was granted were selected and recommended by the Academic Board as the most promising and worthy of those found deficient.

"Under these circumstances, the law of the extra session of Congress, July, 1861, devolving the responsibility of all discharges from the Academy upon the Academic Board, was passed."

It is this law which was repealed in the last session of Congress, as above stated.

This whole subject, upon which so much time has been expended, lies in a very small compass. A youth sent to West Point either cannot or will not conform to the requirements of its *curriculum* and code of discipline. If, from his mental or moral constitution, he cannot do so, then it will be best for the public interest and his own that he should seek some other career. If he will not do so, the obligation is the greater that he should be sent from the institution at the earliest moment practicable. Now who is to decide this question of competency? The law has placed this in the hands of the faculty, as persons who, from their hourly opportunities for ascertaining the mental and moral habits of those under their instruction, are presumed to know most about them. What an unnecessary farce it is to call upon this body to make the examinations requisite for this purpose, and, upon the results of this investigation, to recommend the incompetent for discharge, and then say to them, Gentlemen, you are not infallible, and thus let their recommendation go for nought.

That the evil, so forcibly pointed out in the report, is one of no small magnitude in keeping at the institution incompetent subjects, and thus depriving of an opportunity of availing themselves of its advantages the thousands of youths who are yearly applicants for them, will be apparent from the fact that as many as from thirty-five to forty of such subjects have, at times, been thus retained contrary to the unfavorable opinion of the faculty on their competency.

This national military school is but the creation and creature of the people. If they are satisfied with the mode in which appointments are made to it, and with which, as a trust committed to the hands of their representatives, it is administered, nothing more remains to be said on the subject. But the question may not unfairly be asked, whether an individual would be satisfied to see his private trusts administered in the same spirit?

A WEST POINTER.

Literature.

LITERARY NOTES.

DR. ABEL STEVENS'S interesting little book on the history and present condition of the American Methodist body, prepared in view of the approaching centennial anniversary of the first planting of the denomination in the United States, furnishes some curious statistics respecting the literary operations of the sect whose Book Concern is now the largest religious publishing house in the world. Its earliest operations commenced in 1789, with a borrowed capital of about six hundred dollars, and the first book issued was the "Christian Pattern," a translation by Wesley of à Kempis's celebrated "Imitation." The Northern Methodist Book Concern of the present day comprises two branches, an Eastern and a Western one, with seven depositories and an aggregate capital of nearly nine hundred thousand dollars. Four book agents appointed by the General Conference manage its business. It has twelve editors of its periodicals, nearly four hundred clerks and reporters, and between twenty and thirty cyli nder and power presses constantly in operation. It publishes above five hundred "general catalogue" bound books, besides

many in the German and other languages, and about fifteen hundred Sunday-school volumes. Its tract publications number about nine hundred, in various tongues. Its periodicals include one quarterly review, four monthlies, one semi-monthly, and eight weeklies, with an aggregate circulation of over one million of copies per month. Its quarterly and some of its weeklies have a larger circulation than any other periodicals of the same class in the nation, probably in the world. Its sales in the Valley of the Mississippi alone for the four years ending with January, 1864, were one million and a quarter of dollars. "There has never been an instance of defalcation on the part of its agents. It has never failed in any of the financial revulsions of the country, and it is now able, by its large capital, to meet any new literary necessity of the denomination." How much do "outsiders" know of the operations of this vast organization? There are, no doubt, thousands familiar with books all their lives who have never met with a single one of its publications. It is the difficulty of grasping and allowing their due effect for the instrumentality of such enterprises that makes any generalizations on popular opinion and its sources so often dubious and visionary.

—A case probably unparalleled in this country has been brought for adjudication before the Supreme Court of New York during the last week. It is well calculated to make autograph collectors tremble for the fate of their stores, as it turned upon the right of property in a letter from General Washington to the Mayor and Common Council of this city, in 1785, returning thanks for the freedom of the city, presented to him in a gold box. It formed part of the collection of rare books, engravings, manuscripts, autographs, etc., famous for the last half century as belonging to Mr. John Allan, one of the oldest and best known residents of New York, who died in 1863, in his eighty-sixth year, when his library, etc., was sold at auction by Bangs, Merwin & Co., and amongst other articles the letter in question. It is characteristic of the brief tenure of notoriety in this ever-changing metropolis that Mr. Allan figures in the law reporter's notes given in the New York *Times* as "one John Allen, a gatherer of old and rare books, etc." For more precise information he may be remitted to the elegantly printed "Memorial of John Allan," written by Mr. Evert A. Duyckinck, and sumptuously issued by the Bradford Club. It is well remembered that Mr. Allan's books, from the interest attaching to the collection itself and the numerous friends of the man, brought unprecedentedly high prices. The most costly of all was this letter of George Washington. By a concurrence of two unlimited orders in the hands of agents who were fearful of not meeting the expectations of their principals, it was run up to the absurd sum of $2,050. The buyer, however, found he had gone beyond the means or intentions of his employer, and was unable to complete his purchase, refusing to give up the name of the person for whom he had acted, and the letter remained in the auctioneers' hands until now, when, the facts having drawn attention to the circumstance, a suit was commenced by the city authorities to recover possession of the letter, or its value, as rightfully the property of the city. It seems rather a small matter to task the already overtaxed energies of city counsel and attorneys, particularly as there was plenty of evidence that Mr. Allan had been for more than thirty years in peaceable possession of the document, and the idea of his obtaining it surreptitiously could not for a moment be entertained. The matter was brought to trial on February 14, when the plaintiffs obtained a verdict, not putting them in possession of the letter, it would seem, but of the sum for which it was sold, $2,050. It would appear that the effect of this decision is to confer a right in the receiver of a letter to a perpetual property in it in spite of lapse of time or change of proprietorship. Such a decision would play sad havoc with collections of autographs, and can scarcely be received without some limitation.

—The new English journal of field sports and natural history presents an inviting list of contents. It is called "Land and Water: A Weekly Journal of Field Sports, Sea and River Fisheries, the Stable and the Kennel, the Gun and the Rifle, the Farm-Yard, Athletic Exercises, the Traveller and Explorer, Archæology, and Practical Natural History." The latter department and the fisheries will be conducted by Frank Buckland, Esq., the general editor being Mr. Baker, author of "The Rifle and the Hound in Ceylon," etc.

—Some of the people who will never leave a work of genius alone, who want to see further into a millstone than their neighbors, and are delighted with researches into the "real authors" of Shakespeare's plays, the unknown assistants of Scott in the Waverley novels, and similar enquiries, have been at work on "Don Quixote." It is asserted that Mr. Rawdon Brown, a gentleman well known for the valuable historical works embodying the results of his examination of the Venetian archives, has obtained evidence among them that Cervantes intended his immortal work as a political satire directed against the Duke of Lerma. Mr. Brown, having attained to the inner meaning of the romance by his discoveries, is said to be engaged on a key to the characters, by which many obscure portions of the work are brought into a new light. Another speculation on this subject will be found on another page of The Nation.

—As we notice in a New England periodical an advertisement addressed to "parties who desire the services of a genealogist," there must be many who will be interested in the new edition of a book that had become very scarce—Burke's "Extinct, Dormant, and Suspended Peerage," just brought out in London. It forms a valuable companion and help to English history, giving the story of each title, and tracing the lines of descent where the claim still exists. It is a proof of the practical tendency of the American mind that while every old settled neighborhood has some tradition of a vast property in England rightfully belonging to some widely spread family, no one thinks of claiming dignities, which may actually be recovered, while there is hardly a case known where property has been restored, though large sums have been spent in the pursuit. In the last century there were two remarkable instances where the possessors of ancient titles were discovered in America and their claims made good; one was for the oldest Irish peerage, the barony of Kinsale. The rightful heir was discovered in the person of a poor sailor boy of Newport, and his descendants still possess the title. The barony of Willoughby of Parham was also awarded to a family which had been for two generations settled in Virginia. In the early romantic days of colonization adventure, under Elizabeth and the Stuart kings, the younger scions of distinguished families flocked to the most exciting scene of action as they now do to Australia and New Zealand. The dying out of the elder branches often placed them in the position of inheritors of the hereditary dignities, though change of circumstances generally made them forgetful or careless of the fact. The true male heir of the great Percies, Earls of Northumberland, is supposed to be more likely to be found in Virginia by English genealogists than anywhere else, should he ever "turn up;" and there are several other important hereditary honors presumed to be held rather by failure of appearance in the real owners, than by rightful claim.

—A work that all true Scotchmen must regard as a national enterprise has recently been performed by the publication of the first complete collected edition of the "Writings of John Knox," the celebrated reformer. It has occupied the attention of the editor, Mr. David Laing, whose name is well known in connection with the national ancient literature of Scotland, for eighteen years. His labors have brought together a mass of information illustrating the life, character, and writings of the reformer and the history of his times, unrivalled for its extent and the recondite nature of the sources from whence it is derived. Knox's works may be divided into four classes —historical, admonitory, devotional, and epistolary. They comprise, together, six volumes royal octavo, the first and second being occupied with Knox's most important book at the present day, the "History of the Reformation in Scotland," printed from a collation of the various manuscripts and printed texts, and for the first time presented in a complete shape, with the illustrative documents, etc., on which it is founded. The "Memoir of the Author and his Family," bibliographical notices, notes, fac-similes, etc., render the edition a perfect literary monument to the memory of the reformer whose influence is still so strong in the land of his birth.

—An educational movement of considerable importance, in view of the source from which it springs, has just been started in England. If any department of literature might be supposed to be over occupied, either there or in this country, it is that of school-books. Yet the delegates of the Oxford Clarendon Press state that "they understand, from eminent schoolmasters and others who are authorities upon education, that there is still need of good school-books and manuals." To abridge their manifesto, they "are told that good English editions of almost all the Greek and Latin classics, read in the higher classes of public schools, are required, also grammar and exercise books adapted to them—that the histories at present read in schools are greatly below present requirements—and that English treatises on physical science, written with clearness and precision, and adapted for use in the higher classes of schools, etc., do not exist." They believe that the university may, with propriety and efficiency, do much towards remedying these defects and have therefore determined to issue a series of educational works, hoping to fill up some existing wants and to help in improving methods of teaching. The programme includes classics, history, physical science, English language and literature, mathematical works, a miscellaneous class including handbooks in art, music, literature, and the like, and modern languages. Particulars are given of nineteen works now in preparation, and others are speedily to follow. In history we notice a "A History of England to the Reign of Henry VIII.," by Goldwin Smith, professor of modern history; "A

History of Germany and of the Empire, down to the close of the Middle Ages," by J. Bryce, of Oriel College; "History of Greece," by E. A. Freeman, of Trinity College (author of a "History of Federal Governments"); "A Constitutional History of England," by Rev. W. Stubbs, of Trinity College (librarian to the Archbishop of Canterbury); "History of British India," by S. Owen, of Christ Church. The distinct recognition of the duty of an institution like the University of Oxford in this announcement, is a step far in advance of any yet taken by that or similar bodies in England, and bodes well for the cause of national education.

—The old subject of literary remuneration is again ventilated in Paris, where, indeed, authorship and all that relates to it possesses an active importance greater than in any other country. Contrasts between the past and the present are rife as a standard source of paragraph making. The actual large gains of contemporary authors are compared with those prevalent when Boileau sold "Le Lutrin" for 600 francs, Racine received only 200 francs for the manuscript of "Andromaque," and Delille obtained only 400 francs for his translation of the "Georgics" of Virgil. The 6,000 francs realized by Rousseau for his "Emile" was long quoted as an example of remarkable pecuniary success; nor were the 1,000 francs for which the author of "Paul and Virginia" sold his first work, "Voyage à l'Ile de France," considered an unworthy remuneration. Even the existing generation of authors has experienced the vicissitudes that belong to two separate eras of authorship. George Sand wrote her first novel in conjunction with Jules Sandeau, and the two received 400 francs between them for their work. "Indiana," by that lady alone, was sold for 1,000 francs. She now receives from the *Revue des Deux Mondes* 500 francs per sheet for her communications. In 1823 Victor Hugo's romance of "Hans d'Islande" only gained him 300 francs. "Les Misérables" has already produced him more than a thousand times that sum. Dramatic authorship seems the most royal road to fortune among all the avenues that lead to the French Parnassus. M. Scribe left a property estimated at four millions of francs after starting on his career with 100 francs payment only, for his first work. There are thirty-five theatres now open at Paris of various kinds, so that there is an ample field for the exercise of varied talent in the composer and librettist as well as for the regular dramatic author. The "spectacles," indeed, or mere show pieces, are said to have been more profitable than *chef d'œuvres* of the regular drama. The arrangements for securing to authors a fair share of the profits of these pieces are more just than those of any other country, and might be copied with advantage.

—The work of ex-President James Buchanan, "The Administration on the Eve of the Rebellion," seems to have attracted more notice from the English press than it has met with in this country. It has been freely characterized by the leading journals as a book that at once explains and justifies the oblivion that shielded from view the first officer of the republic immediately on his retirement from office and made his name almost forgotten by each party during the contest immediately succeeding. It is said to paint him as essentially a man of compromise, hoping still to "make things pleasant" all round, if only principle was overlooked and a shallow and prevaricating expediency allowed to rule the hour. It is stated, in an article in *The Reader*, as "a curious fact, for whose truth the writer can vouch, that in the library of the Senate's Committee on Foreign Affairs, the members of which were leading secessionists, every passage in the diplomatic documents relating to the recognition of Belgium and Mexico was found scored and underlined when the Republicans took possession of the library. How soon the European powers might be expected to recognize the Confederacy was the subject which occupied the time and attention of men receiving the pay of the Union and entrusted with the duty of watching over its foreign interests."

—It is said that the library of Sir Charles Eastlake, the late president of the Royal Academy, and, as the most accomplished scholar in England in the history, antiquities, and literature of the fine arts, the possessor of an unrivalled collection of books on these subjects, is about to be dispersed, though strenuous efforts will be made to preserve it intact in connection with some public institution. It is remarked that the highest dignity in the profession seems going begging among artists. Upon the question of appointing a successor to Sir Charles in the chair formerly filled by Reynolds, West, and Lawrence, Maclise was the chosen candidate of the leading members, but he distinctly and unhesitatingly made known his purpose not to accept the position, his desire being to give all his life and energies to painting. At the last meeting of the Academy Sir Edwin Landseer was elected by a very full vote and a large majority, but he has declined to receive the title and position offered as his due by the voice of his brethren and the consent of popular opinion. No reason is alleged for his refusal, but he has been requested by the Academy to reconsider his determination, and if he continues to decline the honor, another balloting must take place.

—The death of Dr. Petrie, vice-president of the Irish Academy, has removed the first antiquarian of the day who brought positive science to bear upon questions of Hibernian archæology. For the material antiquities and ancient remains of Ireland he effected what scholars like O'Donovan and Eugene O'Curry have done for its history and literature. These men have founded a school of investigation before which the dreams and romance of authors such as Vallancey, O'Flaherty, etc., which made the very name of Celtic antiquities degrading, have vanished. Dr. Petrie's dissertation "On the Origin and Purpose of the Round Towers of Ireland" received a prize of £900 offered by the Irish Society, and may be considered to have effectually settled the question. He was the director of the historical and antiquarian departments of the Irish Ordnance Survey. A pension of £300 per annum was granted him by Government for his services.

—Though an Emperor, Napoleon III. is still a man, and is said to have derived great pleasure from the success of the first volume of his "Vie de Cæsar" in a purely commercial point of view. The publishers in London, Messrs. Cassell & Co., have had the gratification of forwarding to the imperial agents a sum much beyond the amount originally stipulated for the exclusive right of translation into English. The second volume, perhaps in consequence, is being rapidly pushed towards completion. The final proofs have been printed; the Emperor is now revising them. He fully appreciates that geography is one of the "eyes of history," and it will be illustrated with thirty-two maps. The volume is expected to be ready, in divers languages, about the middle of March.

—M. Du Chaillu is eminently a sensational traveller. His last explorations, rudely interrupted by a conflict with the natives, from which he with difficulty escaped, has not been productive of any novelty so startling as the gorilla was found to be in the previous narrative of his African travels; but he now brings us news of the pigmy races supposed, ever since the days of Homer and Herodotus, to inhabit the interior of the continent, "the small infantry warred on by cranes" of the poet. A little people called "Obonyo" he discovered, and is the first to describe. He calls them the gypsies of the region—of migratory habits, having no dwelling or shelter but under trees, and living by trapping wild animals for food. They have only short tufts of hair on the head, in distinction from the settled inhabitants, who pride themselves on an immensely large *chevelure*, and wear a wild, anxious, and timorous expression of countenance. The tallest adult man measured was four feet six inches high, and the women varied from that height to four feet. M. Du Chaillu's account is confirmed, as far as hearsay evidence can do it, by Mr. Winwood Reade, who testifies to the general belief in the existence of a pigmy race in the far interior of West Africa, and also by the missionary, Dr. Krapf, who had met with single individuals of the species on the opposite coast of the continent, brought by slave-dealers from the interior equatorial regions. M. Du Chaillu is now preparing his new book of travels from the fragments of journals, etc., saved on his escape from the natives.

WIVES AND DAUGHTERS.*

We cannot help thinking that in "Wives and Daughters" the late Mrs. Gaskell has added to the number of those works of fiction—of which we cannot perhaps count more than a score as having been produced in our time—which will outlast the duration of their novelty and continue for years to come to be read and relished for a higher order of merits. Besides being the best of the author's own tales—putting aside "Cranford," that is, which as a work of quite other pretensions ought not to be weighed against it, and which seems to us manifestly destined in its modest way to become a classic—it is also one of the very best novels of its kind. So delicately, so elaborately, so artistically, so truthfully, and heartily is the story wrought out, that the hours given to its perusal seem like hours actually spent, in the flesh as well as the spirit, among the scenes and people described, in the atmosphere of their motives, feelings, traditions, associations. The gentle skill with which the reader is slowly involved in the tissue of the story; the delicacy of the handwork which has perfected every mesh of the net in which he finds himself ultimately entangled; the lightness of touch which, while he stands all unsuspicious of literary artifice, has stopped every issue into the real world; the admirable, inaudible, invisible exercise of creative power, in short, with which a new and arbitrary world is reared over his heedless head—a world insidiously inclusive of him (such is the *assoupissement* of his critical sense), complete in every particular, from the divine

*"Wives and Daughters. A Novel. By Mrs. Gaskell." New York: Harper & Brothers. 1866.

blue of the summer sky to the June-bugs in the roses, from Cynthia Kirkpatrick and her infinite revelations of human nature to old Mrs. Goodenough and her provincial bad grammar—these marvellous results, we say, are such as to compel the reader's very warmest admiration, and to make him feel, in his gratitude for this seeming accession of social and moral knowledge, as if he made but a poor return to the author in testifying, no matter how strongly, to the fact of her genius.

For Mrs. Gaskell's genius was so very composite as a quality, it was so obviously the offspring of her affections, her feelings, her associations, and (considering that, after all, it *was* genius) was so little of an intellectual matter, that it seems almost like slighting these charming facts to talk of them under a collective name, especially when that name is a term so coarsely and disrespectfully synthetic as the word genius has grown to be. But genius is of many kinds, and we are almost tempted to say that that of Mrs. Gaskell strikes us as being little else than a peculiar play of her personal character. In saying this we wish to be understood as valuing not her intellect the less, but her character the more. Were we touching upon her literary character at large, we should say that in her literary career as a whole she displayed, considering her success, a minimum of head. Her career was marked by several little literary indiscretions, which show how much writing was a matter of pure feeling with her. Her "Life of Miss Brontë," for instance, although a very readable and delightful book, is one which a woman of strong head could not possibly have written; for, full as it is of fine qualities, of affection, of generosity, of sympathy, of imagination, it lacks the prime requisites of a good biography. It is written with a signal want of judgment and of critical power; and it has always seemed to us that it tells the reader considerably more about Mrs. Gaskell than about Miss Brontë. In the tale before us this same want of judgment, as we may still call it in the absence of a better name, presuming that the term applies to it only as it stands contrasted with richer gifts, is shown; not in the general management of the story, nor yet in the details, most of which are as good as perfect, but in the way in which, as the tale progresses, the author loses herself in its current very much as we have seen that she causes the reader to do.

The book is very long and of an interest so quiet that not a few of its readers will be sure to vote it dull. In the early portion especially the details are so numerous and so minute that even a very well-disposed reader will be tempted to lay down the book and ask himself of what possible concern to him are the clean frocks and the French lessons of little Molly Gibson. But if he will have patience awhile he will see. As an end these modest domestic facts are indeed valueless; but as a means to what the author would probably have called a "realization" of her central idea, *i. e.*, Molly Gibson, a product, to a certain extent, of clean frocks and French lessons, they hold an eminently respectable place. As he gets on in the story he is thankful for them. They have educated him to a proper degree of interest in the heroine. He feels that he knows her the better and loves her the more for a certain acquaintance with the *minutiæ* of her homely *bourgeois* life. Molly Gibson, however, in spite of the almost fraternal relation which is thus established between herself and the reader—or perhaps, indeed, because of it, for if no man is a hero to his *valet de chambre*, it may be said that no young lady is a heroine to one who, if we may so express our meaning, has known her since she was "*so* high"—Molly Gibson, we repeat, commands a slighter degree of interest than the companion figure of Cynthia Kirkpatrick. Of this figure, in a note affixed to the book in apology for the absence of the final chapter, which Mrs. Gaskell did not live to write, the editor of the magazine in which the story originally appeared speaks in terms of very high praise; and yet, as it seems to us, of praise thoroughly well deserved. To describe Cynthia as she stands in Mrs. Gaskell's pages is impossible. The reader who cares to know her must trace her attentively out. She is a girl of whom, in life, any one of her friends, so challenged, would hesitate to attempt to give a general account, and yet whose specific sayings and doings and looks such a friend would probably delight to talk about. This latter has been Mrs. Gaskell's course; and if, in a certain sense, it shows her weakness, it also shows her wisdom. She had probably known a Cynthia Kirkpatrick, a résumé of whose character she had given up as hopeless; and she has here accordingly taken a generous revenge in an analysis as admirably conducted as any we remember to have read. She contents herself with a simple record of the innumerable small facts of the young girl's daily life, and leaves the reader to draw his conclusions. He draws them as he proceeds, and yet leaves them always subject to revision; and he derives from the author's own marked abdication of the authoritative generalizing tone which, when the other characters are concerned, she has used as a right, a very delightful sense of the mystery of Cynthia's nature and of those large proportions which mystery always suggests. The fact is that genius is always difficult to formulate, and that Cynthia had a genius for fascination. Her whole character subserved this end. Next after her we think her mother the best drawn character in the book. Less difficult indeed to draw than the daughter, the very nicest art was yet required to keep her from merging, in the reader's sight, into an amusing caricature—a sort of commixture of a very mild solution of Becky Sharp with an equally feeble decoction of Mrs. Nickleby. Touch by touch, under the reader's eye, she builds herself up into her selfish and silly and consummately natural completeness.

Mrs. Gaskell's men are less successful than her women, and her hero in this book, making all allowance for the type of man intended, is hardly interesting enough in juxtaposition with his vivid sweethearts. Still his defects as a masculine being are negative and not positive, which is something to be thankful for, now that lady-novelists are growing completely to eschew the use of simple and honest youths. Osborne Hamley, a much more ambitious figure than Roger, and ambitious as the figure of Cynthia is ambitious, is to our judgment less successful than either of these; and we think the praise given him in the editorial note above-mentioned is excessive. He has a place in the story, and he is delicately and even forcibly conceived, but he is practically little more than a suggestion. Mrs. Gaskell had exhausted her poetry upon Cynthia, and she could spare to Osborne's very dramatic and even romantic predicaments little more than the close prosaic handling which she had found sufficient for the more vulgar creations. Where this handling accords thoroughly with the spirit of the figures, as in the case of Doctor Gibson and Squire Hamley, the result is admirable. It is good praise of these strongly marked, masculine, middle-aged men to say that they are as forcibly drawn as if a wise masculine hand had drawn them. Perhaps the best scene in the book (as the editor remarks) is the one in which the squire smokes a pipe with one of his sons after his high words with the other. We have intimated that this scene is prosaic; but let not the reader take fright at the word. If an author can be powerful, delicate, humorous, pathetic, dramatic, within the strict limits of homely prose, we see no need of his "dropping into poetry," as Mr. Dickens says. It is Mrs. Gaskell's highest praise to have been all of this, and yet to have written "an everyday story" (as, if we mistake not, the original title of "Wives and Daughters" ran) in an everyday style.

MARIAN ROOKE.*

This is an average novel and a very bad book—a distinction, as it seems to us, easy to understand. There have been many novels, contemptible or ridiculous in point of dramatic interest, which have obtained a respectful attention through the wisdom of their tone or the elevation of their style. There have been others, skilful and absorbing in the matter of plot, which the reader has nevertheless flung aside half-read, as intolerably foolish, or intolerably vicious in spirit. The plot of "Marian Rooke," although it can hardly be called very skilful on the writer's part or very absorbing on the reader's, is yet decently interesting, as plots go, and may readily suffice to the entertainment of those jolly barbarians of taste who read novels only for what they call the "story." "Marian Rooke" has an abundance—a superabundance—of story, a vast deal of incident, of variety, of sentiment, of passion, of description, of conversation, and of that facetious element which no gentleman's novel should be without. These merits, however, are not by themselves of so high an order as to justify us to our conscience in an attempt to impose them upon the public recognition; we should have been content to leave their destinies to fortune. The part of duty in the matter, since duty there is, is to point out the defects of the work.

"Marian Rooke," then, is a tale of the "younger world," or, in other words, of life in the United States. If we are not mistaken, it was published in England either just before, or simultaneously with, its appearance in New York; and if on this point, too, we are not wrong in our facts, it met with a warmer welcome on the other side of the water than it has encountered on this, as, indeed, it had every reason to do, inasmuch as we may convey a certain idea of its spirit in saying that, whereas it was written *for* English circulating libraries, it was written only, if we may so express it, *at* American ones. This air of divided nationality which attended its production is an index of a similar feature in the conception of the book. The reader vacillates between setting the author down as a consummate Yankee and dubbing him as a consummate cockney. At one moment he asserts himself an Englishman who has a perilously small amount of learning about the United States, and at another he seems conclusively to prove himself one of our dear fellow-countrymen, with his honest head slightly turned by a glimpse of the carriage going to one of the Queen of England's drawing-

* "Marian Rooke; or, The Quest for Fortune. A Tale of the Younger World. By Henry D. Sedley." New York: Sheldon & Co. 1865.

rooms. It remains a constant source of perplexity that he should be at once so poor an American and so poor an Englishman. No Englishman ever entertained for New England the magnificent loathing which burns in Mr. Sedley's pages. What is New England to him or he to New England that he should thus rack his ingenuity in her behalf? So divinely disinterested an hostility was never inspired by a mere interest in abstract truth. A tour in the United States in midwinter, with a fatal succession of bad hotels, exorbitant hack-drivers, impertinent steamboat clerks, thankless female fellow-travellers, and terrific railway collisions, might possibly create in a generous British bosom a certain lusty personal antipathy to our unmannerly democracy; a vehement, honest expression of which could not fail to make a chapter of picturesque and profitable reading. But it takes an emancipated, a disfranchised, an outlawed, or, if you please, a disappointed, American to wish us to believe that he detests us simply on theory. This impression the author of "Marian Rooke" would fain convey. Therefore we say we set him down as one of ourselves. But he betrays, incidentally, as we have intimated, so—what shall we call it?—so lively an ignorance of our manners and customs, our method of action and of speech, that this hypothesis also is not without a certain measure of disproof. He has vouchsafed us no information on the contested point; and this it is that prevents conjecture from being impertinent, for it is founded solely upon the evidence of the story itself, which, as a book once fairly and squarely published, is utterly given over to the public use, and to all such probing, weighing, and analyzing as may help the public to understand it. Further reflection, then, on the mooted point leads us to the conclusion that in order to furnish Mr. Sedley with any local habitation whatever we must consider one of the two conflicting elements of his tale as a purely dramatic characteristic. As the conflict lies between his perfect familiarity with some points of American life and his singular and arbitrary ignorance of others, we must decide that either his knowledge or his ignorance is assumed. And as his ignorance is generally not so much an absence of knowledge and of statement as positive false knowledge and false statement, we embrace the hypothesis that his scathing indifference to the facts of the case is the result of a good deal of painful ingenuity. And this is what we have in mind in calling his book at the outset a bad book. A book which, from an avowedly critical stand-point—even if it were a very flimsy novel—should roundly abuse and reprobate all things American, would command our respect, if it did not command our agreement. But a book projected (intellectually) from the midst of us, as the present one betrays itself to have been, intended to strike us by a rebound from the ignorant sympathy of foreign readers, displaying its knowledge of us by the possession of a large number of facts and by the petty perversion of every fact which it does possess, and leaving an issue for escape from the charge of deliberate misrepresentation (so good a Yankee is the author) by a species of implicit self-reference to a community where a certain ignorance of our habits is no more than natural,—a book in which the author has put himself to so much trouble to do such an ugly piece of work, commands neither our agreement nor our respect.

The hero of the tale is the son of a dissolute English gentleman—time-honored and familiar combination!—who, having immigrated to this country, married an American wife. In this manner originated the fatal "kink" in the young man's nature—the conflict between his literal allegiance to the land of his birth and his spiritual affinity with the proud home of his ancestors. Marian Rooke, a burning Creole beauty, the daughter of a rich Louisiana planter, is similarly at odds with fortune, it having been discovered on her father's death that she is the child of a slave. Hence a beautiful bond of sympathy between the two. We do not propose to relate their adventures. It is enough to say that these are cast successively in California, in Europe, in Boston, in Berkshire County, Massachusetts (where the local color becomes quite appalling), and in the city of New York. The hero and heroine are duly joined in matrimony at the close, and subsequently, we are informed, the hero does "yeoman's service" in the late war, on which side the author (still like a shrewd Yankee) refuses to tell us, so leaving in considerable doubt (since so essential a point is perforce slighted) whether he really fought on either. He serves throughout the book as an instrument for eliciting in their utmost intensity the vulgar manners and sordid morals of the American people. He is, probably in view of this fact, the most deeply pathetic character in the whole extent of fiction. We have no space categorically to refute the ingenious accusations which Mr. Sedley has levied upon our manners and our speech. We must content ourselves with saying that as, if they were true, they would tell a sad tale of our vulgarity, so, since they are false, they tell a sad tale of the vulgarity of Mr. Sedley's imagination. What California was, socially, fifteen years ago, we cannot say; but it was certainly not the headquarters of politeness, and we accordingly leave it to Mr. Sedley's tender mercies. But we are better qualified to judge of New York and Boston. Here is a young lady of fashion, of the former city, welcoming her mother's guests at a *conversazione*: "We are very gay to-night, although promiscuous. Talk has been lively. There are a good many ladies round. Pa and Professor Sukkar are conferring on immorality. Pa is speaking now. Hush!" Here is another young lady, with the best blood in the land in her veins, conferring with her mother as to the probable character of the hero, who has just made his *entrée* into New York society: "Heavens, no! Clinton would have never given letters to a politician; whatever his faults, my brother would never have introduced a politician into the family of the Parapets!" "Unless sinning through ignorance, perhaps," suggests the mother. "Ignorance! surely their odious names are familiar enough. To be sure we do n't read the detestable newspapers, their organs, but the men do; and I am confident either papa or Clinton would know if Mr. Gifford had been compromised in politics." Having represented every American in his pages, of no matter what station in life, as using a form of the traditional Sam Slick dialect, in which all the humorous quaintness is omitted and all the extravagant coarseness is retained, the author makes generous amends at last by the elegant language which he puts into the mouths of the Parapets, the family of the young lady just quoted; and by the still more elegant distinction which he claims for them. Into various details of their dreary snobbishness we will not plunge. They constitute, in the author's sight, the one redeeming feature of our deplorable social condition; and he assures us that, incredible as the fact may appear, they yet do actually flourish in aristocratic idleness and seclusion in the midst of our universal barbarism. This, surely, is the most unkindest cut of all. It suggests, moreover, fearful reflections as to what our fate would have been had Mr. Sedley been minded to be complimentary.

GENERAL BUTLER AND CHAPLAIN HUDSON.*

General Butler's reply to Mr. Hudson's attack of last summer comes in the form of a letter from himself to the Bishop of Rhode Island, accompanied by another to himself from John I. Davenport, "late Lieutenant A. D. C. and Assistant Provost-Marshal," etc., and an appendix containing, in a letter to Judge Holt, under date of January 14, 1865, the charges and specifications against Mr. Hudson. Mr. Davenport's letter is in answer to one from the general requesting him to report what facts he may have knowledge of with regard to the matters spoken of by the chaplain in his pamphlet, Mr. Davenport having been the officer in charge of him when in custody, and comprises the official documents relating to these matters, together with a running comment by the lieutenant.

The first charge is absence without leave. On the 29th of May, 1864, General Gillmore ordered Mr. Hudson to New York on special duty, to superintend the publication of some official documents relating to affairs in the Department of the South. This was certainly sufficient leave, *prima facie*, for his absence. But other circumstances prevent this transaction from being clear. Mr. Hudson, it will be remembered, had written, according to his own admission, a private letter to Mr. Godwin, of the *Post*, commenting adversely upon General Butler's management of the affair at Drewry's Bluff, which Mr. Godwin had published. The letter, or part of it, was copied into an editorial of the *Herald*, where General Butler seeing for the first time a statement that "General Gillmore earnestly advised him to make his position secure by entrenchments against sorties, or any movements of the enemy to oust him from them," and that he answered "that he could not pause for defensive preparation," sends to General Gillmore for explanation. General Gillmore replies *that he does not know who the author of the editorial in the Herald was, and that he did not, and does not, authorize it.* In the examination of Mr. Hudson by General Butler, which Lieutenant Davenport took down in short-hand at the time, and which is now printed, the following questions and answers occur:

"Q. Did not Gen. Gillmore know of your writing that letter before it was sent? A. I do n't know (hesitatingly). Q. Did he not know of it before it was sent? A. I think so. Q. Do you not know that he did? A. Yes, sir. Q. And before you went? A. Yes, sir. Q. And was not that the reason of his sending you away? A. I can't say that I know it was. Q. Do n't you know that was the reason? A. I thought at the time that it was. Q. Had you any doubt in your own mind on the subject? A. I did not know how necessary the business was that General Gillmore professedly sent me on. I thought that was the reason of his sending me away. I had but little conversation with General Gillmore."

Thus the whole matter is left in obscurity. The question is, whether Mr. Hudson had sufficient reason for leaving the army—whether there was sufficient collusion between Gen. Gillmore and himself to make his absence im-

* "Official Documents relating to a Chaplain's Campaign (not) with General Butler, but in New York. *Audi alteram partem.*" Lowell: Charles Hunt, printer, Exchange Building. 1865. 8vo, pp. 3–48.

proper? Gen. Butler, elsewhere in the examination, tells his prisoner that the business on which he was sent to New York was a pretence, and that the real object was to avoid the appearance of complicity between Gen. Gillmore and himself. Gen. Gillmore states that he did not know who the author of the *Herald's* editorial was and did not authorize it; Mr. Hudson says that he did know of the authorship of the letter. Mr. Hudson also says that the facts contained in his letter were got from officers of his regiment. Shall we say that Gen. Gillmore in speaking of the *Herald's* editorial did not mean to commit himself with reference to the *Post's* letter, or that Mr. Hudson stated a falsehood in saying what he did of the general's knowledge of his writing? Had there been a court-martial, all this might have been ascertained—by what right Mr. Hudson wrote his letter; where he obtained his information; why, if a private letter, Mr. Godwin published it; what, if any, collusion there was between Mr. Hudson and Gen. Gillmore; there having been no trial, we can arrive at no very satisfactory conclusion. It looks very badly for Mr. Hudson, however, that he should have left the army to attend to a purely private enterprise of a superior officer, that he never received after leaving the front any instructions as to that business, and that he drew pay during part of the time of his absence.

The second charge brought by General Butler is disobedience of orders. To this Mr. Hudson can make no defence. Some palliation there was in the fact of the sickness of his wife and himself; but he should, undoubtedly, have reported himself immediately on receiving General Butler's order in July, remanding him to his regiment.

Mr. Hudson's pamphlet, as our readers will recollect, on his side charges Gen. Butler chiefly with imprisoning him, after his return to camp in obedience to orders, in an illegal and brutal manner, and for an unlawful time, and with ill-treating him really for the purpose of forcing him to criminate Gen. Gillmore with regard to the facts contained in his letter, which he had assured Gen. Butler he did not get from Gen. Gillmore. He was put in a "bull-pen," where were confined rebel prisoners and the refuse of the army. It was impossible to escape from vermin. The weather was cold, the ground so wet as to be almost muddy, he had no blanket, and no bed save a few barrel staves. The captain in charge promised to get him a blanket or two, but none came; at length a corporal borrowed one for him, and wrapping that round his shoulders, he spent most of the first night walking up and down in front of his tent. He could not find means to supply himself with wholesome food, as he was "not allowed at first to speak with any but officers of the guard, and these were all afraid to do anything for him, or let anything be done." These sufferings were alleviated by some members of his regiment; but his imprisonment dragged on, and after some weeks the prisoners were removed to a new enclosure, smaller than the first, and filled with men of the worst description, the ground being such, too, that after any considerable fall of rain the chaplain's quarters were flooded. With regard to the attempt to make him criminate Gen. Gillmore, Mr. Hudson gives an account of an interview between himself and the colonel of his regiment, after he had been four or five days in the "bull-pen," in which Col. Serrell said that he had been having a long talk with Gen. Butler about him, that the general disclaimed all hard feelings towards him, that if a trial were had it would be mainly with a view to bring out what he knew about Gen. Gillmore, that in that case Gen. Butler advised him to plead guilty, as he would fare better so, that under the circumstances Gen. Butler did not consider the absence without leave any great offence, while the fact of his having been all along a known and allowed correspondent of the press left little cause against him on that score.

As to the "bull-pen," Gen. Butler denies that there was any enclosure around the tent or camp in which Mr. Hudson was confined, while Lieut. Davenport admits that there was a line of sentinels—to all intents and purposes a very safe enclosure. Gen. Butler says that the tent of his prisoner was precisely like that of his staff officers, while Lieut. Davenport adds that it was situated in the provost camp. As to the character of the second prison, neither Gen. Butler nor Lieut. Davenport deny anything alleged by Mr. Hudson except that the building used was a stable, either cleaned or uncleaned, the latter having stated that it was an uncleaned stable. This apparent or real hardship the general might have prevented had he chosen to obey the 77th Article of War, which requires that whenever any officer shall be charged with a crime, he shall be arrested and confined in his barracks, quarters, or tent.

Of the illegal length of the imprisonment it is easy to judge by reference to an act of Congress approved July 17, 1862, which enacts that whenever the officer by whose orders another is arrested does not take care that within eight days after the arrest a copy of charges shall be served on the prisoner, the arrest shall cease. Mr. Hudson was confined some fifty days, copy of charges was served, and he was never tried. Under date of Jan. 14, 1865, after being relieved, Gen. Butler wrote to Gen. Holt, at the office of the Bureau of Military Justice, enclosing the charges and specifications (dated Jan. 2) which should have been served on Mr. Hudson by the 27th of September. Gen. Butler says that the movements of the army gave him no time to organize a court proper for his trial, while Lieut. Davenport says a good deal about the unfitness of a trial where the general would have been both accuser and reviewing officer. The act of the 29th of May, 1830 (Rev. U. S. A. Regulations, 1863, p. 495), provided for this contingency by ordering that the court for such trials shall be appointed by the President. The difficulties in the case, indeed, might all have been obviated by a careful study of the Regulations.

To the charge that Gen. Butler confined him with the purpose of compelling him to criminate Gen. Gillmore, Gen. Butler has not replied, nor has he denied the conversation referred to above between himself and Col. Serrell.

Gen. Butler, in his letter to the Bishop of Rhode Island, says that he refused the chaplain's request to preach, while in prison, on the ground that he thought, and he doubts not the readers of this book will think, that we had had enough of *that*. If there is anything else which we have had quite enough of, it is the general's oaths and overweening insolence. In the examination of Chaplain Hudson, Gen. Butler three times calls Gen. Gillmore a —— ——; "epithets," says Lieut. Davenport, "more forcible than polished." He tells Mr. Hudson that he lies, and the allusion of Mr. Davenport to Grant is so scurrilous that even Gen. Butler surprises us by printing it. It is a pity that a general who was of such service during the war should have made a *fiasco* of his last military operations through his conceit, and should now be displaying that unamiable quality at no one's expense but his own.

The Myriapoda of North America. By Horatio C. Wood, Jr., M.D. From the Transactions of the American Philosophical Society. (Sherman & Co., Philadelphia.)—This memoir was originally prepared for the Smithsonian contributions, but the manuscript was destroyed at the burning of the Smithsonian building in the winter of 1864-65. Luckily, the illustrations were saved. The text has been reproduced, and the whole now appears in the memoirs of the American Philosophical Society. It contains a strictly scientific description of a race of animals better known as centipedes, comprising about ninety species, which no American naturalist seems to have studied since the days of Rafinesque and Say. The materials contained in the museums of Washington, Philadelphia, and Cambridge, comprising many thousand specimens, were placed in Dr. Wood's hands, and he has certainly improved the excellent opportunities thus afforded him. The memoir contains, first, an outline of the external anatomy of the myriapoda; secondly, a descriptive classification of them, largely illustrated with wood-cuts, giving the anatomical details on which the zoological characters are based; thirdly, a synopsis of genera and species; and, lastly, remarks on their natural arrangement.

Dr. Wood considers the myriapods a distinct class, in which opinion he differs from Brandt, Gervais, and Dana, who make them simply an order of insects, but agrees with Leach, Latreille, and Newport. The last-named naturalist, Newport, who assigns to myriapods a position near the worm, is, undoubtedly, the highest authority on the subject. This conclusion is sustained by the facts revealed by embryological studies. In view of the great light thrown by Agassiz on the natural affinities of other groups of animals through embryological data, one cannot but feel that an extension of Mr. Newport's researches on the development of centipedes would be of great importance, and would help to clear up much of the confusion into which naturalists have thrown the classification of the subordinate groups. The investigation of the anatomy and physiology, the development and habits, of this whole class, still offers an almost untrodden field, which we hope Dr. Wood will occupy.

The plates illustrating this memoir appear to have been drawn from specimens preserved in alcohol, and do not give a correct conception of the natural arrangement of the limbs. The fore and hind symmetry, so obvious in the living specimen, is wholly lost in the plates, except in the case of *cermatia*, where it is correctly represented.

The Universal Pathfinder and Business Man's Pocket Companion. Being a Guide for all People, to all Subjects, and to all Lands. By M. N. Olmsted. (James Miller, New York.)—Though not in the strictest sense a man of business, we place ourselves confidingly in the hands of this obliging guide. Beginning with the globe itself, we are gently borne through the census of the North American aborigines and the Declaration of Independence to the page where the Articles of Confederation ought to be; stop long enough with the Constitution to discover that the public are in error in supposing the latest amendment of that charter to be the thirteenth article; learn the history of our flag, and draw a parallel between Washington and Lincoln; and bridge the period between our two revolutions with tables of the popular vote at each election, of Presidents and Cabinets, of State populations, etc. We return to our muttons on page 123, with an estimate of the number of people whose feet now press the earth—amount of pressure not calculated—and after more census tables, for both hemispheres, wind up with a cheerful Malthusian page on massacres, with an account of travelling on the "Old Shades' Valley Railroad," whose terminus is *Destruction dépôt*. Then we go back a little to the seven wonders of the world,

and ancient chronology, followed by the principal modern dates, together with a list of impolite things to be avoided and hints to travellers. We are to avoid, for instance, "receiving a present without expressing gratitude," and are charged, as travellers, to "be always pleasant"—a hint which we strongly suspect to have been interpolated by the directors of the Camden and Amboy Railroad. Finally, we are asked if we love little girls, and get some definitions of foreign terms, etc. Seriously, this is a book which is not without its convenience, but in which a large amount of precious space is wasted. Its title is absurdly pretentious.

Home Life. What it is and what it needs. By John F. W. Ware. (Boston: Wm. V. Spencer.)—The papers here collected into a book made their first appearance three or four years ago in the "Monthly Religious Magazine," where they attracted considerable attention. They are thoughtful, tender, wise, and prudent, evidently the work of one whose own home-life is more to him than all his other ventures and successes. It must have been written out of a full heart. In certain quarters it is customary for the clergyman to present the persons whom he marries with a little volume, the contents of which are thought to be related in some way to the case in hand. The volume ordinarily is good for nothing. But of late we hear that this book has been used on such occasions. We doubt if there is any better. It is full of practical suggestions. But it contains a great deal of advice that would be very tardy after the putting on of marriage rings. Some of its best portions seek to find the laws which ought to govern men and women in those states which precede the matrimonial. The chapter upon "Home, the Residence," will sound like bitter mockery to citizens of Brooklyn and New York, who might like well enough to have houses of their own, but who count themselves lucky if they get anything at all and are not driven into boarding-houses or the street. The custom of boarding is so prevalent to-day, and is so rapidly increasing, that a book of this sort ought to take cognizance of its merits, if it possesses any, which no one can for a moment doubt who has *not* given it a trial. The author has a timely word about our city tenements. Thinking of these, all lesser miseries are easily forgotten. But when the poor have been attended to, will some one say a word for those unfortunates who have "neither poverty nor riches," but whose yearly stipend in the city, though sounding rather large, yields them less comfort and convenience than the day laborer can purchase with his wages in the outlying villages and towns?

The Sunday Book of Poetry. (Sever & Francis, Cambridge.)—This is a book to be enjoyed on Sunday or on any other day. But if the reader were not told so in the preface it probably would not occur to him that the compiler intended it for children between the ages of eight and fourteen years. We are tempted to ask in what respect the book would have been different if it had been written for grown men and women. And we are not willing to believe that there does not exist material for such a book as our compiler had the good-will to attempt, which should not be namby-pamby on the one hand or on the other hand subtle and metaphysical. These are the two extremes that she professes to avoid. With reference to the first, the book is a success. Not so with reference to the second. It contains many verses that are exceedingly abstruse. The fact that "Keble's Christian Year" has been very generously used is proof enough of this. Here, too, are many of George Herbert's fine conceits. Their meaning will be lost upon nine children out of ten. If a Sunday book of poetry is really a desideratum for the child, we trust the attempt will be repeated, and rewarded with a larger measure of success. But no great advantage will be won over the present compilation until it is agreed that sacred poetry need not contain a reference to the Deity, or involve the sentiment of obligation, but may converse with beauty and affection not less than with responsibility and God. In so far as this book is a failure it is mainly on account of its refusal to see this. Dr. Johnson's definition of sacred poetry is accepted and applied. Further than this we doubt if the compiler is acquainted with the tastes of children well enough to satisfy them in a book. And yet for all that can be said against it, the book is full of beautiful and holy thoughts, and has been published elegantly enough to suit the most fastidious hand and eye.

Rebel Invasion of Missouri and Kansas, etc., October and November, 1864. By Richard J. Hinton, late Captain 2d Kansas Col'd Vols. Second edition. (Church & Goodman, Chicago; F. W. Marshall, Leavenworth.)—The unanimity with which the people of Kansas rose to repel the invasion of Gen. Sterling Price, which threatened incalculable disaster not only to themselves but to the cause of the Union, deserved the honorable record which Captain Hinton has made of it. He rightly remarks that such an uprising had no parallel during the war—neither when John Morgan went galloping through Indiana and Ohio, nor when Gen. Lee paid his unwelcome visit to the Dutch burghers of Pennsylvania. The narrative is by one who was himself a participant in the rout of the invader, and its style is always earnest and unaffected, though not always grammatical and often crude. The reader's interest and sympathies are quickly enlisted and well sustained to the end. As a monograph of a brilliant episode in the late war against rebellion this work has more than a local and transient value. The author seldom indulges in military criticism, but he seems to imply that Gen. Rosecrans was wanting in alertness and promptitude both in discovering the strength and whereabouts of the advancing enemy and in sending relief to Kansas when the object of Price's expedition was manifest. It is pleasant to commend the insertion of maps of the various battle-fields, besides very faithful likenesses of the principal actors in the Federal defence.

The Phenomena of Plant Life. By Leo H. Grindon. (Nichols & Noyes, Boston.)—This little book was obviously intended for general readers; it is free from technicalities, and is written in a style which doubtless attracts many persons, though not many of the more intelligent class. Only the surface of things is touched upon, and there are more loose, and we should say wild, statements in it than we care to copy. Jussieu would surely be surprised to find that the three great classes of plants according to the "natural system" were recognized in the Mosaic account of the creation—that they are, as the author tells us, "enumerated by the inspired writer;" and further, that "learned and pious men have been led from this circumstance to believe that at the very gateway of Holy Writ there is set forth the great principle of triplicity, which science in these later ages has demonstrated." We agree with the author that "almost the last objects we should look to for a commentary on a statement in Genesis are the sprouting seeds of April." The book may, perhaps, stimulate some to seek further and look deeper, and so good may possibly come of the reading of it.

Sermons of the Rev. Francis A. Baker, Priest of the Congregation of St. Paul. With a Memoir of his Life. By Rev. A. F. Hewit. (Lawrence Kehoe, New York.)—Father Baker was a native of Baltimore, a graduate of Princeton, and for eight years a minister of the Episcopal Church. Converted in 1853 to Catholicism, he exhibited the greatest devotion to the new faith, and was an untiring missionary to the day of his death. That he was earnest, conscientious, and humane, we learn from the memoir, but also unmistakably from his portrait. His sermons are brief, addressed to the common heart and reason of his hearers, and remarkably free from clerical assumptions of authority. Quotations from the Scriptures abound as in Protestant discourses, and are mainly relied upon for persuasion. The sermon on "The Duty of Growing in Christian Knowledge" is liberal and philosophical to a degree not usual in the pulpits of any denomination.

A Third Reader. By Marcius Willson. (Harper & Bros., New York.)—We advise naughty children to avoid this school-book. It places them in a very disagreeable light; it is in fact pointed at them all the way through. For fear lest the wide-spaced, open-lettered lessons may not convey to them a realizing sense of their wickedness, there is a barb called a moral appended to each one, and the teacher is directed how to use it and sharpen it. This, it seems to us, is rather severe on the scholars, and sufficiently uncomplimentary to the teacher; and we are quite positive that if *we* had to compile a reading-book for the young, we should make good morals and natural history subordinate to elocution, and consult in our selections what was interesting rather than instructive; and, if we had any designs upon the character and consciences of our readers, should diligently conceal them, instead of exposing the conspiracy between ourselves and the teachers on every page and at every turn.

Mosaics of Human Life. By Elizabeth A. Thurston. (Philadelphia: J. B. Lippincott & Co.)—One cannot look through this selection without being put into a grateful humor with the editor, who has taken the trouble to group so many pleasant things together, with such threads of coherence as hold one's own rambling thoughts one to another. Mrs. Thurston's reading has been generous and general, and she has not found any human author alien to her. So, we have not only passages from Goethe and Dante and Cervantes, and recondite poets and philosophers, but sayings from Fanny Fern and from even lesser people; and sentiments from singers whose fame has not yet passed the newspapers. It is pleasing to find that in so motley an assemblage, drawn in such a democratic spirit from so many sources, the literary company is seldom vulgar or disagreeable.

Memorial Service for Three Hundred Thousand Union Soldiers. With the Commemorative Discourse, by Joseph P. Thompson, D.D. (Loyal Publication Society, New York.)—It was our good fortune to be of the huge throng at Dr. Thompson's church that listened to the inspiring music and words evoked by the memory of the Federal dead, one Sunday evening in December. So much of that impressive service as could be preserved in print is contained in this pamphlet, and bears its mingled freight of consolation and lofty encouragement to all who mourn for our departed heroes. The discourse alludes to the greatness of their sacrifice as measured by its spontaneousness, its endurance, and its results; and from their graves derives a lesson of faith in the principles of justice and humanity by which, under Providence, the world is ordered.

Works of Charles Dickens. Household Edition. Our Mutual Friend. Four vols. (Hurd & Houghton, New York.)—Our judgment of this, the latest of Mr. Dickens's productions, has been already made known to our readers in a very full discussion of its merits. The publishers, as in duty bound, have not suffered its literary inequality to affect its appearance in the elegant series with which the public are familiar. The four illustrations are this time all from the pencil of Mr. Darley, but possess no striking merit. The press-work is admirable.

BOOKS RECEIVED.

The Coquette; or, The Life and Letters of Eliza Wharton. By a Lady of Massachusetts. The Queen's Revenge. By Wilkie Collins. T. B. Peterson & Bros., Philadelphia. (F. A. Brady, New York.)

Principles of Education. Drawn from Nature and Revelation, and Applied to Female Education in the Upper Classes. By the author of "Amy Herbert." Two vols. in one. D. Appleton & Co., New York.

LITTLE, BROWN & COMPANY,

110 WASHINGTON STREET, BOSTON,

HAVE JUST PUBLISHED

HISTORY

OF THE

LIFE AND TIMES OF JAMES MADISON.

BY HON. WILLIAM C. RIVES.

VOL. II., 8vo, $3 50.

It is proposed to add another to that series of National Works which have appeared within a few years, illustrative of the lives and characters of the great men who have identified themselves with the history of this country, and of the important events which transpired during their career, and in which they acted a prominent part.

In tracing the history of Mr. Madison's active life during a period of sixty years (from 1776 to 1836), the writer has been necessarily led into a review of the most important portions of our public history. Mr. Madison's career was contemporary and closely identified with the War of the Revolution, the arduous labors of the old Congress, the completion of the Articles of Confederation, the formation and adoption of the Constitution of the United States, the political questions which arose under the Administration of Washington, the struggle of parties which terminated in the election of Jefferson over Adams, and the complicated questions of foreign policy which led to the war of 1812,—a war commenced and terminated under his own Administration. In passing under review these great scenes of our history, the writer has been enabled, by access to the papers of Mr. Madison and other original documents, to throw new light upon many debatable passages of the highest and most permanent interest in American annals.

Besides the career of Mr. Madison himself, of which no connected narrative has ever yet been given to the public, the works will embrace authentic and illustrative notices, founded chiefly on original and unpublished documents, of the most distinguished of his contemporaries—Washington, Jefferson, George Mason, Patrick Henry, Richard Henry Lee, Adams, Jay, Hamilton, King, and others. Whether the subject, the materials, or the *dramatis personæ*, be considered, the work, in its design, would seem well fitted to supply yet remaining and important *desiderata* in our national history, on questions which must ever engage the deepest interest of the American people.

NOTICES OF THE PRESS. VOL I.

"Mr. RIVES has made an important and welcome contribution to our historical literature in his life of President Madison. In the preparation of his memoirs, Mr. RIVES has had access to all the printed authorities, and to many unpublished documents; and he has brought to his task a mind well trained by various study and experience. He has scrutinized conflicting statements with care and fidelity; and, by a diligent comparison of authorities, he has endeavored to render his own narrative impartial and trustworthy. In this attempt we are inclined to believe, from an examination of the first volume of his work, that he has been very successful."—*Christian Examiner.*

"Mr. RIVES's style is pure, perspicuous, forcible, always adequate to the subject in hand, and worthy of a work which must take its place among the classical authorities in the history of the country."—*North American Review.*

"It is fortunate that a character so pure and a patriotism so noble as Madison's have been assigned to a biographer so competent, candid, and appreciative."—*N. Y. Independent.*

"The work upon which Mr. RIVES has entered fills the gap in the circle of biographies, and further tends to elucidate in an important degree the early history of the Republic."—*Boston Journal.*

"It is one of those productions that are not repetitions, but it is full of fresh materials illustrative of the great scenes of our early national struggles. Everywhere through the volume, Mr. RIVES shows evidence of candor, research, fidelity, and independence; and it is an earnest of a contribution to history and biography worthy of the splendid subject."—*Boston Post.*

AMERICAN AND EUROPEAN LITERARY BULLETIN,

A Monthly List of the most prominent English, French, and German Publications, with occasional notes on Dutch, Danish, Swedish, Italian, Spanish, Portuguese, and other foreign Books, with critical notices, from the best authorities, of important new and forthcoming Publications.

TEXT-BOOKS ON BOTANY

BY PROF. ASA GRAY, OF HARVARD UNIVERSITY.

THE CONSERVATORY OF FLOWERS IN THE NATIONAL PROPAGATING GARDENS AT WASHINGTON IS ARRANGED ACCORDING TO THE CLASSIFICATION IN THESE TEXT-BOOKS.

These books present the latest and most accurate principles and developments of the science, and have been recommended by almost every eminent Botanist in the country.

For comprehensiveness of scope, exactness and clearness of description, accurate and scientific analysis of plants, and beauty of illustrations, they have no equal.

THE SERIES CONSISTS OF

HOW PLANTS GROW.

Containing a *Popular Flora*, or an Arrangement and Description of Common Plants, both Wild and Cultivated. Illustrated by more than 500 Drawings from nature.

LESSONS IN BOTANY AND VEGETABLE PHYSIOLOGY.

Illustrated by over 360 Wood-cuts; to which is added a copious *Glossary*, or Dictionary of Botanical Terms.

MANUAL OF BOTANY.

A comprehensive Flora of the Northern States east of the Mississippi, including Virginia and Kentucky, arranged according to the *Natural System*. To which is added GARDEN BOTANY, and fourteen beautiful plates illustrating the Genera of Ferns, Grasses, etc.

LESSONS AND MANUAL.

This work, in *one volume*, is the one most used as a complete Class-Book by Students of Botany.

STRUCTURAL AND SYSTEMATIC BOTANY AND VEGETABLE PHYSIOLOGY.

Being a *fifth revised* edition of the "Botanical Text-Book," illustrated by over 1,300 Wood-cuts, to which is added a full Glossary, or Dictionary of Botanical Terms.

MANUAL OF BOTANY, WITH MOSSES AND LIVERWORTS.

With 22 Plates, illustrating the Genera of Cryptogamia.

FLORA OF THE SOUTHERN STATES.

By A. W. CHAPMAN, M.D. The plan of this work is nearly the same as that adopted by Prof. GRAY, and presents a systematic arrangement of the Phænogamous and higher Cryptogamous Plants of all the States south of Kentucky and Virginia, and east of the Mississippi.

☞ Teachers and School Officers are invited to correspond with us freely, and to send for our DESCRIPTIVE CATALOGUE and CIRCULAR, which will be promptly sent upon application.

IVISON, PHINNEY, BLAKEMAN & CO.,

48 and 50 Walker Street, New York.

PHILIP FRENEAU'S POEMS

RELATING TO THE AMERICAN REVOLUTION.

With Notes and Memoir by

EVERT A. DUYCKINCK.

A handsome crown 8vo volume, with steel portrait and fac-simile poems. Price $2 25.

No collection of this kind has appeared in America since the edition, now exceedingly rare, published in Philadelphia in 1809. The Poems of the Revolution, by which the author's reputation was established, are now brought together in one volume for the first time.

FOR SALE AT THE PRINCIPAL BOOKSTORES.

WIDDLETON, Publisher,

17 Mercer Street, New Yo

A New Poem by Whittier!

TICKNOR & FIELDS

PUBLISH FEB. 17,

S N O W - B O U N D :

A WINTER IDYL.

BY

JOHN G. WHITTIER,

Author of "Maud Muller," etc., etc.

In one beautifully printed volume, with a fine portrait of the author and an illustration of his birthplace, the scene of the poem. Price $1 25.

Nothing that has ever appeared from our favorite New England poet will have a closer home-interest than this admirable production. It tells the story of his own boy-life amid the hardships and pleasures of that stormy season of the year, so full of vicissitude and danger to the dwellers on our rocky coast. Thousands of readers will thank anew the poet who can make them feel

"The winter joys their boyhood knew."

With Whittier's own beautiful lines at the close of the poem all those who peruse "Snow-Bound" cannot fail to sympathize:

"And dear and early friends—the few
Who yet remain—shall pause to view
These Flemish pictures of old days;
Sit with me by the homestead hearth,
And stretch the hands of memory forth
To warm them at the wood-fire's blaze!
And thanks untraced to lips unknown
Shall greet me like the odors blown
From unseen meadows newly mown,
Or lilies floating in some pond,
Wood-fringed, the wayside gaze beyond;
The traveller owns the grateful sense
Of sweetness near, he knows not whence,
And, pausing, takes with forehead bare
The benediction of the air."

COUPON BONDS. By J. T. Trowbridge. Reprinted from the "Atlantic Monthly." Paper, 25 cents.

T H E M E T H O D I S T :

AN

EIGHT-PAGE RELIGIOUS WEEKLY NEWSPAPER.

This Journal has now entered upon its seventh volume, and has acquired a reputation equal to the first religious and literary periodicals of the age. It stands forth the uncompromising Advocate of LAY REPRESENTATION in the

METHODIST EPISCOPAL CHURCH,

and represents loyally and courageously its denominational interests, as well as the great religious interests of the age.

AS A FAMILY NEWSPAPER it has no superior. Its chief aims are to spread the principles of our common Christianity, circulate a pure literature, furnish intelligence both from our own and other denominations, and to cultivate a spirit of brotherly love and unity among all Christian churches.

It is edited by

REV. GEORGE R. CROOKS, D.D.,

who has associated with him the following editorial contributors:

REV. JOHN MCCLINTOCK, LL.D., REV. ABEL STEVENS, LL.D.,
REV. B. H. NADAL, D.D., REV. H. B. RIDGAWAY,
REV. J. F. CHAPLAIN, REV. E. I. D. PEPPER,
PROF. A. J. SCHEM.

Other experienced writers contribute statedly to the various special departments. Their united ability makes this one of the most original, thorough, complete, and comprehensive religious periodicals of the day.

In typographical appearance THE METHODIST has no superior.

The NEWS DEPARTMENT is under the supervision of an Editor who makes that one thing a specialty; so that the reader of THE METHODIST gets the latest, most carefully arranged and reliable account of the current events of the stirring times in which we live.

The CHILDREN'S DEPARTMENT alone has attracted more attention from teachers and the friends of youth than most of the exclusively juvenile periodicals extant.

The FINANCIAL, COMMERCIAL, MERCANTILE, and AGRICULTURAL COLUMNS are crowded with valuable information for business men, mechanics, manufacturers, and farmers, and are brought up every week to the very hour of going to press.

Altogether, as a religious and literary weekly newspaper, THE METHODIST has been pronounced, by disinterested judges, to be without a superior. Its visits to any household will pay back its price, to every careful reader, a hundred-fold.

TERMS TO MAIL SUBSCRIBERS, $2 50 PER YEAR, IN ADVANCE;

TO MINISTERS, $2.

Served by Carrier in New York and Brooklyn, Fifty Cents additional. Postage prepaid at the post-office where received, Twenty Cents per year. Twenty Cents must be added by Canada subscribers, to prepay postage.

Any one sending FOUR SUBSCRIBERS and TEN DOLLARS, will receive a fifth copy free for one year.

Address,

THE METHODIST,
114 NASSAU STREET, N. Y.

Specimen Copies sent free on application.

$3 WILL PAY FOR "THE METHODIST" FOR ONE YEAR,

AND A COPY OF

"STEVENS'S CENTENARY OF AMERICAN METHODISM,"

To any *new* subscriber (mail), by enclosing the above amount and fifteen cents in stamps to prepay postage on the book.

Address

PUBLISHERS OF "THE METHODIST,"
114 Nassau Street, New York.

FINANCIAL REVIEW.

NATION OFFICE, Saturday Evening,
February 17, 1866.

GOVERNMENT has been a large seller of gold this week, and the consequence has been a decline in the price to 137. It closed this evening at 137⅛ to 137¼. Gold continues to be in active demand for delivery, but holders are no longer able to make ¼ to 3-16 per day by lending their gold, as was the case last week. As usual, the downward tendency of specie brings into the market, as sellers for the fall, a large number of merchants who seek to protect their drooping merchandise by this "hedging" process. It is still pretty generally felt among speculators that if Congress does its duty to the country, gold may sell at 125, or at least 130, by midsummer. But no such price can be touched if the Treasury Department continues to hoard in its vaults two-thirds of the active gold of the country. Exchange has improved, as was natural, on the fall in gold. Bankers' sterling bills are now quoted at 107¾ to 108. Many houses which had been keeping their means in gold during the period when it was worth ¼ per cent. a day, have lately sold the coin and bought exchange. It is yet too soon to say anything positively with regard to this year's foreign trade. The year opens with heavy importations—the duties one day this week at this port were nearly a million. And on the other hand, the exports, consisting mainly of cotton, are so liberal as to pay for all we are receiving from abroad, and to leave a balance in our favor. As to the future, that mainly depends upon the spring trade. If importers can work off their large importations at a profit, it may be assumed that the consumption of foreign goods this year will be in excess of all previous years. If, on the other hand, they should be slow of sale, a marked decrease in import entries will be developed as the year advances.

Thus far, sound men are dubious of the future. Of the two great markets for goods, the West is straitened by the decline in produce, and the South, though rich in cotton, is too poor in credit and too newly readmitted to commercial society to command much reliance. Two prominent clouds overhang the future. One is the prospect of currency contraction, the other the prospect of cholera. Either would prove gravely injurious to commerce. Though Congress still delays action upon the Ways and Means bill for the funding of the currency, notice was given this week of a measure declaring the interest-bearing legal tender notes no longer a legal tender after a fixed date. This is laying the axe to the root of the tree. Of these interest-bearing legal tenders there are over $180,000,000 afloat, some of which are selling as high as 108. By far the greater part of them are held by banks, which hold them in the double quality of investments and reserve. Were they pronounced to be no longer a legal tender, the currency would at a blow be curtailed one-third, and the banks which use them as a reserve would be compelled to replace them by plain legal tenders. The result would be a general enquiry for money and a healthy check to indiscriminate speculation. It is reported from Washington that whatever differences of opinion exist on matters of detail in the Ways and Means Committee, the House, as a whole, is firmly set toward currency contraction, and is likely to favor that measure which looks to the most thorough and direct rehabilitation of the national currency.

Not the least significant indication of the crisis is the condition of real estate. For four years—ever since the first issues of paper-money by Government—speculators have been buying real estate for the rise, holding it year after year, paying taxes on it, and at last selling it, in despair, at no advance on the original cost. Everything—stocks, produce, merchandise, manufactures, gold, and labor—rose; land and houses remained stationary. They sold in 1865 for the same money, in paper—as a general rule—as they had commanded in gold in 1860. Within the past sixty days a change has occurred. An active speculative movement in land and houses has broken out. Buildings have advanced 25 per cent. in a month. Fortunes have been realized by the purchases of vacant lots and Broadway stores. One man is pointed out who has made half a million since New Year by judicious purchases of up-town property. Thus far the movement has been chiefly confined to city property. But it is contagious. An advance in real estate is reported at Cincinnati, St. Louis, and Chicago. And the enormous advance in rents in New York will naturally drive a considerable proportion of city people to the suburban villages, which will lead to a corresponding rise in values there. Already shrewd speculators are picking up houses and farms in the counties surrounding New York, on the theory that before midsummer they will be worth twice their present value. These symptoms are full of instruction. History has been written in vain for those who neglect or misunderstand them. All inflations in this country have pursued the same uniform path. A plethora of money, or its representatives, starts the rise; it begins in the most sensitive market, the stock exchange; from thence it spreads to produce, then to merchandise, then to labor and manufactures, the product of labor; last of all it reaches real estate, and there, after running wild for a brief season, it culminates in a general collapse. However different the causes of the inflation, however varied its incidents, these have always been its leading characteristics, and they have never varied in their order and sequence. Any who doubt, must be referred to the record of 1836–7 and 1856–7. It is hardly necessary to enforce the application. He who runs may read in the signs which surround him the important revelation that we are now in the last stage of the inflation which commenced four years ago, and which has made and unmade so many fortunes. How much longer it may pursue its headlong course no one can tell. Speculation in real estate may riot until no man can afford to buy a house unless he has been a contractor or expects to be a bankrupt. We may yet see, as in 1836, a wild competition for deep-water lots, or a lively enquiry, at a premium, for shares in a railway not yet constructed, as in 1856. But madness of this sort will be short-lived; whether the end come from the natural reaction, from excessive speculation, or from the cholera, or from currency contraction, or from any other now unforeseen cause, it will come, and come surely and terribly to those who owe money.

The money market rules easy at 5 to 6 per cent. for call loans. The Sub-Treasury in this city has been paying the semi-annual interest on $100,000,000 of seven-thirties; but still, so large are the receipts for duties and internal revenue that its balance is again nearly $100,000,000. With this enormous balance on hand, for which there appears to be no use, Government continues to allow 5 per cent. for temporary deposits—to the mystification of commercial men. A banker who should borrow money on interest for the mere pleasure of having a large balance over night, would not enjoy a high credit among his fellows. Whether the Government business is subject to other laws, and justifies more lofty practices, is a question which every tax-payer can settle for himself.

The following table will show the course of prices during the week in the stock, gold, exchange, and money markets:

	Feb. 10.	Feb. 17.	Advance.	Decline.
United States Sixes of 1881	104⅛	104½	⅜	....
5-20 Bonds, old	102⅝	103⅜	¾	....
5-20 Bonds of 1865	102⅝	103½	⅞	....
10-40 Bonds	94⅛	91⅛ ex coup	....	....
7.30 Notes, second series	99⅛	99⅜	¼	....
New York Central	88⅛	93	4⅞	....
Erie Railway	78	81¾	3¾	....
Hudson River	100	104	4	....
Reading Railroad	100	101¾	1¾	....
Michigan Southern	69	71½	2½	....
Cleveland and Pittsburg	79¾	81¾	2	....
Chicago and North-western	27¾	29⅛	1⅜	....
" " " Preferred	54½	56½	2	....
Chicago and Rock Island	101¾	106	4¼	....
P., Fort Wayne, and Chicago	92	95¾	3¾	....
Canton	43½	44½	1	....
Cumberland	44⅛	45¼	1⅛	....
Mariposa	12⅛	12½	⅜	....
American Gold	139	137⅛	....	1⅞
Bankers' Bills on London	107¼	108	¾	....
Call Loans	6	6	....	....

The course of prices has again been generally upward. Two prominent bear houses—prominent rather by reason of the extent of their o[illegible] than in regard to their means or credit—failed yesterday, and [illegible] quence was large purchases of stock for their account. This of [illegible] an improved market, and predisposed speculators to cover short [illegible] ventures for the rise. The clique in Rock Island, assisted by t[illegible] that stock, forced up the price yesterday to 106¼, at which figu[illegible] willing to unload. A lively movement has been started in N[illegible] tral, on the strength of a theory that Governor Fenton will r[illegible] veto of last winter, and permit the road to raise the rate of fa[illegible] but little real probability of such an event. If the Governor w[illegible] mit the road to increase its fares when the currency was only [illegible] on the dollar, and gold seemed likely to go to 500, he is hard[illegible]

so now, when we seem to be in a fair way of resuming specie payments in the course of a few years. The advances in Erie and Michigan Southern are chiefly due to the failure previously mentioned, which created an abnormal demand for these stocks. Railway earnings continue thus far to show a decline as compared with last year, and unless there should be a marked advance in the price of produce—of which at present there is no symptom—the opening of navigation will give rise to a still greater diminution. There is no description of Western produce which, at present prices, can afford to travel by rail, if water communication can be had. Nor can it be a matter of doubt that the consumption of Eastern and foreign goods at the West will this year be smaller than it was last—with wheat, corn, and oats at their present figures, the Western farmers will have much less money than usual to spend in dry goods or in travel.

THE UNION MUTUAL LIFE INSURANCE COMPANY

is one of those well-established and prudently managed Life Insurance Companies which distinguish this nation for enlightened benevolence, practical wisdom, and disinterested philanthropy. It offers superior advantages to the life-ensuring public. It is based upon fundamental principles of soundness, and gives abundant security in large accumulated funds. Through the admirable economy of its management large dividends are secured to policy holders. It is prompt in payment of losses, and accommodates the assured in the settlement of their premiums in life policies by receiving a note for one-half when the premium amounts to over $30.

THIS COMPANY offers PECULIAR ADVANTAGES to persons intending to ensure their lives.

Since its organization it has paid (chiefly to Widows and Orphans) for losses by death,

$912,342 00,

and

$412,748 00

in Dividends—a total of over

ONE AND A QUARTER MILLION

of Dollars, and now has, in its Capital and Accumulations, securely invested for the Payment of Losses and Dividends, a fund of

$1,400,777 16.

of the oldest wholly *Mutual* Life Insurance Companies in the United
been uniformly successful, having always made large returns in Cash
the policy holders.

COMPETENT AGENTS WANTED.

THE MERCANTILE MUTUAL

INSURANCE COMPANY.

OFFICE, 35 WALL STREET, NEW YORK.

Assets, January 1, 1866 . . . . . $1,366,699

ORGANIZED APRIL, 1844.

The Company has paid to its Customers, up to the present time, Losses amounting to over

EIGHTEEN MILLIONS OF DOLLARS.

For the past nine years the cash dividends paid to Stockholders, made from ONE-THIRD of the net profits, have amounted in the aggregate to

ONE HUNDRED AND TWENTY-ONE AND A HALF PER CENT.

Instead of issuing a scrip dividend to dealers, based on the principle that all classes of risks are equally profitable, this Company will hereafter make such cash abatement or discount from the current rates, when premiums are paid, as the general experience of underwriters will warrant, and the net profits remaining at the close of the year will be divided to the stockholders.

This Company continues to make Insurance on Marine and Inland Navigation and Transportation Risks on the most favorable terms, including Risks on Merchandise of all kinds, Hulls, and Freight.

Policies issued making loss payable in Gold or Currency, at the Office in New York, or in Sterling, at the Office of Rathbone, Bros. & Co., in Liverpool.

The Nation:

A Weekly Journal of Politics, Literature, Science, and Art.

THIS journal will not be the organ of any party, sect, of body. It will, on the contrary, make an earnest effort to bring to the discussion of political and social questions a really critical spirit, and to wage war upon the vices of violence, exaggeration, and misrepresentation by which so much of the political writing of the day is marred.

The criticism of books and works of art will form one of its most prominent features: and pains will be taken to have this task performed in every case by writers possessing special qualifications for it.

It is intended, in the interest of investors, as well as of the public generally, to have questions of trade and finance treated every week by a writer whose position and character will give his articles an exceptional value, and render them a safe and trustworthy guide.

A special correspondent, who has been selected for his work with care, is pursuing a journey through the South. His letters appear every week, and he is charged with the duty of simply reporting what he sees and hears, leaving the public as far as possible to draw its own inferences.

TERMS:—Six Dollars per annum, in advance; Six months, Four Dollars. When delivered by Carrier in New York or Brooklyn, Fifty Cents additional.

JOSEPH H. RICHARDS,

PUBLISHER,

130 Nassau Street, N. Y.

WILLIAM KNABE & CO.'S

GRAND, Celebrated Gold Medal
SQUARE, AND UPRIGHT

PIANOS.

These instruments have been for thirty years before the public, in competition with other instruments of first class makers. They have, throughout that long period, maintained their reputation among the profession and the public as being unsurpassed in every quality found in a first-class Piano.

GROVER & BAKER'S

SEWING MACHINES

WERE AWARDED THE HIGHEST PREMIUMS

At the State Fairs of

New York,	Illinois,	Virginia,
New Jersey,	Michigan,	N. Carolina,
Vermont,	Wisconsin,	Tennessee,
Pennsylvania,	Iowa,	Alabama,
Ohio,	Kentucky,	Oregon,
Indiana,	Missouri,	California,

And at numerous Institute and County Fairs, including all the Fairs at which they were exhibited the past three years.

The GROVER & BAKER ELASTIC-STITCH SEWING MACHINE is superior to all others, for the following reasons:

1. The seam is stronger and more elastic than any other.

2. It is more easily managed, and is capable of doing a greater variety and range of work than any other.

3. It is capable of doing all the varieties of sewing done by other machines, and, in addition, executes beautiful embroidery and ornamental work.

GROVER & BAKER S. M. CO.,
495 Broadway, New York.

FINKLE & LYON'S

IMPROVED

LOCK-STITCH SEWING-MACHINE.

N. B.—Money refunded if the Machine is not preferred to any in market for family use.

AGENTS WANTED. 538 Broadway, N. Y.

THE BEST SEWING-MACHINES IN THE WORLD.

THE WEED MACHINES,

With all their valuable improvements, entirely overcome all imperfections. They are superior to all others for family and manufacturing purposes, simple in construction, durable in all their parts, and readily understood. They have certainty of stitch on all kinds of fabrics, and are adapted to a wide range of work without change or adjustment, using all kinds of thread. Will hem, fell, bind, gather, braid, tuck, quilt, cord, and, in fact, do all kinds of work required by families or manufacturers. We invite all persons in search of an instrument to execute any kind of sewing now done by machinery to inspect them, and recommend all parties engaging in the sale of sewing-machines to make sure they secure the best by examining the WEED before purchasing. They make the shuttle-stitch, which cannot be excelled for firmness, elasticity, durability, and elegance of finish. They have received the highest premiums in every instance where they have been exhibited in competition with other standard machines. The company being duly licensed, the machines are protected against infringements or litigation.

Reliable agents wanted, to whom we offer great inducements. Every explanation will be cheerfully given to all, whether they wish to purchase or not. Descriptive circulars, together with specimens of their work, will be furnished to all who desire them by mail or otherwise.

Improvements in Piano-fortes.

One of the simplest and most truly valuable improvements yet made in the Piano-forte is that invented and patented by

DECKER BROTHERS, 91 BLEECKER STREET,

in this city. By correcting the only imperfections arising from the use of the full iron-plate, and that, too, by not detracting in the slightest degree from its many positive advantages, the Messrs. DECKER have developed in their instruments a tone at once admirable for its purity, fulness, prolongation, and sweetness, and the high estimation in which their improvement is held is well shown in the rapidly increasing business of their firm.—*Tribune.*

MARVIN'S

PATENT FIRE AND BURGLAR SAFE.

Superior to any others in the following particulars

They are more fire-proof.

They are more burglar-proof.

They are perfectly dry.

They do not lose their fire-proof qualities by age.

Manufactured only by

MARVIN & CO., 265 Broadway.

721 Chestnut Street, Philadelphia.

Send for a descriptive Circular.

Saleratus.—B. T. BABBITT'S SALERATUS, 70 Washington Street, N. Y. If you want healthy bread, use B. T. Babbitt's best medicinal Saleratus, made from common salt. Bread made with this Saleratus contains, when baked, nothing but common salt, water, and flour. B. T. BABBITT, 64, 65, 66, 67, 68, 69, 70, 72, and 74 Washington Street, N. Y.

Economical Housekeepers Use

STEINWAY & SONS'

GRAND, SQUARE, AND UPRIGHT PIANO-FORTES

Have taken Thirty-two First Premiums, Gold and Silver Medals, at the Principal Fairs held in this country within the last ten years, and in addition thereto they were awarded a First Prize Medal at the Great International Exhibition in London, 1862, in competition with 269 Pianos from all parts of the World.

That the great superiority of these instruments is now universally conceded is abundantly proven by the FACT that Messrs. Steinways' "scales, improvements, and peculiarities of construction" have been copied by the great majority of the manufacturers of both hemispheres (AS CLOSELY AS COULD BE DONE WITHOUT INFRINGEMENT OF PATENT RIGHTS) and that their instruments are used by the most eminent pianists of Europe and America, who prefer them for their own public and private use, whenever accessible.

STEINWAY & SONS direct special attention to their

PATENT AGRAFFE ARRANGEMENT,

which, having been practically tested in all their grand and highest-priced Square Pianos, and admitted to be one of the greatest improvements of modern times, will hereafter be introduced in EVERY PIANO MANUFACTURED BY THEM WITHOUT INCREASE OF COST to the purchaser, in order that ALL their patrons may reap its benefits.

STEINWAY & SONS' PIANOS are the only American instruments exported to Europe in large numbers, and used in European concert-rooms.

WAREROOMS, 71 & 73 EAST FOURTEENTH ST., between Union Square and Irving Place, New York.

FINANCIAL REVIEW 285

Six Dollars per annum, in advance; Six months, Four Dollars. When delivered by Carrier in New York or Brooklyn, Fifty Cents additional.

JOSEPH H. RICHARDS, PUBLISHER, 130 NASSAU STREET, N. Y.

The Week.

THE President's veto and the escapade in the shape of a speech with which he followed it up have excited so much sensation during the week that little else has been talked of or thought of. We believe that, in spite of the efforts of his supporters to appear pleased by the speech, it struck them, as it has the rest of the country, with dismay. Hardly anybody attempts to defend it in private, and the apologies of the newspapers have a very constrained air. We are, of course, now speaking of the Union party. The Democrats are jubilant, for two reasons. In the first place, they are enchanted that a Republican chief should have made such an exhibition of himself, and in the second, that he should even appear to repudiate the policy on which that party has hitherto acted. The expressions of opinion from other parts of the country are varied. The loyal men of Missouri denounce the President, the "Conservatives" fire a hundred guns in his honor; the Union State Central Committee of California declares its intention to believe the best of him and to hope that he will do better than his speech and message would lead them to expect, while the Democrats endorse him. Governor Low, of the same State, expresses "anxiety and alarm" at the President's course; "Sunset" Cox has nominated Mr. Johnson for the next presidency at Grover's Theatre in Washington, and declares the Southern States must be let in to vote for him; and John Van Buren, of this city, the president of the Manhattan Club, has nominated him for the same office in an oration delivered at Albany. The crowd which Mr. Johnson addressed was mainly composed of Democrats, the débris of a meeting that had just adjourned.

THE veto and speech, much as they excited the rest of the country, seem to have produced a singularly tranquillizing, we might almost say sobering, effect on Congress. The calmest, most logical, and statesmanlike speech of the session was made by Mr. Trumbull, on the morning following the veto, in the presence of a crowd boiling with excitement in the gallery. Mr. Fessenden has since delivered another in the same spirit, defending the course pursued by Congress in excluding the Southern representatives. The tone of the debate is the most encouraging sign of the times.

ONE of the most important, if least demonstrative, celebrations on Washington's birthday was the opening of the great railroad bridge at Albany, which has been twenty months in building, and now delivers the west bank of the river from its dependence upon Troy for connection with the East. The actual need of it, however, is not so great as has been. The most extraordinary movement ever known among our people, which filled every public conveyance to overflowing, was witnessed in June, July, August, and September of last year, exclusive of military transportation at the close of the war. Since that time there has been a marked falling off both in passengers and freights. Freight of the fourth class, indeed, which is now being carried at a cent a ton, cost the railroad companies last year not less than a cent and a half. In the meantime scarcely a single item of railroad expenses has been lessened by a fall in prices.

THE public will gladly sanction the action of Congress last week in aid of the Russo-American telegraph. By it the Secretary of the Navy is required to lend one steam-vessel from the Pacific squadron to sound the opposite coasts and otherwise to assist in laying the submarine cable that is to bind the hemispheres. The line lacks only about twenty-five hundred miles of being completed—pretty equally divided between the two continents. With the corresponding assistance volunteered by the Emperor of Russia it is likely to be finished in a twelvemonth.

THAT provision of the internal revenue act which requires licenses to be taken out for the pursuit of certain kinds of business was sought to be improved by the liquor dealers of Massachusetts to evade the liquor law of the State. The case of John McGuire, which Mr. Cushing has charge of, was decided adversely to his pretended right to sell ardent spirits, in the State Superior Court. Carried to Washington by a writ of error, it has fared no better. Behind it, and independent of it, are a batch of cases which have been lumped by the "Public Safety Association," a patriotic body of men engaged in the liquor traffic, who are anxious that the Government should derive all the income it can from their casks and bottles and demijohns. Their counsel refuses to be disheartened by the fate of McGuire, and assures them there is no cause yet for them to lower their spirits.

IF words were things, Mr. Stephens's speech at Milledgeville, on Thursday last, would indicate a not distant return of the South to its right mind and a better state of society. It is something, to be sure, for one who has been chosen senator to represent the new Georgia in Congress, to declare that the blacks should have every facility afforded them for moral and intellectual cultivation, and such ample protection secured to them "that they may start equal before the law in the possession and enjoyment of all rights of personal liberty and property." And it is something for the legislature to have endorsed these and kindred sentiments. The weight of everything Mr. Stephens says, however, is grievously lessened by the readiness which he has shown ever since 1860 to repudiate his own principles and find justification for popular follies. He opposed secession, and then became the most extravagant eulogist of it that ever mounted the stump. He remained silent when he had given up all hope of success in the war, and now once more assumes the congenial office of reconciling his countrymen to the inevitable. He plays a useful, but not dignified, part in reconstruction. Meanwhile Gov. Jenkins, of the same State, and Gov. Orr, of South Carolina, have given evidence, in the acts which they have vetoed, of

a sincere desire to put all classes on a legally impartial footing, and to raise and enlighten those whom it was once the interest of slavery to debase.

The proposition which has been brought before Congress to establish a system of telegraphs, in conjunction with the post-office, affording communication with all parts of the country at uniform rates, and to do away with the monopolies which now confine the use of the wires to the rich, and cut down messages to almost unintelligible brevity, would probably effect as great a change in correspondence as the cheap postage. Letters would become shorter and more frequent. Friends would converse by telegraph, and we should eventually see it introduced extensively into private houses. But, unless means were taken to have it managed better than the post-office, we doubt if it would have any great advantage over the latter in point of speed. Delays would constantly occur, and there would be no remedy.

A San Francisco cockney, writing to the New York *Times*, ridicules the expression, "fervor of the California sun," used by The Nation, apparently not being aware that the climate of San Francisco, which is never extremely warm, does not extend over the whole State. It is a singular fact, little known, that nowhere else in the world, not even in the tropics, have any thermometrical observations been recorded which show as great a heat from the sun as in the southern parts of the great central basin of California. The name of California is supposed to be derived from the Latin *calida* and *fornax*, and to refer to the furnace-heat experienced by the Spanish missionaries in their first attempts to explore the country.

It is announced that Wigfall "has escaped from Texas." From whom or what he has escaped does not clearly appear, but if anybody is in pursuit of him we sincerely trust he will get off. Our only regret is that he did not "escape" ten years ago. In fact, one great source of embarrassment just now is that these "escapes" are not more frequent. There are large numbers of gentlemen at the South who would do us a great service by giving us the slip and running off under our very noses. Gen. Magruder was, we believe, so frightened after the close of the war that he did not rest till he had put the ocean between him and somebody, we believe it was never clearly ascertained whom, but very few of his companions-in-arms are equally nervous.

The *World* speaks of the meeting on Thursday last, at the Cooper Institute, as a "meeting of repentant Republicans," and says "it was everything it could have wished or anticipated," and holds that it declared, by the address and resolutions, "Forney, D.D., Sumner, Stevens, and Phillips to be no better than Davis, Toombs, Slidell, and Benjamin."

There has been another batch of correspondence between Mr. Adams and the Earl of Clarendon published on the subject of the *Shenandoah*. The ground traversed by both sides is now so familiar that there would be little use in going over it. Lord Clarendon, with the greatest naïveté, declared that it would be "useful and practical to forget the past, that England and the United States had each become aware of the defects which existed in international law," and he proposed that they should both go to work to amend the code. The defect in this suggestion is, that one side bears the whole expense of the experiments, and the American shipping interest may well object to being used as a *corpus vile* by English jurists. If Semmes and Waddell are to be considered in the light of a commission of enquiry into the condition of the law of neutrals, it is somewhat unreasonable to make the merchants of New York pay all their costs and charges, when they had absolutely nothing to do with their appointment.

Count Montholon has written to M. Drouyn de Lhuys expressing entire satisfaction with the manner in which our Government has dealt with the Bagdad affair. It appears that the outrage was perpetrated by sixty soldiers from one of our negro regiments. The departure of a body of this size from their quarters in the night, for the purpose of plundering a town on foreign soil, suggests some uncomfortable reflections as to the discipline of the corps to which they belong. Where was the guard, and where were the officers? are questions which will naturally suggest themselves to the minds of most simple civilians.

The silent influence of England as a free Government on the Continental nations deserves to be borne in mind and contrasted with the diplomatic ascendency of her Imperial neighbor. The latest example of this influence is afforded by Sweden, which, while retaining the four orders of feudalism, has abolished the four chambers corresponding to each, and substituted two like those which exist in all constitutional governments, with annual sessions. A slight property qualification determines who shall vote and be eligible to office. The defence of royalty is an appeal to the country when Parliament and the Ministry disagree.

The Prussian Chamber is vigorously asserting its rights against the despotic measures of Herr von Bismark. Two of the opposition members were recently indicted by Government for words spoken in debate. This violation of the law the first and second tribunals refused to sanction, but the Supreme Court endorsed it. The Chamber admitted resolutions denouncing this proceeding in a very emphatic manner, and invited the Minister of Justice to attend the discussion of them. The Committee on the Judiciary was informed by the Premier that the Parliament had no business to meddle with the transaction by which Lauenburg was purchased of Austria for two millions of thalers. They, nevertheless, decided, and the Chamber by an immense majority agreed with them, that the annexation would be legally null until the two Chambers should have given their constitutional assent. The same committee unanimously resolved that last year's persecution of the deputies in their *fête* at Cologne was contrary to the constitution and to the law regulating assemblies. The Minister of the Interior and the Attorney-General were especially censured.

That part of the French Senate's address to the Emperor which said that France was accustomed to gang its ain gait—*la France a l'habitude de ne marcher qu' à son heure*—and would not be moved from its latinizing purposes by the high and threatening words of the United States, was received on the reading with marked satisfaction. The conclusion of the address, which paints the Second Empire as the consummate balance of liberty and power, is as sad an evidence of demoralization under tyranny as can be found this side of Tiberius and his senators.

The opposition in the Corps Législatif have begun the session by attacking the validity of M. Walewski's appointment to the presidency of that body by Imperial decree, after resigning his senatorship and being elected as a representative, but before the legality of his election had been passed upon by the Chamber. M. Larrabure's position was also vigorously contested. He was at the last session a deputy from Orthez, but resigned in vacation, without permission of the Chamber, and stood for Pau, from which place he was returned. Of course the Government party outvoted the friends of law and precedent.

Madame Dora d'Istria has been admitted, in place of that distinguished traveller, the late Madame Ida Pfeiffer, to the French Imperial Society of Geography, founded in 1821 by Malte Brun.

An exhibition of the paintings of the late Massimo d'Azeglio, collected from public and private sources, is now in progress in the Palazzo Carignano at Turin. The works of the illustrious author have, in accordance with his wishes, been turned over by his heirs to Barbèra, in Florence, for republication.

The Swiss people have rejected, by their suffrage, all the constitutional amendments proposed by Government, save that relating to the

Jews—an exception made in favor of the existing commercial treaty with France. Among the reforms thus defeated were the unification of weights and measures, liberty of worship and conscience, prohibition of lotteries and gambling-houses (opposed by the Catholic cantons especially), and federal regulation of certain punishments.

ITALY is one of Switzerland's best customers. In the past year her money orders, payable in the Federation, amounted to 830,965 francs, against 631,124 in return from across the Alps.

BY a vote of 33 to 15 the Belgian Senate has rejected the Government proposal to abolish capital punishment.

AN honest Magyar of Pesth, on occasion of the recent Imperial entry into that town, had planted himself in the second story of a house on the line of the procession and made himself conspicuous by his enthusiasm. When his own lungs were fairly exhausted, he caught up his little son, who sat beside him, and cried: "Now, boy, it 's your turn to shout!"

THE Holy See has obtained of France, as already of Spain and Austria, a small contingent for its army. The troops thus furnished, having been discharged from the service of their country, are permitted to enlist under a foreign standard.

CONGRESS.

WASHINGTON, Feb. 24, 1866.

THIS has been the most exciting week of the session. It opened on Monday with the generally unexpected veto message of the President, returning the Freedmen's Bureau bill, with his objections. The immediate feeling of the Union members was that of profound and strong regret, tempered, in the minds of the majority, with an intenser emotion, impelling them to a more determined attitude in defence of the principle of the bill. With difficulty an adjournment of the question until Tuesday was carried. The public interest in the issue was early evinced by an immense throng of people, filling the Senate galleries and lobbies to overflowing, surging through the corridors, and even invading, with the connivance of senators, the precincts sacred to the deliberations of the Senate. After the strong but temperate argument of Mr. Trumbull in defence of the bill, the veto was sustained by the needed vote of more than one-third of the Senate. The senators who recanted their faith in the bill which they sustained by their votes three weeks before were Messrs. Dixon, Doolittle, Morgan, Norton, Stewart, Willey, and Van Winkle. Had any two of these gentlemen adhered to the majority the result would have been otherwise.

Senator Wilson has promptly introduced a bill to continue in force the existing Freedmen's Bureau until otherwise provided by act of Congress. Meanwhile, it is given out, on high authority, that until the President proclaims the rebellion ended the war is to be considered as still flagrant in the South, and, consequently, the final year of the Freedmen's Bureau has not yet begun to run.

The next excitement of the week was the concurrent resolution reported by the Joint Committee of Fifteen, declaring against any admission of members from the States lately insurgent, in advance of a formal act of recognition by Congress of their right to representation. This was "dragooned" through the House by a vote of over two-thirds of the members present, under the pressure of the previous question, in less than twenty-four hours after the reading of the veto message. Yet the resolution encounters opposition in the Senate from moderate Republicans, and were it not for the feeling unfavorable to the President, engendered by his extraordinary speech of the 22d, there is a recusant minority of the Union members in both Houses which would henceforth separate from the majority, and vote with the Democrats upon the chief matters in issue. It is a plain fact, however, that the President's speech has (however unintentionally) strengthened the Radicals.

The measure proposed by Senator Brown, of Missouri, for an absorption by the Government of the telegraphic business of the country, and cheapening it, like the mails, throughout the Union, opens a most important subject for legislation. Plainly, we ought either to have a freer competition in telegraphing, or the Government should take the monopoly into its own hands, in the interest of the people. The enormous charges and incessant abuses of the present organized system of monopolies have been long enough borne with. The vested rights involved in the various patents for telegraphic communication will soon expire, and the Government should take timely steps to provide against any renewals of the existing monopolies by those combinations which so often prove all-powerful. It might be pertinent, also, to enquire how far an enormously rich corporation called an express company, dividing over 50 per cent. annual profits, should be permitted to monopolize the carrying business of the country, and exclude all wholesome competition.

The Loan bill, which will be the special order in the House the coming week, will encounter the opposition of all who are hostile to a speedy contraction of the currency, but it will probably pass in both Houses.

DIARY.

Monday, February 19, 1866.—In the Senate, Mr. Sumner presented a petition from a convention of colored people of the State of Florida, praying for homesteads, education, and the elective franchise. Referred. Several petitions were presented and referred asking Congress to secure guarantees from the Southern States before admitting them to a participation in the Government. A petition from the Free Trade League for continuance of the Reciprocity Treaty with the United Provinces was referred. The joint resolution passed by the House, giving the consent of Congress to the transfer of Berkeley and Jefferson counties from Virginia to West Virginia, was reported. Three bills granting lands to aid in construction of railways on the Pacific slopes were reported from the Committee on Public Lands. Mr. Wilson offered a joint resolution to disband the State militia in sundry disloyal States. He explained that the officers of the Freedmen's Bureau report great outrages committed in Georgia, Mississippi, and Louisiana by the local militia upon all freedmen and loyalists within their reach. Referred. The Senate resumed the consideration of the constitutional amendment fixing the basis of representation. Mr. Howard offered an amendment providing that all persons of African descent of the following classes shall have the right of suffrage: Those who have been in the military service of the United States, those who can read and write, and those who possess $250 worth of property. Mr. Yates spoke three hours on the constitutional amendment reported by the Joint Committee of Fifteen, arguing in favor of universal suffrage for the freedmen, and declaring that Congress now has the constitutional power and should exercise it to prohibit the States from making any distinction between citizens on the ground of race or color. A message was received from the President, returning the Freedmen's Bureau bill with his objections to its becoming a law.

In the House, a bill was referred constituting eight hours a day's work for all laborers employed by the Government of the United States. Also, a bill repealing all exemptions of United States bonds from taxation; also, a bill equalizing bounties to all volunteers. Mr. McKee introduced a constitutional amendment prohibiting all persons at any time engaged in rebellion from holding any office under the Government of the United States. Referred. Mr. Bromwell offered a resolution declaring only the loyal States competent to ratify amendments of the Constitution. Referred. Bills were offered and referred to reimburse the State of Missouri for moneys expended in aid of the United States; to grant lands to encourage emigration to Michigan; to reduce the duty on printing-paper; and to protect persons from arrests and prosecutions for acts done under authority of the Government. Mr. Longyear offered a resolution declaring that the late rebel States are deprived of all proper civil government. Adopted—yeas, 102; nays, 36. Also, a resolution declaring it the duty of Congress by appropriate legislation to enable those States to organize republican governments—yeas, 104; nays, 33. Also, a resolution declaring that the President ought to maintain the suspension of the writ of habeas corpus in those States—yeas, 120; nays, 26. Also a resolution declaring that the President should maintain military possession and control of the rebel States—yeas, 117; nays, 23. Also a resolution declaring that the President is entitled to thanks for employing the war power to protect Union citizens and freedmen in the rebel States—yeas, 134; nays, 8. Mr. Banks offered a joint resolution directing the Secretary of the Navy to detail a steam vessel to aid in the laying of the inter-continental telegraph between America and Russia. Adopted. A bill was passed amending the act prohibiting the importation of cattle so as to enable the Secretary of the Treasury to suspend the act with regard to any foreign country at his discretion. The Committee of Elections reported that H. D. Washburne (Rep.) is entitled to the seat occupied by D. W. Voorhees (Dem.) as a representative from the seventh Indiana district. Laid over. The rest of the day was consumed on the Pennsylvania contested election case of Koontz *vs.* Coffroth. The House decided that the latter gentleman had the *primâ facie* right to the vacant seat, and he was sworn in.

February 20.—In the Senate, petitions were presented and referred from twelve hundred citizens of Missouri, protesting against the usurpation of the President in recognizing the constitutions and governments of the rebel States; from the Union League Club of New York, in favor of certain guarantees before the rebel States are recognized; and from citizens of Wisconsin, New Jersey, Kansas, and Massachusetts to the same effect. Mr. Wilson offered a resolution instructing the Joint Committee of Fifteen to enquire and report how far the late rebel States have complied with the terms heretofore proposed by the President as conditions of their resuming practical relations with the United States. Adopted. Mr. Wade offered a proposed constitutional amendment, providing that the President of the United States shall not be elig

ible to a second term of office. Laid over. A bill was offered and referred to protect children of African descent from being enslaved, contrary to the Constitution. The Freedmen's Bureau bill, returned with a veto message, was taken up. Mr. Davis spoke against the bill. Mr. Trumbull defended it against the objections of the President in his veto message, claiming that it was constitutional, expedient, and necessary. The Senate then voted on the question—Shall the bill pass, the President's objections notwithstanding? resulting—yeas, 30; nays, 18; absent, 2. Two-thirds not having voted for the bill, it was defeated.

In the House, the Ways and Means Committee reported against any reduction in the duty on distilled spirits. Mr. Stevens reported from the Joint Committee of Fifteen a concurrent resolution declaring that no senator or representative shall be admitted from any late rebel State until Congress shall have declared such State entitled to representation. Mr. Grider offered a minority report, that the State of Tennessee is now entitled to representation in Congress. Mr. Stevens said the committee had been favorable to Tennessee until the veto message of the President, but now they could proceed no further in that direction without surrendering the rights of Congress to the usurpation of another power. He demanded the previous question, when several hours were spent in motions and parliamentary expedients by the minority to delay action. The resolution finally passed—yeas, 109; nays, 40.

February 21.—In the Senate, Mr. Henderson presented a petition from women asking the right of suffrage. The bill passed by the House, extending the right of suffrage in the District of Columbia, was reported without amendment. House joint resolution placing a vessel of the United States at the service of the Inter-continental Telegraph Company was passed. The concurrent resolution from the House against the admission of senators or representatives from the rebel States was reported and laid over. Mr. Buckalew spoke against the proposed constitutional amendment fixing the basis of representation, arguing that the amendment was a partisan measure, that eleven States are unrepresented in proposing it, that it will provoke discord, and that New England has now an undue influence in Congress, which ought to be diminished and not increased.

In the House, the Loan bill of the Ways and Means Committee was discussed. It provides for the funding of the entire floating public debt in securities payable in from five to forty years, at six per cent., authorized by act of March 3, 1865. After speeches by Messrs. Morrill and Hooper in its favor, and Kelley against it, the bill was made a special order for Feb. 28.

February 22.—This being the anniversary of Washington's birth, Congress did not meet. Memorial services in honor of Hon. Henry Winter Davis were held in the hall of the House of Representatives.

February 23.—In the Senate, a memorial of the Legislature of Nevada, protesting against the sale of the mineral lands of the U. S., was referred. Several petitions were presented for a constitutional amendment forbidding the States to make distinctions between citizens on account of color. Mr. Wilson introduced a bill to continue in force the Bureau for the relief of freedmen and refugees, which by the terms of the existing law expires in one year after the close of the war. Referred. Mr. Ramsey introduced a bill to secure the speedy construction of the Northern Pacific Railroad and Telegraph. Referred. Mr. Dixon, from the Post-office Committee, reported a resolution asking the Postmaster-General to report on the feasibility of establishing telegraph lines for public use in connection with that department. Mr. Brown advocated the measure on the ground that it would equalize the expense of telegraphic communication to all parts of the country, reduce the cost of telegraphing to about the price of letter communication, break up two gigantic monopolies now bleeding the country, save the Government the large sums it now pays for its despatches, and put an end to the "Associated Press" monopoly of news. The resolution was adopted. The bill granting lands to the San Francisco and Humboldt Bay Railroad Co. was considered and amended. The House concurrent resolution, declaring against the admission of any senator or representative from the late rebel States until Congress shall declare such States entitled to representation, was taken up. Mr. Sherman thought it should not be pressed at this time, in the midst of excitement, as it was only getting up a political wrangle between the President and Congress. Mr. Fessenden replied that when the President tells Congress it is transcending its proper powers, it was no time to postpone the resolution, than which nothing could be more important. He made an extended argument for the resolution, affirming that while the people of the rebel States have not passed from under the jurisdiction of the U. S. Government, yet, as States having rights in the Union, rights to representation in Congress, these States are at an end for the time being. Adjourned to February 26.

In the House, the entire day was occupied upon the Indiana contested election case of Washburne *vs.* Voorhees. The House voted—yeas, 87; nays, 36—that the former is entitled to the seat.

February 24.—The Senate was not in session. In the House, speeches upon the state of the Union were made by Messrs. Clark and Plants, of Ohio, Bromwell, of Illinois, and Beaman, of Michigan. Adjourned to February 26.

THE FREEDMEN.

THE number of refugees who were treated by the medical officers of the Bureau from the time of its organization to the close of the year was 3,630; died, 304, or an average of eight per cent. Of freedmen thus treated there were 90,522; died, 8,374, or an average of nine per cent. The ratio of deceased refugees had been reduced in December from nine per cent. to two; of freedmen, thirteen per cent. to five. These statistics include patients treated in hospital or visited in their own quarters, but make no account of the thousands of cases prescribed for at the numerous dispensaries. Surgeon W. R. De Witt, chief medical officer for the States of Georgia and South Carolina, says that the civil authorities have elected two physicians to attend the poor and destitute black and white, and have agreed to pay all tewards, nurses, cooks, and so forth, that may be needed, as well as the physicians. The Bureau is to furnish medicines only for the freedpeople.

Brig.-Gen. C. H. Howard has been assigned Assistant Commissioner for the District of Columbia, the counties of Alexandria, Fairfax, and Loudon, Virginia, and so much of Maryland as belongs to the military department of Washington. He has issued a circular to the visiting agents, enjoining them to encourage habits of self-support in the colored people by advice and by careful discrimination in assisting them. The unemployed or inadequately paid will be provided with good situations by the Bureau, but, if they refuse to accept them, will be cut off from all further supplies. The general's inspection report, after a tour through South Carolina, Georgia, and Florida, is full of interest. At Beaufort he found that the appointment, by the agent of the Bureau, of a public cotton-weigher had been very beneficial in securing the freedmen from the false weights of speculators. At Darien were large numbers of destitute colored families which had floated on rafts down the Altamaha to the old plantations from which their masters, during the war, had removed them to the interior. Here they had been abandoned without wages or any share of the crops, and their return brought them only to barren fields. Some cases of supposed kidnapping for the Cuba trade had been investigated by the sub-Assistant Commissioner of this district, and two children had been reclaimed from Florida, though the cause of their disappearance was not clearly ascertained. A Union citizen of Georgia, a prisoner for seven months during the rebellion, and now employed as superintendent of the Andersonville burial-ground, has started a school for the colored people in that town of evil memory. The general urges, in conclusion, the indispensable necessity of continuing agencies like those of the Bureau, to prevent suffering and starvation; to obtain redress for the negro against an adverse public sentiment even under impartial laws; to protect him from fraud in the ordinary transactions of business; to maintain schools which otherwise would not be tolerated by the hostile white population; and, on the other hand, to guarantee the rightful interests of the whites. He thinks the present number of agents needs to be increased for all these purposes, and that the United States troops are at present absolutely necessary as auxiliary to them; they would not be respected or possess any authority otherwise. These troops would also serve to protect Northern immigrants, and would repress that local militia which is proving itself an unmixed evil to the blacks. He is led to propose the raising of a provisional force in the Southern States, to be officered by the War Department, preferably from the meritorious among the lately discharged U. S. volunteers. This, too, would be an advantageous substitute for the militia, and would be the means of enlisting on the side of the Government a class otherwise dangerous and troublesome throughout the South, the greater part of whom are unable to read and write, but might be taught like the colored regiments. The officers might act as agents of the Bureau. This proposition has been strongly recommended by a prominent military commander.

The Commissioner of the Bureau has addressed a circular letter to the Assistant Commissioners, in view of the commotion likely to arise from the action of the President in regard to the Freedmen's bill. He warns them to be prepared for fresh hostility on the part of those who have heretofore proved troublesome, and for increased restlessness among the blacks. He exhorts them to persevere steadily in their well-known duties, having the President's assurance that the present law will be held to allow the Bureau a year yet of existence. Meanwhile, every effort should be exerted to demonstrate the complete practicability of the system of free labor, and the conduct of the employees of the Bureau should be diligently inspected with a view to removing corrupt or incapable officials.

Superintendent Eberhart reports from Georgia that the January returns show that there are throughout the State 62 freedmen's schools, 89 teachers, 6,569 pupils—an increase in one month of 5 schools, 22 teachers, and 2,218 pupils. In January the freed people contributed $538 to the support of their schools, and in the city of Augusta over $2,000 during the past six months for their suffering brethren.

—The bill before the North Carolina House of Commons, providing hat negroes shall testify in all cases where they are concerned in per-

son or property, was not allowed to pass to a second reading until amended as follows:

"That this section shall not go into effect until the jurisdiction of matters relating to the Freedmen's Bureau shall be fully committed to the courts of this State."

—In the Texas convention the committee on the State constitution reported the following amendments:

"ARTICLE —. No slavery or involuntary servitude shall exist in the State of Texas except as a punishment for crime.

"ART. —. Negroes shall have the right to sue or be sued, to make contracts, to hold property, and to be tried by the courts.

"ART. —. In suits between whites and blacks they may testify in their own behalf."

—Mr. George H. Hammond, a teacher of the freedmen at Massanutton, Page Co., Virginia, is reported to have been assaulted in his boarding-place by armed ruffians, taken out and ducked several times in the Shenandoah River, and threatened with death if he should not leave the place within three days. Mr. Hammond was sent out by the American Missionary Association of this city.

—The liberty which the authorities have accorded the ladies of Paris who have asked permission to hold "meetings" in behalf of the freedmen, has not passed without remark. Apropos of a "seconde réunion," recently held in that city, a writer in the *Débats* remarks that it enabled the public, who have hitherto known MM. Albert de Broglie and Cochin only by reading their works, to discover that "the one is a very striking and the other a very eloquent speaker." M. Laboulaye, who delivered the opening discourse, referred to certain trustworthy statistics prepared in England, from which it appeared that "in point of good works an Englishwoman is worth a fraction more than three and a half Englishmen." "But who," adds the writer already mentioned, "can reckon how many Frenchmen are worth one Frenchwoman when an *autorisation* is in question?"

Minor Topics.

THE uproarious applause with which Mr. Johnson's references to his having once been a tailor are always received, reminds us of the great quantity of error and absurdity which is mixed with wholesome truth in the popular construction of the phrase "dignity of labor."

One false development of it is to regard work as an end, not as a means; another is the socialist idea that hand-work is the best if not the only real work; some again, who hesitate to go this length, suppose that in democratic theory all labor is, and in democratic practice all labor should be, equally honorable; there is no such thing as high work or low work. We shall not be content with saying that this conception cannot be carried out beyond the realms of Utopia and Cuckoocloudland; we are convinced that if it could be realized here to-morrow, the consequences would be mischievous for this reason among many:

Other things being equal, that occupation which is the most lucrative will have the greatest attraction for the majority of mankind. Let every employment be alike honorable, and you have made a great step toward equalizing the other things. Why should one be a professor of chemistry, for instance, rather than an old-clothes man, if there is no difference in the respectability of the two occupations, and the latter pays best? Great numbers of those engaged in the learned and liberal professions—we may say the majority, after a certain age—are chiefly kept in those professions by the position and consideration attached to them. Destroy that inducement, and the ranks of the racers after wealth, already too crowded, would be fearfully swollen.

The true democratic theory and doctrine we take to be this: Every man should have a fair start in life, so far as the law of the land can give it him. The natural inequalities of men, physical and intellectual, are quite enough (especially when the accident of wealth is taken into the account), without adding any artificial ones of politically recognized class or caste. To have been born poor, to do such work as the poor must do, should be no barrier against any man's advancement whose merits and exertions tend to lift him into a higher position. No honest work is dishonoring to the worker—a very different thing, be it observed, from saying that all work is equally honorable or desirable. *But it is the man that sanctifies the work, not the work that sanctifies the man.* Very often we talk of the dignity of labor when it would be more accurate and philosophical to say the dignity of human nature. In what consisted the glory of Abraham Lincoln and of democracy as illustrated by him? Not in the fact of his having been a rail-splitter, but in the fact that, having begun life as a rail-splitter, he raised himself through a variety of intermediate positions to the highest office. Andrew Johnson is the most striking example that history affords of a democratic official. He once followed a business not only "plebeian," but—from one of those absurd social caprices which no one can explain or justify—regarded as peculiarly mean and ridiculous. He is President of the United States. But suppose he were to occupy his leisure moments (if he has any, alas!) in mending his own clothes. Might not any one of his fellow-citizens indignantly say to him: "Sir, we helped you off the shop-board because you were too good for a tailor, and now you are stultifying yourself and us?" If this be not the true view of the case, then the first hod-carrier is a potential Lincoln or Johnson, and it would save a great deal of trouble and expense to choose all our magistrates by lot, as was actually done in some of the old Greek democracies.

There is a well-known saying of Louis Philippe's often interpreted altogether too literally. That crafty potentate did not mean that he knew better how to rule from the simple ability to black boots, but that, whereas the *porphyro-geniti* usually live all their lives in a pageant and never get behind the scenes, the poverty which made him perform menial offices for himself introduced him to the people, so that he learned human nature from the people directly, not at second or third hand from books or ministers. We may be sure Louis Philippe never blacked his own boots in the Tuileries any more than Louis Napoleon does now; and it would have been a very silly proceeding on his part. There are not so many first-rate men in the world that any of them can be spared to do tenth-rate work.

GENERAL GRANT, for once in his life, has been pleasantly and gracefully entertained in public. The reception at the Union League Club, on Feb. 22, was a complete success. The arrangements were perfect, the ventilation good, and there was no overcrowding, and the hand-shaking was cut down. The ladies, however, indulged in it, and a great many gentlemen—some of the latter prefacing the performance by an apologetic assurance to the general that "they *must* do it." But the effect of this ceremony, in an artistic point of view, is anything but pleasing. To Grant or any other man who goes through it, it has to be for the time being not an indication of respect or pleasure or even of recognition, but a piece of business. Consequently he has to watch for hands instead of looking at faces, and the shaking goes on mechanically, much as a post-office clerk stamps letters, and, as he cannot possibly take his attention off the job for a minute, his expression naturally becomes fixed and even careworn. The public can put an end to this practice, if they please; the heroes cannot; and it is certainly one of the things which, like volunteer fire companies and stage coaches, the community has outgrown. If persevered in much longer, some mechanical contrivance will have to be resorted to to save labor and suffering. We have heard a lever suggested, on shaking of which by the visitor the general, or statesman, or poet, or orator standing near would smile graciously and a photograph be thrown from a concealed receptacle, or, if preferred, an apple, a bonbon, or a piece of cake, or a bunch of flowers. The lever might be fashioned like an arm and hand. The sensation would be very much the same as shaking the hand of even Napoleon or Alexander the Great, and an act of the legislature might be passed declaring it to be to all intents and purposes a real hand-shaking, and ordering it to be taken, had, and reputed as such.

The special attention of the reader is directed to the Financial Review on another page. Its place among the advertisements is by no means significant of its value, but is resorted to only that we may obtain the latest intelligence of the market.

Articles on any of the subjects usually discussed in this journal will be received from any quarter. If used, they will be liberally paid for; if rejected, they will be returned to the writers on the receipt of the requisite amount of postage stamps.

All Communications which pertain to the literary management of THE NATION *should be addressed to the Editor.*

THE HARANGUE FROM THE WHITE HOUSE.

WE know from the manner in which a portion of the press has received it that there are persons whom the President's speech at Washington, last Thursday, neither shocked nor grieved, and to them we have nothing to say. Anybody whose moral sense was not offended by it the minute his eye lighted on it, is not likely to be roused into condemnation of it by *ex post facto* homilies, and we do not mean to trouble our readers with an elaborate review of it. As a piece of rhetoric it will hardly be expected that we should criticize it, and what of argument there was in it had been already laid before the public in a much more forcible as well as more formal shape. That most extraordinary passage in which he reiterates against prominent members of the Congress of the United States—men who, whatever their faults may be, enjoy the respect and confidence of a large portion of the community—a charge of suggesting, or seeking, or instigating his assassination, calls both from the press and public for something more than a brief and passing note of disapprobation. No matter in what way we look at it, the utterance of such a charge by such a person at such a crisis is matter of the gravest national importance. If it be true, we ought none of us to rest quietly in our beds till the national legislature is purged of the stain. If it be not true, and we all know it is not, the mere fact that the President of the United States should have shown such a disregard for decency, to say nothing of things higher and more important than decency, as to make it a prominent feature in a harangue to a crowd in the street is, of itself, a scandal and disgrace hardly less deep and humiliating.

The readiness with which foul accusations are thrown out against the character of political opponents has always been one of the most repulsive features of our public life. Men who are ready to asperse the character of others, rarely set a very high value on their own, or are very much shocked by the crimes which they lay at the doors of their neighbors; and nobody who has paid any attention to the reflex influence of language on the mind can doubt that the practice of imputing base motives ends in producing baseness. But these low evils have hitherto been left to the worst portions of the press, and to the great host of "bummers" with which every political party surrounds itself on the approach of great conflicts. But, verily, the appearance of the President at the windows of the White House to accuse prominent members of another branch of the Government of the foulest crime of which a man can be guilty, is something new and alarming in American history.

As the matter stands, however, the over-zealous adherents of the President have managed to aggravate it by their senseless efforts to put a good face on it. Better, infinitely better, would it be to acknowledge that Mr. Johnson had lost his temper and said, in a moment of excitement, things which he would be the first to regret, than to lend even the shadow of countenance to the notion that Messrs. Sumner and Stevens had laid themselves open to such accusations as he hurled against them. No words ever uttered by any Radical, extravagant and violent as some of them have been, could afford the least foundation for charging them with such criminal designs. We have ourselves been ready enough to condemn recklessness and ill-temper in debate when directed against the President and the policy which he favors. We should not have blamed him, therefore, if he had shown that he felt aggrieved, and had he done so with propriety or decency he would have met with a good deal of sympathy from the country; but about his display of Thursday the best course for his supporters to adopt is to say nothing.

There is all the less excuse for the attempt to justify him, inasmuch as there is really no essential difference between his aims, as he defines them, and those of the more radical wing of the party which elected him. Mr. Sumner, no doubt, considers the Freedmen's Bureau in itself an evil. There is no statesman or lawyer who must not deplore the necessity of withdrawing any portion of the population of the country from the jurisdiction of the regular courts by means of any organization whatever. Those whom the President vituperates simply think it reasonable to anticipate results from its action more favorable, and evils from its absence more serious, than he regards as probable. The consequence of such a decided split in the ranks of the Union party as would drive Mr. Johnson and his Northern supporters into the arms of the South would certainly be very serious. It would leave the friends of equal rights here to maintain the contest, if not as a minority, at least in the odious character of a sectional organization. And one of the worst features of the agitation which was inaugurated in this city on Thursday last was, that it was, in our opinion, on the part of some of its prime movers, at least, an attempt to make that split inevitable. In any event, it is clear that nothing but patience, good temper, and moderation on the part of Congress can now save us from great dangers.

We hope that it is yet possible for both parties to remember this, and the marked sobriety which has ruled in the debates of Congress since the unfortunate occurrence up to the moment when we write encourages this hope. The greatest danger which now threatens us is that the calm and earnest study which is demanded of our legislators by one of the most difficult problems ever presented to statesmen will be more than ever prevented by impulses of personal vanity, personal offence, personal ambition, and the heat and reckless disposition roused by personal controversies. Keenly as we feel the terrible mistake of the President, we would not have it forgotten that Andrew Johnson has in times past been tried and not found wanting in patriotism, in devotion to the Union, in faithfulness to his obligations. He stands now with a heavier responsibility than ever resting upon him. He cannot be removed for evidence of a ferocious temper or for bad manners, so long as his misconduct does not take the form of unconstitutional obstruction to the machinery of our Government. He will be President for three years to come, and must be the instrument through which alone we can exercise any legal influence on Southern society. No member of Congress, no leader of the people, can be equal to the occasion who now betrays more anxiety about his record or the record of his party than about the best means, as things now stand and as men are, of securing not only the re-establishment of the Union but the restoration of the reign of law in all parts of the country.

THE FALLACY OF THE VETO.

THE President's message, vetoing the Freedmen's bill, is based throughout on the assumption that in the late war we simply suppressed a rebellion. If this were true, there is no doubt that much of what he says of the propriety of at once admitting the revolted States to a full share in the Government would be well founded. The luxury of reigning over a conquered people is one which no republic can enjoy with impunity. No man who has read history to any purpose, or who knows anything of human nature, would deliberately propose to keep eight millions of Southerners in a state of vassalage merely as a punishment for having rebelled. If there be any lesson which the experience of mankind teaches clearly, it is that the power based on conquest is sure, in the long run, to prove as great an infliction to the governor as the governed. No matter what the South may have done, it would be better for us, as well as better for it, that its normal relations with the Union should be restored to-morrow, that its members should be admitted to Congress, and the liberties of its people placed under the protection of its own courts, if nothing had occurred during the last five years beyond an ordinary rebellion, such as that of Poland against Russia, or Hungary against Austria. If the war had disturbed nothing except the political relations formerly existing between us and the rebels, there is not one word which Mr. Johnson has said upon the impropriety of perpetuating the reign of martial law at the South which we could not heartily endorse.

But the war has not been simply a contest between two sets of men, one maintaining the authority of a government and the other seeking to overthrow it. The fighting of the last four years has not simply, as Mr. Johnson assumes, re-established the jurisdiction of the United States over a certain territorial area, and over a certain number of people. It has wrought a social revolution, which for magnitude, for

rapidity, and for the gravity of its consequences has never been equalled in history. That greatest of modern revolutions by which the French church and aristocracy were overthrown—a movement which shook the civilized world to its centre, and whose consequences are still felt in every quarter of the globe—radical as it was, was far from going down so deeply into the social soil as ours has done. In that case some millions of the bravest and most energetic and intelligent men in the world simply reformed their government by destroying the fetters of feudalism. In our case four millions of men have been lifted from a legal condition hardly superior to that of beasts of the field into that of free citizens. It is therefore a fallacy, and a very gross one, to tell us that when the war which did this thing is over, all is over. All is not over. Northern men and Southern men are not the only parties to the peace, and therefore, when Mr. Johnson asks us all to be as we were, we find it impossible to comply.

The great question after all, the question which it may be Mr. Johnson seeks as earnestly to have fairly answered as we do, is how to assist the freedmen in passing through the transition state between slavery and freedom and independence without increasing or embittering the hostility between them and the whites, and without creating in their minds the feeling that any aid afforded them is more than temporary. He acknowledges this duty as fully as anybody, but, as we understand him, thinks it can be best discharged by handing the whole black population over at an early period to their old masters, with the least possible aid in educating them or relieving their distress. In short, Mr. Johnson believes it more safe and prudent, and therefore a more honorable discharge of responsibility to the liberated slaves of the South, to trust solely to the sense of duty, the fears of future military punishment, and the enlightened self-interest of their late masters for their being treated justly and mercifully, than to maintain for any but the briefest period a method of protection so uncongenial to the American people as that contemplated by the Freedmen's Bureau bill. And it is upon this point that the question arises between him and Congress.

Now, let us ask ourselves plainly what it is that the blacks of the South need that they may become intelligent and useful members of society in the shortest possible period. Is it not, first of all, the education of civilized life, the means of becoming familiarized with the use of their new rights and the discharge of their new duties? Must we not rouse in them, or encourage in them, a love of industry, a love of accumulation, and a respect for property? Can there be any way of doing this which fails to impress them with the belief that they are sure of having exact justice meted out to them, sure of as complete protection as law and police can give them, both for their persons and for the fruits of their industry? Is not this feeling the very basis of civil society? Has any society ever prospered, ever been anything but a dead and decaying carcase, in which any considerable portion of the people were deprived of this assurance? Look at Ireland, look at the "sick man" of Turkey, look at Jamaica. Is the whole earth not full of the most awful warnings against depriving human beings, of any race or color or creed, of the perfect confidence that what they sow they shall reap, that where they lie down to rest at night there they shall rise unharmed in the morning, that there stands around their houses a power stronger than all their enemies put together? We must, in short, if we mean to regenerate Southern society, take care that no portion of it is left outside the law.

Now we do not pretend, nor does anybody, that there ought to be a perpetual Freedmen's Bureau maintained for the purpose of nursing the negroes, although we believe it will take some time for the Southerners to learn to treat them as men of like rights with themselves. Blinding as we believe the hatred of race to be, we might be induced to run the risk of its working mischief if the Southern States generally had manifested the smallest willingness to spread over the freedmen the protection of equality before the law. But in nearly every one of them measures have been passed since the close of the war for the avowed purpose of keeping the blacks down, and withholding from them those common rights and liberties which white men enjoy. And we say deliberately that there could be no better mode of disheartening the freedmen, trampling out the sparks of social ambition in their hearts, than thus meeting them on the threshold of civilization with a penal code; and it is to this code, and not to the ordinary laws of the country, that they are committed whenever the Freedmen's Bureau expires. Moreover, the last section of the bill which Mr. Johnson denounces for its "permanence," actually provides for the cessation of its own operation whenever the various Southern States repeal such portions of their legislation as discriminate against any portion of their population on account of color, and are admitted to Congress. Granted that Southerners must eventually be the protectors of the negro, is that a good reason for allowing them to enter upon the duty before the passions of the war have fairly subsided, and before they have learnt to think of the negro as a *person* with civil rights? We at the North may think this a simple matter—nobody who knows Southern men will so consider it; and the presumption that they have learnt it already is one of the worst features of Mr. Johnson's message. Mr. Johnson's theory is that one year more, the period during which the present act will remain in operation, will be sufficient to bring about the desired change; but there is no necessity for fixing any period whatever. The South itself can fix the period of its release from all extra-constitutional restraint by establishing that equality before the law which is, after all, the only satisfactory proof that can ever be given of its complete submission; and as long as it can do so, the maintenance of the Freedmen's Bureau for any period cannot be considered a hardship.

THE WAY THE UNION WAS SAVED.

We doubt whether it is possible to settle the difference between the President and Congress by a *coup de main*. The problem cannot be solved by gun-firing and mass meetings. And we feel bound to say that we think the attempts which have been made, and in which we were sorry to see Mr. Seward participating, to snap a judgment on the President's action by getting up "imposing demonstrations," before the veto message had been fairly read by the public, and to denounce and belittle the majority in Congress before they had had time to make themselves heard, is not only not creditable, but is so very transparent that it is sure to miss its mark. Public opinion cannot be carried in this way by assault. The people have heard of the Freedmen's Bureau bill before now, are tolerably familiar with all that can be said both for and against it, and are hardly likely to be beguiled in one night into believing that Congress is mostly composed of reckless fanatics bent on destroying the Union or nullifying the Constitution. We cannot help considering, therefore, the way in which the President and his organs have permitted themselves to speak of them as at least highly unbecoming. We have great respect for Mr. Johnson's honesty and ability, if not for his temper and taste, but we have yet to learn that he has absorbed so much of the wisdom and patriotism of the country that there is little or none left in the other branches of the Government. Thaddeus Stevens, and Charles Sumner, and Wendell Phillips may be very unsafe guides, but if they were traitors of the deepest dye, they are only three. It will be something new to the country to learn that the Union has no friends left in Washington except Mr. Johnson and his friends and the small band of Copperheads in both the House and Senate who have passed the last five years in pleasant little efforts to have the Confederacy recognized. And we must say that, with the fullest appreciation of the faults and shortcomings of both Messrs. Sumner and Stevens, it causes in us a novel sensation to hear them denounced as traitors by a gentleman who is holding out his hands to Wade Hampton and waiting to clasp him to his political bosom.

If it be indeed true that the majority of both Houses of Congress are at this moment bent on destroying the Union, as the President and his orators would have the country believe, we advise him not to give himself much trouble about the Government, for nothing that he can do will save it; and, in fact, it would be a pity to have it saved, for the whole concern must be very rotten and worthless. When Congress sinks so low as this, even Andrew Johnson may well give up the task of mending the state as hopeless.

Mr. Seward's despatch, announcing that "the President's speech is triumphant, and the country happy, and the Union safe," will always

remain amongst the curiosities of telegraphic literature. Mr. Seward was, we believe, in New York on the day when he made this pleasing discovery, and we presume the basement of the Cooper Institute was the scene of this great salvation. When we consider, too, that the process must have consisted simply in the appearance of two or three gentlemen of high character and great talent like himself, and the delivery by each of them of a speech of ordinary dimensions and ability to a promiscuous assembly of excited citizens, it is clear that the nation need never again despair, no matter how bad a scrape it gets into. The reconstruction problem has always hitherto been spoken of as one of extraordinary difficulty, but it is a great pity we should have racked our brains over it so much, when its solution is, after all, so simple; and then, too, the facility with which the country has not only been "saved" but made "happy," must furnish abundant matter for cheering reflections to every lover of his kind. The only drawback on this exhilarating state of things is that it shows that the days of statesmanship are over. When the means has been discovered of settling the most tremendous questions by which any country was ever agitated, and making a great people "happy," in two hours' talking to a large crowd in a large hall, it is clear that we have seen the last of the great craft. If any people sits down in misery hereafter, which has an orator at hand, and the means of hiring a room, it will certainly meet with little pity, and will deserve less.

A CHANGE IN THE SITUATION.

If a breach between the President and Congress was inevitable from the moment of the death of Mr. Lincoln, it could not have come at a better time than the present. Let us do Mr. Johnson justice. When he fell into power, it was into a power of unusual and extraordinary growth, which the people were anxious to have used to further the great ends which the prospect of returning peace seemed to bring within their grasp. The President, however, wisely remembering that the Government was a democracy, not an autocracy, refused to call into action any further than was necessary the forces with which the people, accustomed to war, had become familiar, and hastened to put off the strength that chance had clothed him with. He was autocratic, it is true, in dealing with the South, but it was arbitrary power exercised for the unusual purpose of making way for republican life. While he was urged in every direction, now to try Davis by court-martial, now to give the freedmen civil and political rights, he remained steadfast and unyielding in the effort to rid himself of a power that he felt was dangerous to the nation. In this way, month by month, has the Executive declined. Choosing to leave to the people questions whose settlement most affected the people, the President has at every turn avoided the tempting opportunities which presented themselves to his grasp. The army was at his disposal; he got rid of it. Congress met, and he declared it his purpose to hamper by no action of his the movements of the legislature; when the Southern representatives were sent home, he offered not a word of remonstrance; Tennessee herself remained without a voice in the national debates, and he made no imperative demands for her admission. Congress, on the other hand, has shown day by day a consciousness of its increased strength and returning authority, and a greater disposition to bring within its own bar all questions concerning the reconstruction of the revolted States. Thus a great change has come over the Government during the year—a change which has somewhat restored the normal relation of the legislative and executive departments, disarranged by a state of war.

But if Mr. Johnson, overlooking this change, seeks to separate distinctly his supporters from his opponents, what is the prospect before him? He sees that, when he holds the Freedmen's bill unconstitutional and inexpedient, and the admission of Southern members necessary, the whole South, rebellious and ignorant, with their *claqueurs*, the Democracy of the North, gather round him with unwelcome applause. He sees, rushing to grasp his hand with all the eagerness of those who for years have not shaken hands with honest men, the gentlemen who cried Peace, when there was no peace, who instigated mobs of thieves and murderers, but had not the courage even to become a mob themselves. He hears the voices of those whom he fought, of those who would have hanged him, sounding exultant plaudits in his unaccustomed ear. Southern legislatures stop a moment in the passage of black codes to cry Well done! to the man for whom their lips once formed only curses. He remembers that in December he told Congress that "good faith required the security of the freedmen in their liberty and their property, their right to labor, and their right to claim the just return of their labor," and sees the freedmen gathering together in silent fear lest that scant security but just acquired shall pass away. He sees that by his action Tennessee, the State of all that he most longed to see in her old position, is cast instantly into outer darkness. He may hear amid the tinkling of glasses at Willard's the names of Robert E. Lee and Jefferson Davis joined with that of Andrew Johnson. He cannot forget that his new admirers love him, not because he is patriotic, not because he is wise, not because he is cautious, but because his views of duty seem at present to coincide with their views of interest, and that they would love him ten times better were he one of the roaring fire-eaters of '60.

ERICSSON ON THE MEXICAN QUESTION.

That Delphic utterance of the Emperor Napoleon to his Corps Législatif, on the 22d of January last, continues to be the chief international topic of discussion in the public press of either shore of the Atlantic. Each commentator puts his own interpretation on what seems to have been but a conventional speech (for why should Napoleon expose his cards while the game still is doubtful?), and each accordingly draws the inference which suits him as to the future solution of the Mexican problem. No one of these speculations has touched what seems to us one of the important elements in the question—the very vital element, indeed, in case of ill-blood between France and the United States—namely, Napoleon's chances of success in attempting to hold Mexico against the armed opposition of our country.

As, in case of so lamentable an event as the breaking out of hostilities between France and America, a stretch of 3,000 miles of water would lie between the two belligerents, it is evident that the *first* question to be decided, if not the final one, would be that of naval superiority. And by "naval superiority" cannot be meant any operations of privateers or swift piratical craft made to plunder, not to fight; to cripple commerce rather than to land troops or bombard citadels. Though Semmes, in his "protest" to President Johnson, claims to have had "half the commerce of the world at his mercy," it is clear that he did not accomplish so much for the Confederate cause as a single *Merrimac* might have effected let loose to prowl along our coast and enter our harbors. An ocean, we repeat, rolls between the French base and the seat of war in Mexico. The question of naval superiority is obviously reduced, for practical purposes, to the respective prowess of the hostile navies in operations along the westerly shore of the Gulf of Mexico. The entire aim of the French navy must be to hold the ports of that coast and to cover the debarkment of troops and stores, while ours would be to prevent those achievements and to protect our Gulf ports in Florida, Alabama, Louisiana, and Texas. Now, the experience of the late war has induced not only America, Russia, England, France, but even Italy, Denmark, and the lesser European powers—the whole maritime world, indeed—to rely chiefly for such operations as have been indicated upon iron-clad vessels. That is to say, for naval battles, on which a great issue hinges, and whose object is the possession of a coast-line or a coveted port of entry, iron-clad warfare is the only warfare worthy of consideration. What, then, would be Napoleon's prospects of success in case his continued occupation of Mexico should result in a war with the United States?

The iron-clads of France now afloat are the *Magenta*, *Solferino*, *Couronne*, *Normandie*, *Invincible*, *Gloire*, *Provence*, *Héroine*. The two former have a nominal horse-power of 1,000, and were built at a cost of twelve million francs. All the rest have 900 horse-power, and cost seven millions of francs. There are building (all of the latter class) the *Savoie*, *Revanche*, *Surveillante*, *Flandre*, *Guyenne*, *Gardoise*, *Valoreuse*, *Magnanime*, *Taureau*, and one other. There are sixteen, besides, which could not cross the Atlantic. These sixteen are of the sort employed at the Crimea, and have power so low, armor so thin, and battery so weak, that they may be left entirely out of the question. Of the eight afloat and the ten building (all of which will soon be completed) only two, the *Couronne* and *Héroine*, have iron hulls. But this fact is not important.

The two largest of these vessels are the *Magenta* and *Solferino*—enormous hulks of nearly 7,000 tons displacement. They draw upwards of 26 feet of water, and are partially protected with 4½ inches of iron. The *Couronne*, *Normandie*, *Invincible*, *Gloire*, *Provence*, and *Héroine*, although differing in some details, are, for practical purposes as engines of war, all of the same general character, being about 6,000 tons displacement, drawing from 25 to 27 feet of water, and carrying 4½ inches of iron in the centre portion, the armor gradually tapering off to 3 inches at either end. All the rest, namely, the *Savoie* class, are also of substantially the same character, having about the same displacement and draught as the *Gloire* class, but differing somewhat in the arrangement of armor. The iron in the *Savoie* class is made thicker at the water-line and thinner above, doubtless with the idea of keeping the vessels afloat if possible, even if the armor which protects the battery and the gunners be shot through and through.

No one can fail to notice the two main points in the preceding description—the thin armor and the deep draught of the French iron-clads. It will be observed that their sphere of operation i extremely limited. It is unnecessary to enumerate the harbors on our shores which they could not enter, but anybody familiar with the Atlantic coast-line and the Gulf coast-line will at once appreciate the force of this objection. As to their armor, so far as opposing a 15-inch projectile, propelled by 60 lbs. of cannon-powder, is concerned, it might as well be so much card-board. Of artillery, it is enough to say that no gun is yet afloat in the French navy of greater power than the old 68-pounder, the English 8-inch smooth-bore of 95 cwt. At the moment we write, incredible as it may seem, the English are experimenting to see whether it is *possible* to work a 12-ton gun in broadside. The iron-clad *Minotaur* is in service for that special purpose, and the majority of English naval officers think the solution is quite problematical.

What, now, are the American iron-clads? They are built upon a new, bold, and original plan. When the war broke out we possessed nothing, and contemplated nothing, which could neutralize the broadside iron-clads of other countries. The ingenuity of Ericsson solved the difficulty, and produced the American *Monitor*. The monitors of the *Passaic* class—such as the *Passaic*, *Montauk*, *Catskill*, *Lehigh*, *Sangamon*—are vessels drawing but 11 feet of water, while the French ships draw 25. They are of about 1,200 tons displacement, while the French ships are of 5,000 and 6,000 tons. They have iron *all over* upwards of 5 inches thick, backed by more than 36 inches of oak and the *entire deck* itself. Within a wrought-iron cylindrical turret, 11 inches thick, a pair of 20-ton guns are mounted, throwing a 15-inch spherical shot, with 60 lb. service charges. Next we come to the *Mahopac* class—such as the *Mahopac*, *Manhattan*, *Catawba*, *Oreota*, *Manayunk*, *Saugus*, and *Canonicus*. They draw 12 feet of water and have but little upwards of 1,500 tons displacement. Their armor throughout is 9½ inches of iron, backed by 20 inches of oak, besides the deck, as already mentioned. They carry the usual monitor turret, with its formidable contents, similar to the *Passaic* class, previously described. Next, we reach a class of "wooden monitors," the *Monadnock*, *Agamenticus*, *Tonawanda*, and *Miantonomah*. These are of a little over 2,000 tons displacement, and draw about 12 feet of water. They have upwards of 5 inches of iron armor, with about 3 feet of oak, and their whole breadth of deck, to back the iron. They carry each two 11-inch thick iron turrets, like those of the other monitors, and a total battery, therefore, of *four* 15-inch guns. Finally, we come to the class represented by the *Dictator* and *Puritan*. These are ships of about 3,500 tons, carrying all around, and in every part, 10½ inches of iron, backed by about 48 inches of oak.

To make the comparison between the French broadside iron-clads and ours still more striking, the screw and the rudder in our monitors are protected even more completely than the guns themselves—an inestimable advantage. Again, while the enormous French iron-clads are high out of water, like an old-fashioned line-of-battle ship, and present a splendid mark, the little monitors lie—stripped of bulwarks and every incumbrance—but about two feet out of water! Such a mark is difficult enough to hit; but, even if hit, the shot is useless. It is a truth too obvious to argue, that not only the present French naval artillery, but any immediately prospective artillery which can be mounted in their fleets, is no better than a parade of popguns, when employed against the American monitors. On the other hand, what possible resistance could the 4½-inch plates of the *Gloire* oppose to a projectile from a 20-ton gun, discharged within respectable iron-clad range? Plates of French construction 1½ inches thicker than those put upon their iron-clads have been smashed to splinters by the 15-inch gun, in trials at the Washington navy yard.

Suppose, then—leaving the great majority of the iron-clads to act as auxiliaries to our other defenses for the Atlantic harbors—we should select only the three double-turreted monitors of the *Monadnock* class and the *Puritan* and *Dictator*, and send them into the Gulf of Mexico. What would become of the rolling and pitching French monsters, with their toy-gun batteries and flimsy side-armor? How long would it take to seize the few available harbors on the Mexican coast, and hold them against the French iron-clads? So experienced an artillerist as Napoleon III. would be the first to anticipate the effect of ten 15-inch guns, afloat in absolutely impregnable structures, against armor and armament like his. The arguments presented to the Emperor by his chief naval constructor, M. Dupuy de Lome, as to the folly of attempting to send the monitors to sea, have been refuted by several years of experience in actual coasting and battle. Indeed, at this moment, one of the smaller class of monitors is half-way to the Pacific, having, with her consort, paid a brief visit to the harbor of Havana. We fancy that M. Xavier Raymond, the semi-official writer in the *Revue des Deux Mondes*, would find some difficulty in extricating the French squadron from the dilemma we have imagined for it in the Gulf of Mexico, even on paper. It is not impossible, at all events, that 20-ton guns, in impregnable turrets, have already exercised some influence on the decision of the Mexican problem.

THE HISTORY OF THE AMENDMENTS.

Since the formation of the Federal Constitution there have been four distinct and successful attempts to amend it, resulting in the addition of thirteen articles to the original instrument. The first ten of these belong together, and were part of a batch of twelve which passed both Houses of the First Congress, at its first session, in this city (March 4, 1789), but of which the remainder failed to be ratified by a sufficient number of States. They are to be regarded as addenda rather than amendments, according to the language of the preamble:

"The conventions of a number of the States having, at the time of their adopting the Constitution, expressed a desire, in order to prevent misconstruction or abuse of its powers, that further declaratory and restrictive clauses should be added; and as extending the ground of public confidence in the government will best insure the beneficent ends of its institution;—*Resolved*, etc."

The eleventh article qualifies the judicial power of the United States, and was proposed to the country by the Third Congress, at its first session, Dec. 2, 1793. The twelfth article, concerning the mode of choosing a President by the electors, or House of Representatives, was proposed by the Eighth Congress at its first session, March 26, 1804. The thirteenth article, abolishing and prohibiting slavery, passed, as every one knows, the Thirty-eighth Congress at its second session, on the 31st of January, 1865.

The series of ten amendments already described, like the Constitution, was nearly two years in being adopted. To Rhode Island, Maryland, Virginia, South and North Carolina, the whole twelve were acceptable; but Delaware objected to the first, Pennsylvania to the first and second, and New Hampshire, New York, and New Jersey to the second; and these consequently fell through. As for Massachusetts, Connecticut, and Georgia, they made no returns whatever.

The eleventh amendment had a somewhat peculiar career before it could rank with its predecessors as an integral part of the Constitution. At the second session of the Congress which enacted it favorable returns had been received only from New York, Massachusetts, Vermont, New Hampshire, Georgia, and Delaware. At the first session of the Fourth Congress, Rhode Island and North Carolina responded aye. But as the tardiness had got to be rather provoking, at the second session a joint resolution was passed, March 2, 1797, and approved the same day by President Washington, as follows:

"That the President be requested to adopt some speedy and effectua means of obtaining information from the States of Connecticut, New Jersey,

Pennsylvania, Maryland, Virginia, Kentucky, Tennessee, and South Carolina whether they have ratified the amendment proposed by Congress to the Constitution concerning the suability of States; if they have, to obtain the proper evidence thereof."

The Fifth Congress was informed by President Adams at its first session, Jan. 8, 1798, that Connecticut, Maryland, Virginia, and Kentucky had ratified the amendment, New Jersey and Pennsylvania had failed to do so, South Carolina had taken no definite action, and Tennessee—which had been admitted to the Union in the interval succeeding the passage of the amendment—had not been heard from. Thus it required four years—overlapping two administrations—to obtain the sense of sixteen States, and to secure the ratification of twelve; so little interest seems to have been felt in the fate of this amendment.

The twelfth was only six months in ratifying, and for a very good reason: a Presidential election was imminent, and the amendment contained instructions which were designed to apply to it. Vermont, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Virginia, Ohio, Kentucky, Tennessee, North and South Carolina, and Georgia—thirteen out of seventeen—constituted the requisite three-fourths. New Hampshire, Massachusetts, Connecticut, and Delaware, either purposely or neglectfully, tarried behind.

The latest amendment, it is scarcely necessary to add, was nearly eleven months in getting ratified, that is, if we accept Mr. Seward's reckoning that there were thirty-six States which were competent to consider it. No doubt this time would have been shortened if the success of the measure had admitted of a doubt. The only comparison which it is worth while to draw between this and the foregoing ratifications, connects (say) the action of Mississippi in the present instance with that of Pennsylvania in the case of the twelve amendments. But it is evidently one thing to reject one or more of a series of really independent propositions, and quite another to reject a portion of an indivisible whole.

It remains to describe the various methods in which official announcement has been made of the adoption of these amendments. The Constitution does not specify how or by whom this duty shall be discharged. The first ten appear to have dispensed with this formality. It was probably owing to the reminder of Congress, quoted above, that President Adams sent to them the following message, which, if only for the sake of the form, may properly be reproduced entire:

"*Gentlemen of the Senate and Gentlemen of the House of Representatives:*

"I have an opportunity of transmitting to Congress a report of the Secretary of State, with the copy of an act of the legislature of the State of Kentucky, consenting to the ratification of the amendment of the Constitution of the United States proposed by Congress, in their resolution of the second day of December, 1793, relative to the suability of States. This amendment, having been adopted by three-fourths of the several States, may now be declared to be a part of the Constitution of the United States. JOHN ADAMS.

"UNITED STATES, January 8, 1798."

Notice was given of the adoption of the twelfth amendment, September 25, 1804, by James Madison, pursuant to the provisions of an act passed in conjunction with the amendment, which instructed the Secretary of State forthwith to "cause a notification thereof to be made to the executive of every State," and to "cause the same to be published in at least one of the newspapers printed in each State in which the laws of the United States are annually published."

Secretary Seward's proclamation of December 18, 1865, will be found in exact compliance with the second section of the act of April 20, 1818, to which he refers, and which reads thus:

"Whenever official notice shall have been received at the Department of State that any amendment which heretofore has been, or hereafter may be, proposed to the Constitution of the United States, has been adopted, according to the provisions of the Constitution, it shall be the duty of the said Secretary of State forthwith to cause the said amendment to be published in the said newspapers authorized to promulgate the laws, with his certificate, specifying the States by which the same may have been adopted, and that the same has become valid, to all intents and purposes, as a part of the Constitution of the United States."

We shall be pardoned for this minute, but we trust not tedious, investigation, seeing how little known are the facts, and the general looseness that has ever prevailed in so practical a matter; seeing, too, what curious and important questions arise in view of that long train of amendments to which the "eggs of Pharaoh's serpents" afford the readiest parallel. How little pains, for example, were taken to send to the State Department that "official notice" which the law requires, by States which were among the foremost in ratifying the late amendment. In these days of railroads and telegraphs, does the validity of any amendment depend on the date of the Secretary's certificate? And do amendments ever die? We have seen one attain the respectable age of four years before it was ratified. If that is but infancy, what may old age be? Which is right—New Jersey or Kentucky—New Jersey, which repents, reverses its action, and at last ratifies the rejected amendment; or Kentucky, which pronounces the action of its first legislature final and irreversible? If the former, what, except the popular indifference, is to hinder the resurrection of those two amendments for which respectively six and eight votes were cast by as many States in 1789-90? What, in short, is the limit within which an amendment may be entitled to struggle for existence, and, if defeated, decently and for ever to yield up the ghost? According to present usage, once started from the Capitol, an amendment may walk the earth like Ahasuerus, safe at least from any legal quietus, never losing a friend, and waiting patiently for the conversion of its enemies until the tally of its supporters is full. We would not argue in favor of a fixed and moderate period during which alone ratifications should be lawful; we are not just now arguing in favor of anything, and in no respect against the motives of the authors of the numerous proposed amendments. We merely point to the existing confusion which impedes the accomplishment of their and our desires; and herein, perhaps, is something worth a thought or two, let alone that graver and antecedent question of the States which are qualified to ratify or reject.

OUR LITERATURE AND OUR CRITICS.

WE have seen in various quarters during the last six months the imputation thrown out that THE NATION, as well as other literary journals, has devoted too large a portion of its space and attention, in its literary department, to the consideration of foreign literature and literary news, neglecting American books, and American authors, and the current subjects of American thought. We believe the charge was never seriously made by anybody who both read the paper carefully, and watched closely the sources from which our people draw their reading matter, and the class of topics which most occupy the attention of the studious portion of the public. But then it is just the kind of charge which finds ready acceptance with that large class who talk under the influence of vague impressions, and that still larger class who are morbidly sensitive touching the proper recognition of American talent, and can never thoroughly rid themselves of the idea that there is a conspiracy amongst the critics, both home and foreign, to rob it of its due.

Now in these cases there is, after all, nothing like facts, and to the facts let us go. In the first volume of THE NATION, from July 6 to December, 1865, there were ninety reviews of books, of which forty-five were devoted to foreign books and authors, six only of these being on books not republished in this country. There were also fifty-five short notices of books; of these not fifteen were of foreign books. In truth, then, more than half of our space devoted to literary criticism was taken up with reviews of American publications; and we have really to plead guilty to not having paid due attention to foreign literature.

Let us now see what books were published in the United States during those six months. We have taken the lists given in the "American Publishers' Circular," and, excluding directories and volumes of statute laws, we find 681 works. Some of these are probably counted twice, as the lists given are not always correct, and there are frequent repetitions which we have tried to make allowance for. Of this number, 105 are republications of foreign books; of the remainder, at least three-fourths are pamphlets, "dime novels," Sunday-school books, or law reports, which are excluded from literature proper. This leaves us about 140 books. Of these, again, some are new editions and some republications of early books and tracts printed privately or by literary societies. The forty-nine reviews and forty notices of American books in THE NATION for that period cover, then, nearly the whole ground of the national literature. Some of the reviews are of books previously published, and some were published too late for notice in this paper at that time, and many were not worth notice; but the result will remain about the same.

Such has been the quantity of American literature for six months. As respects quality, there is also something to be said. In poetry we have had nothing but Brownell's small volume; in criticism no works of account ex

cept White's two volumes on Shakespeare and Botta's compilation on Dante; in history we have had various chronicles of the war, by such writers as Headley and Abbott; but to call them "history" would be an abuse of language. We have had, however, to set them off, Parkman's "Pioneers;" and in biography the lives of Adams and Warren. There has been but one even respectable novel, Mrs. Stoddard's "Two Men." In theology we have had Bushnell's "Vicarious Sacrifice" and Hurst's "History of Rationalism." Some valuable contributions have been made to military science and military surgery. In mental philosophy we produced absolutely nothing; in political economy nothing but Professor Perry's manual, if we except the ton of pamphlets, some wise, some foolish, called forth by the condition of the currency. In general literature we have had Wheeler's excellent "Dictionary of Fictitious Names," Godwin's "Cyclopædia of Biography;" in political science, Draper's "Civil Policy;" and to these may be added a few good school-books to make up the sum total.

Let any one now go into Christern's or Appleton's or Scribner's, and look at the mass of books which lie on their tables or figure in their foreign catalogues every month, of history, criticism, metaphysics, philology, ethnology, jurisprudence, travels, natural philosophy, political economy—most of them the product of years of labor, and that the labor, in a very large number of cases, of the most gifted and highly cultivated minds in the world. Let him compare all this mountain of reasoning and research with what we have to show in the same fields, and then ask himself who is to blame if American literature does not occupy a larger share of the attention of American critics.

But does foreign literature occupy the attention of the American people in the ratio of the value of that literature? Yes, it does. Nearly all the great European works of the day are reprinted here—one hundred and fifteen during the six months ending December 31, 1865. Nearly all the books of any permanent value which American publishers produced during the last two years, on history, on metaphysics, on physical science, on jurisprudence, and political economy, have been works of foreign authors. The large importing bookstores here are filled with foreign books—French, German, and English—which are sold and renewed constantly; books of a kind that never have been written here—books on art, on philosophy, on science. The call for such literature is very great, and rapidly increasing. And not only foreign books are largely read and reprinted, but foreign journals are reprinted here. Four English reviews and one monthly are reprinted bodily, some of them having a much greater circulation here than at home. Three or four other magazines are published simultaneously both here and in England. At least four periodicals are avowedly made up entirely of articles from English journals, and the rest of our journals, from "Harper's Monthly" down, are in a great part filled with English articles for which no credit is given. In fact, the reading matter of this country is almost entirely foreign. This, we admit, is an unfortunate state of things; we deplore it as much as anybody, more than most people, for were the taste for home literature more widely diffused, journals like The Nation would be all the better for it. We do not mean that we deplore the existence of the love of good books, no matter where they come from—that we consider eminently healthy; but we deplore the fact that American writers, as a body, are not able to do more towards satisfying the wants of their own countrymen. We trust they will never completely satisfy them, because we think the Chinese are not good models in literature any more than in art—and a determination on the part of any people to draw its mental food from only one quarter would, sooner or later, produce a Chinese type of civilization.

It could not, in the nature of things, be expected that in six months, and the six months following a great war, the state of literature would be any different. Literature is not a lucrative profession, and there are few inducements here to pursue it. The best talent of the country is turned in other directions from authorship. There are few men of large wealth and corresponding culture who have been able to give thought enough to one subject to make themselves authorities on it. We have some fine scholars, but they occupy poorly paid professorial chairs, and all their spare moments are taken up with ephemeral writing for reviews and newspapers. Indeed, it is rather a matter of surprise that we have even as many good authors as we have. The production of great works in literature is not always possible, and the present seems to be one of those preparatory periods when men are being educated and trained who, some day, will be good scholars and writers, and will produce works worthy of being set beside the contemporaneous literature of other countries. A desire to read good books will act on culture, and will affect the power of producing good books.

It is certainly no part of our purpose, any more than that of any newspaper, to build up a literature. It would be silly and presumptuous for us to entertain or proclaim any such intention. The *rôle* of a weekly critic is, after all, a very humble one. It is to examine the fields from which it finds the community drawing its mental food, and to point out, to the best of its ability, what those fields produce—what is bad and what is good; what had better be tasted, what digested, and what thrown away; to keep before the public the best standard in every department, and point out departures from it, according to the critic's understanding of it. If people go to England for political economy and history, to Germany for philology and metaphysics, to France for everything by turns, it is our business to go with them and find out what the English, French, and Germans are getting ready for their entertainment; and we are no more responsible for the extent to which those markets are ransacked for our literary wares, than we are for the condition of our dry goods trade. We protest against the shallow notion that a peculiar standard of art or literary criticism has been evolved by our political and social system. This is one of those bits of Anglo-Saxon conceit which gives Frenchmen and Germans so much amusement. Truth and beauty are eternal and immutable, and of no country. The style of the "Peloponnesian War" was a good style two thousand years ago, is now a good style, and will continue to be as long as the world lasts. In arrangement and diction, what orator has yet improved upon Demosthenes? If all the congresses, parliaments, and academies in the world were to sit over the matter till the crack of doom they would never discover a better way of writing history than to tell the truth at least grammatically and, if possible, pleasingly and picturesquely. There will never be an English, or French, or American astronomy, or geology, or chemistry. The world of knowledge belongs to the whole human race, as the ocean does.

THE ASSAULT BY NIGHT.

All night we hear the rattling flaw,
The casements shiver with each breath;
And still more near the foemen draw,
The pioneers of Death.
Their grisly chieftain comes:
He steals upon us in the night;
Call up the guards! light every light!
Beat the alarum drums!

His tramp is at the outer door;
He bears against the shuddering walls;
Lo! what a dismal frost and hoar
Upon the window falls!
Outbar him while ye may!
Feed, feed the watch-fires everywhere—
Even yet their cheery warmth will scare
This thing of night away.

Ye cannot! something chokes the grate
And clogs the air within its flues,
And runners from the entrance-gate
Come chill with evil news:
The bars are broken ope!
Ha! he has scaled the inner wall!
But fight him still, from hall to hall;
While life remains, there's hope.

Too late! the very frame is dust,
The locks and trammels fall apart;
He reaches, scornful of their trust,
The portals of the heart.
Aye, take the citadel!
But where, grim Conqueror, is thy prey?
In vain thou 'lt search each secret way,
Its flight is hidden well.

We yield thee, for thy paltry spoils,
This shell, this ruin thou hast made;
Its tenant has escaped thy toils,
Though they were darkly laid.
Even now, immortal, pure,
It gains a house not made with hands,
A refuge in serener lands,
A heritage secure.

Edmund Clarence Stedman.

THE PROGRESS OF HORTICULTURE.

It is one of the most pleasant signs of the times that a great war has been waged and brought to an end without sensibly disturbing the numerous interests involved in horticulture in this country, and without perceptibly retarding the progress of the gardener's art. The most careless reader, even the man who does not know a strawberry plant from a cranberry vine, when an agricultural journal falls in his way cannot fail to be amazed as he glances over its advertising columns.

He finds in the same paper advertisements of a dozen dealers or firms who offer for sale grape-vines and strawberry plants by the hundred thousand, pear and apple trees in enormous quantities, and an endless supply of roses, herbaceous plants, and the latest novelties in the world of flowers. He sees grape-vines offered to credulous purchasers at five dollars a piece; strawberry plants at a dollar; and reads the notice of one nurseryman who proposes to sell his new Yellow-Ease at three and five dollars a plant as soon as one thousand subscriptions at these prices shall have been received.

If he pursues his investigations further, he will see several thousand kinds of seeds offered for sale, from pear and apple seed by the bushel to pelargonium seed by the tiny packet. He will find that grape-cuttings are sold by the million, cranberry vines by the barrel, that three thousand dollars have been paid for three new strawberries, and that a nursery of two or three hundred acres is not so large as to excite surprise by its extent. He will learn that the public is never tired of novelties in fruits or flowers, and that the demand for almost everything the horticultural journals advertise exceeds the supply.

He cannot help noticing that all quarters of the globe are ransacked to gratify a legitimate and healthy craving for something new, something unseen here before. He will see that he can purchase a seed of the Victoria Regia for a dollar, or that, if he has eight dollars to spare, he can buy for himself a fine bulb of the new Japan lily. A Yeddo grape-vine, also from Japan, will cost him ten dollars; or, if he is fond of raising evergreen trees, an ounce of seed of Nordman's spruce can be had for the moderate sum of three dollars; although, if he prefer, he can change his ounce of seed for a single bulb of a new gladiolus or a tuber of a new dahlia.

The more he reads the greater is his wonder, and the truth slowly dawns upon his mind that he has been for a long time blind to one of the most widespread, important, and rapidly growing branches of industry his country exhibits. There always has been a steady demand from people of taste and leisure for ornamental trees and shrubs, besides roses, bulbs, and all varieties of bedding flowers, as florists term them; but within a few years the interest felt in the culture of the grape and the strawberry has risen to a perfect mania.

Partly in consequence of this mania, and partly, we think, as one of its causes, an enormous number of new grapes and strawberries have been brought into public notice, and sold, while new, at prices as large as a credulous and willing public could be induced to pay. We have before us a catalogue which enumerates one hundred and seventy distinct and approved kinds of strawberries, besides noticing one hundred and two varieties that have been discarded as unworthy of cultivation; and another price-list which offers for sale fifty kinds of out-door grapes, each of which, if we may believe the dealers, has some striking peculiarity which renders it worthy of a place in the garden.

Nurserymen and amateurs all over the country have devoted themselves with the utmost enthusiasm to raising from seed new varieties of strawberries and grapes. Since every seed that germinates produces a grape-vine or a strawberry plant different from all others, and since not more than one plant in a thousand of these seedlings will be worth preservation, it is not difficult to understand that raising seedlings of these two fruits is an amusement that has the pleasant excitement of a lottery, and whose results, even if we take the extreme case of saving only one plant in a thousand, cannot fail to be profitable to the experimenter and the country.

Mr. E. W. Ball, of Concord, Massachusetts, beginning twenty years ago, and following in the steps of Van Mons, produced, by raising thousands of seedlings from the native vine, the Concord grape, and has lived long enough to see his seedling planted literally by millions from Missouri to Maine.

Dr. Grant, of New York, raises five thousand grape seedlings, selects and rejects and reduces the number of those fit to introduce as worthy of cultivation to *two*, viz., the Iona and the Israella, and now reaps a golden harvest as the result of his patience and skill. Mr. Rogers, of Salem, Mass., carefully transfers the pollen of foreign vines to the pistil of native grapes, plants the seeds thus produced, and in a few years is the proud originator of forty-five new grapes, all good, and some of them of the highest excellence. His success has set hundreds of amateurs, who are willing "to labor and to wait," at work crossing native and foreign vines, subduing the harshness of the former, strengthening the tenderness of the latter, and bringing about results that a few years ago were not even dreamed of.

Brilliant as have been some of the triumphs in raising new grapes, it is plain that the perfect grape has not yet been attained. A grape that shall have the size and sweetness of certain foreign kinds, with the flavor, hardiness, and vigor of some native varieties, is yet a desideratum. That we shall reach this goal in time is as certain as it is that we now have out-door grapes so good that those who see and taste them for the first time refuse to believe that they are not raised under glass, with the aid of artificial heat.

Mr. Seth Boyden, of New Jersey, by patient and careful hybridizing, produced a few years ago the "Agriculturist" strawberry, wonderful alike for the size, flavor, and number of its berries, and which excited for a time a perfect *furore* among amateur horticulturists. Fifty dollars was offered and refused for a single plant in 1863, and even now the dealers ask more for this variety than for any other. Mr. Boyden has not rested content with his success, but continues his experiments and researches, and, though far advanced in life, promises the public better strawberries than they have yet seen.

French, English, and Belgian nurserymen are annually sending out scores of new kinds of strawberries, some of them wonderful for their delicacy and flavor, and all sure to be bought and tested by hundreds of eager amateurs.

We can conceive of no case of more hopeless bewilderment than that of the novice in fruit culture who is endeavoring to make up a list of fruit trees and vines for his garden. He needs only half a dozen kinds, but the catalogues offer him a hundred, each and every one of which is one of those that "no gentleman's garden should be without." For his comfort we may say that, notwithstanding the great number of novelties presented by the nurserymen every spring and fall, the tendency of the best dealers is to reduce greatly the number of kinds they offer for sale, rejecting all but the very best. Not a year passes but scores of varieties, whose advent was loudly trumpeted by those who had money to make from their sale, drop off the lists and are heard of no more.

It is not our purpose to discuss the whole matter of fruit-raising, or the rapid progress that an interest in horticultural matters has made throughout the United States within a very few years, but we think we have said enough to set to thinking those whose attention has never been directly called to the subject.

The rich lands and new farms of the West absorb the products of hundreds of nurseries both East and West, and for years to come the demand for good trees, plants, and vines, true to name and of approved kind, must necessarily exceed the supply.

Besides, it is more than probable that many of us will live to see what are now the choicest kinds of fruits fall into neglect, and be supplanted by newer and better varieties, that will owe their origin, like the pears of Van Mons, the Concord, and the "Agriculturist" strawberry, to the patient and well-directed labors of the many experimenters who are now devoting themselves with their whole heart and soul to the most fascinating and promising branch of horticultural art.

THE SOUTH AS IT IS.

FROM OUR SPECIAL CORRESPONDENT.

XXX.

New Orleans, La., February 8, 1866.

At Mobile I took passage by steamboat for New Orleans, gladly bidding good-by to that disagreeable city, to the mud-banks of its harbor, with the flocks of carrion crows—turkey buzzards—always streaming and hovering over them, to the narrow and dirty streets, infested as they are by hundreds of ill-looking men, whose profession, said to be gambling, seems to be hanging about the innumerable bar-rooms. Nor was I at all sorry to go away from the boarding-house where I had heard so much about the irreclaimable worthlessness of the niggers, about the gallantry of various Confederate regiments, about the vast preponderance of foreigners among the dead men in Federal uniforms on several battle-fields, and where the lady sitting next me at table used to quiet her child whenever it made a disturbance by threatening to leave it and let the Yankees catch it. As we moved down the bay and past Fort Morgan the water became quite rough, and the weather, windy and piercing cold, was thoroughly unlike what one is accustomed to fancy of February on the Gulf coast. There were many little indications, however, that we were not travelling on Northern waters. On board that boat a placard notified us that gambling on Sundays was strictly

prohibited. The bar was open, and a handsome young mulatto behind it, extravagantly dressed and fluent in French and English, was kept pretty busy throughout the afternoon and evening. There was ice in all the water jars, flowers adorned the tables at dinner, and there was a plentiful supply of fresh vegetables and fruits. Gentlemen were introduced to others as having been in Mexico, or intending to go there, or being well informed on Mexican affairs. It is noticeable, as one approaches New Orleans, that the dress of the men and women is better than that of the Southern people further north—homespun coats, Confederate uniforms, and clothes of the fashion of twenty years ago being an exception.

At the end of eighteen or nineteen hours we reached New Orleans, and I was walking through the French quarter and toward the river, eager to see the Mississippi, and intent on comparing the real city with that New Orleans which for many years, from the time when I first read pictorial geographies, had existed in my mind as the most interesting of American cities, seeming further off and more foreign than Europe or Egypt. But the Department of the Gulf has recently been too much written about for a description of the city to be now of any value. It will be of more general interest to give the substance of a series of conversations which I have had since my arrival with several men, some of them natives of Louisiana, some of them citizens of Northern States, but residing here, who may be supposed capable of giving a correct opinion in regard to the tone of public feeling in this community. The disposition of the people toward the Government and toward the Northern men living here were the points to which my enquiries were chiefly directed.

I talked first with a young gentleman from Massachusetts, an educated man, a lawyer, who, having come out here as a lieutenant in the Federal army, served till the end of the war, and is now practising his profession in New Orleans, and also has some money invested in carrying on a plantation in a neighboring parish.

"These people," he said, "are in this frame of mind: they are as firmly convinced as ever that they were right in this war, but they see and admit that secession from the Union is an impossibility; that the attempt to secede was a great mistake, and one that they have no desire or intention to commit again. Every one of their soldiers will tell you—I hear it said almost every day—that he is tired of fighting, that he has taken the oath of allegiance, and that he means to keep it, and to be a good citizen; and when they tell me this I believe them. Talk with the business men, and you hear the same thing. The war is over, slavery is gone. They have no wish to see it restored; they want to see business reviving—that 's what they say. These classes of people will treat a Northern man well enough. I do n't wish to be better treated than I have been treated by them, both here and in the country. My profession has brought me into contact with a good many of them. I have acquaintances with lawyers in almost every parish in the State, and I know I am always treated with courtesy, and I think they show me their honestly felt sentiments and opinions. As for Northern capital, they welcome it. Men come to me in this office; they have come recently, anxious to get help from Northern men. I am endeavoring now to induce some Northern men to send their money out here, and I am authorized by the parties here to guarantee them fifteen per cent. interest on their money, and give them the control of the crop. If they direct it to be consigned to Boston, why, my client will agree to do so. His case is not an isolated one. The whole planting community here is wishing for Northerners; they want them as partners or as capitalists; and whatever money is loaned the planters are ready to secure by a mortgage of their lands—not their crop, mind, as they used to in old times, but their land—or they will sell land to the Northerner. And if he buys he will be kindly received. I go down once in a while to the plantation that I am interested in, and I never was better treated than I am there. They bring out their wine, I am taken to ride, I am introduced to the neighbors, and yet they know perfectly well that I am a radical, that I believe in emancipation, and that I fought them for four years in the Federal army. Yes, I believe that all the men of wealth and influence and integrity, the solid men, are disposed to be loyal, and to behave like good citizens. It is a few brawlers in bar-rooms and billiard saloons—fellows who do not represent public opinion, who are not responsible men, and whom the sensible people despise—these are the fellows who are always damning the Yankees, who have n't had enough of fighting yet, who declare that they owe no allegiance to the United States, and all that kind of talk. They make a great noise, but I know that the respectable people are not with them. I believe I have as good opportunities for getting information as anybody."

I remarked that these men whom he described as bar-room brawlers, who had never owned negroes, and whose opinions were not worth regarding, were commonly said to be in a majority here.

"No; I do n't believe they are so numerous, and I do n't believe they wield any influence. I do n't deny that of the better classes some cherish the recollections of rebellion, are proud of Lee's army and Stonewall Jackson and so on. That I look upon as natural, and so it would be natural if some of them did hate the Yankees. Suppose the North had tried to secede, and the South had whipped it back into the Union, and there was a Southern garrison in every Massachusetts town, would n't we take it out in hating the South, though we might conclude that we ought to be loyal to the Government?"

Another Massachusetts man, an ex-captain in the Federal army, had entered the room while the foregoing conversation went on, and at about this point he said:

"Why, hang it, L——, a' n't you getting a little touched with secession? You 've been here a little too long. You do n't believe any Northern men would have any sort of a chance down here if the military was removed? You would n't dare to stay here yourself, now, would you?"

"Stay here? Certainly I would. And I believe I should never be troubled, no matter how long I stayed."

"Well, now, I can tell you that you would be troubled. I can tell you that you 'd stop here a mighty short time after the military went away. I can tell you that there 's a secret society in this city—and I know it 's so—where your name and mine have been brought up before the whole crowd, and canvassed, and our antecedents discussed, and a mark put against us both. Not us alone, you understand, but every other Northern man in the city, too. They intend to drive us all out. And it a' n't your rapscallions either; some of the first merchants in town belong to it," and the captain mentioned some names.

"I do n't believe a word of it. We 've heard of this conspiracy before. I do n't believe there is any such society."

"Well, tell me what made Governor Wells, in his message to the legislature, talk to them about secret societies, with grips and passwords and mysterious meetings, that he wanted to have put down? Did n't he say they were political?"

"Yes; and did n't he afterwards admit that he was mistaken, and had been humbugged?"

"I do n't know whether he did or not. If he did, he need n't, for there is such a society, I know."

"All right; you can have it stopped then. But you 'll find there 's nothing in it. We 've heard too much about it. It 's an old story, you know. I 've been all through it. Why, I was very sure myself that I 'd got on their track, and I even was enough of a fool to write to the State Department and beg to have it investigated. And very soon I had to send another letter apologizing for the first one. For two of the best detectives in the United States came down here to investigate. I felt sure then. They got in with the suspected men, dined with them, drank with them, damned the Freedmen's Bureau for two months, and then they went away laughing between themselves at the idea of a secret anti-Northern society in New Orleans."

"Very well. But you find out, if you can, what they think of it at Gen. Canby's headquarters. There they believe it."

This was a matter of which I could learn but little further, and that little was chiefly corroborative of the captain's assertion that, at headquarters, a secret society, which the governor refers to in his recent message to the legislature, is really believed to exist. It was vaguely hinted to me that I might believe the objects of the society to be more nefarious than an attempt to injure the trade of Northern men in business here, and to discourage immigration from the North. On the other hand, a Southern gentleman, a member of the State senate, said that he thought the governor was entirely mistaken, for he himself, in endeavoring to hunt out the conspiracy, which he denounced as odious, had exhausted all the resources that freemasonry placed at his command, and had been unable to find the slightest trace of it. But whatever the fact may be, the suspicion certainly exists, and in quarters generally considered very well informed.

Mr. L—— thought that as a rule the freedmen in Louisiana would receive kind treatment from their former masters, and inclined to think that eventually they would find their former masters their best friends. So far as his observation extended, most of the planters had tried hard to conform themselves to the new order of things.

A gentleman with whom I conversed shortly afterwards was a planter and the owner of three plantations. All the people on his home place had stayed with him, he said; but on his lower places they had been burnt out of their homes by General Smith, and he had been obliged to cut that up into small lots and put on white people. Nineteen families of poor devils were there doing what they could, and they were to give him half of what they made—they to find themselves in provisions and to furnish their own stock.

His niggers on the home place were doing pretty well. He knew how to manage them. In old times almost every boy of his had a little horse, each family had a patch of ground for its own use, the men had one Saturday in every month as a holiday, and the women had half of every Saturday, no matter how much the plantation work might be pressing him. They never went to the field till broad daylight, and when it was cold they never went out at all. The result was that all his neighbors called him a nigger-spoiler; but he beat them all on crops, and a sick nigger was a rarity on his plantations. It was always his rule when engaging an overseer to tell him that his niggers were not to be whipped unless their owner was present; that in the absence of the owner he might give eighteen lashes over the nigger's clothes, and that if he ever violated those instructions he should leave and leave his wages. By this management he always had civil, industrious niggers. He knew how to manage them. They ought to be treated kindly, of course. Probably they would be, for the planters of Louisiana as a class were good masters. But Northern men did not and could not understand the negro character. Therefore, the old harmony and confidence once existing between the black and white races in the South would never be restored; the golden age, if he might call it so, would never return until the Freedmen's Bureau should be removed. He would give me a sample of the working of the institution if I did n't know much about it: A friend of his went to Natchitoches the other day and engaged fourteen hands to work for him, and got the agreement countersigned by the Bureau officer. Thought he was all right. Coming into town the next day for his niggers, he found that another man had hired them, and that the officer had approved that contract too; so he went to the Bureau and said to the lieutenant: "Lieutenant, you 've let those boys that I hired only yesterday, and brought before you to make the contract, go and make a contract with another man." But the officer would give him no other satisfaction than telling him that "the niggers were as free as he was." The Bureau certainly made trouble everywhere, and he asked me what I thought of the prospect for its discontinuance. I replied that its powers would probably be enlarged, and that I believed an agent was to be appointed in each county of the Border and Southern States. If that was so, he said, and if Andy Johnson did n't veto the bill, he thought he 'd try to be appointed agent in his own parish. Of course it was reasonable to suppose that a native Southerner, who knew all about planting and all about the negro, would make a better agent than a Northern man.

This gentleman described the people of his State as being loyal to the United States. Some few men were still rebellious, but even those few were gradually getting more sensible, and there was not nearly so much bitterness now as three months ago. This he could see in his own circle of acquaintance. And what was the use, he wished to know, of talking about the Southern hostility to Northern men when anybody could see it was for the interest of the South, that it was absolutely a necessity for her, to invite capital and enterprise from all quarters? And Northern men, in thinking of the subject, ought to remember that the State of Louisiana was in reality opposed to secession from the outset. It was nothing but that cursed Democratic party which took the State out, and the honest men, the men of character and standing, did all they could to resist it, but unfortunately failed.

Another man who gave me his opinion of affairs in Louisiana was a Northern man by birth who had lived in Arkansas and Louisiana thirty years and more. When the war began he was a steamboat captain and pilot in New Orleans, and being, as he says, an outspoken man, was soon thrown into the parish jail for being a Unionist and a Lincoln spy. When the city was taken he joined the Federal army and served during the war as a soldier and as a pilot. His property was destroyed by the Confederate army, and since the war he has been endeavoring to earn his living by following his profession. This he finds impossible, and the reason, as he gives it, is the hostility towards Unionists which is felt by a large portion of this community. When Butler's order compelled the people of New Orleans to divide themselves into two classes, registered friends and enemies of the United States, three-fourths of the members of the Pilots' Association were enrolled in the list of enemies and were sent outside the lines. Now, after four years, they have returned, and the Pilots' Association is revived again. A list of pilots has been prepared by the association and is used by the inspector of steamboats for the Board of Underwriters. It is charged by my informant, and, whether mistaken or not, he attests his sincerity by preparing to bring the matter before the courts, that this list ranks the pilots not according to their ability, but according to their political opinions; that an unqualified pilot, if he was a registered enemy of the United States, is classed as a No. 1 pilot, but that a Unionist, no matter how well qualified he may be, is omitted from the list; that he has been informed by steamboat captains that they would willingly employ him, but that they are told that no boat in charge of a man whose name is not enrolled will be able to effect an insurance. Feeling sure, therefore, that there is a combination to keep honest men out of employment for no good reason whatever, he proposes to bring a suit for damages in one of the courts here, and has sent a petition to Washington setting forth the facts and praying for justice.

This person thinks that the men who fought in the Confederate army are honest in their professions of loyalty and wish for an enduring peace; but the great body of the people are, in his opinion, as rebellious as they were two years since. The men who are reasonable and desire to give up contention are kept in awe by the opinion of their neighbors. He mentioned what he considered the strongest of many instances of this kind which he had observed. On one occasion during the war he had befriended a young Confederate prisoner whose family he had known in former times. Recently, while travelling in the Washita country, he met the boy's father on a steamboat, and the old man, after some time, came over to him and returned thanks for his kindness. This he did in a hasty whisper, showing every sign that he desired those about him to remain ignorant that he had received or acknowledged favors from a Yankee. He would like to talk to Andy Johnson for one half hour, and he would prove to him that he ought to raise the number of regular troops to one hundred thousand men, and keep these States garrisoned for the next three years. If the troops were removed now no Union man could stay here a week.

I find the greatest diversity of opinion prevailing among the men with whom I have talked as to whether or not public opinion is growing more hostile to the North. I judge that the Northern men now here would, for the most part, think it not dangerous to remain after the troops are gone; and I think most of them would not expect their stay to be so profitable to them as it is at present. I speak of professional men and merchants. I believe there was but one of my many questions that received always the same answer. When I asked if there is any town in the State where they thought a man might, with safety to his life, publicly advocate, or be generally known to advocate, the propriety of allowing intelligent, educated negroes to vote, the reply was uniformly in the negative.

ENGLAND.

London, February 3, 1866.

The English people have a deep-rooted love for fine clothes and handsome equipages; and, considering what we pay for the blessings of monarchy, it is, I think, rather hard upon us that our royal family should live a more secluded life and exhibit less of external pomp than any court in Europe. If I were an English Bismark, my first advice to my royal master would be to spend money liberally and keep up a great display, and then I should certainly secure in his favor one instinct of the popular heart—not a high one, perhaps, but nevertheless very genuine. Next week, however, I shall have to say more about the great "crape or no crape" question. Indeed, this week dress questions have been the order of the day. The one solitary incident of the Parliamentary session thus far has been one concerning attire. After Mr. Denison had been nominated to the chair, Mr. Bright, somewhat to the astonishment of the House, rose and made an appeal in favor of members being allowed to dine with the Speaker in ordinary evening dress. At the state dinners of the Speaker nobody can be present who is not dressed in uniform, or in what is called the Windsor suit —a sort of livery worn only by civilians invited to the palace, or by footmen upon the stage. Quakers, I presume, have a conscientious objection to arraying themselves in braid and gold; and all sensible men must have a repugnance to making mountebanks of themselves; but still, the fact that you must either don the suit in question or deprive yourself of the pleasure of dining with the Speaker can hardly be accounted a serious grievance. If a Whig baronet of aristocratic connections had proposed the abolition of the "Windsor uniform," the proposal would probably have commended itself to the good sense of the House; but, coming as the suggestion did from Mr. Bright, it was regarded as part and parcel of a scheme to "Americanize our institutions," and condemned accordingly. So the only practical result of the member for Birmingham's appeal has been to ensure the court tailors of the continuance of a custom from which they derive no small profit. That this would be so, Mr. Bright must have known beforehand; and that, knowing it, he should have made the suggestion, is an evidence of that odd want of tact which renders him far more obnoxious to the governing classes than the unpopularity of his opinions. Mr. Cobden never went to the Speaker's dinners on account of the necessity of assuming a court suit; but then Mr. Cobden was too prudent a man to say anything about the matter.

As I anticipated long ago, the Government are still utterly at sea about reform. From whatever cause, there has been no strong demonstration of public feeling in favor of any extension of the franchise, and the Ministry cannot discover to what extent they can rely upon the support of the country if they are driven to dissolve Parliament on a reform question. As far as I can learn, their resolution is oozing away as the time approaches for action. Already there is a rumor that they do not intend to propose any bill till after Easter. In consequence, the opposition of the Palmerstonian Liberals to the idea of any reform at all is becoming more and more outspoken. The *Times*, after veering round day after day in its usual fashion, seems at last to have set its sails straight at the anti-reform tack, and the "moderate" Liberals are obviously inclined to follow its lead. The first open signal of defection has been given by Mr. Grenfell, M.P. for Stoke-on-Trent, who is described in Dod's "Parliamentary Hand-Book" as "a Liberal, and in favor of the extension of the suffrage, a redistribution of seats, and the ballot." This gentleman was invited the other day to attend a meeting in favor of reform, and declined doing so in a letter wherein he states openly that "nobody is really in earnest about reform," and that "he would rather see the Government and legislature devote their time to questions of administrative, judicial, military, or colonial reform—all loudly called for—than throw away their time in the pursuit of an object the attainment of which excites much fear and alarm." Mr. Grenfell is not a politician of much position, but he is a very fair type of the ordinary Palmerstonian Liberal, and his desertion of reform is certain to be followed by swarms of members of his class, if once the impression gains ground that the Ministry are not determined on decisive action. Many, too, of the advanced Liberals, to my knowledge, believe that the collapse of the Government measure would excite a degree of popular feeling which would facilitate the passing of a far more democratic bill than any dreamed of at present, and would, therefore, not be sorry to witness a complete *fiasco*, though they would do nothing to bring such a result about. In fact, from all indications, I should say reform stock was sinking rapidly in the political market. With its apparent decline, quidnuncs are prophesying the speedy break-up of the Ministry. Mr. Layard, it seems, has made up his quarrel with his colleagues, and took occasion at a public dinner at Guildford to express the highest confidence in Earl Russell's liberalism and the greatest respect for him as a statesman. Somehow or other, the grievances of the Under-Secretary have been removed. Rumor says that the permanent salaried Under-Secretary of the Foreign Office, the highest of the irremovable officials in the department, is about to retire upon a pension, and that Mr. Layard is to succeed him. If so, the sudden recovery of his confidence in Earl Russell is not so extraordinary.

I should recommend all persons who want to learn anything particularly unpleasant that can be said about England to read an article in the "Cornhill Review" called "My Countrymen." Its author, Mr. Matthew Arnold, the eldest son of Dr. Arnold, of Rugby, is one of those authors whose social reputation has always been higher than his general one. He is so very near being a great writer that his friends and admirers always think he is going to be one; and yet he has never got beyond what the French call a *succès d'estime*. An unsuccessful writer is always more or less a disappointed man; and all Mr. Arnold's later writings are impregnated with a sort of philosophical dissatisfaction with things as they are, such as might be entertained by an Epicurean sage who felt annoyed at the preference given by the public to Stoic teachers of far lower intellectual ability. Of late years Mr. Arnold has constituted himself the eulogist of French thoughts and literature and institutions as opposed to English; more, I think, unless I wrong him, because by so doing he can annoy his English readers than from any very profound admiration for the cause he espouses. Some months ago the *Saturday Review* attacked Mr. Arnold for his French proclivities in one of the pseudo-Johnsonian, educated spread-eagle articles for which it possesses a specialty. In this instance, however, the *Saturday Review* has found its match. The article in which Mr. Arnold retorts upon the critics, who accused him of indecency, seems to me the most elegant piece of stinging sarcasm which I have read for many a long day. No other living writer could have contrived to give bitter offence to so many different parties in the country, or to wound so many British prejudices in the course of so few pages. What amount of truth there is in Mr. Arnold's delicate inuendoes that we, as a nation, have fallen behind our age, have lost character abroad and strength at home, and are wrapt up in intolerable self-conceit, I may try to examine, if you will let me, on a future occasion. That there is a good deal of truth in it I should be the last person in the world to deny. All men who, like myself, have lived much abroad, must sympathize with Mr. Arnold in his intense disgust at the one perpetual burden of self-laudation that our public men and our public prints raise in honor of our practical good sense and our moral, social, and political superiority to the inferior races who occupy portions of the globe not bounded by the green seas. But, on the other hand, I very much doubt whether England is a whit worse in these respects than she always has been; and I also doubt whether a great portion of our strength and success is not due to this stolid, immovable belief in our own goodness and grandeur and excellence. No greater proof could be given of the depth of this faith than the success of Mr. Arnold's essay. People are amused with it, as they would be by an ingenious argument against the rule of three, or by a sparkling denunciation of the advantages of steam; but everybody treats it as a self-evident paradox. After all, Mr. Arnold ought to remember that even in the freest days of France no popular French publication would ever have dared to publish an essay by a French writer proving, or essaying to prove, that Frenchmen were in every respect inferior to Englishmen.

Chateaubriand's saying that Rome is the second country of all the world is so eminently true of Americans who have resided in the Eternal City, that I am sure all your readers who know Rome will feel something of a personal regret when they learn that Gibson is dead at last. How far he was a great sculptor is a point about which there is much difference of opinion even amongst his own countrymen; but he was an artist towards whom all lovers of the beauty of form must feel kindly, and he was a celebrity of that Roman city which all who know it love so well. The name of the "Caffè Greco" must surely recall to all its frequenters in bygone days, scattered as they may be over the world, the picture of the shrewd, shabby, kindly-looking old man who was pointed out to neophytes at that resort of artists as the most illustrious of Anglo-Roman sculptors, the last and worthiest disciple of the Canova school. No man cared less for high society or was less spoilt by the intoxication of success and the flattery of fashionable patrons of art. The only recognitions of his fame that seemed to touch him much were those which came to him from the English royal family. Just before he died a telegram of kind enquiry arrived from the Queen. It was given to him in one of his last lucid moments; and when they tried to take it from his dying fingers, he grasped it so tightly that he was allowed to retain and died holding it. In his death as in his life, in his strength and weakness, in his virtues and failings, there was never, I think, a more genuine Englishman than the dead artist, who, from a carpenter's apprentice, had become the most celebrated of British sculptors, and to whom for nearly half a century Rome had been a home and dwelling-place.

February 9.

On Tuesday last the Queen opened Parliament in person. But everything was done that well could be done to give a sombre character to the ceremony. The robes of state were not worn, but laid upon the throne and sat upon by the sovereign; the speech was read by deputy, without the slightest indication on the part of the lady in whose name it was spoken that she took any interest in the proceeding. And as to her dress, I can only say it was what Mary Stuart might have worn, if she had dressed for the part, on the day she was led out to execution. However, the general aspect of the scene was very bright; the House of Lords was crowded with "high-born dames" and "squires of every degree," and everything went off satisfactorily. The streets through which the Queen passed were lined with dense crowds, of a very respectable class. But considering that this was her first state appearance in public since Prince Albert's death, the reception was not nearly so enthusiastic as I should have expected. The Prince and Princess of Wales were far more cheered than the sovereign herself. And our newspapers have been wonderfully lukewarm in their raptures about the royal re-appearance. The truth is, that the more I know my own countrymen, the more I come to two conclusions. In the first place, there is no conceivable folly that we are not capable of committing; in the second place, anybody who reckons on our continuing consistent in our folly is even more foolish than we are ourselves. For a long time after Prince Albert's death, you would have thought from the tone of society and of our leading papers that the late Prince Consort was a second King Arthur, and that our loyalty to the Queen exceeded all bounds of common sense and even self-respect. In this assumption you would have been perfectly right; but you would have been perfectly wrong if you had supposed this outburst of loyalty was of a permanent character. We have heard of "Albert the Good," but we are weary of his name; and the popular sense of duty, which, I am glad to say, is still extremely powerful among us, has been irritated by the spectacle of a mourning inconsistent with the discharge of the duties of the mourner. At any rate, whether rightly or wrongly, the extraordinary enthusiasm created by the Queen's first dread bereavement has worn itself out, and the public has ceased to care for sentimental articles about "the royal widow." So this week our papers have been temperate enough in their descriptions, and, oddly enough,

the only outburst of exaggerated rapture about "our good Queen" which has come under my knowledge was contained in the pages of an Anglo-American journal recently established in London.

It is tolerably clear that for the present the question of reform must give way to more pressing considerations. On the first night of the session Mr. Stanhope declared, amidst the cheers of both sides of the house, "that reform might wait, and Ireland might wait, and Jamaica might wait; but that the cattle-plague could not wait." The debate on the address ran off into a cattle plague discussion, and no other subject could even get a hearing. The landed interest is always almost omnipotent in the legislature, when it happens to be united; and on the Rinderpest there is no diversity of sentiment between Whig and Tory landlords. The opposition obviously intends, as a political move, to bid for the support of the agricultural interest, by supporting the demand for an indemnity for the sufferers from the cattle-plague; and I doubt the Government having strength enough to resist the demand, if urged vigorously. Hitherto, every method of cure, including vaccination and homœopathy, has proved a failure, and the universal demand throughout the agricultural districts is for a complete suspension of all cattle traffic by vessel or by rail. If this demand is granted, the result will be that the meat consumers in the towns will have to pay an enormously increased price for meat; but, as a rule with us, the counties are stronger than the towns. Talking of the cattle-plague, Lord Frederick Cavendish, a young gentleman who, in consequence of his being the son of the Duke of Devonshire and the brother of the Marquis of Huntington, was selected to move the address, made the only joke, though an unintentional one, in the course of the first night's weary debate. Alluding to the royal speech, he gravely asserted his conviction that the expression of Her Majesty's sympathy would be a great source of consolation to the *victims* of the Rinderpest.

The only other memorable debate of the session so far has been a discussion on Ireland, in which The O'Donoghue moved an amendment, declaring virtually that Fenianism was due to the misgovernment of Ireland by England. The speech was an able and temperate one enough; and was replied to by the English speakers in a tone of unusual candor and moderation. But—and this is a point I think well worth noticing—the bitter attacks against The O'Donoghue, the imputations of disloyalty, the deriding of his arguments, all came from brother Irish members. Out of a House in which there are 105 Irish representatives, only 21 could be found to vote with the leader—now that Pope Hennessey is out of Parliament—of the Irish party. I quite agree with The O'Donoghue, as I think every fair man must do, that the existence of such an agitation as Fenianism, after we have held Ireland for centuries, is proof positive of some radical defect in our treatment of the sister kingdom. But as to what we ought to do. If Ireland were an homogeneous country filled with a population of one race and creed and language, it would be easy enough philosophically—however bitter it might be practically—to say that she has a right to self-government. But how, I want to know, can we legislate for a country, one-half of which considers the other half traitors and heretics? You in America know something of what it is to have to deal with an Hibernian population; and you ought, in common fairness, to have more sympathy for our difficulties than we can expect from French publicists, who lecture us about the "oppressed Celtic nationality." Mr. Pope Hennessey has lately been making a furious onslaught upon the Government for the severity with which the Fenian prisoners have been treated at Pentonville on their road to Portland. If, however, we had a right to convict the rebels at all by the verdicts of Irish juries, and if we had a right to sentence them at all to penal punishment, I do not see how we could treat them otherwise than common felons. Moreover, if this wretched business blows over, I have no doubt before long we shall have a general amnesty.

Politics and Parliament have pretty well occupied public attention during the week. We have had, however, another of those odd cases which seem to me the monopoly of England. Mr. Fitzgerald, a lad of eighteen, the son of the distinguished Irish Roman Catholic judge of that name, has just sued the school authorities of Oscott—the chief English Roman Catholic training school—for having expelled him without adequate cause. And so for three days our papers have been full of the momentous discussion whether young Fitzgerald did or did not promote an association at Oscott called the "Anti-Bunkers," and, if so, whether this school club was of a character inconsistent with his position while in "statu pupillari." Both the judge and the principal of Oscott are gentlemen well known in English society, and therefore the case excited immense interest over here; but to a foreign reader of our papers the whole thing must have seemed inconceivably small and petty.

PARIS GOSSIP.

PARIS, February 2, 1866.

THE Skating Club is becoming seriously uneasy at the prospect of losing all its trouble and outlay through the persistent mildness of the weather, and some of its members are proposing to build in its domains in the Bois de Boulogne, described in a former letter, an elegant structure, to contain halls for playing at nine-pins, billiards, croquet, etc., not forgetting that ingenious substitute for ice, a floor of glass, on which skating is performed by means of skates running upon casters. In this way it is thought that the members may contrive to get some amusement in return for their outlay, despite the unwelcome height of the thermometer.

Magnificent balls and routs are, meantime, the order of the day. The most splendid entertainment yet is the ball just given at the Prussian embassy to Prince and Princess Hohenzollern, who are making so long a stay at the Tuileries. The hotel of the embassy is a very handsome building, containing seven magnificent drawing-rooms, opening one out of the other and splendidly fitted up. These rooms, with others adjoining, were sumptuously ornamented with lustres and flowers, presenting a most brilliant *coup d'œil*, the orchestra of the ball-room being placed in a gay tent, ornamented in Oriental style, erected in a vestibule outside. The beautiful Countess of Hatsfeld, wife of the first secretary of legation—one of the many fair American girls who have, of late years, excited the ire of European mammas by carrying off the highest matrimonial prizes—was to have done the honors in the absence of Countess Goltz, wife of the Prussian minister; but as the Emperor and Empress suddenly notified their intention of honoring the *fête* with their presence, Princess Hohenzollern supplied the place of the absent lady. Their Majesties took part in the "Quadrille of Honor," and afterwards walked through the rooms, admiring the splendor of the scene The King of Prussia, informed by telegram of the presence of the Imperial couple, sent a telegraphic order to Count Goltz, directing him to present a bouquet to the Empress in the King's name. This order the count lost no time in obeying, and, having done so, transmitted by the same agency the Empress's thanks to the King. One of the ladies present, Madame de Pène (wife of the journalist who, it may be remembered, was challenged some years ago by all the officers of a regiment that conceived itself to have been insulted by an article of his, and whose recovery from the wounds received in that unequal duel was watched with so much interest by the European public), a very beautiful woman, who dresses with exquisite taste, is so wonderfully like the Empress Josephine that the Emperor exclaimed, on seeing her: "It is my grandmother—grown young again!" The Empress, in a dress of white tulle (she is in mourning for Prince Oddone, of Italy), with a splendid tiara and necklace of diamonds, looked very lovely; Princess Metternich sported an indescribable costume, more extravagantly eccentric than anything she has hitherto appeared in, and evidently enjoyed the sensation she created; the gay and rather "fast" Russian, Mme. Rimsky Kortchakoff, wore in her hair her famous peacock, whose spreading tail is entirely composed of precious stones of immense value, a curious, but by no means becoming, ornament; and the much-talked of Countess de Castiglione, who has been ill, and looks rather pale and thin, appeared again, after a retirement of a couple of winters, in the peculiar style of rigging for which she is famous, and which (when her dress is not composed altogether of transparent materials) may be described as consisting of very little in front, rather less behind, and nothing worth speaking of in the way of sleeve. The beauty and success of the fair impersonator of "Salammbo," "Egeria," and other airily attired heroines of romance and mythology, having secured for her an enemy in almost every one of the lady members of the fashionable world, the re-appearance of the eccentric Italian created a certain amount of sensation at the brilliant ball in question.

Another grand ball has been given at the Tuileries, where the dancing was kept up until four o'clock in the morning; in the absence, however, of the Imperial hosts, who always retire to rest a little after midnight. The ministers, the Prefect of the Seine, Count Walewski (who has just succeeded to the lamented Duke de Morny in the presidency of the legislative chamber), and all the other great dignitaries of the official world, are outrivalling one another in the splendor of their entertainments; and as all these personages occupy magnificent official residences and are allowed a handsome sum each year for the express purpose of "showing off," it will be readily understood that the spectacle presented by these gatherings is brilliant in the extreme.

The extravagance of the day in every branch of luxurious display is, in fact, so enormous and so general that one cannot help marvelling how it is kept up. The salaries of the official world explain the possibility of such outlay in the case of those who receive them; and some few of the great financial speculators have amassed such vast fortunes of late years that they

may spend largely without exciting surprise. Many members of the foreign colony, too, are known to possess great fortunes in their respective countries, and lavish expenditure on their part is naturally regarded as a thing of course. But what surprises all who have eyes in their heads is the magnificence of the legions of gay people who manage to live sumptuously, to keep carriages and horses and a number of expensive servants, to dress in the extreme of fashion (which feat now implies, on the part of the ladies, a total change of wardrobe every few days, and a constant succession of jewelry and other ornaments almost as costly), to go "everywhere," to give sumptuous entertainments in return, and to go off, when the extravagances of a Parisian 'season" have been exhausted, to the fashionable watering-places, where the cost of cutting a dash is almost greater than in Paris.

It is undeniable that much of the present unjustifiable and unreasonable outlay springs from the growing influence of the formidable phalanx of the "demi-monde," whose chiefs, in their "war to the knife" rivalry with the world around them, incessantly strive to outshine the wives and daughters of those for whom they spread their dangerous nets. The latter, furious at the insolent splendor of the syrens who are flaunting so ostentatiously at their expense, endeavor to outshine them in their turn; and the consequences of this rivalry are seen in the enormous inflation of every branch of vain-glorious expenditure which forms so prominent a feature of the day and threatens to exhaust the resources, as well as to depreciate the tone, of modern society. The danger of such a rivalry in expenditure is especially great in this country, because the French, being both envious and imitative by nature, are extremely unwilling to allow themselves to be outshone by one another; and thus the example of lavish outlay being given by those who are at the top of the social ladder is at once imitated to the extent of their possibilities by all below them. Because Princess de Metternich, one of the richest women in Europe, can afford to run up a bill of 80,000 francs for dresses in a few months at a single tradesman's, and because a great banker can give his wife 30,000 francs a month for the expenses of her toilette, all the womenkind of the region rush incontinently into an outlay for dress absurdly out of proportion to the means at their command. As for the leaders of that other world which is rapidly conquering from its enemy an unwilling recognition of its existence and its power, their principle of action seems to be to get all they can and to spend all they get. Three hundred thousand francs appears, from statistics recently gleaned by an authority in such matters, to be the average yearly "domestic" outlay of the leaders in question. They have elegant hotels, sumptuously furnished, full of pictures, statues, porcelain, and objects of virtu often of great value; an array of servants, and often keep ten or a dozen horses and six or eight elegant carriages. Their horses, which are generally of great value, are usually like their diamonds, of which they generally possess about 500,000 francs worth, though one or two have diamonds worth three times that amount, to say nothing of other jewelry, the gift of "friends." These luxurious beauties never sleep in sheets worth less than three thousand francs a pair; never put on a gown worth less than five hundred francs, exclusive of trimmings, while the lace alone on many of their dresses costs from five to twenty thousand francs; they think nothing of putting eight or ten thousand francs' worth of the most exquisite lace on a dressing-gown, spend about six thousand francs a year on shoes, about as much more for bonnets, ten thousand francs for washing, and about ten francs a day for perfumery. One or two of the queens of the mercenary realm in question possess stones and trinkets that might almost rival the crown jewels of the various European monarchies, with single necklaces worth a million of francs, and the other ornaments on a similar scale of value, and spend, as, for instance, the well-known ex-opera-dancer, Clotilde, a million of francs yearly on their housekeeping and toilette.

The domestics of the Parisian grandees, who have enrolled themselves for some time past on the lists of "The Society of Upper Servants," have just had their annual ball, given, with great *éclat*, in the Salle Valentino. This society, founded under the Emperor's auspices by one of his head valets, who became its first president, has been instituted for the relief of its members in cases of sickness, each member paying an entrance fee of ten francs, and an annual subscription of thirty francs. It has a regularly constituted board of officers, holds regular meetings, and invites its members every year to a grand ball of the most brilliant description. The guests, consisting exclusively of members, and attired for the most part in garments of the newest fashion, the *spoglia* of masters and mistresses, alight under an elegant awning, deposit their wraps in a well-organized *vestiaire*, and are received at the entrance of the ball-room by the president and syndics of the society, all wearing rosettes of white satin. Each member contributes ten francs to the expenses of the ball, and is admitted by ticket only; a sharp inspection being brought to bear on all arrivals, and any interloper being speedily discovered and politely conducted back to the street. The fountain in the middle of the hall is surrounded with flowers and seats; the lustres and hangings are of the most approved description; the orchestra excellent, and the dancing is kept up with great animation until about seven o'clock next morning. So many of the guests being unable to come until very late, as they are obliged to await the return of their masters and mistresses from *their* dissipations, the subscribers would be prevented from "getting the worth of their money" if the ball were brought to an end at an earlier hour. Besides the ball-room, there are other rooms for cards and promenading, and a *buffet*, which, I am assured, is a very *recherché* affair, where delicacies of every kind are dispensed at "moderate prices."

Patti, who is in greater favor than ever, and who is probably, at this time, one of the happiest as well as luckiest little mortals to be found on the planet, has just signed an engagement for St. Petersburg at the rate of 10,000 francs per night! The public of Paris seems determined to get its favorite married; first, it was asserted that the bridegroom expectant was a Russian prince; next, that the young *diva* had promised her hand to a Spanish marquis; and now it is positively asserted that she is on the point of marrying the heir to a great French title. Patti, whose slight figure and almost infantile manners make her look younger than she really is, has already attained her twenty-third year; but, being a Spaniard, she will not be legally of age until she is twenty-five, a point which is of great importance in the singular position in which she is placed, as, in virtue of a contract made by her relatives with M. Strakosch, her brother-in-law, her gains, as long as she remains under age, are divided into three shares, of which one goes to her relatives, one to M. Strakosch, and the third is invested at good interest to join her own fortune. Of this fortune, as of her own actions, the popular songstress will only be mistress when of age.

STELLA.

Correspondence.

"IN HOPES THE DAY WILL SOON COME."

TO THE EDITOR OF THE NATION:

I enclose you a letter received by one of our family from a relative residing at the place indicated by its superscription. I presume that many such are received in the North by sympathizers and relatives, but that it may be only in rare instances that *you* get possession of them.

I would merely say that the writer of the letter is a man of above thirty years of age, born and brought up under the shadow of free Northern institutions, having gone to Texas when twenty-one years of age.

Very respectfully, —— ——.

Macon Bibb county Georgia
Jan 18th 1866

DEAR UNCLE—As an opportunity has presented itself for me to write to my relations again I thought I would not put it off any longer. I have wrote to my father and cant get an answer. I should like to know what has become of him. I recived a letter from him just before the war commenced and have not heard any thing since. I left Texas the spring of 1861 in the first regiment that went to the Army and served as a rebel soldier four long years. I tryed to make as good a one as any boddy. we failed in our undertaking which I am verry sorry for. the reason for it is I lost six likley negroes by our being over powered. I shall not give up that we were whiped. I received a wound in my right hand which caused me to have but little use of it. Southern people was once a happy people but now I think we are disgraced as long as one of us lives. it is hard for us to give up all we had. I am a strong believer in slavery for the negroes wont work unless they are in bondage. I have been over seeing negroes ever since I came south. you may think hard of me for being a rebel but I thought it my duty to try and save my property if I could. I received a letter from cousin William while I lived in Texas. I answered it and never heard from him again. I am ancious to hear whether he lives in Oregon yet or not. I am going to stay in Georgia this year then I am going back to Texas. the reason I did not gow soon after the surender my hand was to sore to travel. most of the doctors wanted to cut it off. I was sorry a good many times that I did not let them have their way but now I am glad I had my way about it. we had a great stir up amongst the negroes on New year's day. they wanted to divide the land and stock for their former masters but they are getting satisfied with their freedom without any property. I am in hopes the day will soon come when all of the U S soldiers will be disbanded then we will have our way some of the time if not all. as it is we rebs are afraid to speak above a whisper. I am a single man yet and expect to stay so untill I can make another start in life. there has been a great deal of marrying this winter and still continues. this leaves me in good health hoping when this note comes to hand it will find you and family in a thriving condition. give my kindest regards to all the family. pleas accept my most earnest wishes for the continuance of your happiness and prosperity and belive me most truly yours —— ——

Literature.

LITERARY NOTES.

NOTHING shows the increasing wealth of this country in literary property of all kinds more than the growing importance of the auctioneers' announcements connected with it. A new and enterprising firm, Messrs. Leavitt, Strebeigh & Co., who have recently succeeded Mr. James E. Cooley in the management of the New York publishers' trade-sales and the general auction business connected with works of art and literature, have just put forth a bulletin of their sales for the coming spring. Among them are several very important collections—as the library of the late Mr. Daniel Embury, of Brooklyn, a gentleman of fine taste and culture; of Mr. J. B. Fisher, of Austerfield Farm, Camden County, N. J., renowned as an assemblage of books almost unique for splendor of condition; and several others, including, in May, a large selection from the library of Daniel O'Connell, with his book-plate, autographs, etc. There are, besides, two very choice and extensive sales of coins and medals, both American and foreign, gold and silver, etc., and the extraordinary collection of autograph letters and documents formed by the labor of a long life by the late Mr. J. K. Teft, of Savannah, Georgia. Compressed as much as possible, the sale of this collection will occupy an entire week. For letters, papers, and documents illustrating American history and biography, it is probably unrivalled, nor have foreign notabilities been neglected in gathering from every quarter the personal relics of great men. For a single volume, containing a complete collection of autographs of the signers of the Declaration of Independence, mounted, illustrated with portraits, etc., and bound in quarto, two thousand dollars were offered some time since, and we shall not be surprised to see it bring more than that amount at public competition. A similar volume includes the autographs of the signers of the Constitution of the United States. The catalogue now preparing forms a valuable list of original documents, etc.

—Among late French publications appears a version of Alexander L. Holley's well-known "Treatise on Ordnance and Armor," published by D. Van Nostrand. It is entitled "Traité d'Artillerie et des Cuirasses. Traduit par F. X. Franqel," and is brought out in three parts. It is so comparatively rare for the French to import their science from other nations that the compliment becomes a marked one when it refers to a work on the very subject that has engaged the most devoted attention of the Emperor himself and all the men of science connected with military matters. The value of Mr. Holley's book, as an authentic and impartial record of scientific experiments and their results, is well understood at home and abroad, and in this light its importance was no doubt speedily discovered in France.

—We have already expressed our sense of the curiosity and value of Mr. Wheeler's "Dictionary of Noted Names of Fiction," etc., and are glad to hear that its utility has been recognized abroad, by its publication in the well-known series, "Bohn's Standard Library," whose general high character has ensured its very extensive circulation. The book, however, requires much revision, excision, and addition before it can be accepted in a permanent shape. Though highly creditable to the writer's industry and research, it confirms us in the opinion that the so-called "British Classics," the standard authors of the last century, are now scarcely ever read. For instance, here is Mr. Wheeler, who should have them at his fingers' ends. He never can have read Sir Charles Grandison, or he would not call Miss Harriet Byron "an accomplished woman of high rank," when she is clearly not a woman of rank at all. The *Guardian* must be a terra incognita to one who says "Nestor Ironside" was a name under which Steele, "*assuming the character of an astrologer*, set up the *Guardian*;" and he can know as little of the *Spectator* who calls Sir Andrew Freeport a member of the club "under whose direction the *Spectator* was professedly published;" and numerous other instances might be given. Perhaps it is too much to expect an intimacy with Pierce Egan's "Life in London," as we do not find "Tom," "Jerry," or "Bob Logie" in the dictionary; but even less recondite authorities would show that "Charlies" was not the "sobriquet given to the London police force," but to the superannuated parochial night watchmen (the police were called "Robin Redbreasts" from their red waistcoats), and the derivation from King Charles I. "wants confirmation." In turning over the pages of the dictionary, one of the oddest blunders we note regards an author as popular as Dickens. We envy Mr. Wheeler the treat he has in store of making acquaintance with the "Old Curiosity Shop," when he will learn that "Master Humphrey" is not the infatuated gambler, the grandfather of Little Nell, but a character in the introductory chapter, now suppressed by the author. That *Abel Drugger* is a character in *Ben Jonson's farce* (!) of "The Tobacconist" must be difficult to demonstrate, as he never wrote anything with that title, though Francis Gentleman patched one up from "The Alchemist." That the contributors to "Blackwood's Magazine" "embrace Wordsworth, Coleridge, and Landor," among other eminent literary men, will be news to the editors of their writings. Mr. Wheeler is generally very strong in folk-lore and popular fiction. He has missed, however, the true derivation of "Queen Mab," whose identification by Mr. Francis Douce is very curious and interesting.

—It is a feature of the American publishing trade worth noticing as an evidence of national movements and tendencies, that a popular book intended for large circulation, and more especially educational works, has no sooner been successfully launched before the public than the question of a translation into German arises. A gentleman, most conversant with the business, assures publishers that there is at present a large and rapidly increasing demand for school and academic text-books and works of general literature in the German language. By what seems a curious anomaly in the copyright law of this country, the translation of any book into a foreign language is free to all, the law placing no hindrance in the way and affording no protection to the owner of the original. Most of the illustrated histories of the war, lives of President Lincoln, etc., are thus published in duplicate in the two languages, usually by the owner of the English text, who endeavors to forestall any intruder on his domain. So extensively recognized is the business that the gentleman referred to above, Mr. E. Steiger, of 13 North William Street, has organized a bureau of competent translators, prints at his own presses, and supplies to publishers use editions in German of every book that is desired. He has been employed for very many in this capacity with great success.

—The total number of new books published in England during the past year, 1865, is summed up as comprising 4,952 titles. Deducting from this the American books introduced to the London market, and works recorded merely on account of some change in their form or reduction of price, 4,496 remain as original additions to the previously existing stock of literature. As there is no compulsory return of the statistics of publishing, and very little attention given to obtaining the names of books issued in the provinces, or outside of the great centres of the business—London and Edinburgh—the real number may be probably taken with sufficient accuracy at five thousand. In the United States it would be still more difficult to arrive at a complete enumeration of new books, as local publishing increases in every part of the country and its productions are very often only to be found in the immediate neighborhood where they are produced. The law enacting that a copy of every book on which copyright is claimed must be deposited in the library of Congress, at Washington, must, however, afford authentic material for estimating the literary activity of the country, when its provisions are fully understood and carried out. To turn from quantity to quality, the permanent accessions to the library acquired during the past year are said to be fully up to the average. They include several books destined to a lasting place in public estimation, as Mr. Grote's "Socrates and Plato," J. S. Mill's "Examination of Sir William Hamilton's Philosophy," Palgrave's "Travels in Arabia," Lecky's "History of the Progress of Rationalism in Europe," Smiles's "Lives of Boulton and Watt," and many others.

—The intrusion of religious societies established for a specific purpose in the general business of publication is a grievance of long standing in England, and has lately called forth much correspondence in the literary papers. There are there in operation the two great corporations, the "Society for the Promotion of Christian Knowledge" and the "Religious Tract Society," including among their various supporters partisans of both the Church and Dissent, and each working with large capitals supplied by public beneficence. Not content with supplying cheap devotional and religious books, they now bring out, in superior style, illustrated works, books on natural history, general literature, etc., sometimes with a slight tinge of "seriousness" thrown over them in remembrance of their original objects. In this country organizations of the same character exist in closer connection with special religious bodies, as the Methodist Book Concern, mentioned last week, and the two similar "Boards" representing the divisions of the Presbyterian Church. They have restricted themselves much more to the purposes of their foundation than their English brethren, though even here there is a tendency to infringe upon the regular business of private establishments. By many, the great diminution of the publications in this country of religious books, a noticeable fact in the trade experience of the last twenty-five years, is attributed to the interference of these concerns. It is a great question for examination whether private enterprise does not more legitimately and economically answer the purposes aimed at, than

these elaborate organizations, which, in their desire of making a profit sufficient to cover their large expenses, are constantly tempted to outstep their regular boundaries.

—A valuable service has been performed for old French literature by M. Gustave Brunet, whose new work, "La France Littéraire du 15me Siècle," is just ready to appear. It gives a catalogue, with critical notices, etc., of every book known to be printed in the French language from the introduction of typography in France, by Ulric Gering at Paris in the year 1470, to A.D. 1500. M. G. Brunet, through a curious coincidence of name and pursuit, is often confounded with the veteran bibliographer, J. C. Brunet, the fame of whose "Manuel du Libraire" has penetrated to every country where books are known and valued. M. Gustave Brunet is a native of Bordeaux, and is an accomplished and elegant writer, in contrast to his namesake, who somewhat sternly confines his attention to the technicalities of the science of books. M. G. Brunet has shown, by his articles in MM. Didot's "Biographie Générale," a knowledge of early English books and authors exceedingly rare in France. His "Dictionnaire Bibliographique," forming one volume of the Abbé Mignes' great collection of encyclopædias, is the fullest of interesting facts and most readable of all the works on the subject. A *catalogue raisonné* of English books of the Elizabethan period, somewhat similar in design to the work of M. Brunet, has been undertaken by Mr. Carew Hazlitt and will be published in monthly parts by John Russell Smith. It is not so strictly confined to one period, however, and will be mainly devoted to the light literature of the day, and the drama, the very branches that, it must be said, have almost monopolized the researches of English literary antiquarians, through the halo of association that clusters round the name of Shakespeare, to the undue neglect of other departments of our early literature.

—A controversy, conducted with some asperity, has been maintained in England respecting the well-known commodious "Tauchnitz" series of reprints of modern English books, which enjoy a large circulation on the Continent of Europe, and are preferred by many persons here to the American reprints of light literature for their handier shape and clearer typography. It is well known that these editions are always printed with the author's consent, and for a pecuniary consideration in his favor; but some one (perhaps a disappointed applicant) asserts in print that the price so offered is, in most cases, merely nominal, and actually a cunning device of the Baron Tauchnitz to ensure the writer's sanction for his reprints at the very lowest possible expenditure of cash. These charges have called forth the baron's agents, and, in the opinion of third parties to whom the question was referred, facts completely disprove the accusation and do credit to his liberality. It is proved that, for sales of two books alone, in 1865 he paid respectively £225 and £150. These sums show a very fair share of the profits of the continental market, while the gratification they afford to an author confirmed in the possession of the usufruct of his own brains is not to be measured by money ratios alone.

MR. WHITTIER'S NEW POEM.*

As the village newspaper, with its tidings of the great world outside, to the snow-bound people described in Mr. Whittier's exquisite idyl, so the poem itself to us, long prose-bound. The heaven of song was not clouded for ever, after all, and some of the immortals are still living. Here is drink from Castaly, breath from the meadows of Arcadia, and we know both flavor and fragrance, in spite of the travesty of Piscataqua and Amesbury. Nay, Memphremagog even shall not make us doubt the divine source of the stream.

If the poem has any incident, it is very slight, and it lies in the clear current of thought and feeling, like some bit of rock in the course of a creek; the water plays round and over it, breaking into a louder warble, and dancing back to it, a little, without much pause. The poem is essentially descriptive and meditative, and it is the poet's graceful art to give his landscape human interest and his musing the charm of narration. It tells of a snow-fall in the country that buries the old farm-house in pathless drifts; of the boy carving the avenues to the road; of the circle round the evening hearth; of the talks, the tales of childhood, dissolving into age's tearful reminiscences of them; of faces glowing and fading in the pathetic verse, while the poet speaks of the lost as they were and the lost as they are; of the children's happy slumber, broken next day by the jolly tumult of the farmers, gathered from far and near, and come to open the road-way, with multitudinous teams and sledges. It tells of these things very simply, and makes them delightful with as little effort as the flowers bloom.

The description of the snow-fall, and of the estrangement of all familiar things by the fallen snow, is fine and faithful, but does not equal, it seems to us, in wintry feeling, the picture of the succeeding day, when—

> "The sun through dazzling snow-mist shone,
> No bell the hush of silence broke,
> No neighboring chimney's social smoke
> Curled over woods of low-hung oak.
> A solitude made more intense
> By dreary-voiced elements:
> The shrieking of the mindless wind,
> The moaning tree-boughs swaying blind,
> And on the glass the unmeaning beat
> Of ghostly finger-tips of sleet."

Then, for a scene suggested by a few strokes, bold and sharp, we think this glimpse of the night following that gloomy day to be one of the finest things in poetry:

> "The moon above the eastern wood
> Shone at its full; the hill-range stood
> Transfigured in the silver flood;
> Its blown snows flashing cold and keen,
> Dead white, save where some sharp ravine
> Took shadow, or the sombre green
> Of hemlocks turned to pitchy black
> Against the whiteness at their back."

This is a glance out of window, from the room where the great fire on the hearth

> —— "beat
> The frost-line back with tropic heat;
> And ever, when a louder blast
> Shook beam and rafter as it passed,
> The merrier up its roaring draught
> The great throat of the chimney laughed.
> The house-dog, on his paws outspread,
> Laid to the fire his drowsy head;
> The cat's dark silhouette on the wall,
> A couchant tiger's seemed to fall;
> And for the winter fire-side meet,
> Between the andirons' straddling feet,
> The mug of cider simmered slow,
> The apples sputtered in a row,
> And close at hand the basket stood,
> With nuts from brown October's wood."

The poet figures himself once again one of the group that sat before this fire, and recalls its simple and homely joys, so rich for all their scantness; and loses himself in contemplation of

> "The dear home faces whereupon
> The fitful firelight paled and shone;"

and with the tenderest touch, as he recalls them all, portrays the character of each member of the charmed circle. All this is the more interesting because it is the poet's own early home which he describes, and it is the poet's mother, father, sisters, and kindred with whom he makes us at home. It is done with the most natural and winning grace, and with an affection and tenderness for them that seem also to include the reader. Of these sketches that of the mother and that of the maiden aunt we think the best, for though they are done with less elaboration than that of the younger sister, they embody far subtler feeling and truth. Of the loss of our beloved, we can only say that we live in the hope to meet them again, and Mr. Whittier can say no more of this sister (though he says it ever so beautifully and pathetically), whose whole being seems summed, to him, in the fact that she was, and is no longer, with him. But the mother has the charm of a type, with her wondrous vast experience and knowledge, which impress childhood much more than the more reticent paternal wisdom, and give an epic grandeur to the tales she tells of Indian warfare and backwoods life:

> "So well she gleaned from earth and sky
> That harvest of the ear and eye,
> We almost felt the gusty air
> That swept her native wood-paths bare;
> Heard the far thresher's rhythmic flail,
> The flapping of the fisher's sail,
> Or saw in sheltered cove and bay
> The ducks' black squadron anchored lay, (*sic*)
> Or heard the wild geese calling loud
> Beneath the gray, November cloud."

The aunt, whom

> —— "fate
> Perverse denied a household mate,"

and who kept all the sweetness of her girlhood and the sacred illusions of youth along with its memories, is hardly less an actual presence, we say, than this mother, whom we all know. Neither the uncle nor the schoolmaster is so well realized to our imagination. As to that other guest, the woman of fierce pride and will, who sat with the awed country-folk that night, by their quiet fireside, and who now wanders, a religious fanatic, somewhere in Syria,

> ——"startling on her desert throne
> The crazy Queen of Lebanon
> With claims fantastic as her own,"

how the nature of this woman, thrown against the greyish ground of the

* "Snow-Bound. A Winter Idyl. By John Greenleaf Whittier." Boston: Ticknor & Fields. 1866.

New England life, glows and burns like a bit of crimson color among the cool tints of a twilight landscape!

"A certain pard-like, treacherous grace
Swayed the lithe limbs and drooped the lash,
Lent the white teeth their dazzling flash;
And under low brows, black with night,
Rayed out at times a dangerous light;
The sharp heat-lightnings of her face
Presaging ill to him whom Fate
Condemned to share her love or hate.
A woman tropical, intense
In thought and act, in soul and sense,
She blended, in a like degree
The vixen and the devotee,
Revealing with each freak or feint
The temper of Petruchio's Kate,
The raptures of Siena's saint.
Her tapering hand and rounded wrist
Had facile power to form a fist;
The warm, dark languish of her eyes
Was never safe from wrath's surprise."

We find the lurking humor, which peers out here and there in the poem, a very delightful element of it, and count the story of that

"Gentlest of skippers, rare sea-saint!
Who, when the dreary calms prevailed,
And water-butt and bread-cask failed,
And cruel, hungry eyes pursued
His portly presence, mad for food,"

was providentially saved from being eaten by his crew through the appearance of a school of porpoises, to be hardly surpassed in delicacy even by the picture of literary destitution in the snow-bound farm-house:

"And poetry (or good or bad,
A single book was all we had),
Where Ellwood's meek, drab-skirted muse,
A stranger to the heathen Nine,
Sang, with a somewhat nasal whine,
The woes of David and the Jews."

This "Winter Idyl" is the most artistic of all the poems of Mr. Whittier. The only other poem comparable to it in grace of feeling and expression is "Maud Müller," which lacks its harmonious self-agreement. It is marred by none of the poet's peculiar faults; not even by one of those amazing inadmissible rhymes which he sometimes permits himself; and if his later manner seems to owe much to the great master of manner, we are not the less grateful for the beauty of his poetry, and we accept it as one of the most genuine autographs of our most purely American life. Such a poem as this winter idyl has an original value in its way as great as the "Biglow Papers" in an utterly different way; and it would not be a matter of surprise to us, some hundred years hence, to find that Whittier, who seemed at first to have an exceptional vocation to sing only the poetry of a great moral and political movement, had, in his riper and deeper growth, been truest of all our poets to whatever was worth poetizing in our time and country.

A NOBLE LIFE.*

Noble lives have always been a sort of specialty with the author of "John Halifax." Few novelists, in this age of sympathy with picturesque turpitude, have given us such flattering accounts of human nature, or have paid such glowing tributes to virtue. "John Halifax" was an attempt to tell the story of a life perfect in every particular; and to relate, moreover, every particular of it. The hero was a sort of Sir Charles Grandison of the democracy, faultless in manner and in morals. There is something almost awful in the thought of a writer undertaking to give a detailed picture of the actions of a perfectly virtuous being. Sir Charles Grandison, with his wig and his sword, his high heels, his bows, his smiles, his Johnsonian compliments, his irreproachable tone, his moderation, his reverence, his piety, his decency in all the relations of life, was possible to the author, and is tolerable to the reader, only as the product of an age in which nature was represented by majestic generalizations. But to create a model gentleman in an age when, to be satisfactory to the general public, art has to specify every individual fact of nature; when, in order to believe what we are desired to believe of such a person, we need to see him photographed at each successive stage of his proceedings, argues either great courage or great temerity on the part of a writer, and certainly involves a system of bold cooperation on the reader's side. We cannot but think that, if Miss Muloch had weighed her task more fairly, she would have shrunk from it in dismay. But neither before nor after his successful incarnation was John Halifax to be weighed or measured. We know of no scales that will hold him, and of no unit of length with which to compare him. He is infinite; he outlasts time; he is enshrined in a million innocent breasts; and before his awful perfection and his eternal durability we respectfully lower our lance. We have, indeed, not the least inclination to laugh at him; nor do we desire to speak with anything but respect of the spirit in which he and his numerous brothers and sisters have been conceived; for we believe it to have been, at bottom, a serious one. That is, Miss Muloch is manifestly a serious lover of human nature, and a passionate admirer of a fine man and a fine woman. Here, surely, is a good solid basis to work upon; and we are certain that on this point Miss Muloch yields to none in the force of her inspiration. But she gives us the impression of having always looked at men and women through a curtain of rose-colored gauze. This impediment to a clear and natural vision is nothing more, we conceive, than her excessive sentimentality. Such a defect may be but the exaggeration of a virtue, but it makes sad work in Miss Muloch's tales. It destroys their most vital property—their appearance of reality; it falsifies every fact and every truth it touches; and, by reaction, it inevitably impugns the writer's sincerity.

The volume before us contains the story of an unfortunate man who, born to wealth and honors, is rendered incompetent, by ill-health and deformity, to the simplest offices of life, but whose soul shines the brighter for this eclipse of his body. Orphaned, dwarfed, crippled, unable to walk, to hold a fork, a book, or a pen, with body enough to suffer acutely, and yet with so little that he can act only through servants upon the objects nearest to him, he contrives, nevertheless, to maintain a noble equanimity, to practise a boundless charity, and to achieve a wide intellectual culture. Such is Miss Muloch's noble life, and this time, at least, we do not contest her epithet. We might cite several examples to illustrate that lively predilection for cripples and invalids by which she has always been distinguished; but we defer to this generous idiosyncracy. It is no more than right that the sickly half of humanity should have its chronicler; and as far as the Earl of Cairnforth is concerned, it were a real loss to the robust half that he should lack his poet. For we cannot help thinking that, admirable as the subject is, the author has done it fair justice, and that she has appreciated its great opportunities. She has handled it delicately and wisely, both as judged by its intrinsic merits and, still more, as judged by her own hitherto revealed abilities. She has told her story simply, directly, and forcibly, with but a moderate tendency to moralize, and quite an artistic perception of the inherent value of her facts. A profound sense of the beauty of the theme impels us to say that of course there are many points in which she might have done better, and to express our regret that, since the story was destined to be written, an essentially stronger pen should not have anticipated the task; since, indeed, the history of a wise man's soul was in question, a wise man, and not a woman something less than wise, should have undertaken to relate it. In such a case certain faulty-sketched episodes would have been more satisfactory. That of Helen Cardross's intimacy with the earl, for instance, would probably have gained largely in dramatic interest by the suggestion of a more delicate sentiment on the earl's part—sensitive, imaginative, manly-souled as he is represented as being—than that of a grateful nursling. Such a feat was doubtless beyond Miss Muloch's powers—as it would indeed have been beyond any woman's; and it was, therefore, the part of prudence not to attempt it. Another weak point is the very undeveloped state of the whole incident of the visit of the earl's insidious kinsman. If this had been drawn out more artistically, it would have given a very interesting picture of the moves and countermoves about the helpless nobleman's chair, of his simple friends and servants, and his subtle cousin.

Good story-tellers, however, are not so plentiful as that we should throw aside a story because it is told with only partial success. When was more than approximate justice ever done a great subject? In view of this general truth, we gladly commend Miss Muloch as fairly successful. Assuredly, she has her own peculiar merits. If she has not much philosophy nor much style, she has at least feeling and taste. If she does not savor of the classics, neither does she savor of the newspapers. If, in short, she is not George Eliot on the one hand, neither is she Miss Braddon on the other. Where a writer is so transparently a woman as she and the last-named lady betray themselves to be, it matters more than a little what kind of woman she is. In the face of this circumstance, the simplicity, the ignorance, the want of experience, the innocent false guesses and inferences, which, in severely critical moods, are almost ridiculous, resolve themselves into facts charming and even sacred, while the masculine cleverness, the social omniscience, which satisfy the merely intellectual exactions, become an almost revolting spectacle. Miss Muloch is kindly, somewhat dull, pious, and very sentimental—she has both the virtues and defects which are covered by the untranslatable French word *honnête*. Miss Braddon is brilliant, lively, ingenious, and destitute of a ray of sentiment; and we should never dream of calling her *honnête*. And, as matters stand at present, to say that we prefer the sentimental school to the other, is simply to say that we prefer virtue to vice.

* "A Noble Life. By the Author of 'John Halifax, Gentleman.'" New York: Harper & Brothers. 1866.

LITERATURE IN LETTERS.*

On the volume before us the publisher's art has been well bestowed. The idea of the book is a happy one, and the editor shows himself a man of cultivation and of taste. From an immense mass of literature, amounting, as he says, to many hundred volumes, Dr. Holcombe has selected one hundred and ninety-seven letters from the pens of about a hundred different writers, all persons of note in their own departments, and all English and American with the exception of Mme. de Sévigné and Humboldt. The list of authors includes all the best known names in literature, and the selections are characteristic of each. The topics are so numerous and diversified that they must be massed rather than classified; but in a book of this nature precise classification is no advantage. The editor arranges his materials under four heads. Book the first contains letters of "gossip, society, and manners." Book the second comprises letters of "pleasantry, sentiment, and fancy." Book the third embraces sketches of "nature, art, and travel," in letters. Book the fourth takes in letters on "public history," some of them very interesting and curious. Book the fifth is devoted to "literary biography, anecdote, and criticism." Book the sixth and last includes letters of "moral and devotional reflection," from Oliver Cromwell all the way to F. W. Robertson; from Dr. Doddridge down to Thomas Jefferson.

The title, "Literature in Letters," is not as suggestive as it might be. "Life in Letters" would be better; for life it is, public and private, in cabinet and field, in parlor and closet, in saloon and sick chamber, in boudoir and prison-cell, in throne-room and cabin. When we say life in letters, or literature in letters, or anything else in letters, provided the letters be the best of their kind, we say, life, literature, or what not, in the most charming form under which they can be presented; and not in the most charming form, merely, but in the most entertaining and instructive form. We believe in letters, when they deserve the name of letters, more than in dissertations, essays, histories, for they contain the essence of dissertations, essays, histories, undiluted and "undoctored" by scribes and commentators. The letter is a genuine production of the mind in its creative moments. It is born of genius, if it has any birth worthy to be spoken of or recognized at all. It is written to some dear friend, or to a person who for the time being stands in an intimate relation; it is called forth, therefore, either by an impulse of affection, or by a special private demand, which gives flavor to the thought, limits the message contained in it to one person, and gives a confidential character to the writing. It goes folded and sacredly sealed, or did before the labor-saving envelope came in vogue. No publisher is to see it; no printer is to lay upon it his grimy hand; no one is to scrutinize it save the one who is already prepared for what it contains.

It is therefore written in sincerity. Why should it not be? Why write letters at all unless they are written sincerely? Their very purpose is to say what the writer is moved to say in privacy. There is no temptation to put on airs, to take a position, or to strike an attitude. The great man says in his letters what he would not dare to say in his speech or his book. He unburthens his mind. If he knows anything, it comes out in his correspondence; if he feels anything, it comes out; if he thinks anything, it comes out. The letter is a written soliloquy, or aside, uttered to a trusted ear. The discovery of a fresh heap of letters revises the judgments of history. The letter is most precious for another reason: it is oftenest the production of a leisure hour, when the mind, in an undress as it were, with no thought of care or business, indulges in an overflow of chat on matters near the heart. It belongs to an age of leisure, at least to an age when leisure is possible, and obtainable, and allowable without eternal disgrace. The gentlemen and ladies who have given us the contents of this charming volume doubtless enjoyed such leisurely privilege. They belonged to another and a quieter generation than ours. None of them are alive now; most of them have been long dead; the most recent of them is Mr. F. W. Robertson, of Brighton; and he passed his days in a small, stupid town, aloof from men, surrounded by very uninteresting people, and driven by the sheer necessities of his position to reach out by letter after living souls with whom he could have no speech. What Londoner or New Yorker would ever have found time for those painfully conscientious epistles on points of literature and philosophy? Theodore Parker, it is true, wrote letters interesting, confidential, long, and innumerable, and he lived in Boston, with London, Berlin, and Paris sitting in his study; but Parker was a prodigy; he had leisure for everything, for he made time; he really had all the time there was. But we doubt if literature will ever be found in letters again. People do not write letters in our days; they scribble notes in characters that would satisfy Chesterfield, who said that no gentleman ever wrote a good hand. Letter-paper even is out of date; the art of folding is forgotten; seals are banished; gluten has superseded wax. The dainty sheets of billet-paper suggest broadly enough that people have nothing to say to one another; that they must not say it if they have, for nobody wants to hear it. The time is short, and business is business. Brains, too, are brains. If a man has an idea—how it may be with women we would not presume to say—but if a man has an idea, it is worth so much money; he cannot afford to put it into a letter; he keeps it for a book, a pamphlet, a newspaper article, which the editor will pay for and the public will praise. The letter receives the refuse of his mind, not the essence of it. We make literature out of newspaper clippings; we overhaul the journals; and a very different sort of literature it is likely to be from that which private correspondence furnishes the materials for. The least interesting portion of modern memoirs is usually the epistolary portion. That is meagre; or, if not meagre, is dull and heavy, as if it was prepared when the man was sleepy and bed-time was near at hand.

We turned over the handsome leaves of Dr. Holcombe's volume with ever new sensations of surprise. When did these rulers, statesmen, scholars, poets, historians, gentlemen, and ladies of society find time for such elaborate and brilliant compositions? Were their lives slow, after all? Had they less to do than we have? Were their days longer? Did they rise earlier in the morning? They certainly did not retire later at night. Was there less demand than there would be now for their literary wares? Were magazines and journals less importunate or less pecunious? Were wits worth less money in the market? Did no market offer for the lighter creations of the mind which now go to make up the contents of manifold weeklies and monthlies? Were they less taciturn than we are? We suspect the secret of epistolary copiousness lies somewhere about this point.

They were less taciturn. The interchange of letters is a social matter peculiar to people who meet frequently, or live a great deal in one another; who have strong personal sympathies, and find communication a necessity. The oftener people see one another, the oftener they write letters to one another. People who live solitary never write letters, for letter-writing is a species of conversation, and when conversation is not cultivated as an art, letter-writing is not. A tongue-tied generation like ours cannot wield a fluent pen.

There, for instance, is this beautiful letter of Daniel Webster's about morning. We take it as a good illustration of our theory, because the letter itself is a genuine product of the epistolary spirit, and we are in a condition to appreciate all the circumstances under which it was penned. Mr. Webster was a very busy man, of many grave affairs public and personal, of active mind, interested in literature, statesmanship, politics. But his letter covers three of these generous pages. It is a beautiful, sententious monologue, held forth to a very charming woman of his acquaintance in Boston. It starts off at once on its theme with graceful abandonment to his feeling. It does justice to morning in all its bearings, poetical, practical, philosophical, romantic; calls up David, Milton, Shakespeare, and even finds time to wonder how the first morning struck Adam in Paradise. We heard this letter read by fair lips some twenty years ago, and marvelled that a man like Mr. Webster should have deliberately put so much fancy away in an envelope. No public man would think of writing such a letter to-day The secret of its composition is revealed by the time and place thereof, as given by Dr. Holcombe—Richmond, 1841, five o'clock A.M. You see it was done a good while ago; far back in the dawn of our history; before modern existence began; when newspapers were a rarity, short and far between, and magazines were not; when books were by no means so plenteous that the mind could not gasp out a thought between their appearance; and friends were not so pre-occupied with their separate cares that never a vacant hour came for talk. Mr. Webster was writing in Richmond, too, stupidest of stupid towns, when he had nothing else to do, and must naturally have felt a longing to communicate with his dear friend in some civilized part of the world. Add to all this that amazing item, the five o'clock in the morning, and the problem is solved. Who gets up at five o'clock in the morning? Whoever does it must certainly stand in need of his friends.

But we intended saying something about Dr. Holcombe's book, and we have scarcely allowed ourselves space for a word. This volume is just the volume to have by one for the little tid-bits of idle vacancy that come almost every day. A few minutes are sufficient for a letter, and each letter is a complete whole in itself. Each letter has a touch of character in it, if not a touch of genius. Each has an occasion and a peculiar interest attached to it from the circumstance that called it forth. Each has a choice bit of description, a piece of sentiment, a reflection, a touch of wit or satire, an inner view of some event in private history, a sketch of social life and manners from one who lived in the midst of them, or a disclosure of hidden

policies from an actor behind the curtain. There is something in the book for every mood. One cannot open it at the wrong place; for wherever he may open he will come upon instruction and entertainment. The volume seems to be edited, too, with good taste and with modesty, as if the editor knew what place in literature it was fitted to fill and was perfectly satisfied with it; and that, in our ambitious days, is no small merit.

DE TOCQUEVILLE AS A LEGISLATOR.*

THE ninth and concluding volume of the "Works" of De Tocqueville, which we have now before us, will be found by most readers hardly less interesting and instructive than any other of the collection. If it does not contain any of the author's renowned masterpieces, it carries us through an unusual variety of topics, political, historical, and literary, over all of which the warm and placid rays of his philosophical and humane spirit are profusely scattered. It presents to us De Tocqueville, entire, as he was in the period of his maturity and vigor, from the time when he had, as the author of "Democracy in America," occupied so high a place among the foremost thinkers and writers of the age, almost down to the fatal day—the second of December, 1851—which sent some of the most active minds of France into an involuntary retirement, in which our philosophic statesman found no rest, but sufficient *otium cum dignitate* to write his "Ancien Régime." In academical and parliamentary speeches or short addresses, in literary and legislative reports (as for instance on Cherbulliez's "Démocratie en Suisse," on the abolition of slavery in the French colonies, on prison reform, on the affairs of Algeria, and on the revision of the constitution), and in independent elaborations on penal colonies, on emancipation, on the history of Cherbourg, this volume re-introduces us to De Tocqueville, the writer and orator, philosopher, legislator, and minister of state; the independent enquirer so full of moderation; the aristocrat by birth, habits, and tastes, whose task of life it is to study the laws, and to co-operate in smoothing the ways of political equality; the friend of democracy in the New World who trembles at its advent—under different auspices—in the Old; the son of legitimists, but republican by conviction, who sincerely defends the constitutional throne of Louis Philippe; the staunch partisan of liberty and opponent of centralization who above all abhors demagogism; the zealous advocate of the rights of the poor who sees in socialism the worst kind of servitude; the ardent religionist with whom unlimited freedom of conscience and the separation of church and state are the dearest of political tenets; the Catholic by education to whom England and the United States are models of a religious society; the man of the minority who is always charitable and gentle in judging the leaders of the majority; the writer and speaker who charms us by his diction without ever sacrificing simplicity or lucidity to flowery ornaments. But it is, we believe, the parliamentary part of the speeches contained in this volume, scanty as it is, which shows him, as a man of active thought, in best relief. We shall here call the attention of our readers to a few extracts which we regard as either particularly characteristic or historically interesting.

It was full six years before the revolution of 1848, and nearly ten before Louis Bonaparte executed his *coup d'état*, that De Tocqueville, in a speech in the Chamber of Deputies on the state of the country, in which he pointed out the general relaxation of public morals, a growing desire for office, the indifference of the people amidst attacks on society, the pernicious effects of a governmental policy which addressed itself to the worst, instead of to the better, impulses of the citizens, and the equally demoralizing effects of political coalitions based not on principle but on interest, among others spoke the following words:

"Yes, gentlemen, it is necessary that somebody should declare, and that the people, who hear us, should learn, that the representative system is in peril. The nation, which feels its inconveniences, does not sufficiently appreciate its advantages. . . . And liberty, too, let me be permitted to say, is in peril. Undoubtedly, when we have the entire use, and sometimes, I will grant, witness the abuse, of liberty, it may appear puerile to say that it is in peril. It is true that these perils are not immediate, but allow me to affirm that it has been by this mode of action that nations in all ages have lost their liberty. To be sure, I see no one man great enough to become our master; but I say—and may my country tolerate my words respectfully—that thus have all nations proceeded when preparing for themselves a master. I know not where he is, or from which quarter he is to come; but he will come, sooner or later, if we long continue to follow this road. . . . Now, gentlemen, if all this be true, what is the result? It is that the public spirit in this country, assailed in its very principle, is threatened with destruction. It results that instead of opinions, which, as I have just said, might serve as a solid basis, be it to an opposition, be it to a government, we meet only with a collection of petty private interests, mobile and transient, which can afford no point of support to anybody, neither to the government nor to the opposition, and which necessarily surrenders the whole of society and the government which rules it to a perpetual mobility, from which nothing can spring but anarchy and universal ruin."

In two powerful speeches in opposition to the foreign policy of M. Guizot, delivered in 1843 and 1845 respectively, he displays no less sagacity, and considerably higher talents as a parliamentary orator. Both are keen and outspoken in their criticisms, though polite and even deferential in tone, and replete with political reflections of a high order; which, however, want of space forbids our reproducing here, though we cannot refrain from quoting the concluding words of the second speech, in which he showed the tameness and colorlessness, the timidity and the fear of a policy which characterized Louis Philippe's foreign efforts:

"What state is there in Europe, little or great, which believes that in any affair, small or great, but from which difficulties might arise, France would step forward, would remain at the breach, would pursue her enterprises to the end—enterprises, let me add, most just and most necessary? Where is the state, where can you find a cabinet, which would indulge (forgive the expression) in such dreams? There is none. It is known everywhere that you will take nobody's side, that you will not do anything. Well, if it is possible in this way to secure the tranquillity of a reign, it will never be possible thus to establish the permanency of a dynasty. None has ever been founded in this manner. Dynasties are not thus planted in the soil. No, gentlemen. Sooner or later my country will see that what I say here is demonstrated by experience."

Thus spoke De Tocqueville years before the revolutionary tempest of February burst upon France. One month before that event, in the debates on the proposed address to the king, at the opening of the session of 1848, he gave utterance to his forebodings in a more definite form. Now, for the first time, he is convinced of the correctness of his fears, for he sees that his impressions are shared by others. "A certain uneasiness, a certain apprehension, has taken hold of men's minds. For the first time in sixteen years the feeling, the instinct of instability, that precursor of revolutions, which often announces and sometimes produces them, has grown in the country to an alarming degree." The cabinet itself admits the existence of that impression, but it attributes it to some particular causes, to political accidents. He is afraid symptoms are taken for the disease, and that the latter is more widespread and more profound. It has its seat in the public mind, in the public morals. The ruling class shows signs of growing depravity, political as well as private. The governed or laboring classes are imbued with ideas hostile not only to certain laws, to a certain ministry, to a certain government, but to society itself. He is convinced that French society is sleeping on a volcano. The government, by its unmanly, surreptitious, unconstitutional, and immoral way of regaining or extending power, by making use, for this object, of "the passions, the foibles, the interests, and often of the vices" of men, has in no small degree contributed to bring about this threatening condition of things. There is always some accidental reason, an event or a man, pointed out in history as the cause of the overthrow of a ruling class; but "the real, efficient cause which makes men lose their power is their becoming unworthy of wielding it." The ancient monarchy in France was not overthrown by the deficit, by the oath in the tennis-court, by Lafayette, or by Mirabeau. No; "the ruling class, by its indifference, by its selfishness, by its vices, had become incapable and unworthy of rule." He then adds:

"Do you not feel, by a kind of instinctive intuition, which cannot be analyzed, but which is sure, that again the soil of Europe trembles? Do you not feel—what shall I say?—a revolutionary wind moving through the air? Nobody knows where this wind rises, whence it comes, or whom, mark me well, it will carry off; and in such times you remain calm in the face of the degradation of public morals—the word is not too strong.

"I speak here without bitterness; I speak to you, I believe, even without any party promptings; I attack persons against whom I feel no anger; but I am bound to tell my country what is my profound and decided conviction. Well, then, my profound and decided conviction is that public morals are degenerating, and that their degradation will lead you, in a short time, very short, perhaps, to new revolutions. Does the life of kings hang on threads more substantial and harder to sever than those of other men? At this moment have you the certainty of a morrow? Do you know what may occur in France a year, a month, or even a day hence? You know it not; what you know is that the tempest is on the horizon, that it advances towards you; will you allow yourselves to be surprised by it? Gentlemen, I implore you not to do so—implore, not ask you merely. I would fain sink on my knees before you, so real and so alarming does the danger appear to me; so strongly am I convinced that to signalize it is not to have recourse to a vain form of rhetoric."

It certainly was not, yet the majority whom De Tocqueville thus addressed allowed themselves to be taken by surprise. The eruption of the volcano did take place a few weeks later, burying the chamber, the ministry, the throne under its lava. France was convulsed by agrarian contests. In September of the same year we hear the orator addressing another national

* "Œuvres complètes d'Alexis de Tocqueville. IX." Paris. 1866.

assembly, the constituent, but, without having changed principles, he has changed the *rôle*, the position. He is no longer applauded by the left, as heretofore, but by the right and the centre. He speaks against the "right to labor," which has been proposed to be inserted in the new constitution. In June following, De Tocqueville spoke to the legislative assembly, as minister of foreign affairs, amidst passionate interruptions from the left. The policy he defended was certainly no less tame and timid than that which he assailed in the times of Guizot. It would be hard to say whether it was more justified by circumstances. At all events, it did not lead to the end aimed at—the preservation of liberty. De Tocqueville's worst forebodings had not been exaggerated. The master came.

ELOCUTION IN THE SCHOOLS.*

THE book whose title is given below is one of a large class. There are "speakers" innumerable, or "speech-books," as the school-boys more accurately call them, all containing selections in prose and verse, and almost all a preliminary essay on elocution, with rules and pictorial illustrations of gesture.

Of this book about sixty pages are devoted to the preliminary essay on elocution. It appears from some "Suggestions to Teachers," which come first, that the book is not intended to be used "without a master." That is well. We know of "Latin without a master," French, Greek, English, German, fencing, painting—all those are possible studies; but elocution? No; so far as elocution is a thing to be studied, it is less a matter of rule than of feeling, less a science than an art. There are rules that can be given, principles that should be understood, maxims worth knowing, but the manual that would contain all these in their best form would still be but an insufficient guide to the whole art of oratory. We are happy to agree with our author in this; but if this book is to be used by a class under the guidance of a teacher, there is much in it that might with advantage be omitted. Such advice as this, for instance, could hardly be given to a class like a rule in arithmetic, to learn by heart, and is surely unnecessary as a hint to the teacher:

"Advance, retire, or change, with ease, except when the action demands energy or marked decision. Adopt such positions only as consist of (*sic*) manly and simple grace, and change as the sentiment or subject changes, or as you direct attention (*sic*) to different parts of the audience."

And with the greatest advantage might be omitted all the pictures of boys making different gestures. If these are intended for boys to imitate, say before the looking-glass, they can only do mischief; if for any other purpose, they are simply of no value or interest. They are wretchedly drawn, so badly that but few of them give any clear idea of the gestures which it is intended to represent, and, so far as we can get at the gestures intended, they are falsely conceived and without meaning or propriety. One or two of the simplest might, on some occasions, be used as directed; but there is no distinction pointed out between one and another, nor is it possible to show that many of them might not be used in the directly contrary sense from that intended. What does it amount to—a drawing of a boy with his feet apart, his right arm stretched out, with hand open, and his left arm behind him and straight, entitled "Animated Gesture, No. 1?" Or this of a boy with right arm half raised in a knock-that-chip-off-my-shoulder attitude, called "Defensive?" Is it expected that a boy will learn from these how he ought to gesticulate when animated or on the defensive? It is really unnecessary to discuss them; there is no meaning to be found in them, no system unites them, no principles are explained or enforced by them; they are merely a disfigurement of the book. It is not as if it were impossible to analyze gesture, which has, indeed, been well analyzed and reduced to a perfectly intelligible and simple system, the knowledge of which will save anybody who knows it a world of trouble when he wants to study oratory in earnest. But in this pictorial review of gesture we find no hint even at the primary and essential doctrine that gesture ought not to be descriptive; on the other hand, the tendency of this would be to lead boys to act and impersonate what they ought only to indicate.

The proposed drill on the elements of sound is good, well calculated to give a better utterance and a voice more under control to those who pursue it.

The division of quality of voice into pure, orotund, guttural, aspirate, and tremor is not without usefulness, and is referred to in the notes to the selections in prose and verse. But the notes themselves are generally very weak, because vague, because teaching nothing. "High, aspirate, long pauses—*imagine the scene and adopt such expression and gesture as will portray it to the listener.*" Exactly so; why not print the clause we have italicized at the head of every page and leave out the useless notes? It would be well, for instance, to save the book from the ridicule it will get from smart boys when they read this note on page 123:

"*a* slow; voice slightly tremor; with as much variety as would be given by an old man in the circumstances. *b* change the voice; endeavor to give the full but subdued voice of a faithful slave. *c* raise both hands."

There is more of it on the next page, but that will suffice. It would be easy enough to find ridiculous things scattered through this book, but we have no such wish. We know the difficulty of writing a good and practically useful manual of oratory; but it is possible to do it, and at all events nothing should be done in that direction unless it can be much better done than this.

The selections are not always wise. It is well to take modern pieces, and pieces the student will enjoy; but the compiler of such a book should remember that it is not a book of elegant extracts he is making, but a collection of pieces for students to learn oratory with, a collection of "good pieces to speak." A worse piece to speak, or one that boys will blunder over more hopelessly, than selection XIII., "The Drummer's Bride," we do not remember to have seen. The notes at the foot of the page will help the poor boy to go as crazy as the lunatic in the poem, if he tries to attend to the "music of the sub-vocal M," and "shriek this impersonation," and do all the other things he is told to. This bad imitation of Poe is not the worst poem in the book, either, at least for a boy's speech; "The German's Bell" and "The Frenchman and the Flea Powder" certainly are worse, and "On the Shores of the Tennessee" wholly inappropriate and not to be properly spoken by any boy alive.

Sheridan Knowles took the pains to write a debate for his pupils to deliver, three or four on each side of the question, Was Cæsar's crossing of the Rubicon justifiable? Many collections of poetry have been made within a few years. It is reserved for some teacher of elocution to compile a good speech-book, a thing the schools need sadly.

A BIRD THAT MIGHT SING, BUT WON'T.*

WHEN it is known that the "course and consequences of the late civil war" are discussed in two out of the eighteen chapters, and in about a hundred out of the four hundred and forty pages of Mr. Foote's book, it will hardly be consulted with high expectations by those who would gladly penetrate the secrets of rebellion. The author has wasted a great deal of paper in an effort to disprove the irrepressible conflict announced by Mr. Seward, being quite as confident as Mr. Buchanan that continued compromising would have staved off the crisis. He asks Northern readers to throw away their time over this precious argument, around which he spins his wordy web of personal opinions and reminiscences, eking out his own material with liberal quotations from the political speeches of Webster, Calhoun, etc. Once, according to his own account, a most devoted Union-saver, afterwards simply "an insurgent who has voluntarily come within the military lines," he now assumes the *rôle* of the magnanimous patriot, who, having been a sport of fortune, desires to be charitable to all his former enemies, and conceal his complacent egotism by frequent and unlimited laudation of others. We shall not track him in his historical meanderings from colonial times to the present day. In 1846, he says, there was no probability that abolition could be effected by all the agitation of the period. Up to that time the irrepressible conflict was a myth. In 1848, if we understand him, the seeds of the discord just terminated were sown, quite accidentally, at the Democratic Convention in Baltimore, by William L. Yancey, on the one hand, and the Barnburners, on the other. Fillmore bridged the impending breach with the compromises of 1850, and if he had continued in office; if Mr. Pierce and Mr. Buchanan had never been elevated to the Presidency; if Clay and Webster and Calhoun had lived; what has been might not have been. It is amusing to listen to Foote's reiteration that Pierce was elected on a "finality" platform! There was no excuse for the thing not staying put And yet nothing can be settled that is not right.

In all these preliminary chapters there is a plentiful lack of information and an abundance of that which is stale and out of date. When we have reached, as we think, the inside view which is so provokingly postponed, Mr. Foote responds, with the needy knife-grinder,

"Story, God bless you! I have none to tell you."

But he warns us pregnantly that "the time is coming when it will be safe

to disperse much of the mystery which now veils the past. When that time shall have arrived, the curtain which conceals certain transactions of enduring interest will be doubtless uplifted by the hand of some man who will dare to speak *the truth, and the whole truth, both as to men and their acts.*" At present he modestly declines informing us how he came to join the secession movement, the aim of whose leaders, by the way, he states to have been to "participate prominently in dominating over the widespread affairs of both the eastern and western hemispheres." For the rest, we are told that the scheme of disunion was long before secretly prepared, but not how long; that the State-rights doctrine was an utter failure when sought to be carried out in the Confederacy; that Davis was a stubborn, supercilious despot, under whom no liberty existed from the Potomac to the Rio Grande; that Benjamin's integrity was not without blemish; that Mallory, Memminger, and Northrop were utterly incompetent to hold the offices they did; that Seddon was tyrannical towards the people, fawning towards his master, and guilty of the most corrupt and soulless practices for his own aggrandizement; that ten-minute rules and secret sessions were Davis's instruments in managing the Confederate Congress; that the most despotic measures were introduced by the ultra State-rights advocates;—which we do not learn for the first time. Mr. Foote agrees with General Jordan, that Davis's retention of unworthy subordinates and generals, and his direct interference in military operations, were the causes of disaster and ultimate defeat. We suspect that the ex-senator also believes that, had he had his own way, and ousted Davis from the Presidency, he might have saved the Confederacy as he had often saved the Union.

We congratulate Mr. Foote on having advanced somewhat since his peacemaking proposition to Mr. Seward that slavery should definitely cease by January 1, 1900, and that all negroes born after 1890 should be free-born. There is not only sense but earnestness in his exhortations to the South to "preserve the newly enfranchised race from all possibility of being hereafter resubjugated," and, for the future concord and safety of the whole population, to do away effectually with "all serious inequalities in civic rights." He is inclined, it is true, to side with the President in asserting the right of the several States to regulate suffrage for themselves; but he denounces, in unsparing terms, that mock freedom which is bestowed without admission to the courts and the witness-box. For so much of assistance in reforming the temper of the South, we can afford to endure the windy disquisition to which it is appended. In every other respect—as a biography or an historical exposé—the work is valueless.

MR. TUCKERMAN'S CRITERION.*

This volume contains twelve essays on a variety of pleasant topics, ranging from inns to sepulchres, from actors to doctors, from newspapers to bridges. They are slight in construction, and they are intended rather to amuse and entertain the reader than to instruct him with philosophy or reflection. They give to him the accumulations of wide reading and of various experience, and are full of literary illustration and anecdote. They show, like the other volumes on which Mr. Tuckerman's reputation as an author has been founded, his fondness for discursive treatment of the subjects upon which he writes, and they display alike a receptive and impressible mind and a kindly disposition. The want of force or originality of thought is supplied by a cordial appreciation of excellence in others, and by a general good sense and good feeling, The book is one which may give pleasure to many readers.

We are tempted to find fault with a tendency on Mr. Tuckerman's part to accept commonplaces as truths, and to substitute a plausible statement for an exact or profound opinion. There is, too, a somewhat loose mode of arranging his materials, so that the effect of many of his pages is that of the ragged patchwork of a compilation rather than the beautiful and orderly mosaic of a genuine literary composition.

Occasionally Mr. Tuckerman falls into errors which, in a writer of so much culture, are a little surprising. For instance, in his first essay, on page 6, in discourse about taverns, he says that "Clement's Inn was the scene of that memorable dialogue between *Shallow* and *Sir John*." Now Clement's Inn was no tavern, but one of the inns of court; nor was it the scene of "that memorable dialogue." On the contrary, the dialogue to which Mr. Tuckerman undoubtedly refers was the one between *Justice Shallow* and *Silence* which took place in the court before the justice's house in Gloucestershire, when *Shallow*, speaking of *Cousin William*, says, "He must then to the inns of court shortly: I was once of Clement's Inn, where, I think, they will talk of mad *Shallow* yet.' *Sir John* afterwards comes in, and *Shallow* again refers to the time "when I lay at Clement's Inn."

So, too, on the next page, Mr. Tuckerman says, with amusing inconsecutiveness, "The author of 'Peter Wilkins' resided for a time at Clifford's Inn, and Dr. Johnson frequented all the taverns in Fleet Street." But Clifford's Inn, we repeat, had no more resemblance to a tavern than the Hôtel de Rambouillet has to the Hôtel du Louvre.

Other slips of this sort occur now and then, but we have no disposition to pick flaws in a book which leaves one with so kindly a feeling toward its author as this.

THE MAGAZINES FOR MARCH.

The "Atlantic Monthly" starts with the third instalment of passages from Hawthorne's note-books, containing some charming "studies" made in an excursion in Maine in 1837. Some of the sketches are admirable, and the very commonplaceness of the subjects, the frequency with which we all of us light on just such scenes and people every time we leave home, gives one an increased sense of the advantage which a genius has in his rambles over the rest of the world.—"An Old Man's Idyl" is an excellent specimen of that kind of verse which every editor receives nowadays in great quantities, and which the conductor of a popular magazine since defunct (the magazine, we mean) once told us he bought by the pound, and kept a stock of on hand. It is not positively bad; there are several pretty things in it, a vein of very pleasing sentiment running all through it, and a good jingle in it, such as Hungarian spurs make in a waltz; but, then, it is hardly poetry, and it certainly is not prose. There are, we venture to say, ten thousand young women north of Mason and Dixon's line who can write verses in which men walk with their darlings by the rivers of life, with the burthens of being weighing lighter on them than a linnet's feather, and love's sweet miracles throwing mantles of joy over them which outlast time, and with sounds like marriage chimes growing up out of the rosy meadows, etc., etc.—A "Ramble through the Market" is a rather loose description of Quincy Market, in Boston, interspersed with some not very profound observations on cookery and digestion.—"The Freedman's Story" is concluded.—"Nantucket" describes very pleasantly a fortnight's visit to that remarkable island, which the writer describes as "the gem of the ocean without the Irish, which he considers an improvement"—a blasphemous speech which he would not have ventured on in New York. We commend him to the attention of Mr. B. Doran Killian, or whichever of the Fenian officials it is who is charged with the chastisement of Saxon impudence.—The "Snow Walkers" is a charming article, describing the habits of the various little animals which leave their tracks on the winter snows in wood and meadow. The fox, the partridge, the dormouse, the squirrel—all have their winter life described with a graceful touch. Even the skunk is made to look attractive, and we learn that his secretion has some repute as an eye-water.—We have in the "Amazonian Picnic" a rather realistic sketch of an excursion made by some members of Mr. Agassiz's party on the Amazon.—"Dr. Johns" has reached the forty-ninth chapter.—"Communication with the Pacific" preaches a new route to the Pacific, through Montana from St. Paul, through the Big Hole Pass, and down the Columbia River to Puget's Sound.—Mrs. Stowe replies, in one of the best of her "Chimney Corner" papers, to the criticisms of a writer in the *Evening Post*, who maintained that it was the proper business of women who could afford it to look well and cultivate the graces. She maintains that married women in America would retain their good looks longer if they did more housework before they were married, which is true. But then housework is, for some reason or other, so exceedingly disagreeable to all women, even when the house is their own, that we see no great chance of a general resort to it by those who can by any possibility avoid it. Sweeping a room or cooking a dinner is probably as repulsive a form of exercise as could be found, valuable as the results might be. These are undoubtedly things that every woman ought to know how to do, but then nothing will induce women to do them habitually except sheer necessity. For any particular kind of exercise to be generally adopted, and to produce any marked effect on the health of a large class, it has to be in itself agreeable. We could never get men to strengthen their muscles by raising the dust in a dirty parlor, or perspiring over meats and confectionery in a hot kitchen, or even chopping wood, and, in our opinion, it is vain to expect women to submit to this ordeal when their circumstances enable them to avoid it.—"Poor Chloe," said to be a true tale of slave-life in old Massachusetts, and the ninth chapter of "Griffith Gaunt," make up the number.

"Harper's Monthly" opens with an illustrated article entitled "In and Around Richmond," *temp.* McClellan's and Grant's campaigns against the

rebel capital. Of course it is from a Southern hand, but is none the less pleasant to read for what it has to tell us—little, it is true, beyond a few picturesque reminiscences. All will subscribe to the meaning of the somewhat intricate sentence, "Had the South evinced, as developed, the same aptitude for manufacturing industry before as during the war, it would probably never have occurred." The tail-piece, "Ruins at Richmond," in which a Federal sentinel and three little colored boys are the principal objects, we incline to regard as mildly satirical. It is significant that, odious as the Harpers have become throughout the South by their loyalty to freedom, it is to them that such men as General Jordan, Senator Foote, and the writer of the present article, come for a hearing.—"The Burrowers at Home," a lesson in natural history, profusely illustrated, is preceded by Jean Ingelow's "Sand-martins," which, not alone because it is borrowed fruit, is by far the most delicious poetry of the number. "Summer Longings" is mediocre, and "The Cumberland" will "roll" neither on nor under the tongue. In "Battle Memories" there are some good verses under the title of *Port Hudson;* but *Before the War* and *Gettysburg* are laudable prose measured off into unjustifiable stanzas.—"The Second Life of Washington" has a ministerial flavor about it, and is rather fantastical in working out the notion of the *post-mortem* influence of the Father of his Country. In view of the malign effects of the site of our capital on the legislation of the past half century, and of the proposition now pending in Congress to remove it to some point nearer the centre of the continent, it is hazardous to exclaim: "What a power that metropolis has been to the nation! and what foresight he who gave it its name showed in his choice of the seat of Government!"—"What Hope Bell found in her Stocking" was an engagement ring.—A chapter from Harper's "Pictorial History of the Great Rebellion" gives a succinct account of the seven days' battles on the Peninsula, with abundant foot-notes referring to or quoting both Confederate and Federal authorities. The admirers of General McClellan, who are now equally the admirers of General Lee, will be pleased to learn, from their parallel reports, how lightly the latter esteemed the ability and truthfulness of the former. The conclusion is impartial enough, and approximately correct: "Never in all history was better fighting, and never worse generalship, on both sides."

"Beadle's Monthly" is, in more senses than one, "a journal of to-day," as it styles itself, having reached only its third issue. It follows as closely as it can in the wake of "Harper," though as yet *non passibus æquis.* The March number has illustrated articles on "The North-west Passage by Land," taken from an English work, on the barometer, and on finger-rings. We infer that the poetry is native—even, we apprehend, to the grammar of the line,

"When who *could* I love but Tom Blake?"

to which the answer, "Lindley Murray," might seem impertinent—and the rather entertaining description of the oil regions. The rest is hardly worth the determining whether it be "original" or "selected."

In concluding its second volume, the "Catholic World" announces that the next and all succeeding numbers will be open to original contributions. In the March issue we find, indeed, but a single article—"The Birthplace of St. Patrick"—which is not manifestly a selection, and even this may be. There are two translations from the French: "Positivism," a review of the doctrines of Comte, Littré, and Taine; and "The Last Attempt of Charles II. to Emancipate the Catholics of England." "California and the Church," from the "Dublin Review," is partly based on Mr. Hittel's "Resources of California," noticed in No. 27 of The Nation. A very amusing contrast is presented between the Spanish and what the "Review" is pleased to call the Yankee baptisms of localities and settlements. In this way *Santa Cruz* and *Yankee Doodle, San Pedro* and *Hell's Delight, San Paolo* and *Git Up and Git, Buena Vista* and *Bob Ridley Flat,* are brought in juxtaposition. The superficial inference, however, must not be insisted on too strongly. Pithole will figure more respectably in history than Holyrood Palace; and besides, the sonorous Spanish does not always embalm, even in California, the most spiritual notions. *Monte Diablo,* that famous landmark to the voyager to *El Dorado,* is not far from synonymous with *Hell's Delight.*

The best of the stories in "Our Young Folks" seems to us Miss Mary N. Prescott's "A Pair of Shoes." "The Nutcrackers of Nutcracker Lodge," by Mrs. Stowe, is in her happiest vein, but the children will not comprehend it so well as their mothers and fathers. The moral of this burlesque on "Young America" is much more effective than that of "The Disobedient Crow." The illustrations are in the main well executed, but, for the life of us, we can't make right the perspective in the cut on page 161.

Fine Arts.

PHOTOGRAPHY AS A HANDMAID OF PAINTING.

Photography has been used to multiply representations of works of fine art almost as much as to portray human countenances. Statuary and other works of sculpture have been continually reproduced in this manner. Statues and groups were favorite subjects for the very first stereoscopic slides. These were indeed for a long time almost the only alternative with the geometric figures in perspective of white lines on black ground, which accompanied the early instruments; and even now, when a stereopticon is exhibited in a darkened hall, it is some statue or group which causes the greatest delight among the audience. Sun-pictures of statuary are, in fact, a very important means of studying fine art, and a very pleasant way to be brought into contact with fine art, and, for all those many people who have not sculpture within easy reach, a very much needed assistance. But photographic renderings of pictures are much less happy and, therefore, of much less value. Every one who buys or looks at such things will have noticed how few of the many little photographic representations of noted pictures are taken at first hand from the pictures themselves, how large a majority are from engravings. For ten years past every traveller in Europe has loaded himself with such little hints at the motives and meanings of great pictures in Venice and Florence—all taken from engravings. The business itself has become of great commercial importance, and the copies have a certain inferior artistic value because they are generally or often taken from proof impressions of the engravings to be copied. Few persons will buy an "artist's proof" for a hundred dollars when they can get a tolerable print for fifteen; but many will prefer a photograph from the proof to the fifteen-dollar print, and this preference is certainly confirmed rather than weakened by the still lower price of the photograph; so that photography from pictures, through the medium of engravings, is an important minor application of fine art. Why has it become so? Because works of color do not photograph well; because a painting in full color passes through the camera and comes out of it a ghost, or rather a caricature of itself.

The photograph will not take color, and scientific experimenters are trying to make it do so. But it also misrepresents colors, assigning to them amounts of light and shade to which they have no claim, turning dark into light and light into dark, to the destruction of intended harmonies. Every picture of any merit has a system of light and shade as well as of color, and its system of light and shade is put out of balance and order by the false report of the camera. Light yellow, for instance, takes darker than a blue many shades darker. The flunkey in *Punch,* who shows the carte-de-visite of himself to the housemaid, has experienced the trouble, and answers her admiring exclamation, "Law, Thomas! it 's the wery moral of yer," with "Yes, it 's a pretty thing; pity the yellow of the uniform comes out so black!" Goupil & Co. publish as No. 381 of their "Galerie Photographique" a fine photograph of that picture by Florent Willems, "Au Roi!" of which we spoke three or four numbers back. In the photograph, the young man who is said to be a portrait of the artist, the belated *convive,* whose glass is being filled, appears dressed in a much darker color than, for instance, does his *vis-à-vis,* the guest with his back to the window. But the picture shows this latter to be in blue, certainly not lighter than the brilliant red of the other's doublet. The wine-cooler in the lower right-hand corner of the picture is gilded in the painting; in the photograph it seems to be japanned black. The red frame-work of the chairs comes out nearly as dark as the black velvet of the tall gentleman with his back to us. And yet this is a very fine photograph. There are very few which are better in any respect. It is more valuable as a rendering of the picture than any engraving would be unless made with unusual care and skill. But it is evident from this why, when an engraving exists, it is the natural resource to make copies of it rather than to take copies, accurate in drawing but utterly wrong in light and shade, from the painting itself.

As the high number, 381, of this photograph shows, these from pictures are popular also. One photograper in Paris, Bingham, has done much to bring to relative perfection this difficult process of photographing works of color. The pictures he has produced are wonders of delicacy and approximate truthfulness. Similar work has also been well done by other operators in France and in England. It has also been attempted in America, and sometimes with fair success, but the attempt has not been persisted in and followed up. Messrs. Gellatly & Lecky, of 86 Nassau Street, this city, now announce that they intend to "devote their entire attention to copying works of art by photography," and hint that books may receive needed illustration by their means. It is to be desired that they shall succeed pecuniarily in their enterprise so far as to feel encouraged to prosecute it, and to aim at and attain higher excellence. Our painters have evinced a general desire to have photographic copies taken of their works, and Messrs. Gellatly & Lecky are sure of custom. We hope they will do so well as to keep all their customers and establish their artistic business on a permanent basis of good work done and reasonable profits made. At present the six pictures of theirs which are before us are not better than Philadelphia photographs we have seen of pictures by Mr. Lambdin and Mr. W. T. Richards; or Boston photographs of pictures by Mr. W. Hunt; or New York photographs of pictures by many artists. Small parts are thoroughly well rendered, as in photographs from pretty little pictures by Mr. J. G. Brown; but these same pictures are badly taken in other parts, and it is easy to guess what the colors were which have "come out" exceptionally well. The photographers should pick out for their specimens copies of pictures in which color is subdued and drawing dominant.

Science.

SCIENTIFIC NOTES.

THE essential condition of a thoroughly successful treatment of an average ore of a precious metal, whether by fire or by chemical solvents, is the complete reduction of the ore to an impalpable powder. Gold, for example, is often diffused in microscopic particles through the hard quartz or pyrite, in which it habitually occurs, and in a ton of the quartz or pyrites only a few ounces of metallic gold may be contained. It is perfectly obvious that we can never be sure of getting all the gold out of the enveloping quartz or pyrites unless the whole mass of ore be completely reduced to an impalpable powder as fine as the minutest particles of gold which it contains. The machinery now chiefly relied on for the reduction of ore to a powder consists of heavy stamps, which are raised by steam or water-power and allowed to fall upon the ore to be crushed. The action of stamps may be compared to that of a pestle and mortar. They produce a large proportion of fine sand and a little real dust; but the principal product of the best stamps is never an impalpable powder of microscopic fineness, but a sand very many of whose particles will not pass through a sieve of fifty threads to the linear-inch. Just here is an obstacle to the perfect working of the ores of the precious metals which has never yet been practically overcome, although al most every week for years some new process has been brought before those interested, theoretically so admirable that the utmost confidence in its success has been felt, and large amounts of money have been freely expended to put it to the test of practical operation. The back-yards of hundreds of houses in San Francisco are encumbered with the wrecks of machines, on each of which men have embarked their fortunes. Yet the fact that the present processes often fail to yield even one-half of the amount of metal which the accurate methods of chemical analysis reveal in the quartz, while thousands of mining enterprises are abandoned every year after their owners have been beggared which would be most valuable properties if but a small degree of this loss could be overcome, constantly stimulates energetic enterprise as well as feverish speculation in the trial of new appliances, and the renewed trial of old methods under new circumstances. Until the frightful waste which attends the present processes of extracting the precious metals is overcome, they can be mined with profit only where a deposit is found which is not only comparatively rich, but the richness of which can be depended upon to extend far into the darkness of the earth—a case which does not occur one time in ten thousand where specimens of high promise are found at the outcrop. As long as mining is pursued with this uncertainty it must have, in most cases, more the character of gambling than of a regular business capable of yielding sure returns to industry and intelligence, and must be a curse to those who engage in it and to the communities whose prosperity is dependent in any great degree upon them.

It is thus obvious that the subject is one of vast importance to our country and though little confidence can reasonably be felt that any invention will prove of great value for general application until it has been for some time in actual use under the management of persons who have no interest in it, except that which is common to all owners of gold mines, the progress of experiments should have studious attention.

Machinery, patented by Messrs. J. D. Whelpley and J. J. Storey, has been in operation during the last year in Boston, which seems to justify more than usual consideration. Two separate machines combine their different operations for the reduction of ore, previously broken into pieces of not more than three or four inches in diameter, to a fine flour or dust, which is at least a million times finer than average stamped ore. These two machines are, the "crusher," which converts the ore into a gravel mixed with sand, and the "pulverizer," which reduces the sand and gravel to the condition of a floating dust. The crusher may be described as follows: A circular iron table, three feet and a half in diameter, and weighing eight hundred pounds, revolves on an upright shaft at the rate of one thousand and twenty-five turns a minute. This whirling table forms the bottom of a cast-iron tub, eighteen inches deep, whose thick sides are perforated with numerous holes about half an inch in diameter. Upon the upper surface of the whirling table, and near its circumference, are bolted six, or sometimes eight, blocks, made, like the lower sections of the perforated tub, of the hardest possible iron—Franklinite iron. When the velocity of the whirling table is between one thousand and one thousand and fifty revolutions a minute, the extreme ends of these cutting blocks move with a velocity of about two miles a minute. When there is no stone in the tub the table revolves freely with but little friction, and acts as a fly-wheel to regulate the other machinery, but the instant that material to be crushed is thrown into the tub, the consumption of steam-power begins, the lumps of stone are splintered into small fragments by concussion with each other and with the edges of the cutting blocks, and the gravel so produced is swept out through the holes in the grated sides of the tub.

The quantity of steam-power necessary to drive the table is said to be approximately one and a half horse-power per hour for each ton of quartz crushed, five tons of quartz per hour requiring seven and a half horse-power, ten tons fifteen horse-power, and so on. It is recommended not to feed more material to the crusher than will exhaust ten to fifteen horse-power. So vague and uncertain, however, are all existing rules for the measurement of steam-power that too much weight should not be attached to these estimates of the power consumed. Of course, if a softer material than quartz be supplied to the crusher, less power will be consumed, or more material can be crushed in an hour.

It is evident that a machine thus constructed and driven at such an enormous velocity is abundantly capable of reducing even the hardest ores to a fine gravel at a very rapid rate; but the doubt naturally suggests itself, will not the machine be itself destroyed in the operation? This is a point upon which only extended practical experience in the use of the table can be decisive. It appears at present that the wear of the machine is confined to the exposed faces and edges of the splintering blocks and to the lower portion of the perforated sides of the tub. These wearing parts are so made as to be readily replaceable in sections. In general, the higher the velocity of the whirling table, the less it wears in proportion to the amount of work done It is asserted that one set of cutting blocks will reduce one hundred and fifty to two hundred tons of ordinary quartz, and a much larger quantity of marble, sandstone, pyrites, or ordinary silver ores. The crusher yields incidentally a small proportion of fine dust, but it wil not work economically as a pulverizer. The reduction of the gravel delivered by the whirling table to the condition of fine dust is accomplished by a distinct machine, the pulverizer. This pulverizer consists of four distinct parts or elements: a feeding mill, which furnishes a constant supply of the gravel to be reduced; an iron drum or cylinder containing an air-wheel of peculiar construction; a fan-blower which draws air, and with it the dust formed, out of the cylinder just mentioned; and, lastly, dust chambers in which the product is collected. Beyond the dust chambers an auxiliary fan-blower draws air out of these chambers, and so relieves the pressure upon them and prevents leakage This fan-blower is furnished with a set of arms or dashers, which dip into water and create a spray which wets down any dust fine enough to escape deposition in the dust chambers. The essential and peculiar part of this combination of machinery is the second element, the cylindrical drum with its air-wheel. The cylinder is eighteen inches in breadth and forty-two in internal diameter. Within the drum, on the shaft or axis, are three sets of strong iron arms, eight arms in a set, which carry at their extremities "paddles" six inches long by three and a half in breadth, made of the hardest possible iron cast upon a wrought-iron skeleton of wire. The diameter of

the "paddle-wheel" is forty inches, so that a space of one inch remains between the outer edge of each paddle and the cylinder. This wheel, with its twenty-four paddles, is driven at the rate of one thousand and twenty-five revolutions a minute, so that the extreme edge of each paddle has a velocity of more than two miles a minute. A strong current of air is drawn through this pulverizing cylinder by the action of the fan-blower, and no air can enter or leave the cylinder except by the aid of this blower. The dust escapes from the mill through an opening at the centre, about the shaft; but no dust leaves the drum except as it is drawn out on the current of air induced by the fan-blower.

The question is: What is the action which goes on within the mill, converting gravel into an impalpable flour? The paddle-wheel is not sufficiently strong, and the steam-power consumed, per ton of dust, is not sufficiently great, for any process of hammering, crushing, or grinding. The most plausible answer to the question is, that the paddles act like fans, producing whirls or vortices of air which put the particles of gravel into very rapid motion, and that it is the mutual clashing and friction of the particles which produces the dust. The wake of each paddle is a dust-mill. The dust atoms are found under the microscope to be rounded; the gold in the dust is found rolled into little pellets, the best form for the amalgamator; nails or other bits of metal which fall by accident into the mill, come out rounded as if they had been rolled on a beach. The quality and quantity of the yield of the mill are determined by the velocity of the paddles, and by the velocity and volume of the current of air which passes through the cylinder. A low velocity of the paddles causes the yield to be coarse and abundant; at a high velocity, with too small a current of air, the mill becomes heated, and the yield is small but exceedingly fine; a freer current of air will give a larger but coarser product. The art of using the machine consists in a judicious regulation of the quantity and velocity of the current of air which is drawn through the drum. The management of both crusher and pulverizer, particularly of the latter, obviously requires an engineer of unusual intelligence and capacity. The velocities used are very high, belts may break or shafts spring, the breakers in the crusher and the paddles in the pulverizer require timely renewal, and the proper regulation of the air-current in the pulverizer requires acute observation and constant watchfulness. The wear of the inside of the case, or external cylinder, of the pulverizer is not very rapid, and as the interior is lined with boiler-plate iron, which can be cheaply and easily renewed, the only wear which occasions much inconvenience and expense is that of the paddles. The cost of this wear of the paddles is said to be about twenty cents for each ton of quartz pulverized. It is asserted that a pulverizer in perfect operation will reduce hard quartz from the size of gravel to fine dust at the rate of thirty-one hundred pounds an hour, and that of this quantity one-third will be as fine as bolted wheat flour, another third will all pass through a sieve of ten thousand meshes to the square inch, and the remaining one-third will all be greatly finer than the best product of stamps. The whirling table will break the same quartz into gravel at the rate of eighteen tons per hour. One crusher will ordinarily feed ten or a dozen pulverizers. It is confidently stated that a single pulverizer, applied to the reduction of gold ores, delivers, with a small consumption of steam or water-power, as much powder as twenty ordinary stamps, and that the quality of the whole product will be beyond comparison finer than the best stamp work. For the better part of two years both the crusher and pulverizer have been in actual operation at Boston, and have been tested upon a large variety of substances. Quartz, granite, feldspar, bones, copper ores, barytes, ochre, manganese, corn, and sundry paints and drugs, have all been successfully reduced in these omnivorous mills. Considering the quantity and quality of the work done by them, they compare favorably with other machines, now used for like purposes, both in respect to first cost and to expense of running. They are also comparatively light for transportation. Not to dwell upon the application to the service of the druggist, agriculturist, or manufacturer, these inventions seem to promise some real advance towards a better dealing with the most difficult problems of metallurgy.

—The brilliant white light produced by burning the metal magnesium has lately attracted much attention. Magnesium is the metal contained in ordinary magnesia and Epsom salts, in soapstone and meerschaum, and might be a very common metal if uses were found for it. Within two or three years it has been produced in England in considerable quantities, and its price has rapidly fallen as the production increased, till it now costs in London only ten shillings an ounce. This weight corresponds to a considerable bulk because of the low specific gravity of the metal, which is seven times lighter than lead. In the metallic state it looks much like zinc, a metal to which it bears a close chemical as well as physical resemblance. Zinc may be readily burned in a coal fire, and in the burning it also produces a white light, due, like the magnesium light, to the incandescent particles of the solid oxide. A small ribbon of magnesium may be lit by the heat of an alcohol or gas lamp, and it will burn steadily so long as it is properly protected from currents of air, provided there be no flaws in the ribbon. A slight puff of wind may blow out the flame. The magnesium light is remarkable for other qualities besides its brilliancy. The ultra-violet portion of its spectrum is more than six times as broad as the common spectrum produced by sunlight. Hence the phenomena of fluorescence are very finely exhibited with the magnesium light. Its chemical and photographic power is intense. Dry chloride of silver is colored dark blue by it in a few seconds. If a mixture of equal volumes of chlorine and hydrogen be exposed in a glass cylinder to the light of a burning magnesium wire, a mist of hydrochloric acid will at once appear; and if a second burning wire be brought to reinforce the first, the two gases will, after a few seconds, unite with explosion, precisely as they do when exposed to direct sunlight. Bodies which will emit light in the dark after five or ten minutes' exposure to the direct rays of the sun, as do the phosphides of calcium, strontium, and barium, and some varieties of the diamond, of fluorspar, and of alumina, attain their maximum of phosphorescence from as many seconds' exposure to the magnesium light.

A perfect lamp for burning magnesium is yet to be invented. The product of the combustion is a white, solid, bulky ash, which consists of nothing but pure magnesia. It is difficult to get rid of this ash, which forms very rapidly and greatly dims the brilliancy of the light. Progress has, however, been made toward this most desirable end, both by English experimenters and by the American Magnesium Company, of Boston. One of the most ingenious suggestions which has been made is to reduce the magnesium to powder, mix it with sand, and let the mixture run into a jet of gas, as sand runs from an hour-glass. The greater part of the magnesium now manufactured is consumed by the theaters, and for such purposes it is certainly much more convenient and manageable than either the Drummond or the electric light. For light-houses and for signal-lights at sea and upon railways, the magnesium light possesses great advantages over any light which has ever been used for such purposes, but the actual employment of the metal for ships and light-houses must depend upon the invention of a lamp which will insure the uninterrupted combustion of the metal, and the complete and immediate removal of the smoke and ash. For fire-works mixtures of zinc and magnesium may be used with excellent effect. By the magnesium light photographers may work at night or in dark weather, and the interiors of caves, catacombs, and mines may be reproduced with all the distinctness of a sun-picture. Professor Smyth has obtained by its use photographs of the interior of the great Pyramid, and of the granite coffer in the King's chamber of the Pyramid. Colors look by the magnesium light just as they look by sunlight, so that in those countries of Europe where sunshine is scarce the light may prove a convenience to dealers in delicately-colored fabrics of silk, cotton, or paper.

LEE & SHEPARD, Publishers, Boston.

Gems of Sacred Song.

A New Volume of the Choicest Pieces of the Best Composers, with Piano Accompaniments; a beautiful collection of popular music, uniform with the previous volumes of the "Home Circle Series," now consisting of seven volumes, the whole forming the most complete and valuable library of Piano Music published, to which will soon be added "Gems of Scottish Song," now in press. Price of each, plain, $2 50; cloth, $3; cloth, full gilt, $4. OLIVER DITSON & CO., 277 Washington Street, Boston.

A New and Revised Edition Now Ready

OF

A DICTIONARY

OF THE

NOTED NAMES OF FICTION:

Including, also, FAMILIAR PSEUDONYMS, SURNAMES BESTOWED ON EMINENT MEN, etc. By WILLIAM A. WHEELER. 1 vol. 12mo, $2 50.

This Dictionary has been welcomed by critics as a work of very great value and interest both to scholars and general readers. It explains many of the allusions so frequently occurring in modern literature—the names of the Greek, Roman, Norse, and Hindu Mythologies; noted Fictitious Persons and Places so interwoven with the best recent literature of England and America, and those of most general interest in the literature of other modern nations; Nicknames of eminent characters in political and literary history, and those applied to parties and sects.

The practical value of the work is greatly enhanced by a carefully prepared Scheme of Pronunciation, in accordance with which every word of doubtful orthoepy is marked; also by an Index of the *real* names of the Persons, Places, etc., mentioned in the Dictionary.

To show the marked favor which this work has won from Scholars and the Press, we append the following notices:

"It is a work *sui generis;* all the flowers from the field of Romance mingled together."—*H. W. Longfellow.*

"It is full of good matter."—*G. S. Hillard.*

"In treatment of the names, the necessary information is supplied in a way which fully unites the great requisites of accuracy, perspicuity, and compactness."—*Prof. Jas. Hadley, Yale College.*

"I regard it as one of the most valuable works of reference in our language."—*S. Austin Allibone, Author of "A Dictionary of Authors."*

"I shall recommend the volume to the teachers in High Schools, Academies, and the higher classes in our Grammar Schools, as a reference manual of very great value."—*Prof. D. C. Gilman, Secretary of Board of Education in Connecticut.*

"There is not a page that does not contain very curious things not to be found elsewhere without a deal of search. Nor is it valuable only as a book of reference. It is full of quotations in sensible prose and beautiful poetry from great numbers of the best English and American writers. They are all witty or wise, often both."—*G. B. Emerson, in Boston Advertiser.*

"Mr. Wheeler's is the very first attempt at a dictionary of fiction. The book will be found, we think, on full trial, to be more nearly complete in its comprehensiveness, and far nearer to perfect accuracy in detail, than could have been anticipated in regard to a first work of the kind. . . . In fact, the volume must be reckoned an indispensable handbook for all who read at all."—*The Nation.*

"A production perfectly unique; . . . one of the best helps that an habitual, or even a casual, reader can have."—*The Round Table.*

"As a book for miscellaneous reading, it is full of pleasant surprises; as a book of reference, it is difficult to conceive how any lover of literature can do without it."—*Boston Transcript.*

Copies of the above work will be sent, *post-paid*, to any address, on receipt of advertised price.

GET THE BEST.

WEBSTER'S UNABRIDGED DICTIONARY.

NEW ILLUSTRATED EDITION.

Thoroughly revised and much enlarged. Over 3,000 Fine Engravings. It is a well-nigh indispensable requisite for every intelligent family.

It contains 10,000 WORDS and MEANINGS not found in other Dictionaries.

It is now believed to be by far the most complete, useful, and satisfactory Dictionary of the language ever published, as it is by far the largest single volume ever issued in any language.

The possession of any other English Dictionary, or any previous edition of this, cannot compensate for the want of this very full and complete one. In its present perfected state it must long remain the BEST ENGLISH DICTIONARY, and, once possessed, remain of constant and abiding value.

What book, beside the Bible, so indispensable as a good Dictionary?

In One Vol. of 1,840 Royal Quarto Pages.

Published by G. & C. MERRIAM, Springfield, Mass.

SOLD BY ALL BOOKSELLERS.

"HIGH COMMENDATION."

FINANCIAL REVIEW.

NATION OFFICE, Saturday Evening, February 24, 1866.

GENERAL business continues depressed by the uncertainties impending over the future. Cotton falls slowly, owing to the large demand for consumption both at home and abroad, and the skill with which the market is fed; but still it falls steadily week after week. Produce and breadstuffs decline more rapidly. At present prices very few kinds of Western breadstuffs will bear transportation from the place of growth to the seaboard. Pork has been maintained by speculators at an unnaturally high price, on the theory that the crop was below an average; but the receipts at Chicago within the past fortnight have been so large as to discredit this theory, and the price has fallen $3 to $4 a barrel. A further decline seems probable in view of the large supply at the West, and the increased activity in money.

the foreign merchandise markets a profound dulness is reported, with little variation in prices. Dealers throughout the country are declining to buy, in the expectation of lower rates for gold; holders who sell for gold, and who are therefore quite willing that gold should decline, are thus far not pressing sales. Dry goods are dull, and the leading styles are moving less rapidly than was anticipated. The importations of all styles continue large, and thus far a large proportion of the goods imported go into market directly; but the importers' stores are not cleared out as rapidly as was expected. A notion pervades the whole country that everything is going to be cheaper by-and-bye, and no one buys more than he can help.

Government has again been a liberal seller of gold—to the extent, it is said, of over eight millions this week—and the tables are turned on the gold speculators. Instead of being able to lend their gold at ¼ to 3-16 per day to the bears, the bulls are paying 6 and 7 per cent. per annum for currency to carry their gold. Matters are returning, in a word, to their normal condition. Exchange is up to 108¼ to 108½—say 1 per cent. below the point at which specie can be profitably shipped as a remittance. But at the advance the supply of bills is in excess of the demand. A few parcels of five-twenties and some Erie shares are arriving by each steamer from Liverpool. But these importations are too moderate in amount to affect the general course of trade. They do not suffice to offset the steady return from England of American money sent thither for safe keeping during the dark days of the war. It is understood that Government will continue for the next thirty days to sell all the gold received for duties, and possibly something more.

For the first time in many months we have to report an active money market, caused by the accumulation of over $105,000,000 in the Sub-Treasury at this point. So large a withdrawal of money from the banks has led them to curtail their loans to their customers, and the consequence has been an active enquiry for money at 7 per cent. In some instances, yesterday and to-day, a commission has been paid, over and above the usual interest, for the use of money. It need hardly be observed that it is in the power of the banks to make money easy whenever they please. They hold $25,000,000 of Clearing House certificates which they can pay into the Sub-Treasury without notice, as money; and they hold, besides, over $90,000,000 of deposit certificates, which they can call upon the Sub-Treasurer to redeem in money on ten days' notice. It is notorious in banking circles that the Sub-Treasurer would willingly waive this notice if requested so to do by any bank in needy circumstances. But it is not the interest of the banks that money should be too cheap. Their profits are greatest when money is active, and it is therefore not unreasonable to assume that they will take no steps to relieve the existing pressure until they themselves feel it more severely than they do at present.

The loan bill was at last taken up in Congress on the 21st inst., and gave rise to a debate in which Messrs. Morrill, Hooper, Stevens, and Kelley took part. Nothing definite was elicited by the discussion. Mr. Stevens, in common with most people out of Washington, though from different motives, objects to clothe the Secretary of the Treasury with arbitrary control of the money market; but as he insists in his bill that the Secretary shall not sell bonds below par, it would seem that he has not learnt much since he introduced a measure forbidding gold to rise to a premium. Mr. Kelley, of Pennsylvania, on behalf of the national banks, took ground boldly against contraction. Messrs. Morrill and Hooper advocate contraction, though differing on matters of detail with each other and with the Secretary of the Treasury. On the 28th the debate will be resumed. From all appearances, at present, the chances are that a substantial step toward contraction will be taken by excluding interest-bearing legal tenders from the reserve which the banks are obliged to hold, and by practically stripping them of their legal-tender character. This, if carried into effect, would reduce the currency of the country to the plain legal tenders, national bank notes, old state bank notes, and fractional currency—say $750,000,000 in all. What further steps Congress may take it is yet too soon to predict. It is now clear that the national income this year will be nearer $550,000,000 than $500,000,000, which will leave a surplus of fully $150,000,000, and perhaps $200,000,000, applicable to the reduction of the debt. Should this money be devoted to paying off the call loans and the debt certificates, the Treasury Department would become independent of the banks, and would be in a position to fund currency whenever its credit and the state of the money market presented a favorable opportunity for so doing.

The following table will show the course of prices during the week in the stock, gold, exchange, and money markets:

	Feb. 17.	Feb. 24.	Advance.	Decline.
United States Sixes of 1881	104⅛	104	....	⅛
5-20 Bonds, old	103⅞	102¾	....	⅝
5-20 Bonds of 1865	103⅛	102¾	....	¾
10-40 Bonds	94⅛	94	....	⅛
7.30 Notes, second series	99⅜	99⅛	....	¼
New York Central	93	91¼	....	1¾
Erie Railway	81¾	80⅞	....	⅞
Hudson River	104	102	....	2
Reading Railroad	101¾	100	....	1¾
Michigan Southern	71⅛	68⅞	....	1⅛
Cleveland and Pittsburgh	81¼	77	....	4¼
Chicago and North-western	29⅛	27¼	....	1⅞
" " " Preferred	56⅛	54¼	....	2¼
Chicago and Rock Island	106	103⅜	....	2⅝
P., Fort Wayne, and Chicago	95¼	92⅛	....	2¾
Canton	44⅛	44¼	....	⅛
Cumberland	45¾	44⅜	....	1⅜
Mariposa	12⅛	11¾	....	1⅛
American Gold	137⅛	137	....	⅛
Bankers' Bills on London	108	108¾	⅜	....
Call Loans	6	7	1	....

The advance of last week has not been sustained. Partly owing to the increased activity in money, and partly in consequence of natural extrinsic causes, prices have almost uniformly declined. Ever since New Year, in fact, the condition of the market has been the same. Railway receipts have been falling off, and the public, already disinclined to buy for the rise in view of the steady shrinkage of prices in all markets outside of the stock exchange, have been thereby confirmed in their indisposition to operate. Cliques have been formed among inexperienced but wealthy speculators with a view to corner this or that stock, or to put up this or that security. Each of these cliques has had its swing. Where the object was to "corner shorts," as in Pittsburgh, the clique has had the mortification of seeing the shorts hasten to cover and avoid the stock to be cornered ever thereafter. Where the object was merely to put up the stock by buying a large quantity, as in Rhode Island, the public have looked on with a curious kind of interest, but have taken no part in the game. It is safe to say that not one of these cliques will come out whole. The clique in Erie, managed by the veteran director of the road, supplied with unlimited means, and engineered with consummate skill, has already sunk over half a million dollars, and will probably sink as much more before it is finally dissolved. Already dark rumors of impending failures—to grow out of this Erie clique and the Pittsburgh clique—are whispered in the Street, and are leading to a pretty general enquiry for certified checks. Meanwhile the increasing activity in money is compelling holders of stocks on margins to sell them out for cash, and is tempting investors to realize in order to employ their money more profitably elsewhere. New York Central has been freely sold by the clique which forced it up to 93, and nothing further has been heard about the governor's alleged willingness to sign the bill increasing the rate of fare. Erie fell at one time during the week to 79¾, but has since rallied. The leading director of the board has been a large seller of "puts" at 79; they expire next week. Heavy sales of Fort Wayne are reported, and some uneasiness has been created by the quarter from which the stock comes. A meeting of directors is to be held in this city next month, and it has been surmised that the decreasing earnings may give rise to a change of policy. It is hardly expected, however, that the usual quarterly dividends will be suspended. Of Clevelandand Pittsburgh sales of some 15,000 shares were made

this morning, and the price fell in consequence to 75½, rallying afterward to 77. There are no indications as yet that the "pool" has sold out, and speculators are wary of touching the stock. Rock Island has fallen back to 103, though the parties who were such heavy buyers at 105 to 106 have not been traced in the market as sellers. Government securities have shared the fate of all stocks during the stringency of the past few days. Small parcels of five-twenties are coming back from Europe by each steamer, and at present prices pay a small profit on the importation. This operation, however, cannot last long; the London market will soon be cleared of floating stock, and, if money continues active, our market will not be sustained. Among the miscellaneous shares we note an advance of 20 per cent. in ten days in Atlantic Mail, based on grounds not known to the general public.

HOME
INSURANCE COMPANY
OF NEW YORK,

OFFICE, 135 BROADWAY.

THE UNION MUTUAL LIFE INSURANCE COMPANY

is one of those well-established and prudently managed Life Insurance Companies which distinguish this nation for enlightened benevolence, practical wisdom; and disinterested philanthropy. It offers superior advantages to the life-ensuring public. It is based upon fundamental principles of soundness, and gives abundant security in large accumulated funds. Through the admirable economy of its management large dividends are secured to policy holders. It is prompt in payment of losses, and accommodates the assured in the settlement of their premiums in life policies by receiving a note for one-half when the premium amounts to over $30.

THIS COMPANY offers PECULIAR ADVANTAGES to persons intending to ensure their lives.

Since its organization it has paid (chiefly to Widows and Orphans) for losses by death,

$912,342 00,

and

$412,748 00

in Dividends—a total of over

ONE AND A QUARTER MILLION

of Dollars, and now has, in its Capital and Accumulations, securely invested for the Payment of Losses and Dividends, a fund of

$1,400,777 16.

This is one of the oldest wholly *Mutual* Life Insurance Companies in the United States, and has been uniformly successful, having always made large returns in Cash dividends to all the policy holders.

This Company will continue, as heretofore, to insure respectable parties against
DISASTER BY FIRE
At fair and remunerating rates; extending, according to the terms on its Policies, the advantage of the
PARTICIPATION PLAN OF THE COMPANY,
pursued by it for several years past, with such great success and popularity, and profit to its customers; whereby
(75) SEVENTY-FIVE PER CENT. (75)
of the Profits, instead of being withdrawn from the Company in Dividends to Stockholders, is invested as a "SCRIP FUND," and held for greater protection of its Policyholders; and Scrip, bearing interest, is issued to Customers therefor: thus, IN THIS COMPANY, those who furnish the business, AND PAY THE PREMIUMS, derive the largest share of advantages; and when the accumulations of the SCRIP FUND shall exceed
FIVE HUNDRED THOUSAND DOLLARS,
the excess will be applied to PAY OFF the Scrip IN CASH in the order of its issue.

☞ The liberal and prompt adjustment of Claims for Loss, WHEN FAIR AND SQUARE, is a specialty with this Company.

NOTE.—This Company does not insure on the hazards of RIVER, LAKE, or INLAND NAVIGATION; confining itself strictly to a legitimate FIRE INSURANCE BUSINESS.

ASHER TAYLOR, President.
H. P. FREEMAN, Secretary.

PIANOS.

These instruments have been for thirty years before the public, in competition with other instruments of first class makers. They have, throughout that long period, maintained their reputation among the profession and the public as being unsurpassed in every quality found in a first-class Piano.

650 BROADWAY,
AND
CROSBY'S OPERA HOUSE, CHICAGO, ILL.

J. BAUER & CO., Agents.

GROVER & BAKER'S

SEWING MACHINES

WERE AWARDED THE HIGHEST PREMIUMS
At the State Fairs of

New York,	Illinois,	Virginia,
New Jersey,	Michigan,	N. Carolina,
Vermont,	Wisconsin,	Tennessee,
Pennsylvania,	Iowa,	Alabama,
Ohio,	Kentucky,	Oregon,
Indiana,	Missouri,	California,

And at numerous Institute and County Fairs, including all the Fairs at which they were exhibited the past three years.

The GROVER & BAKER ELASTIC-STITCH SEWING MACHINE is superior to all others, for the following reasons:

1. The seam is stronger and more elastic than any other.

2. It is more easily managed, and is capable of doing a greater variety and range of work than any other.

3. It is capable of doing all the varieties of sewing done by other machines, and, in addition, executes beautiful embroidery and ornamental work.

GROVER & BAKER S. M. CO.,
495 Broadway, New York.

FRANCIS & LOUTREL,

45 MAIDEN LANE, NEW YORK,

STATIONERS, STEAM PRINTERS,

AND

BLANK-BOOK MANUFACTURERS,

Supply everything in their line at lowest prices. Every kind of Writing Paper, Account Books, Fancy and Staple Stationery, Diaries for 1866, Expense Books, etc. Orders solicited.

THE BEST SEWING-MACHINES IN THE WORLD.

THE WEED MACHINES,

With all their valuable improvements, entirely overcome all imperfections. They are superior to all others for family and manufacturing purposes, simple in construction, durable in all their parts, and readily understood. They have certainty of stitch on all kinds of fabrics, and are adapted to a wide range of work without change or adjustment, using all kinds of thread. Will hem, fell, bind, gather, braid, tuck, quilt, cord, and, in fact, do all kinds of work required by families or manufacturers. We invite all persons in search of an instrument to execute any kind of sewing now done by machinery to inspect them, and recommend all parties engaging in the sale of sewing-machines to make sure they secure the best by examining the WEED before purchasing. They make the shuttle-stitch, which cannot be excelled for firmness, elasticity, durability, and elegance of finish. They have received the highest premiums in every instance where they have been exhibited in competition with other standard machines. The company being duly licensed, the machines are protected against infringements or litigation.

Reliable agents wanted, to whom we offer great inducements. Every explanation will be cheerfully given to all, whether they wish to purchase or not. Descriptive circulars, together with specimens of their work, will be furnished to all who desire them by mail or otherwise.

WEED SEWING-MACHINE CO.,

STORE, 506 BROADWAY, N. Y.

Improvements in Piano-fortes.

One of the simplest and most truly valuable improvements yet made in the Piano-forte is that invented and patented by

DECKER BROTHERS, 91 BLEECKER STREET,

in this city. By correcting the only imperfections arising from the use of the full iron-plate, and that, too, by not detracting in the slightest degree from its many positive advantages, the Messrs. DECKER have developed in their instruments a tone at once admirable for its purity, fulness, prolongation, and sweetness, and the high estimation in which their improvement is held is well shown in the rapidly increasing business of their firm.—*Tribune.*

MARVIN'S

PATENT FIRE AND BURGLAR SAFE.

Superior to any others in the following particulars:

They are more fire-proof.

They are more burglar-proof.

They are perfectly dry.

They do not lose their fire-proof qualities by age.

Manufactured only by

MARVIN & CO., 265 Broadway.
721 Chestnut Street, Philadelphia.

Send for a descriptive Circular.

"THE RIGHT TEACHER IN THE RIGHT PLACE."

Information of teachers will be furnished which shall embrace the following particulars:

Opportunities for Education; Special Qualifications for Teaching; Experience, where and in what grade of Schools; References and copies of Testimonials; Age; Religious preferences; Salary expected, etc.

Unless otherwise advised, we nominate *several* candidates, and thus give opportunity for good selection.

Those who seek Teachers should state explicitly what they will require of the Teacher, what salary they will pay, when the Teacher must be ready, etc., etc. Too full particulars cannot be given.

☞ Principals, School Officers, and Heads of Families are requested to give early notice of what Teachers they want.

TERMS.

TWO DOLLARS, upon giving the order for the Teacher, which pays for the "AMERICAN EDUCATIONAL MONTHLY" one year (see advertisement of Monthly in another column).

When a suitable teacher is secured, $3 additional.

NO CHARGE TO PUBLIC SCHOOLS.

Testimony for the American School Institute.

I *know* your "AMERICAN SCHOOL INSTITUTE" to be possessed of *the most reliable and extended facilities.*—[REV. C. V. SPEAR, Principal Young Ladies' Institute, Pittsfield, Mass.

The benefits of a "division of labor" are happily conceived and admirably realized in the "AMERICAN SCHOOL INSTITUTE."—[EDWARD G. TYLER, Ontario Female Seminary, N. Y.

I have tried and experienced its practical usefulness.—[WM. F. WYERS, Principal, Westchester, Pa.

Experience has taught me that I may safely rely upon it when I want teachers.—[REV. J. H. BRAKELEY, Bordentown Female College, New Jersey.

I commend it to the entire confidence of all.—[REV. D. C. VAN NORMAN, LL.D., New York.

The business of the Institute is systematically conducted. The proprietors are liberally educated and otherwise eminently qualified for their duties.—[O. R. WILLIS, Principal Alexander Institute, White Plains, N. Y.

I am very grateful for the prompt services which the "AMERICAN SCHOOL INSTITUTE" has rendered in supplying me with excellent teachers.—[REV. C. W. HEWES, Principal Female Seminary, Indianapolis, Indiana.

I have tried the "AMERICAN SCHOOL INSTITUTE," and regard it a most desirable medium for supplying our Schools and Seminaries with the best teachers, and for representing well-qualified teachers who wish employment. All who are seeking teachers will find a wide range from which to select, with an assurance that in stating character and qualifications there is no "humbug," *and there can be no mistake.* Teachers will find situations open for which they may seek in vain any other way. The highly respectable character of the gentlemen who conduct the "AMERICAN SCHOOL INSTITUTE" affords a sufficient guarantee, not only of fair dealing, but also of kind and polite treatment to all.—[REV. EBEN S. STEARNS, Principal Albany Female Academy, N. Y.

The most remarkable exponent of what method may accomplish, is that system of educational tactics as conducted and developed by the "AMERICAN SCHOOL INSTITUTE." Here is a set of gentlemen who keep themselves posted on the entire educational wants of the country. Every department of education, high or low, comes within the plan. The apparatus, the literature, the wants and resources of education, are tabled as in a BUREAU OF EDUCATIONAL STATISTICS.

And now mark the value of such knowledge. In a *time* consideration, what saving! Instead of schools being closed or suffered to decline until the right man turns up, one is provided whose calibre is known—"The right man in the right place." The loss of time, misdirection of talent, imposition by unprofessional charlatanry, each in itself no small misfortune to patron and pupil, are happily avoided.—[REV. SAMUEL LOCKWOOD, Keyport, New Jersey.

"THE AMERICAN SCHOOL INSTITUTE" IS REFERRED TO IN "THE NATION" OF FEBRUARY 8, PAGE 165, LAST COLUMN, AS "DOTHEMASTERS INSTITUTE."

RAVEN & BACON'S PIANO-FORTES.

STEINWAY & SONS'

GRAND, SQUARE, AND UPRIGHT PIANO-FORTES

Have taken Thirty-two First Premiums, Gold and Silver Medals, at the Principal Fairs held in this country within the last ten years, and in addition thereto they were awarded a First Prize Medal at the Great International Exhibition in London, 1862, in competition with 269 Pianos from all parts of the World.

That the great superiority of these instruments is now universally conceded is abundantly proven by the FACT that Messrs. Steinways' "scales, improvements, and peculiarities of construction" have been copied by the great majority of the manufacturers of both hemispheres (AS CLOSELY AS COULD BE DONE WITHOUT INFRINGEMENT OF PATENT RIGHTS) and that their instruments are used by the most eminent pianists of Europe and America, who prefer them for their own public and private use, whenever accessible.

STEINWAY & SONS direct special attention to their

PATENT AGRAFFE ARRANGEMENT,

which, having been practically tested in all their grand and highest-priced Square Pianos, and admitted to be one of the greatest improvements of modern times, will hereafter be introduced in EVERY PIANO MANUFACTURED BY THEM WITHOUT INCREASE OF COST to the purchaser, in order that ALL their patrons may reap its benefits.

STEINWAY & SONS' PIANOS are the only American instruments exported to Europe in large numbers, and used in European concert-rooms.

WAREROOMS, 71 & 73 EAST FOURTEENTH ST., between Union Square and Irving Place, New York.

JOSEPH H. RICHARDS, PUBLISHER, 130 NASSAU STREET, N. Y.

The Week.

THE week has been one of comparative calm. The President has blown one little blast more against the Radicals, but the Radicals maintain a masterly silence. In the meantime the Democratic journals are in agony lest by some unhappy combination of circumstances the quarrel should pass over without further consequences. The Chicago *Times* proposes for Mr. Johnson's consideration the arrest of Sumner, Stevens, and Phillips, and the forcible dissolution of Congress. The New York *Times*, in a philosophical discussion of the matter, has arrived at the conclusion that somebody must yield; that the President cannot be expected to yield, inasmuch as he is unwilling to yield, and that therefore Congress must do so. We propose that a commission composed of conservative politicians be framed to enquire by what authority Congress meddles in the government of this country at all. If we may judge by some of the articles and speeches we read, both House and Senate are sitting in Washington in consequence of some monstrous mistake, Mr. Johnson being charged with the sole management of the national affairs in virtue of his accidental accession to the presidential chair. It might be well, however, in any event, to let Congress linger on for the present, inasmuch as the dispersion of the members might injure the public credit. And we confess for our part we cannot wholly divest ourselves of the conviction that even if Mr. Johnson be not allowed to do exactly as he pleases, the national existence may by a great effort on the part of the people be still protracted. The Government was, no doubt, a very poor affair until he took charge of it, but still it lived, and, we flatter ourselves, will continue to do so even after he has retired. We doubt very much whether he will even do that whimpering over its mangled remains which he promised his hearers in Washington a fortnight ago.

THE constitutional amendment introduced by Mr. Bingham has been postponed till April, and April probably means indefinitely. This is supposed to be one step in a possible or probable compromise with the President. Meanwhile the concurrent resolution asserting the power of Congress to keep the rebel States out until it chooses to admit them by bill has been carried by a large majority. Conservatives oppose this on *à priori* grounds, and ask in alarm whether the admission of States by bill is not an admission that they are out of the Union. The fact is, that no *theory* of the powers of our Government, or of its relations with the rebel States, yet propounded has had, or has now, the slightest practical value. Not one of them can be made to cover one-tenth of the steps that have been taken to bring the South back to its allegiance. There is only one stand-point from which a clear view of the situation, or of the course we are steering, can be obtained—and that is the stand-point of the national safety. Whatever is necessary to establish the Government on a sure and lasting foundation, to ensure liberty and justice and security to every man, woman, and child living under it, is right, no matter what logical inferences may be deduced from it. And we should advocate this, though it furnished dialecticians with the means of drawing the conclusion that all black men were white, or that the President was an absolute monarch.

MR. JOHNSON, who seems not only never weary of pardoning, but never satisfied unless he is pardoning somebody, has, we suppose in default of rebels, taken to pardoning counterfeiters, and has within a few days let loose—and this is the second or third case of the kind—a convicted forger of fractional currency. The counterfeiting of fractional currency is *par excellence* an offence against the poor, and, consequently, perhaps less entitled to indulgence than any other in the statute-book. We respectfully suggest, therefore, that Mr. Johnson have a more careful examination made of the revolted States, as we have no doubt numerous objects for Executive clemency may yet be discovered there, and the Northern counterfeiters be thus left to serve out their terms.

MR. ROGERS, a representative from New Jersey, enjoys the unusual satisfaction of lying down at night with a clear conscience. This is owing to the fact that he did not vote for the amendment by which slavery was abolished, and which he styles "that most wicked and unjust measure." Another title to undisturbed repose, we imagine, he derives from his opposition to the amendment proposed by Mr. Bingham, which would, as Mr. Rogers so feelingly shows, abrogate those statutes of the late slave States which regulate the penalties for crime according to the color of the culprit. Indeed, to take the instance adduced by him, we do not see how any good citizen could rest quietly in his bed, if he knew that the penal code of Kentucky had been suddenly so altered that a black man guilty of rape could be only imprisoned, or else a white man equally guilty must be hung. On the one hand, society would be exposed to fresh assaults from those for whom punishment would have been thus abated; on the other, to more reckless violence on the part of the irritated and desperate white population, subjected to additional rigor. The alternative is deplorable.

THE Senate has asked the President again for copies of the orders, letters, instructions, commissions, and so forth, used in reconstructing. The same request was made last December, and up to this time has met with no response, and yet these documents would certainly throw much light on the process of reconstruction and would gratify much legitimate curiosity. It would be interesting to learn, for instance, what passed between Mr. Johnson and Governor Humphreys, of Mississippi, who was elected fresh from the battle-field, and before he had been pardoned, and whose first message was as truculent a denunciation of the federal Government as ever appeared in the palmy days of the Confederacy.

READERS of Mr. Olmsted's "Journey in Texas" may remember his account of a hospitable farmer, Mr. Dagmer, and his two manly sons, who entertained him at Sisterdale, on the Guadalupe, and of whose enlightened sentiments in regard to slavery he speaks in terms of admiration. A correspondent in Texas states that the two sons of Mr. Dagmer were murdered by the secessionists early in the war, while the

father was in prison. The latter is now a prominent member of the State Constitutional Convention of Texas, and has distinguished himself by a speech in which he avowed his willingness to give the right of suffrage to such of the negroes as could read and write the English language intelligently.

CERTAIN citizens of Tennessee, convened at Nashville on the 22d ult. to endorse the President, undertook among other things to parse the word loyalty, which they did by resolution. From this it appears that loyalty has tenses like a verb, but it is defective: that is to say, it wants the past. Thus, on the authority of these gentlemen, it is quite correct for an ex-Confederate or a neutral or a Copperhead to say: "I *am* loyal," and "I *shall be* [or, still better, by Southern usage, *will be*] loyal;" but it would be a solecism for him to declare that he *was* loyal. It will be seen from this how utterly useless it is to enquire into any man's antecedent relations to the Government. Once rid of all ungrammatical distinctions, we arrive at a second resolution, which runs as follows:

"*Resolved*, That in restoring Tennessee to her equality of rights and influence in the Union, her citizens are entitled to a full compensation for the loss of that property of every kind, so far as practicable, of which it was the policy of our country in the late struggle to deprive them."

THE jealous advocates of State rights should look after the bill proposed by Mr. Green Clay Smith, of Kentucky, in the House on Friday. Congress is asked, in the interest of the liquor traffic, to allow the license granted under the internal revenue act to legalize the commercial transaction for which it is taken out. Such legislation would nullify the Maine law wherever it now exists, and would in effect establish the principle that a State has no right to repress the growth of vice, or even to pass a sumptuary law, if she deems it expedient, for her own citizens, provided such a course would diminish the sources of the Federal income.

THE Massachusetts Commissioners appointed by the last Legislature to investigate the hours of labor and the condition and prospects of the working classes, made their report last week. After a fair hearing of employers and employees, they concluded against an eight-hour law, because it could not equitably be applied to all kinds of labor; because it would be rendered void by special contracts; and because it could not possibly be observed by a large proportion of the industrial interests of the country. They present evidence, however, of marked and deplorable abuse in the employment of children of tender years in manufacturing establishments, contrary to State law; and they recommend that the time for schooling prescribed be doubled, and that the law be relaxed in favor of those employers who adopt in good faith the English "half-time system." They also urge the appointment of one or more inspectors, of ample powers, who shall see that the laws on this subject are faithfully obeyed, and bring suits, if necessary, for their enforcement. There should be, in their opinion, a law for the annual collection of statistics in regard to the condition and needs of the industrial population.

ONE hundred thousand dollars raised by voluntary subscriptions have been presented to General Grant, with a letter from one of the subscribers. No better deserved testimonial has ever been offered to a distinguished man, and the secresy with which the money was collected, and the silence which was at first maintained with regard to the names of the contributors, lent a grace to it by which but few movements of this kind have been marked. We are, therefore, very sorry to see that somebody has been guilty of the treachery and bad taste of furnishing the list to the New York *Herald*. There are several other heroes who have deserved well of the nation whom we should like to see rewarded in the same manner, if it could be done without furnishing occasion to lovers of notoriety to advertise their liberality.

THE well-meaning telegraph reported last week that the executive of a neighboring State had appointed *Wednesday*, the 13th of April, for the execution of a murderer. The fact is, the date falls on Friday, which is thus, according to a custom more venerable than defensible on any but superstitious grounds, once more to be branded as a *dies nefastus* by being made the "hangman's day." It may be doubted whether the supposed reproach of this coincidence should be understood as resting on the criminal or on the nature of his punishment. If the former, it would be puerile; if the latter, it would be an odd concession to the opponents of the gallows.

THE Jamaica Legislature came to the very sensible conclusion, about the time of the suppression of the "rebellion," that the best mode of hiding its own shame and spiting the blacks was to die; so it petitioned the Crown to accept a surrender of the Colonial Charter and govern the island as Parliament might please. The Crown has taken the colony at its word, and a bill has been introduced by Lord Cardwell into the House of Commons abolishing the wretched caricature on constitutional government which has ruined the island. It is now to be placed on the same footing as Trinidad for an experimental period of three years and governed as a Crown colony. The first measure of reform ought to be the abolition of the Established Church, and the conversion of its revenues into an educational fund; the substitution of paid magistrates, sent out from England, for the existing local justices of the peace, bred in the slavery system, or inheriting its prejudices; the reduction of the duties on necessaries, and the equalization of taxation. Jamaica has rendered some service to the world in demonstrating the extent to which slaveholding unfits men for the administration of justice amongst a dependent or inferior race.

MATTHEW ARNOLD, the son, as most of our readers know, of Dr. Arnold, of Rugby, has published in "Macmillan's Magazine" an onslaught on the English middle class, now the governing class of the country, which, for keenness, bitterness, rhetorical finish, as well as power, has been rarely equalled. As a piece of English composition, it is worth being lectured upon in colleges. He makes out a terrible bill of indictment against the British bourgeoisie for their ignorance, bad manners, timidity, and political and social incapacity; and predicts for England, if she continues under their guidance, and they do not mend their ways, a fate somewhat like that of Holland. Already, he declares, she has fallen below both France and the United States in the scale of nations. The unhappy middle class, however, take their whipping in such good part, and "come up so smiling" after every knockdown, that one cannot help believing that there is still hope of their improvement. The article is, apparently, highly enjoyed all over England. Professor Arnold has certainly gained in popular estimation by writing it, and the *Saturday Review* has replied to it in a splendid piece of intellectual fence. When one asks one's self what would be the fate of a professor of a Southern college, or even of a Northern one, who had ventured to write in this way of his countrymen, and what would be said and thought of the magazine which published his revilings, we get an idea of the extent to which slavery or something has made it difficult even for our ablest men to criticize national faults or shortcomings, without loss of reputation or social standing. And yet the question whether sound and healthy progress is possible without such criticism has still to be answered.

GEN. LA MARMORA has addressed to the Italian minister at Madrid a very frank and positive communication for the Spanish government, informing it that its solicitude for the temporal security of the Pope when the French troops shall have been withdrawn from Rome is impertinent, and that the treaty of the 15th September, 1864, which has been scrupulously observed by Italy, concerned only her and France. He also rebukes an official expression of hope, on the part of Spain, that certain provinces which now form a part of the kingdom may eventually be detached from it. This is, he says, to mistake the immovable foundations on which Italian unity rests, and the unalterable determination which exists to make it respected.

THE Prussian Chamber protested, by a vote of 265 to 35, against the judgment of the Supreme Court which sanctioned the prosecution of deputies for words spoken in debate. Bismark quoted for them, by way of menace, a police regulation relating to servants, that "if they provoke their masters to anger, they must not complain of being roughly handled;" and the Minister of Justice gave notice that he had ordered the prosecutions to be made.

An Austrian commission appointed to consider the propriety of introducing the decimal system of weights and measures has unanimously pronounced in favor of it.

CONGRESS.

WASHINGTON, March 3, 1866.

A week of calm deliberation has succeeded to the warm political excitements of the preceding week. The fact that the President has gone no further in the direction of his imprudent speech of the 22d February, and the retention by all the members of his cabinet of their places, is generally looked upon as evincing an overruling desire for conciliation and harmony in the councils of the great Union party. That this is the feeling of the President is corroborated by the authorized publication of his talk with Governor Cox, of Ohio, as well as by the fact that little or no movement toward the political proscription of those in office differing from the Executive has been made. Still, it is by no means safe to conclude that any permanent concord will exist between the President and the present Congress upon measures concerning the political rights of the rebellious States. The grounds of difference all remain, and if the Executive should determine to follow up his first veto by a systematic endeavor to thwart the legislation of Congress, it is in his power to make an issue which will bring to his side all the elements of opposition to the party which elected him, together with the mass of the Southern people. So long as the latter, however, are unrepresented in Congress, through the resolute determination of that body to insist upon the loyalty not only of representatives, but of the constituencies behind them, the only effect will be to agitate the country and enhance the importance of that popular verdict which must, sooner or later, decide between Congress and the President.

The chief measure of importance in the legislation of the week is the passage by the Senate, by the strong vote of 29 to 18, of the concurrent resolution adopted by the House on the day succeeding the veto of the President, and declaring that no representatives shall be admitted from any State heretofore proclaimed to be in insurrection until Congress shall have declared such State to be entitled to representation. The chief significance of this resolution lies in the fact that it establishes the opinion of Congress, by an overwhelming majority, that the two Houses should act conjointly upon the whole question of representation of States, and that this question is entirely independent of the Executive. On these points the tenacity of this Congress will be found immovable. It is also noteworthy that precisely the same number of Union senators (with the addition of Mr. Lane, of Kansas) deserted the majority upon this question as changed their votes on the Freedmen's Bureau bill, after the veto message.

The second amendment of the Constitution recommended by the Joint Committee of Fifteen, after being partially discussed in the House, has been postponed until April. This is chiefly because many members of the legal profession see in the final clause of the proposed amendment, investing Congress with power "to secure to all persons in the several States equal protection in the rights of life, liberty, and property," a dangerous centralization of power. Unimpeachable Republicans object to it as authorizing the general Government to interfere and override State laws on the subject of property, the legal rights of women, etc. The postponement of the amendment by unanimous vote of the majority, while it gives time for maturing another proposition, is conclusive against the passage of the present one.

Mr. Trumbull's very stringent "Civil Rights bill," if passed by the House as it came from the Senate, would go far to render any such proposed amendment of the Constitution unnecessary, *i. e.*, provided it were to receive the signature of the President, which, it is confidently believed, it cannot do.

Mr. Fessenden's closing speech on the passage of the concurrent resolution from the Joint Committee of Fifteen, urged that the committee were obstructed by the President in procuring the needed information on which to base their action and final report on the condition of the rebel States. It is a significant fact that President Johnson, although three times requested by special resolution of the Senate or House to do so, has not hitherto communicated any of the facts or documents in his possession regarding the provisional governments he established and afterward withdrew in those States.

DIARY.

Monday, February 26, 1866.—In the Senate, several petitions were presented from Wisconsin and Michigan, praying for a prohibitory tariff on imports. Referred. Mr. Grimes presented a petition from citizens of Iowa, praying for a constitutional amendment distinctly recognizing the Christian religion as the true one, and the United States as a Christian government. Several petitions, asking for guaranties of loyalty etc., previous to the admission of any rebel State, were referred. Mr. Lane, of Kansas, moved to take from the table the credentials of the two senators of Arkansas, and to refer them to the Judiciary Committee. He urged that Arkansas is now peaceable and quiet, has abolished slavery and repudiated the rebel debt, and should be represented by her loyal senators, who had already taken the test-oath preliminary to being elected. Mr. Trumbull opposed the motion, as the Senate had postponed the claims of these men at the last session, until Arkansas should be declared entitled to representation. He moved that the credentials lie on the table until the Joint Committee of Fifteen should report as to the rebel States. Carried—yeas, 29; nays, 17. A motion to admit the claimants to seats, *pro tempore*, was laid on the table—yeas, 27; nays, 18. Mr. Sherman spoke at length on the House concurrent resolution, refusing admission of senators and representatives from rebel States until Congress shall have declared them entitled to such representation. He approved the principle, but doubted the expediency of now re-affirming it, condemned the President's speech as humiliating and unworthy of his office, declared the doctrine that the President is under no obligation to the party which elected him to be false in honor and false in principle, favored the prompt restoration of Tennessee and the constitutional change in the basis of representation, and urged moderation and harmony between Congress and the President. The bill to grant an exclusive privilege to the International Ocean Telegraph Company to lay and operate a telegraph to the West Indies was discussed and laid over.

In the House, Mr. McClurg's resolution to enquire into the expediency of levying contributions on the rebel States to defray the cost of the army in those States was referred—yeas, 102; nays, 27. A resolution instructing the Military Committee to report a bill equalizing the bounties of all soldiers was passed. A resolution declaring it as the opinion of the House that Congress has no constitutional right to fix the qualifications of electors in the States was not adopted—yeas, 40; nays, 53; not voting, 86. The Joint Committee on Reconstruction reported back the constitutional amendment offered last week empowering Congress to make laws securing equal rights to life, liberty, and property to citizens in all the States. Laid over. Mr. Wilson reported from the Judiciary Committee a bill fixing the number of judges of the Supreme Court and changing certain judicial circuits. Referred.

Feb. 27.—In the Senate, a joint resolution, expressing the gratitude of the nation to the officers and soldiers of the United States, was passed. Mr. Morgan offered a bill to exempt college lands donated by Congress from taxation by State or municipal authority. Referred. Mr. Sumner offered a resolution repeating the call of the Senate upon the President (made Jan. 5) for copies of all papers, proclamations, constitutions, and other proceedings between the Executive and provisional governors, or between those officers and conventions, etc., of the rebel States. Adopted. Mr. Morrill submitted a resolution calling for the reports of Assistant Commissioners of the Freedmen's Bureau. Adopted. The House concurrent resolution against admission of representatives from States declared in rebellion was taken up. Mr. Dixon opposed it as unconstitutional and disorganizing, and defended the President's policy of restoration as the true one. Mr. Trumbull replied, claiming that it requires the concurrent action of both Houses of Congress to recognize any government in States where rebellion has overthrown it.

In the House, the constitutional amendment conferring upon Congress power to equalize civil rights was discussed by Messrs. Higby, Kelley, and Price in its favor, and Mr. Hale against it. Mr. Van Horn, of Missouri, offered a resolution that the further employment of French troops in Mexico would be considered by Congress a violation of the Emperor's pledge at the recent opening of the French Chambers. Referred.

February 28.—In the Senate, Mr. Johnson presented the credentials of B. F. Perry as senator elect from South Carolina. Laid on the table. Resolutions of the Nevada Legislature, in favor of the speedy trial of Jeff. Davis, were presented. The naval appropriation bill, which passed the House, was reported with amendments. The bill granting lands to the San Francisco and Humboldt Bay RR. Co. was passed. The concurrent resolution relating to representation of Southern States was taken up. Mr. Nye, of Nevada, opposed the present admission of any members from those States, and advocated the resolution. Mr. Stewart, of Nevada, opposed the resolution, arguing that to suspend the right of a State to representation is dangerous and unwise.

In the House, the constitutional amendment, empowering Congress to secure to citizens in all the States equal rights, was taken up, and opposed by Messrs. Davis and Hotchkiss, of N. Y., and advocated by Messrs. Woodbridge and Bingham. On motion of Mr. Conkling, of the Joint Committee of Fifteen, the constitutional amendment was postponed until the second Tuesday in April—yeas, 110; nays, 37. The deficiency appropriation bill was considered and amended,

March 1.—In the Senate, a petition was presented from the American Free Trade League for a free interchange of goods between the British provinces and the United States. Referred. Mr. Wilson reported a bill, heretofore referred to the Military Committee, to disband the militia forces of certain Southern States. The bill granting lands to aid the Southern Pacific Railroad was considered and amended. The bill which passed the House, amending the act prohibiting the importation of cattle, was passed. The concurrent resolution declaring against the immediate representation of States lately in rebellion was taken up, when Mr. Stewart and Mr. Johnson spoke against it and Mr. Wade in its favor.

In the House, the Committee on Ways and Means were instructed to report on the expediency of reducing the duty on paper. The bill which passed the Senate, to protect all persons in their civil rights, was taken up and discussed by Messrs. Wilson, of Iowa, and Cook, of Illinois, in its favor, and Mr. Rogers, of New Jersey, against it. The deficiency appropriation bill was passed after being amended so as to provide that no money be paid to any person not ready to take the test-oath of July, 1862.

March 2.—In the Senate, Mr. Sumner presented two petitions from authors, editors, and publishers of the United States, praying Congress to enact measures for the adop-

tion of an international copyright law by this Government and that of Great Britain. Referred to the Committee on Foreign Relations. Mr. Sumner also presented the petition of John A. Andrew and others, praying that the Constitution may be amended so that the President and Vice-President may be chosen by the people directly, without the intervention of electors; also for an amendment extending the elective franchise to all citizens who can read, irrespective of color or social condition. Referred. Mr. Johnson presented credentials of Henry Boyce, elected as a senator from Louisiana. Laid on the table. Mr. Lane, of Kansas, offered a resolution looking to a general convention of the people of the United States to consider amendments to the Constitution. The bill granting lands to aid in the construction of the Southern Pacific Railroad was passed. The Senate resumed the consideration of the concurrent resolution from the House, declaring that no representatives shall be admitted from any State heretofore declared in insurrection until Congress shall declare such State entitled to representation. Messrs. Cowan, Doolittle, and McDougal spoke against the resolution, and Messrs. Wilson and Fessenden in its favor. Mr. Hendricks moved to amend so as to insert "the inhabitants of" before the words "States declared to be in insurrection." Lost—yeas, 17; nays, 29. The resolution was then passed—yeas, 29; nays, 18. Adjourned to March 5.

In the House, a bill to construct a ship canal around the Falls of Niagara was reported and re-committed. Mr. Boutwell presented petitions from colored citizens of Georgia asking for the right of suffrage. Referred. Also, a memorial from white loyalists of Alabama complaining that they are at the mercy of the rebels, in whose hands the State government of Alabama now is, and protesting against the removal of United States troops. Referred. Mr. Baker offered a joint resolution proposing an amendment of the Constitution, but it was objected to. A bill relinquishing the title of the United States to all lands within the corporate limits of San Francisco was passed. The Senate bill to protect all persons in their civil rights was discussed by Messrs. Thayer, Windom, and Shellabarger in its favor, and Messrs. Thornton and Eldridge against it. After adopting certain amendments to the bill, the House postponed its further consideration to Thursday, March 8. A bill was offered and referred to encourage education in agriculture and the mechanic arts.

March 3.—The Senate was not in session.

In the House, speeches on the state of the Union were made by several members, but no business of any kind was transacted.

THE FREEDMEN.

THE Bureau and the freedmen have lost a devoted helper in the person of Brevet Lt.-Col. H. M. Stinson, A. D. C. to Gen. Howard. He entered the army as a Maine private in 1861, was wounded and taken prisoner at Bull Run, and suffered confinement in various parts of the South. On his release he returned to the service, under promotion, and was shot through the lungs in the Georgia campaign. Hemorrhage resulted from subsequent exposure about Atlanta, and he died on the 22d ult. at Tallahassee, whither he had gone in hope of recovery. He was but twenty-two years of age.

The Assistant Commissioner for Texas gives a most satisfactory account of labor in that State. He reports that laborers are in great demand with the planters, and that those engaged are working well and getting good wages. Wages rule from eight to fifteen dollars per month in specie, with quarters, food, fuel, etc. He challenges the whole South to show better paid laborers than those of the cotton and sugar growing sections of the State. Instead of money wages, in some instances, portions of the crop are to be given, in amounts ranging from one-third to one-half. "At least nine-tenths of the former slave population are under contract for a year." Outrages, though not unfrequent, are on the decline, except in the portions of the State inaccessible to the influence of the Government. There are twenty-six schools (colored) reported in the State, with over 1,600 pupils. The expenses of the Bureau are paid in part from the receipts from fines, etc., of the freedmen's courts.

Gen. Fisk reports a steady advancement in industry, good order, education, and justice in Kentucky and Tennessee. But few freedmen are idle, the emigration from the towns and cities having been large. The whole number of rations issued to dependents, black or white, by the Bureau during the month of December, 1865, amounted to only $620. Much has been done for the destitute freedmen by the freed people themselves, and Gen. Fisk's report brings to light the very remarkable fact that the "Provident Association," in Nashville, Tenn., which is a colored organization, and which relieves distress without regard to color, has benefited more whites than blacks, and that "many widows and orphans whose husbands and fathers fell fighting to perpetuate slavery have been fed and warmed through the kindly offices of the freedmen's association for the relief of the poor."

The reports of outrages in Kentucky are numerous. Two negroes were shot by a gang of guerillas in Owingsville. An agent of the Bureau took one or two of them prisoners, and started to Lexington with them. At Mount Sterling a writ of *habeas corpus* was served, and the men released by a judge, on the ground that the law did not include Kentucky within the operations of the Bureau. Another negro, an old man, was shot, placed upon the coals in a fireplace, one side roasted, and then turned over in order to roast the other side, by some fiends in human form. These facts rest upon unquestionable authority.

Complaints of the injustice of the Maryland apprentice laws are constantly reported. Children are taken from good situations and placed in a condition as bad as slavery. In one case, a colored woman sick with consumption was deprived of her son—her sole support—by his being apprenticed to a white man to "learn habits of industry." He was maintaining his mother and himself by honest toil, and she is now dependent upon charity for support.

Col. Thomas, of Mississippi, sends a gratifying account of labor in that State. The demand exceeds the supply to such an extent that one planter came to Virginia to secure help. He took back sixty-three able-bodied hands. The absurd stories which have been prevalent throughout the State, and which prevented the freedmen from going to work, are no longer heard; the vagrant laws are not in force in any of the towns or cities he has visited, because, as the civil authorities say, "they are not needed." The feelings of the whites are improving towards the blacks. Cases of abuse are becoming less frequent.

From Virginia, Col. Brown writes that Capt. Lacy, of the Western District of the State, reports that the demand for labor in that section, also, exceeds the supply; that high wages are offered and paid for able-bodied hands.

Minor Topics.

THERE are a number of harmless and respectable persons who think they look like some famous man or woman either living or dead. This resemblance they nurse to the best of their ability; it adds a daily pleasure to their lives. As it is quite impracticable to masquerade outside of a fancy ball in a costume older than 1850 without incurring the risk of a commission of lunacy, unless one deals in patent medicines or old-folk minstrelsy, they are necessarily limited to their heads and the hair thereof, in the imitation of their great originals. Napoleons comb that historical foretop carefully down towards the eyes; Louis Napoleons wax out the ends of their heavy moustaches; bald gentlemen, who do Shakespeare, extend their foreheads and peak their yellow beards; and ladies who have been fortunate enough to receive such gifts from nature, do the smiling Sévigné in little blonde ringlets, or brush their dark hair well off the temples and scowl sternly as Rachel. Why is this a gratification to them? In what way is their vanity tickled? It would be interesting to know how they account to themselves for the pleasure, if, indeed, they ever think of analyzing their feelings at all.

It is certain that the besetting weakness of man is to try to appear what he is not. He is a lucky individual who, in a lifetime, has known two or three honest, genuine, unaffected persons, who are willing to seem what they are, or rather who have never thought of being other than nature made them. This is the highest form of moral health. All the rest of the world have an ideal, moral or physical, they work up to. Indeed, when we take a good look at ourselves, it is not at all surprising we wish for improvement. There would be little hope for the race were it otherwise. Unfortunately, most people think the imitation will pass current almost as well as the genuine article. "Assume a virtue if you have it not," says the poet. They dress themselves up in moral qualities they think becoming, and wear false good feeling and false politeness to hide their meannesses and selfishness, just as they parry the insults of nature by padding, and try to hide the scars of time by wigs and teeth. This is comprehensible. It is also easy to understand why it is agreeable to resemble a man or a woman celebrated for their beauty. To look like them is to be good-looking; and certainly a little trimming and brushing to help out the resemblance is natural and pardonable. But it was not Shakespeare's bald head and peaked beard that made him immortal. In fact, not even Mr. Richard Grant White knows what manner of man he was. Napo-

leon did not conquer Europe because he brushed his hair over his brows; and Mlle. Rachel would have been much more attractive had her eyes been less sunken, her neck fatter, and her forehead less bony. However small might be his chances of success, we could only approve of a man who devoted his energies to trying to become a Shakespeare; but to make a mere mask of one's self day after day seems the silliest of all the foolish objects of human endeavor. Barnum's wax-work effigies of the famous are much more effective, for they give the costume as well as the face, and they hold their tongues. If Mr. and Mrs. Smith are "extremely innocent company," as Pepys says of his father, no one is offended; it is no fault of theirs; but if Mr. and Mrs. Smith present themselves wearing the lion's skin of Shakespeare and of Rachel, they invite a comparison which becomes, of course, a ridiculous contrast when they begin to bray. A great name is often too heavy a burthen for the heir, because it suggests a standard of talent or conduct he is unable to come up to. That is a misfortune. But why should any one, of his own free will, uninvited and unprovoked, struggle to show his acquaintances the great gulf that lies between his insignificance and the genius of his exemplar? It seems inexplicable; yet it is a very old trait of human nature. Byron shirt-collars are proverbial, and Horace laughs at Romans who "did" Cato with bare feet and sour faces. Perhaps physiology may help us to understand it. La Marck and Darwin assert that mankind sprang from some gorilla in advance of his age. If so, it must be this monkey element, not yet worn out of our nature, that drives us into these absurd imitations.

The last number of the *Revue des Deux Mondes* contains an article upon Proudhon, the French socialist, and his works, in which an amusing but, no doubt, very correct explanation is given of Proudhon's habit of exaggeration. He loved to throw his theories into propositions of the most startling violence, and such as everybody else would be sure to deny. "Property" he declared to be "theft; God, to be evil; woman, debauchery; government, anarchy." This manner of arguing the reviewer calls "putting too high a price on his thought;" in other words, it is the fault of a dealer anxious to obtain as much as possible for his wares. Proudhon expected his reader to beat him down, and thus to arrive at his real meaning. If he was taken at the letter, therefore, injustice was done him, just as it would be unfair to call an Italian shopkeeper extortionate because, according to the custom of the country, he asks from every purchaser twice as much as he expects to get. He has to make allowance for the beating down he knows he will undergo. In fact, "his violence," Proudhon said, "was part of his tactics."

As this was his way of dealing with ideas, he could not, of course, lay it aside in dealing with men. Consequently, he was one of the most abusive reformers that ever appeared, which is saying a good deal; but the reader had, of course, to beat him down. If he said of a philosopher that he was a "charlatan," it would be found on making the necessary allowance that he simply meant that he did not agree with him. So, also, if he called a man an "idiot," he simply meant that he had contradicted him. Everything he wrote had to be read with this little peculiarity in view.

We call attention to all this for the purpose of bespeaking the public indulgence for numbers of worthy men amongst ourselves, who in their zeal are also in the habit of making apparently extortionate demands on our patience and confidence in the utterance of their thoughts on public affairs. If their readers and hearers would only bear in mind that they really expect to be beaten down in their phrases, they would treat them with more consideration. A large discount has always to be made in their language. For instance, when they call a man a "liar," they simply mean that he changes his mind too frequently; by a "cheat," they mean a person who has acted differently from what they expected; by an "idiot," they generally wish to indicate simply a person who disagrees with them. When they announce that "all is lost," they mean that they have some fears as to the future; and when they proclaim some quondam ally a "traitor," they probably mean only to accuse him of lukewarmness. In fact, a little hand-book for newspaper readers and attendants on public meetings might be made up, with a very useful vocabulary giving the real sense of the phrases on which many popular orators and writers rely to produce their more startling effects. And when we remember the circumstances under which most newspaper articles are read and most speeches listened to, we must all confess that it is no great wonder if both writer and speaker find themselves so often driven to exaggeration in order to secure a hearing at all, that at last it becomes a habit with them. When you know that what you write will be read in cars, restaurants, or over a hurried breakfast, you are apt to be driven into capitals, italics, and loud-sounding epithets, in order to make the faintest impression. And when you find yourself addressing a hot, irritable, and uncomfortable crowd, such as most public meetings are composed of, if you say that Smith has not acted with the courage you expected of him, it falls very flat; but if you say that he has behaved like a cowardly knave, and damned his memory to everlasting infamy, you bring down the house. When the audience go home and sit down to think over what they have heard, they are probably sensible that the orator has been guilty of great absurdity; but then the fact that Smith has misconducted himself remains imprinted on their minds, though they forget all about the infamy that is to follow his memory down the ages.

We hope the next Democratic convention that meets, after re-affirming the Dred Scott decision and endorsing the policy of President Johnson, will have some praise to bestow on Gen. Bennett, U. S. A. Since, that we may not be thought traitors and disunionists, we are all now agreed that this is a white man's government, it is pleasant to find a Federal officer on Southern territory—we beg pardon, soil—whose notions of duty are not confined to looking after the negro. This admirable, and all the more so because exceptional, character—one of the few, it would seem, who lighten the military yoke by which our Southern brethren are galled—felt obliged, it is true, to interfere with the operation of the civil law in South Carolina. But if such interference is inevitable, may it never be exercised less worthily than in the present instance. So long as statutes must be dumb at the bidding of the war power, there is some satisfaction in knowing that they cannot speak to the prejudice of a white man. We have no sympathy for the misdemeanor for which, by Judge Aldrich's quite lawful sentence, the rescued culprit would have received a flogging; but we have grave doubts whether a simple robbery should condemn a Saxon to the degrading punishment meet for the sons of Ham.

As for the general's excuse, which might be taken for a slant at slavery, we feel sure that no innuendo was intended. The lash, he said, was contrary to the "spirit of civilization that pervades society at the present day." He was speaking not from a Northern, but a military, point of view. He remembered that the odious instrument had been expelled from the American army and navy, and that here, as in Prussia under Stein, and everywhere, in fact, that the experiment has been tried, the morale of the service has been immediately and palpably elevated. It is not strange that the gallant general should have applied the principles of the organization which he adorns to the civil society of which he has temporary custody. Not, be it understood, that we approve the logic of this application. It may be very well to argue from a white soldier to a white citizen; but from a negro regiment to the black race a deduction as to discipline would not be permissible—nay, would be absolutely heretical. Happily, in the case which arose in Charleston, the color of the offender and the humane reasoning of Gen. Bennett harmonized perfectly together; and we shall refuse to assume in advance that the latter would, from any false sentiment of consistency, be as prompt to interpose in behalf of a dark-skinned depredator. Meanwhile his action in the premises is fairly deserving of commendation, and will receive it from all those patriots who think that if the Government is to meddle at all with the affairs of the South, it is time some attention was given to the poor white as well as to the negro.

The special attention of the reader is directed to the Financial Review on another page. Its place among the advertisements is by no means significant of its value, but is resorted to only that we may obtain the latest intelligence of the market.

Articles on any of the subjects usually discussed in this journal will be received from any quarter. If used, they will be liberally paid for; if rejected, they will be returned to the writers on the receipt of the requisite amount of postage stamps.

All Communications which pertain to the literary management of The Nation *should be addressed to the Editor.*

THE DUTY OF THE HOUR.

If we may judge from the proceedings during the past week, and from what we hear of the state of opinion in the capital, Congress has become fully aware that the President is—to speak plainly—a very "ugly customer," and that the less he is stirred up by mere railing, the better for all parties. Mr. Lincoln's almost unparalleled gentleness and self-restraint, and the success with which Mr. Johnson managed for awhile to imitate him, got several members both of the House and Senate into habits of carelessness about their language, from which the speech of Thursday week thoroughly roused them. Mr. Johnson is clearly, whatever his principles may be, wanting both in the temper and sense of decorum for which Mr. Lincoln was distinguished, and it is now evident that anybody who assails him may fairly expect him to reply in terms more forcible than decent. One of his most thorough-going advocates, the New York *Times*, ascribes the late speech to the influence of the old associations of the stump and cross-roads in Tennessee—where politicians, we may explain, are in the habit of saying whatever comes uppermost, with the understanding that they are "personally responsible" for it—that is, willing to shoot at or be shot by anybody who objects to it.

This is an exceedingly inconvenient habit for a President to carry with him to Washington; but there is now no help for it. We must take Mr. Johnson as he is, and make the best of him. His outbreak against the radical leaders was vulgar, indecent, and alarming; but we confess that, for our part, we did not need it to convince us of the gross impropriety of the manner in which Thaddeus Stevens and others have allowed themselves to talk of him. It was their indiscretion which not led to his, but furnished an excuse or occasion for his. Anybody in landing from a steamboat at a New York wharf will probably think of a good many unpleasant remarks which he would, on moral grounds, be justified in making on the manners and customs of the hackmen; but if he chooses to make them, he can hardly complain if he is treated to a torrent of abuse in return. The best excuse Mr. Stevens can make for comparing Mr. Johnson to Charles I. is, that he did not know what kind of a person he was dealing with. Now that he does know, we hope we shall hear no more of this kind of talk. If we saw anything that could be gained by suggestions about cutting the President's head off, we should pardon a speaker for indulging in them—perhaps even indulge in them ourselves. But we do not.

There is an additional reason for refraining rigidly from violent language towards Mr. Johnson to be found in the fact that he is evidently "spiling for a fight." The tenor of his speeches and replies to deputations shows it, and the very worst service any public man can render his country is to furnish him with an opportunity to engage in one. There has probably been nothing more outrageously sophistical—we shall not use any stronger term—uttered by any Northern Copperhead since the war began than the passage in the President's reply, on Friday last, to the Baltimore delegation, in which he placed the Northern Abolitionists in the same category with the Southern rebels, and accused them of an equally strong desire to break up the Government. We shall say nothing of the insult offered to the moral sense of the civilized world in the insinuation than an attempt to break up a political fabric in order to destroy slavery, and an attempt to break it up in order to preserve and perpetuate slavery, can be placed on the same moral level; or of the insult offered to the loyal States in characterizing men like Charles Sumner with being enemies of the Union in the same sense that Toombs and Wigfall were enemies of it. What we do say is, that Mr. Johnson's indulgence in such talk proves that he has got into a state of mind which makes it the duty of all prudent and patriotic men to abstain from wordy war with him, to entrench themselves behind law and propriety, and on no pretext be tempted to come down into the arena for a bout of epithets or threats with him.

It ought never to be forgotten, too, that he is to be President for the next three years; that there is no legal mode of getting rid of him; and that his must be the hand which must execute all measures of reconstruction, no matter who may endorse them. Congress may pass the finest laws in the world, and even if he do not veto them, or his veto be overcome, they must depend on him for their efficacy. The mere exercise of his undisputed right to control the army might, if he now chose to pervert it, work incalculable mischief. We hear some talk of impeaching him, but we are sorry to hear it, because it is talk which sensible men ought not to indulge in at a crisis so grave. He has done nothing, and need not do anything even to accomplish the worst objects which his enemies ascribe to him, to merit impeachment or to afford the shadow of a foundation for any charge on which an impeachment could rest. Impeachment is a judicial process, and the offences to which it applies are defined by law and must be supported by legal evidence. We need hardly say that talking nonsense to mobs in the street is not amongst the number. Moreover, there would be no chance of securing a conviction, and, if he was convicted, it would have no moral weight. Any process arising out of his course on the reconstruction problem would to many honest men appear a piece of party persecution, and would divide the North, convulse the country, and seriously imperil the public credit, and might prove the beginning of a series of revolutions and pronunciamientos that would soon seal our ruin. The recent utterances of the Chicago *Times*, recommending the President to break Congress up by a *coup d'état*, and the practice pursued by the *World* of keeping the term "Rump Congress" as a standing head for its report of Congressional proceedings, give us a little glimpse of the pit which our enemies would fain prepare for us.

Nor do we consider the enquiry which is now being conducted by many writers and speakers into the immediate causes of the President's late shortcomings a very profitable or very edifying one. Whether it be his personal habits that create his mental or moral defects we consider a very nauseous and utterly useless subject of investigation. A man's conduct, whether good or bad, is generally due to a composition of causes, and, except as a psychological study, there is not the least use in trying to find out what these causes are, unless the discovery is likely to aid in changing his character. But we doubt if many are simple enough to suppose that the contributions which are made to the gossip of the hour on this point by hangers-on at Washington hotels and newspaper offices are likely to help in the solution of the problem now before the country.

The course of all good men at the North seems to us clear enough. It is, first of all to keep their temper and cultivate moderation of language; and then to lose no opportunity of keeping the real issue before the country, letting the people hear constantly what it is that is involved in the plan of reconstruction which Mr. Johnson is urging forward, what its dangers are, what the limits of his authority are, and what are his true relations to Congress. It must not be forgotten that he has both in his veto and his speech appealed most plausibly to the two dearest instincts of the American heart, love of a law-governed Union and hatred of arbitrary power; that he has consequently on his side a vast number of the best men at the North, and amongst them thousands of those who were foremost in carrying on the war and in overthrowing slavery. Therefore he must be met by arguments, and the arguments must come from cool heads as well as ready tongues. His fallacies must be exposed, his evidence overhauled, the consequences of his action pointed out, and the conscience of the nation kept constantly alive, until his powers of mischief, if he really means mischief, are at an end. Neither railing nor violence can save us, and those who doubt the force, at a juncture like this, of the old weapons by which so many victories have been won for freedom and progress, pay Andrew Johnson a compliment which his warmest admirers would be ashamed to offer him.

MAKE THE ISSUE PLAIN.

Special pleading is a science which has got a bad name; and this chiefly because of a mistaken notion of its object. It is (or was, for it has been largely legislated out of existence) a strictly logical process, the object of which is to eliminate everything from the presentation of law or fact to be tried that is

foreign to the case, and to reduce it to the exact and single issue to be passed upon. Its name has been perverted in common usage into another name for legal trickery. Still, there may be an abuse of special pleading by a crafty and unscrupulous advocate, especially if he be more than a match for the judge, which may substitute a false for a true issue and pervert the whole process of adjudication from its legitimate purposes. This is one of the chief arts of profligate politicians, and much mischief they have done by casting dust into the eyes of the people, who are the judges of all political issues in the last appeal, making them decide questions which are not before them by means of the ingenuity with which they are wrapped up with those that they intend to put at rest.

This is eminently the case at the present moment. All the arts of political chicane are employed to divert the attention of the people from the real question, so that it may go by default while the side issues take up all the thoughts of the judges. All the chief pettifoggers in and out of Congress have been busy trying to darken counsel and to make the judges look at something else than the point they are to decide and which is to fix the law by a permanent precedent. And the leading counsel of all, on whom the people had relied chiefly for putting the case logically and distinctly before them, has summed up all the fallacies, and sought, honestly and soberly, if you will, but irregularly and unprofessionally, to substitute the consideration of them for that of the actual question. What the people have to make up their minds about and to settle by an authoritative judgment is, *not* whether the States lately in rebellion are bound by laws made in the absence of their representatives. It is *not* whether they are suffering taxation without representation. It is *not* whether they are ready to make any specified promises or to take any propounded oath. It is *not* whether the right of suffrage is a natural right or a political privilege. It is *not* whether every State has a constitutionalright to decide who shall be voters within its own jurisdiction. It is *not*, even, whether men shall vote everywhere irrespective of race or color. It is none of these, nor of the host of other issues which are sprung on every side to make men look any way instead of in the right and true one.

The actual question now before Congress and the country *is*, whether the government of the eleven States lately in rebellion is to be given to the enemies of the nation, whose hands are just unclutched from her throat, or to her friends. If the people think that rebels, who do not pretend to be penitent even if they confess themselves conquered, should be invested with absolute power over all the inhabitants of their States or sojourners within them, including the negroes whom the people themselves have just set free, and that, besides this, they should be allowed their full weight in the government of the nation which a little year ago they were doing their utmost to destroy, the people can so decide, and from their decision there is no appeal, excepting to themselves in a soberer hour. But let them have this issue always kept unmistakably before them. Let them not think that they are deciding against Executive usurpation, or against taxation without representation, or against Federal interference with the reserved rights of the States, or in favor of the effectual restoration of all the States to the Union. The question is, Shall one half the country be absolutely governed, and the whole be in danger of being controlled, by its enemies rather than its friends? If this point can be kept clearly before the public mind, separate from all entangling alliances, we have no fear as to the result. And it is important that this should be done quite as much for the interests of the rebel as of the loyal States. There can be no substantial peace until this question is put at rest, and peace is more essential to them than to us.

If, as we are fully convinced, there is no man or class of men desirous of keeping the eleven States out of Congress for the sake of keeping them out; if, as we believe, there is no thought of punishment at the bottom of any of the propositions presented to Congress in regard to the rebel States, it is certainly important that no advantage should be given those who will endeavor to assume the contrary in the discussion of these propositions before the people. No pains should be grudged to make it plain to the weakest intellect that it is self-preservation solely that makes us pause. The question is as to the means most expedient to be used for that end. It is only unscrupulous politicians, demagogues, pettifoggers, darkeners of counsel, who raise any other question. Even those who most fiercely object to the President's policy, when the depths of their rhetoric are sounded, will be found to say and mean simply: If the rebels are truly penitent, let them bring forth fruits meet for repentance. They must give some proofs of feeling that they have sinned before God, and in the sight of the nation, before even Mr. Seward would slay the fatted calf to give them welcome. They have kept themselves out of Congress and out of their rights as members of the Union for more than four years. Is it hard measure to keep them out for one or two years longer till they have shown themselves fit to be trusted with their own government and ours? Even if it is hard measure, must those who advocate it as reasonable, just, and prudent, be placed on the same footing as the rebels? Surely, this is the height of sophistry.

Let the issue be but fairly made, and there need be no fear that any fulminations from the White House, or any fascination of Copperheads, charm they never so wisely, will alter the fixed resolve of the people of the United States that not only slavery, but all its works, shall perish from off the earth. They have not poured out their blood and treasure like water in order to deliver themselves up to their enemies after the victory has been won. Certainly not, if this is the plain English of all the circumlocution that is uttered from either House or from Presidential balcony, and they can be made to see it. Let the issue be made clear, and they will sustain Congress in keeping the doors of the Capitol locked in the face of all comers whose record is not clean, either through innocency or repentance, and prophetic of safe and patriotic counsels, as surely as they sustained it in every measure for the more vigorous prosecution of the war. No recent rebel, in haste to get into power again, is fit to be trusted with it. No honest Union man will complain of being obliged to wait if his admission would open the way to the man who sought his life. But, whether so or not, it is the clear duty of Congress to refuse to restore States or men to power over us as well as over their own people until they have given evidence of a change of heart, or, at least, have given bonds for their future good behavior. And on this issue, clearly stated, they may safely appeal to the people at the polls.

THE GOOD SIDE OF FENIANISM.

The Fenians have been thrown into a terrible state of excitement by the news of the suspension of the *habeas corpus* in Ireland, and President O'Mahony has issued a call to arms, and all the governing bodies of the organization are meeting to take measures adapted to the emergency. What is most curious in the expression of their feelings just now is, that they pronounce the arbitrary arrests of their members, by a power against which they have declared war, an atrocious outrage. Logically, they are estopped, however, from claiming the benefits of a constitution which they have repudiated, and, as far as they are concerned, they are entitled to nothing on Irish soil except the protection of the laws of war. It is absurd to challenge people to the field of battle and then denounce them for not submitting to be sued in damages for assault and false imprisonment.

As to the "measures" which the Fenians here are likely to adopt to save their brethren in Ireland from the Lord Lieutenant and the police, we need hardly say that the appearance of the American branch of the brotherhood on Irish soil with muskets is not likely to be of the number. Whatever can be done for the deliverance of the victims of British tyranny by speeches and processions in the United States will be done, and that faithfully; and if the British Government is not frightened into releasing them by the remonstrances of George Francis Train and Col. John O'Mahony, all that can be said is that the British Government is even more cruel and depraved than it was supposed to be.

The sudden resort of the English Ministry to this measure has not surprised many people who have paid much attention to the course of events in Ireland during the past three months. The gentry in the south and west of the island have been for nearly the whole of that period suffering from a panic, and have, in many instances, had their

houses barricaded, and large stores of arms and ammunition laid in, and been imploring protection from the Government. The Orangemen of Ulster have been for the last month rapidly arming themselves, and been threatening to take the law into their own hands and put down Fenianism by a Protestant rising, so that if the matter had gone a little further there was a strong probability that the Government would have found itself charged with the suppression not simply of a rebellion, but of a civil war. Moreover, it was clearly impossible to suppress the movement by the ordinary process of law, as the island appears to be plentifully supplied with "agents" from this side, whose secret was well enough kept to defy legal proceedings, though, perhaps, not well enough to avoid suspicion. With the *habeas corpus* suspended, there will probably be a general "descent" upon all persons suspected of Fenian proclivities, and the great plot will find its denouement, as so many Irish plots have done before, in the thirty-two county gaols of the Irish kingdom, and John O'Mahony will be left to lament, amidst the débris of the organization, over the rascality of traitors and the corrupting influence of "British gold."

There is, however, a serious and interesting side to the affair. The first palpable result of the Fenian movement has been what we expected it would be, the postponement for an indefinite period of the efforts which the English liberals and the sane and intelligent portion of the Irish population were making to procure the abolition of the Established Church, and the settlement of the land question. For the enemies of these two great measures of reform, nothing could have come more opportunely than the Fenian outbreak, as we see by the result of the motion made in the House of Commons for a commission of enquiry, its supporters, including John Stuart Mill, finding themselves nineteen in all, with the rest of the House against them. The argument that to debate Irish grievances then would look like succumbing to Fenian intimidation, was of course overwhelming to the great mass of English members; the subject was kicked out summarily, and the *habeas corpus* suspended a few days later in a single sitting.

This result has so often been brought about before in the same way, and Irish reform thus converted into a sort of treadmill labor, in which perpetual toil brings no progress, that one would suppose Irish "patriots" would by this time have learned wisdom and mended their ways; but, for some inscrutable reason, every one of their abortive attempts at revolution seems to leave behind it a larger crop of fools than ever. It is quite true that as little disposition is manifested in the English House of Commons to redress Irish grievances in quiet as in troublous times. When the Irish are silent, the answer to all demands for reform is that the country is tranquil; when they are rebellious, they are told that her Majesty's Government must not be bullied. So that the time has never yet come when the English public were ready to acknowledge that the Irish difficulty had to be faced. But to put this difficulty before the English public in its full magnitude, to break through the glass of prejudice, pride, passion, and contempt through which Englishmen are apt to regard Irish questions, time is necessary, long years of peaceful, persistent, reasoning agitation, such an agitation as Englishmen and Scotchmen will respect. This there are plenty of able and sensible Irishmen ready to carry on, sighing for the chance of carrying on, but just as they are beginning to make themselves heard and to overcome the popular English indifference to Irish troubles, come the O'Mahonys and the B. Doran Killians and all the rest of the herd of wordy, brazen-faced, brazen-lunged orator and adventurers, and again plunge the whole cause into ridicule and ruin by some astounding outburst of folly —an attack on the British empire with fifty pikemen, or an attempt to capture the British fleet with a fishing smack.

There is, however, about Fenianism one consoling feature, which leads us to hope that it may really serve the purpose of manuring a respectable tree of Irish liberty, and which is worth the notice of every student of history. Our readers may remember that in an early number of The Nation we accounted, not for Irish grievances, but for the futility and absurdity of such attempts to remedy them, by alleging that the Irish people were one or two stages behind all other Western races in political development. They are, in fact, the only Christian people of Europe who are still governed by the political ideas of a thousand years ago. They, in the first place, carry the clan feeling of devotion to persons rather than principles into all political contests; and, in the second, have never until now succeeded in separating religion from politics. What is remarkable in this Fenian movement is that in it, for the first time, politics have been completely secularized in the minds of a very large body of the Irish people. The movement is entirely independent of the Church, is condemned by the clergy is carried on without reference to its religious bearing, and owes all its force to considerations wholly mundane. This is unquestionably an indication of great progress, and, as such, is worthy of note, as no matter what the fate of the Fenian movement may be, and it can have but one, it foreshadows the possibility of a sympathy and co-operation between Irishmen and the liberal and progressive men of other races and countries which has hitherto been out of the question.

HOW TO OFFICER THE REGULAR ARMY.

The proceedings of Congress will be searched in vain for any practical project of officering the regular army with men of ability. There is much talk everywhere about the size of the future military establishment, a matter which the necessities of the times will regulate more decisively than any legislative acts. But on the far more important point of elevating the morale of the national troops and strengthening the national power by providing efficient officers, it would seem as if all the lessons of the war had been wasted. Only the crudest and most ill-considered plans are proposed,—such as the resolution of the Ohio Legislature, presented to the House by Mr. Schenck, regarding the appointment of volunteer officers in the proposed addition to the regular army. No one seems to comprehend the nature of the military profession, the peculiar character it develops everywhere, or to be acquainted with the customs and traditions which have in this country shaped the management of the army.

The inevitable tendency of military life long pursued is to dwarf the intellectual powers. Exceptions may and do exist in the cases of persons occupying peculiar positions, or possessing a peculiar mental constitution; but as a general rule it is safe to say that, after a certain point, the longer a man stays in the army, the less he knows. The profession has no healthy contact or competition with other professions. Its members are shut out not simply from all those opportunities and influences which develop and encourage literary taste and effort, but also from the wide social and political sympathies, the thoughts and feelings, which take up the hearts and lives of other men, and which build up strong characters through the agency of moral qualities reacting upon the mind. These things, true at any time of any army, are aggravated with us by the insignificant size of our military establishment and by the traditions which have prevailed in its management. The former is a necessity; but there is no good reason why the customs of the service in the internal administration of the army should any longer set aside the dictates of common sense. The national troops can never be furnished with efficient officers under any plan now proposed; and there is no better way of showing what the condition of things will be if no radical changes are made, than by showing what it has been.

The army has generally been so small that entrance into it has been difficult, and promotion in it, even under the most favorable circumstances, has been slow; and as if to cut off every attraction to men of talent and every effort for distinction, entrance into it has depended not upon capacity but upon political influence, and promotion in it not upon merit, nor entirely upon seniority. The natural tendency has been to drive the men of ability and ambition belonging to it into other professions. This was seen in the most marked manner in the long period of peace which prevailed from 1815 to 1861, unbroken save by the petty episode of the Mexican war. With now and then an exception, the ablest officers, after a few years of service, entered upon some civil pursuit. A sketch of the life lived and the character developed by any one of those who remained will serve as a sketch for nearly all. His earlier years were spent in very petty fighting or very serious flirting, according as he was stationed at Fort Laramie or at Fort Lafayette. These pursuits were diversified by occasional trips around the country at the expense of the Government, under the guise of recruiting. As he advanced in years his opinions and acts ran more and more in the

same old ruts which had been worn deep by the customs and feelings of the class to which he belonged. He became terrible in details. Knew the regulations by heart, and considered the laws of honor as constituting the highest moral code. From principle, from education, and from habit he shunned responsibility. He took no risks. He rarely issued an important order, no matter how pressing the necessity, without first writing or telegraphing for instructions. He was generally as careful to save money for the Government as many of his successors have been to defraud it. "He hated," to use the language of a correspondent, "all changes whatever, but especially any which required him to learn over what he had once learned; clung to the musket with its buck-and-ball cartridge with all the fervor of a first love, regarded rifles as an invention of the adversary, and looked upon breech-loaders as anathema maranatha. As he grew old he grew fond of drinking, and indulged in a mild kind of gambling as his principal pastime. In justice to him, it is to be said that he usually got drunk on good liquor, and, until these days of high duties and cheap excesses, disdained whiskey. Whether professing religion or not, on occasions whose importance seemed to demand it he swore. Thirty to forty years of solitary life, of hard frontier service, and harder drinking, dissipated at last what few brains he had had originally. As he rose in rank he sank in intellect, so that he usually attained about the same time to a full colonelcy and hopeless imbecility. Lingering in this position a few years, he finally dropped into his grave from a life in which he had learned to look upon fussiness as activity, and a knowledge and strict performance of trivial duties and points of military etiquette as the highest test of soldierly proficiency."

This is no doubt an exaggerated picture. But it would probably have been impossible to find any profession in which the ability of the members averaged so low as that of the officers of the regular army who were in actual service at the breaking out of the late war. The exception in the case of a few of the rebel leaders was more an apparent than a real one, and the state of society which caused even this exception has now passed away. In the South, the system of slavery, by bringing all labor into contempt, had the tendency to make the pursuit of arms one of the few avenues to position and success. Many of their ablest men consequently chose it, and some remained in it. But it was not so in the North, as the melancholy failure of nearly all of those officers showed who, by virtue of holding high positions in the regular army, were given at first important commands in the volunteer service. They proved themselves as incapable of commanding the vast bodies of men they nominally led, as they were of comprehending the character of the struggle in which they were engaged. They gained no successes, save by accident, and failed to improve the very victories into which they had blundered. Their self-sufficiency and incompetency would have been laughable had not national unity been the stake for which, and human lives the counters with which, this game was played.

In every country the higher offices of the army are apt to be filled by such men in time of peace. There is danger now that we will again drift into this state. For, in addition to the natural tendency of men to compromise and half-way measures, there are many influences which work against any radical change in the manner of officering the army. Senators and representatives are unwilling to give up the privilege of conferring positions in the service on the relatives of influential constituents. Prominent members of the Veteran Reserve Corps have been, ever since the close of the war, earnestly endeavoring to induce Congress to inflict upon the national army the organized indolence of that body. Senator Wilson expects to grind out competent officers through the agency of examining boards, which will be just as worthless in the future as they have been in the past. Without stopping to discuss the various plans proposed, we simply give four essential changes which, in our judgment, will commend themselves to the common sense of practical men everywhere, and will agree with the conclusions of most thinking military men who are not wedded to the traditions and policy of the past:

1. The abolition of the system of appointments as a means of admission to the Military Academy, and the opening of that institution, on impartial competitive examination, to every one wishing to enter, subject only to the limitations of age, acquirements, and ability.

2. Promotion by seniority up to and including the grade of captain; above that grade by selection on the ground of merit and capacity. This selection, the most delicate and difficult of duties, to be entirely out from under the shadow of political influence, and entrusted solely to the higher officers of the army, whose approval shall be necessary to every such promotion, and who shall be held responsible for the fitness and character of the men they recommend.

3. The appointment of a limited number of officers from the ranks annually after strict competitive examination.

4. Prohibition of the appointment of any man from civil life as an officer unless he shall have previously served a specified time in the ranks, and then only upon examination. We print elsewhere a reply to some of our strictures on the condition of the Academy, from an esteemed correspondent, whose statements and opinions on this matter are worthy of all respect. Our former article was not intended, however, to be a denial of the value of the school, but a lamentation over the extent to which it had failed to accomplish what it ought to accomplish. We certainly never meant to stultify ourselves so far as to assert or imply that it had not produced many officers and scientific men of the highest rank.

A GLANCE AT THE STATE OF EUROPE.

When, in the early summer of 1864, that double series of battles and marches was in progress on this continent which forms the most remarkable chapter in post-Napoleonic military history, the lighter din of arms which had for a time disturbed the peace of Europe gradually died away. Denmark, overwhelmed by her foes, paid the penance of national arrogance by submitting to the viler arrogance of conquering monarchs. Poland, once more prostrate, atoned in silence for another ebullition of the patriotism, fostered by despair, which attacks without counting the enemy. The half-exterminated Circassians commenced their exodus from the desolated forests and gorges of the Caucasus, wandering in destitution even as far as Tunis. This general cessation of hostilities was followed by a period of unbroken tranquillity, such as Europe rarely enjoys at once, from the Volga to the Tagus, as well as of monstrous dulness in politics. For a time all motion seemed to be suspended, and a deep stagnation or a new and violent convulsion likely to follow. Neither has taken place. Peace has remained unbroken to this day, no extraordinary events have occurred, but slow and natural developments have quite recently given rise to interesting situations in most of the countries of Europe. Let us cast a rapid glance over all of them.

To begin with the south-western corner of the continent. Portugal is starting on a career of progressive reforms, and instead of being, as formerly, coveted as a prey by her more powerful neighbor, her liberal young King, Don Luiz, has become a star of hope to all ardent minds of the Peninsula who dream of a united and free Iberian kingdom. Spain the Bourbon throne has barely escaped a violent shock haps overthrow, with which it was menaced by the mil tion under Prim; but the latter was too slight an outb panied by too little commotion, to be regarded as volcanic eruption, which would leave the warrin time. The Government will try in vain to dro satisfaction of the advanced classes of the peopl South America, for these will only aggravate ment, the principal source of its troubles and Chili and Peru likely to enrich enervated Spain did lately Mexico and St. Domingo. On the other s too, warlike expeditions to America have served little to sa higher aspirations of the nation, and their ill success, caused by expected collapse of the Southern Confederacy, has placed Napo abler and mightier ruler than O'Donnell, in a position which le no other alternative but reckless persistency or a shameful retreat, both equally fraught with danger to the artificial structure of the new French empire. The Corps Législatif is opened, *l'empereur s'excuse*, and the opposition is ready to open the attack.

No less interesting are the circumstances under which the

new British Parliament opens its first session. Momentous questions press upon it from every side. Reform is promised and expected. Fenianism undermines the ground in Ireland. Victorious America urges heavy claims for indemnification. There is trouble in Jamaica, Canada, New Holland. More impressible than all, a terrible plague scourges the rural districts. And all these storms old England has to weather at a moment when her most experienced and trusted helmsman, Palmerston, who so often successfully steered her ship of state, has just fallen. Belgium mourns the loss of a wise leader in her first king, and, under his son, a disciple of priests, enters upon an unknown sea, not unexpectant of tempests and rocks. Holland, who generally wears the mark (as Schiller says) of virtuous women and happy states in not being spoken of, now lies in the throes of a ministerial crisis. Denmark is engaged in remodelling her constitution so as to suit her now diminished proportions. Her happier Scandinavian sister, Sweden, has, without the impulsion of a shock from abroad, remodelled hers agreeably to the demands of the age and of justice, abolishing her unwieldy four legislative chambers, based upon caste, and introducing a more just and regular system of national representation in two houses. Russia, victorious over Poles, Caucasians, and caste, tries the first rudiments of representative government in her provincial assemblies, which are, however, so much under the direct guidance and control of the imperial authorities as to be denounced by the opposition as serving rather to limit the old autonomy of the municipalities than to create a self-rule in the *gubernias*. The work of denationalizing Poland and converting it—*per fas et nefas*—into a homogeneous part of the empire, is pushed forward with remorseless rigor, the means used to obtain this object in Lithuania being little less tyrannical than those employed by Philip II. against the Moriscoes. While the Czar is thus engaged in reforming his empire, Turkey enjoys a period of comparative peace and quiet, though the elements of decomposition are steadily at work in her inner structure. Bosnia, Herzegovina, and Montenegro, it is true, have ceased to trouble the divan of Stamboul with their periodic outbreaks, but Moldo-Wallachia is consolidating her independence under Prince Couza, a protégé and disciple of Napoleon; and Servia, under Michael Obrenovitch, is watching events in adjoining Hungary and Croatia, to avail herself of new contingencies to extend her autonomy and territorial power.

Greece, aggrandized by the annexation of the Ionian Isles, shows under her new Dano-German dynasty, no less restlessness than she did under the rule of the Bavarian Otho, being divided by a violent desire for outward expansion and an equally violent impatience of royal encroachments within. Italy advances, not without shocks or stumblings, but steadily, towards the territorial and moral consummation of her national unity. The period fixed by the Convention of Paris for the evacuation of Rome by the French troops is approaching its termination. Pio Nono's sands of life are, apparently, near running out, and Antonelli and the lower pillars of the Church are unable to prevent the Government of Florence from executing its measures tending to emancipate the state from the shackles of the clergy, and [illegible] to appropriate the domains of the latter. Unpopular as La M[illegible] cabinet is, it is firmly supported by the bulk of the peo[illegible] h extremes of the opposition, which, by their nature, [illegible] binet in an effort for its overthrow. Austria has ceas[illegible] Francis the Second, late of Naples, can do nothing b[illegible] g away of his "brigand" hosts.

[illegible] side of the Alps, Switzerland, though failing [illegible] pt to carry through a systematic revision of the federal constitution, has made a great step in advance by adopting the amendments conferring equality of rights on native and naturalized citizens of all religious denominations, by which the greatest blot on the Swiss charters has been erased. The great "empire of the centre," Germany, tries in vain to march one nation[illegible] way. Every step towards unity is followed by two towards complete dissolution. The Schleswig-Holstein war has made this more apparent, and the impotence of the *Bund* as well as of the nation more glaring than ever. Those Duchies are kept illegally out in the cold; the Duchy of Lauenburg has, as illegally, been appropriated by Prussia. The Diet of the latter kingdom vainly protests against this as well as other usurpations of the Crown. The Diet speaks, Bismark acts. The condition of the minor states, of which Bavaria and Würtemberg have new kings, is not much more encouraging to the friends of a free and united Germany, while Austria seems entirely to have stepped out of the German communion, led by her endeavor to reconcile the Hungarian nation. For the moment the Austrian centre of gravity seems to have been transferred from Vienna, which is now deprived of its Reichsrath, to Pesth, where an imposing Hungarian Diet holds its sittings, where Francis Joseph plays the Magyar, and utters solemn vows of good behavior in that language, and where the future of the empire seems really to be trembling in the balance. Austria will come out of this experiment either as a constitutional Hungaro-Germano-Slavic confederation or as a newly centralized absolute realm, in both cases, probably, with irremediable germs of dissolution in her bosom. The spectacle at Pesth is, in the meanwhile, the most interesting, the grandest appearance on the checkered board of European politics.

Thus there appear movements, not unaccompanied by progress, almost everywhere in Europe. The most violent process seems to take place in Austria, the most powerful in Russia, the most natural and progressive in Italy, the least perceptible in France. Thus it appears to-day: who will venture to say what aspects to-morrow's day will present?

WHO SHALL ELECT A STATE CONVENTION?

We give place, with much pleasure, to a communication from an esteemed correspondent questioning the soundness of our views upon the subject of elections for delegates to a State convention. We fully comprehend that the new application which we gave, in our article of February 22, to an old doctrine, will startle most persons who have not thoroughly studied the question. Discussion is to be welcomed, since the interest excited by discussion will finally impress the truth all the more deeply upon the public mind.

In the first place, it is essential that the *facts*, upon the basis of which the argument is to be conducted, should be agreed upon. According to our ideas, there can be no question as to the following points:

1. That, at the organization of the existing Federal Government, none of the States except South Carolina restricted the suffrage to white men by any express words.

2. That, as a matter of fact, free men of color exercised the right of voting in all the States with the like exception.

3. That there is not, and never has been, in any State, a permanent and general provision, by constitution or statute, regulating the mode of choosing a State convention—at least so far as the qualifications of electors are concerned.

4. That, in a majority of the States, and especially in this State, conventions have been repeatedly summoned and held, notwithstanding the total absence of all authority for such proceedings in the constitutions of the States.

5. That the members of a State convention never take the oath to support the constitution of their State, which is required by every such constitution from State officers.

6. That such a convention is subject to no restrictions whatever, except such as may be imposed by the United States or by the law summoning the convention, or except, possibly, an obligation to submit its work to a popular vote—which last points must be considered doubtful.

Our correspondent objects to our use of the word "revolution," in connection with proceedings so orderly and peaceable as the framing of a new constitution. He thinks a "normal revolution" a contradiction in words. Yet Webster defines the word as simply meaning "a material or entire change in the constitution of government." Surely revolutions may be peaceful. If the Emperor of France should to-morrow, conscience-smitten, resign his throne, and dismiss his legislature, and thereupon the people should quietly, and in perfect order, elect a Constituent Assembly, and establish a republic, would not that be a revolution? Now the calling of a State convention is an act precisely analogous to this. It is intended that the convention, when it

meets, shall have absolute power to abrogate the whole existing government, and to substitute a new one. It may or may not *use* that power, but the *power* is there, and was meant to be placed there. Thus the last convention in New York displaced every judicial officer in the State, except justices of the peace, and unseated three-fourths of the State Senate before the expiration of the terms for which they were elected. In Missouri, two successive conventions within the last five years have swept out hundreds of officers. The first of those conventions (elected in January, 1861) removed every important officer in the State in one day, from the governor and legislature downwards. What revolution could be more sweeping than this?

Our entire frame of government having been revolutionary in its origin, the American people have universally held the right of revolution sacred, and have sought to recognize it so effectually that its exercise, being always undisputed, might be always peaceable. According to their interpretation, this right of revolution means neither more nor less than the right of the majority of the whole State to change at will the form of State government, so far as it can be done without infringing upon the rights of the national Government. Nearly all the constitutions adopted within the last forty years recognize this principle in the clearest language. The constitutions of Alabama, Florida, Mississippi, Arkansas, and Texas, for example, while explicit in defining the persons who are "qualified electors," and invariably using that phrase in every paragraph which refers to popular elections, are nevertheless equally explicit in asserting that *the people* have an absolute right at all times to change their form of government. Why did they not use the words "qualified electors" in that clause as well as in the half-dozen widely separated clauses which relate to elections? They declare that the governor shall be chosen by the "qualified electors," in another article that the Senate shall be chosen by the "qualified electors," in yet another article that the Lower House shall be chosen by the "qualified electors," in still another that the judges shall be chosen by the "qualified electors," and so on through the whole range of elective officers. Why this wearisome iteration, why this accuracy of definition, if the word "people" would have meant the same thing? And why should we assume that men who were so careful to express their exact meaning in every article of the organic law except one, became loose and inaccurate in shaping the language of that one?

In truth, there was no mistake and no want of comprehension of the meaning of language in framing these constitutions. Our correspondent suggests the key to the whole mystery when he says that the doctrine which we now advocate was maintained long ago "by many of those calling themselves, *par excellence*, "the Democrats." Precisely so, except that for "many" we should read "most." This was one main foundation of the strength of the Democratic party. When Thomas Jefferson founded it, a majority of the States restricted the right of suffrage to property holders. The Federalists in general supported these restrictions, and dreaded to admit the whole people into political rights. The Democratic party threw itself upon the support, and asserted the rights, of *the whole people*, in opposition to the exclusive franchises of the property owners. Wherever, in the Northern States at any rate, it obtained power, it used it to extend the area of equal rights. In Connecticut it broke down the old election laws, which limited the suffrage to a minority of the people. In New York it brought about, step by step, universal suffrage. In Rhode Island it struggled for forty years, until, by an attempt at forcible revolution, it compelled the ruling powers to meet it more than half-way. In North Carolina it fought on the same side until 1850 before attaining complete success. These, be it observed, were *State* issues, and did not, therefore, appear in the national platform of the party; but they contributed more than any national issue to its strength; and now that the party is utterly apostate and rotten, the indistinct memory of these old struggles and triumphs in the cause of a broader liberty is the secret of the amazing vitality of the party organization.

Now, it was in full view of this conflict between the *electors* and the *people* that these Southern and Western States framed their constitutions when they made the distinction to which we have referred. True, they made the basis of representation as broad as they thought desirable in any case. But the conventions of these States, during the period of which we speak, invariably contained a large majority of Democrats. They strongly sympathized with their political brethren in other States where the suffrage was restricted. For their sakes, and for the sake of the general principle, the conventions *meant* to, and did, make a clear distinction between the electors and the people, asserting a right in the latter to disregard all the fetters of constitutions and laws when framing a new government, and a right to frame such new government at their pleasure.

These views will be found very clearly expressed in an article in the "Democratic Review" for July, 1842, written by one of the foremost lawyers of the Union, who now takes an active part in resisting the very doctrine which he then supported. Almost the entire Democratic party endorsed this doctrine when the Dorr Government sought to enforce it in Rhode Island. Nor does the result of that controversy prejudice this theory, as our correspondent seems to suppose. Nothing was ever judicially determined, except in the Rhode Island courts, that such action must be taken under the forms of law and in the United States courts, that the political branches of the Federal Government must decide between conflicting State governments.

We cannot in this article cite many authorities, but we will briefly refer to one or two, and may enlarge their number on another occasion.

In Stewart agt. Foster (2 Binney, 110), the Supreme Court of Pennsylvania held that under a charter which authorized all "inhabitants" of Pittsburgh, paying taxes, to vote, *aliens* had a right to vote. Yeates, J., said that females, minors, slaves, and servants for years, could not vote.

In Comyn's Digest (Parliament, D. 10), it is said to have been adjudged on the 8th of May, 1626, that, in elections for a borough, all burgesses ought to vote, unless there is a usage to the contrary, *time out of mind*. And that in a borough which has no burgesses, and no such custom, all householders had a right to vote.

There is certainly no immemorial usage to exclude colored men from voting. Within the recollection of living men, they voted everywhere except in South Carolina, and there they were excluded by positive law, and not by mere custom. When the Democratic party began to fight its battles for the extension of the franchise, there were so few free negroes that it did not occur to the party leaders to exclude them. Afterwards, as they increased in number, they were excepted from the benefit of laws extending the suffrage; but it was too late to exclude them from the benefit of the general principle that the people should govern. It was obviously unnecessary to except slaves, since in the eye of the law they were mere property, and of course no part of the people.

We cannot, at this time, carry our argument further, although it is by no means exhausted. To sum up, we maintain that the people, in a political sense, are all human beings permanently residing in a State who have not been excluded from political rights by the immemorial and universal usage of these United States; that a majority of this people in any State have the supreme power at their discretion to frame its government unfettered by any existing laws. We say that this doctrine has been maintained and enforced by the party which has been dominant for fifty years of our history; that it has been embodied into the organic law of many of our States, especially at the South; that it has been acted upon in this State; and that it is the unwritten law of every State. It lies at the foundation of our whole government, it is an indispensable condition of freedom everywhere, and if it is now repudiated, it will be in the power of any State convention, purchased by bribes or influenced by the spirit of oligarchy, to place the control of the State for ever in the hands of a minute fraction of the community.

EXCELLENCY AND ACCIDENCY.

It was in the last year of that administration which almost the toss of a penny had decided should be Thomas Jefferson's and not Aaron Burr's, that the radical change was made in the constitutional method of filling the two highest offices in the gift of the nation. This change was natural and inevitable. It was brought about by the rise of parties, and, with the gradual perfection of their discipline, the new mode has assumed its present definiteness. No longer do the people trust

unpledged electors to choose the fittest citizens of the republic to occupy the White House and preside over the Senate, nor are they content to ballot vaguely for the best interests of the State rather than for the success of favorite leaders, committed to well-known measures and policies. They dislike to incur the constant risk of a divided administration, and of electors who should disappoint their expectations. They prefer decidedly to enter upon a contest of which the end may be pretty certainly reckoned from the beginning, which could rarely happen as between parties distinguished only by principles and deprived of the personal influence of candidates.

Nevertheless, the old way had advantages which cannot be depreciated, and in theory it must be allowed to have been the more perfect and rational of the two. Its superiority was manifested especially in the dignity which it attached to the office of Vice-President, and in the care with which, when selecting this officer, it nominated him whom the majority, hesitating to pronounce the best, had declared the second best among possible rulers. Thus Adams succeeded Washington, and Jefferson Adams, by a purely logical progression; and if the various parties which, since the Constitution was amended in regard to the electoral college, have triumphed for longer or shorter periods, had conscientiously proposed to the popular suffrage their two most honored representatives, we should have had more than a single example of a like sequence in the present century. Mr. Van Buren was the last Vice-President that ever rose any higher.

That specious sectional balance which, from the first, hampered liberty of selection with considerations of North and South, was preserved till the time of Jackson and Calhoun, remembering whose illustrious and orthodox example the Democracy of 1860 might have spared their denunciations of the Lincoln and Hamlin conjunction, after an interval, to be sure, in which the balance had not again been interrupted. The abolition of slavery has removed the pretext for omitting to promote merit, wherever located in our common country, in order to appease the narrow jealousies of rival sections. The disposition, for the sake of victory, to choose an inferior man from a doubtful State whose vote it is important to obtain, has met so often, like other compromises, its proper reward, that it is time we also heard the last of "availability" and excluded the cheap appeal to State pride from the legitimate means of carrying an election. And if we shall ever again be guilty of disparaging the necessary qualifications of a vice-president, counting it a waste to exchange him for the second citizen of the republic, we shall deserve to, but it is to be hoped we never may, suffer more than we have all already done for such indifference and folly.

As one runs over the list of those who were, in view of possibilities, esteemed the peers of the Presidents with whom their names were coupled by the people, the later figures do not loom upon us like Adams and Jefferson—twin giants, not more close in office than in death; or good old Governor Clinton, of this State; or Governor Elbridge Gerry, of Massachusetts, famous in local caricature for his "Salamander," but more creditably renowned for his refusal to sign the Constitution of the United States in the convention which framed it, because three-fifths of the blacks were to be represented as freemen; and who approved the abolition memorial submitted to the first Congress by Benjamin Franklin, who had "observed with real satisfaction that many important and salutary powers" were vested in them "for promoting the welfare and securing the blessings of liberty to the people of the United States," and had conceived "that these blessings ought rightfully to be administered, without distinction of color, to all descriptions of people." Burr and his treason soften almost into loyalty before the conspiracy of which Calhoun is the patron saint. Van Buren's name will chiefly endure along with and because of the despised Free-Soil party of 1848. His successor, Vice-President Richard M. Johnson, survives in the shadowy memory of Tecumseh. Mr. Dallas lived to be discomfited at a social science congress in England by Lord Brougham, who pointed the American Minister to a negro among the "assistants." Breckinridge will not escape history so easily as he did his betrayed native land.

To do them justice, the Vice-Presidents, as a rule, have not been so detestable, formidable, or contemptible as to induce the nation to pray for the health of their principals. Yet the career of Tyler and of Fillmore might have opened our eyes to the importance of their office. The most horrible charge that has been brought against the American character is not, as some may suppose, that it produced a Booth, but that the lives of three of Mr. Lincoln's predecessors were attempted in order to effect a political *coup d'état*. Tyler's apostasy, if not the price of Harrison's removal, was a consequence which might confidently have been expected in the circumstances. Governor Foote, in his recent work on the war, betrays the alarm with which President Taylor inspired the South by his disposition to secure the Territories for freedom, and confirms the suspicion that he was taken off to make room for the complaisant signer of the Fugitive Slave Law and willing advocate of the compromises of 1850. The poisoning at a Washington hotel, to which Buchanan almost fell a victim, may not improbably be classed with the two instances just mentioned, since it is now apparent how far the then Vice-President could have been relied upon to serve the conspirators who, foreseeing their doom at the ballot-box, were preparing to expose their designs on the field of battle. Whether there be proof enough to sustain this theory, according to which our government becomes a republic "tempered by assassination," we leave to others to determine. That the slave power was capable of anything whereby it seemed likely to accomplish its nefarious purposes we do sincerely believe. However, there can be no question that the fitter the Vice-President to be the weak tool or wicked accomplice of any faction, the stronger must always be the temptation to get rid of an unpliant President. It may even hereafter transpire that the transformation which has come over our accidental Presidents has been wrought by a well-grounded fear of the fate of the last incumbent.

The reform which has been often suggested, of electing the President and Vice-President by the vote of the people, irrespective of State limits, would, for reasons already hinted at, ensure better servants of either degree. But the fundamental remedy for our past mistakes consists in placing as high a value upon the latter as upon the former; perhaps, also, in connecting him more intimately with the administration, as by making him, *ex officio*, a member of the Cabinet.

MY DEAD.

Of my dead,
In life, voices said,
These are noble, these are great,
And beautiful; we wait,
And hold them lovingly.

Of my dead,
In death, voices said,
No sculptured beauty like this sleep
Was ever seen! We, strangers, weep,
And bear them reverently.

Of my dead,
Out of death, led
Immortal—I listen, holding breath
And tears, and hear the things God saith
In heaven, welcoming!

CURIOSITIES OF LONGEVITY.

Everybody likes to hear of cases of remarkable longevity. Everybody, indeed, affirms that he does not wish to attain to it himself, but nobody that we know of seems to be in any hurry to die in order to avoid it. It is a perfectly natural and laudable feeling, however. A very old person is a kind of living monument of past times; and this even if it be a slave who had never left his plantation, or a peasant who had lived out his century on the estate where he was born. What revolutions, what wars, what changes have come over the world since he first drew the breath of life! He has stood still, but what a marvellous procession of personages and events has swept over the earth since he has inhabited it! One cannot help thinking what a different world was the one he left from that he entered. This interest is naturally much greater and this sentiment stronger when the person exciting them has been an actor in the events or a companion of the personages that have so changed the face of things, or even if he have been but a spectator of the one and a chance acquaintance of the other. Such instances seem to connect and bring close together points of time which appear

to us infinitely distant from each other. There was the Marquis di Manso, for instance, who was the common friend of Tasso and of Milton, though the Italian died more than ten years before the English epic poet was born. It were almost worth one's while to have been dead two hundred years to have had such luck as that. Lady Louisa Stuart, the daughter of the famous Earl of Bute, whom our pre-Revolutionary sires used to burn vicariously in the similitude of a *boot*, died since 1850, and actually remembered her grandmother, Lady Mary Wortley Montagu, who died in 1762. She wrote the introductory anecdotes to Lord Wharncliffe's edition of Lady Mary's works. She had seen every celebrity of the last half of the last century and known most of them, from Johnson down to Dickens and Tennyson, and was the intimate friend and correspondent of Scott, and one of the original depositaries of the secret of the authorship of the Waverley novels.

Rogers, "the bard, the beau, the banker," was almost exactly her contemporary, and must have known many personal acquaintances of Pope, Swift, and Gay, and possibly of Addison and Steele. The Berry sisters, who covered about the same period of time with their lives, and who might have been, one or both of them, Dowager Countess of Orford, as the widow of Horace Walpole, for more than fifty years were links connecting the long past with the present and bringing famous people of more than a century ago almost into contact with the present generation. Then "Queeny" Thrale, who was Johnson's "plaything often when a child" and his familiar acquaintance as a grown-up young lady, and to whom he gave his blessing on his death-bed, has not been ten years dead yet; she may have remembered Goldsmith, and certainly knew every other member of the Literary Club and every social and political celebrity of the last ninety years. She was the second wife of the great Admiral Lord Keith. But the instance of English longevity in the higher ranks which seems to have brought distant points of time nearest together was that of the Dowager Countess of Hardwicke, who died, in 1858, at near a hundred years old. Her father, the Scotch Earl of Balcarras, was "out in the Fifteen" with Lord Derwentwater and Forster, and his life was spared through the intercession of the great Duke of Marlborough. There were two lives of father and daughter which covered more than half of this century, all of the last, and ten years or more of the seventeenth! It is a little odd that a person should have been living eight years ago whose father was strictly a contemporary of the Old Pretender, of Pope and Chesterfield, of Voltaire, and a generation that looks to us as belonging to ancient history. He was, of course, well stricken in years when his daughter was born. But this was not the only curious fact about this longevous dame. Her grandfather was born in 1649, the year distinguished by the lesson in natural history which, according to old Lord Auchinleck, Boswell's father, was taught to kings, viz., that "they have a joint in their necks;" and when he married her grandmother, that most religious king, Charles II., gave away the bride.

Within the last month a long life came to an end in Boston, breaking one of the last links that connect the present times with those before the Revolution. In June, 1774, Copley, the great portrait-painter, the American Van Dyke, sailed for England in the last ship that left the port of Boston before the oppressive Port Bill which closed it went into effect. His three children, a son and two daughters, accompanied him. Two years ago all three of these children were alive. A few weeks since two of them were still living, and one yet survives in England. The son, we need hardly say, was the late Lord Lyndhurst, three times Chancellor, for many years the leader in the lords of the Tory party, and the originator, in his extreme old age, of some of the most important reforms that have ever been made in the English law. He was the Nestor of English statesmen, not only in having survived three generations of breathing men, but in eloquence and in political wisdom, both of which seemed to increase with his years, and were never more marked than when he was on the verge of fourscore and ten. The elder sister, Mrs. Elizabeth Copley Greene, died in Boston, about a month ago, at the age of ninety-five. This venerable lady closed a life as singularly prosperous and happy as it was long by a death of perfect tranquillity and ease. She furnished one of the rare instances of a life completely rounded, and ceasing from no disease or accident, but simply and purely because the vital machine had gradually and painlessly worn itself out and stopped. The growing infirmities of age had withdrawn her for some years from general society, of which she naturally stood at the head from her high social position, her dignified, graceful, and charming manners, her animated and varied conversation, and her kindliness and friendliness of heart. She was liberal, hospitable, and charitable in the dispensing of a large estate, and discharged all the offices of a responsible position conscientiously and with dignity. She will long be remembered by those who had the privilege of her personal acquaintance as a most interesting example of one who had lived one life, as it were, in the last century, and with a generation which exists to us only in history or tradition, before she had begun another long and various life in this hemisphere.

It was odd to sit and talk with one who had known Sir Joshua Reynolds familiarly, not as a child but as a young lady. Copley and Sir Joshua both lived on Leicester Square, which had not then been *mediatized* and reduced to its present dilapidated state. It was a well reputed place of residence in those days, and its flags were trodden by many a famous visitor of its inhabitants. The families of the president of the Academy and of Copley, one of its chief members, were on terms of familiar intimacy, and Mrs. Greene used to delight to expatiate on the perfect manners and Old World grace of Sir Joshua, and to describe the society she used to meet at his delightful house. From the position of her father she had seen all and known many of the chief celebrities of every kind of the last quarter of the last century. She was, perhaps, the very last survivor of the spectators of that splendid scene in "the great hall of William Rufus," which Macaulay has painted in such gorgeous coloring—the opening of the impeachment of Warren Hastings—where "were collected together grace and female loveliness, wit and learning, the representatives of every science and of every art." Of all that splendid audience, it is not likely that a single one is now alive after the lapse of seventy-eight years. To hear an actual eye-witness bear testimony to the truth of the description, and describe the appearance of Burke and Fox and Sheridan in the forefront of the Commons of England as the managers of the impeachment, almost seemed to bring one into personal relations with the scene and the actors, and to make them present to the mind rather as recollections than imaginary presentments. Two days afterwards she heard the great opening speech of Burke, which has passed into literature as an example of eloquence not excelled in ancient or modern times. Very few persons, if a single one, can be yet living, on whose ears that voice, now silent for all but seventy years, can have ever fallen, and probably not one who heard that crowning triumph of its power. These are things which make one feel that the long past and the present are not separated by sharp divisions, as it is apt to seem to us at a distance, but glide gradually and imperceptibly into one another, kindred drops of one great stream of time.

About the beginning of this century Miss Copley, being then about thirty years of age, married Gardiner Greene, of Boston, a man of large fortune and a gentleman of the old school of finished courtesy and perfect politeness. Here another life of some sixty-five years was past. Her residence for about the half of it was in one of those old pre-Revolutionary houses, built and its accompaniments laid out before land was sold by the square foot. Such were to be found in all our large cities forty years ago, and especially in Boston, before the ruthless hand of improvement had swept them out of its way. The tradition is that it was the quarters for a portion of the time of the siege of Boston, at least, of Earl Percy, and it was certainly occupied by Mrs. Hayley, the sister of John Wilkes, whose lot was cast in some way inexplicable by us upon Boston for a while. It stood on the slope of one of the three hills which gave Boston its second title of Trimountain, and was approached by flights of steps through a spacious "front-yard." The garden behind the house was terraced to the top of the hill, which was crowned by large forest trees—English elms, if we recollect aright. Here it abutted upon other gardens on the other slopes of the hill. It was a unique place, with "no second and no third" like unto it that we know of in any city. It should have been bought by the city and preserved as a pleasure-ground for the people. But aldermen are not æsthetic in their ideas, and the speculators stepped in and it all soon vanished out of sight. They had faith sufficient to remove the fair hill and cause it to be cast into the sea and to conjure up heaps of brick and mortar in its place. We are happy to believe, however, that the speculation was a very bad one. In this charming abode she lived out her second generation of men, with another thirty years to spare before her summons came. What changes had she not seen come over the face of the world since she entered it! The American Revolution, and its daughter, that of France, the whole career of Bonaparte, the entire history of the United States, from the Convention of 1787 to the crushing of the slaveholders' rebellion! Did any ninety-five years ever comprise more eventful and more fruitful history than hers? We think not, and believe that her example well deserves to be added to those we have related as one of the curiosities of longevity.

WASTE.

It will not be very strange if our remote posterity have rather a poor opinion of us, their excellent ancestors. They will have learned so much of which we are ignorant that our civilization, admirable as it is, may appear somewhat rude to them. Happy as we are, the time may come when we shall seem to still happier generations to have had but scant experience of the good things of this world. They will hardly look back to our days,

as Dante did to those of his ancestor Cacciaguida, or as we look back to pre-Revolutionary times, as presenting a picture of delightful simplicity of manners and innocence of living. And yet they will not give us credit for having gained much in place of our lost innocence. It would be a little trying, but perhaps it is not impossible that they may even regard us as having hardly got out of the woods of barbarism, and may detect underneath our superficial pretences the old habits of the savage still clinging to us.

We are, indeed, so well off that even this poor opinion need not matter much to us. But we might, if we chose, be a good deal better off. The arrangements for the comfort, quiet, and enjoyment of daily life are, to say the least, not quite so perfect as they might be. M. Blot's excellent lectures on cookery are a rather sharp criticism on our tastes and manners. Will not some other M. Blot come to teach us how to dress well, or how to build and furnish comfortable houses?

Who knows how to be rich in America? Plenty of people know how to get money; but not very many know what best to do with it. To be rich properly is, indeed, a fine art. It requires culture, imagination, and character. A man who should practise this art with success would be one of the greatest benefactors of his time. He might win a pure fame and leave an enduring example. To be rich is to be able to be magnanimous; to conceive and to execute large, splendid, and permanent designs. It is to be at ease and to set others at ease. It is only the rich man who does not know how to be rich that finds it hard to enter into the kingdom of heaven. The man who knows the art passes through even this life, to use one of the fine phrases of Marcus Aurelius, "like one who has entrusted to the gods, with his whole soul, all that he has." Suppose such a rich man to live in our time! "Assuredly," said Solon to Crœsus, "he who possesses great store of riches is no nearer happiness than he who has what suffices for his daily needs;" but surely he has some means of happiness which the other does not possess.

One of the signs of the barbaric as distinguished from the civilized temper is the tendency to waste; and the less waste in a community, the higher, other things being equal, is its civilization. Our social organization does not come out well if tried by this test. We Americans are given to wastefulness. It is the reaction from the parsimony and narrow frugalities of the hard early days of the nation, and is one of the consequences of our rapid growth in wealth. New York wastes every day more than would have supplied all its wants fifty years ago; and, what is worse, it wastes the very source of its own prosperity. Dirt is honest and useful matter in the wrong place. To correct this misplacement occupies a great part of the life of every man. The accumulation of dirt on a large scale is productive of innumerable offences and dangers to society. To utilize this accumulation by its proper distribution is one of the chief objects of social organization; to waste it is to destroy one of the chief elements of social prosperity. It has been well said that the value of the dirt of a city in any given time is far greater than that of any single product of industry or any article of commerce. No gold mine is so full of value as the dirt of our streets. It is on the proper distribution and application of this dirt, or its replacement in its right position, that the very life of the city in the long run depends.

England has been lately warned by a high authority of the fatal diminution of her resources and her powers by her rejection and waste of the dirt of her cities. What the city draws to herself from the country and turns to dirt, must be returned to the country if the land is to remain capable of sustaining the continuous drain. Nature takes a slow but sure revenge for the neglect of man. Dirt wasted corrupts the air and the waters, impoverishes the land, breeds pestilence, produces poverty, and increases misery. Dirt utilized makes the land rich, supplies the stores of nature, diminishes poverty, increases happiness, and lengthens life. And yet we waste our dirt and tax ourselves to pay the expense attending the waste of it.

Our habit of wastefulness shows itself in the very construction of our cities. Hardly a house in New York is a hundred years old. The city has been pulled down and rebuilt within the memory of man. It is likely to be pulled down and rebuilt again before the end of the century. This is, no doubt, due in part to the absolute requirements of progress, to the change in habits and in business, and to a natural growth. But, however much of the rebuilding may be assigned to these causes, there is still much that is merely and disastrously wasteful; for the waste of labor, of capital, of design, involved in this constant process of destruction and renewal is beyond computation. Each successive generation has to do over again work that might be done once for all. Work lasts but twenty years which should last for a thousand. The accumulation of capital is impeded, labor is employed unproductively, progress in all cultivation is retarded, and the plainest dictates of economy and good sense are set at naught. New York seems to fulfil the suggestion of Mr. Hawthorne's cynical humor, that no dwelling should be allowed to serve for more than one generation of men. One of the reasons why we fail to rival the Old World in the possession of the products of civilization, is that we have spent and are spending so much of our time and wealth and energy in doing work over and over again. The palaces of Venice were not more costly than the palaces of the Fifth Avenue. But those of the Fifth Avenue have no tenure of existence. The palaces of Florence are old, but better than new. How shall the arts flourish among us if their best productions are to be more short-lived than the artist?

For the mere material waste implied in this destruction and rebuilding is not all. We fling away the inheritance of memories and associations which dignify and exalt life, which connect it by visible monuments with the past and the future. Both the imagination and the affections suffer where there is nothing venerable for them to cling to, where there is no hope of permanence for their highest achievements. We make our lives barren by this waste.

Fine as our houses look, comfortable as many of them are, they have not grown out of the heart. They miss the essence of home. They are but the lodging places of a family, and next year they will be to let to new inmates. In one of his delightful descriptions of an English place Mr. Hawthorne says:

"All about the house and domain there is a perfection of comfort and domestic taste, an amplitude of convenience, which could have been brought about only by the slow ingenuity and labor of many successive generations, intent upon adding all possible improvement to the home where years gone by and years to come give a sort of permanence to the intangible present. An American is sometimes tempted to fancy that only by this long process can real homes be produced. One man's lifetime is not enough for the accomplishment of such a work of art and nature, almost the greatest merely temporary one that is confided to him; too little, at any rate—yet perhaps too long when he is discouraged by the idea that he must make his house warm and delightful for a miscellaneous race of successors, of whom the one thing certain is that his own grandchildren will not be among them."

This absence of the sense of permanent possession, and hence of interest in the real worth of things, is one main cause of the evil of slight and poor work, which involves not only waste but dishonesty. The dishonesty of poor work may seem of little account to those who are content with makeshifts. But, to look at it from the lowest point of view, bad work costs in the long run far more than good. In many of our trades the thorough workman is rare. Our houses themselves, our furniture, our books, our shoes, too often give the plainest evidence of the prevalence of bad work. It is in the main our own fault, for we are apt to prefer a so-called cheapness to excellence. We have, too, so much work to do that we slight it all. But the careless workman is, according to Proverbs, "brother to him that is a great waster."

Another most prevalent source of waste among us, and another indication of the Oriental barbarism of our tastes, is in our fondness for mere extravagance and display unaccompanied by refinement or comfort. The upholstery of a steamboat saloon or a hotel parlor, the white satin hangings of the silly "bridal apartments," the wearisome excess of delicacies at our public and private entertainments, and the style of much of the dressing of our women, are among the most obvious instances of an extravagance which is purely wasteful, without any compensation of elegance, luxury, or even splendor. We are young and fond of youthful follies, and shall get over them in time, no doubt; but it is a pity that our good sense should be bullied by the vanity of "shoddy" and "petroleum."

The readers of Mr. Marsh's admirable book on "Man and Nature" will not have forgotten how strikingly he exhibits the wasteful manner of our dealing with nature herself, and with what force he sets forth the penalties that follow upon it. The resources of nature are inexhaustible; but man may exhaust the stores which she has provided for his use, and may so deal with her as to prevent her from replenishing them. Already the great continental forests, wantonly desolated, begin to fail in their supply. The destruction of the woods diminishes the stream of the rivers, and the axe in the hands of the wasteful wood-cutter cuts off the waters from our mills and lessens the tonnage in our river ports. We kill the goose who laid daily the golden egg. Like profligates, we waste the inheritance of our children, and hand down to them the ancient estate encumbered with post-obits, the records of our useless squanderings.

A DESCENT INTO THE DEPTHS.

SIXTH WARD.

THERE are phases of human degradation, the revelation whereof (as the world is at present organized) can only be justified when there is a possibility of thereby subserving some special good. The simple contemplation of vice or misery may gratify that keen curiosity which is ready to explore every

crypt of our nature, but it had better be omitted unless it excite enquiry into causes, influences, and methods of prevention. *Passive* knowledge of evil is often itself remotely an evil.

I believe, however, that there is a necessity for what some may consider a repulsive acquaintance with the manner of life of those who dwell in the depths of this misgoverned city, burrowing beneath its ostentation, its reckless gaiety, its haste and excitement. Out of these caverns come votes; and from the votes, again—so far as they go—comes the government which increases misery by neglect, and thus increases the vice bred from it. There is as inevitable a connection between filth and vice as between manure and potatoes.

Last Saturday night, at nine o'clock, I found myself, in company with two friends, at the headquarters of the Metropolitan Police, in Mulberry Street. It was raining dismally, and the detective officer whom Mr. Inspector Carpenter had summoned to be our pilot, informed us that we had chosen a most unfavorable time for our proposed inspection of the cellars and barracks of the Sixth and Fourth Wards. The dance-houses are rigidly closed at midnight on Saturday, and we should be disappointed, he said, in our object of seeing the worst people of the city in their worst aspect. We judged, however, that in such a storm we should probably find most of the inmates of the lodging-houses at home, and might learn something of their ordinary habits of life before making acquaintance with their modes of recreation. So, at ten o'clock, we took a Fourth Avenue car for that part of Centre Street nearest to the Five Points.

The rain still poured out of the pitchy sky, and our first plunge into gutter-torrents and pools of liquid mud, guessing at the sidewalks in the dingy gas-light, was a pleasant preparation for the scenes that followed. At the police station we were received by Captain Jordan (whose recent detection of the Concord Bank robbers is only one of his exploits). A keen, intelligent, determined man is he, with a head like General Grant's in its air of mingled boldness and caution, and his forehead none the worse for a scar here and there. In a few words he marked out our course to a policeman familiar with the locality and its inhabitants. The latter lighted a lantern, and, after receiving a parting instruction of "Be sure and take them up Jacob's Ladder," preceded us into the street.

We were already on the borders of the vilely-famous region. The gloom of the night could not conceal the shabby, tumble-down appearance of the houses on either side, nor the long ridges of filth in the streets, the smells of which, constantly beaten down by the rain, we were fortunately spared. Our nostrils would soon have need of all the refreshment they could get. With the exception of three or four dram-shops and corner groceries, the shutters of the houses were closed, few persons were abroad, and the street was silent and deserted. Occasionally a dull murmur of voices came down from somewhere above, or seemed to rise from under the pavement.

The policeman presently mounted an old flight of steps, and we, following, found ourselves in a large bare room, with a bar in one corner and two dirty billiard-tables occupying the centre. Fifteen or twenty boys, between the ages of eight and sixteen, were handling the cues, smoking, swearing, spitting, or indulging in "rummy" conversation. Two loafers hung over the stove, and a negro boy was asleep in a chair. The proprietor—or rather his agent, during his temporary residence on Blackwell's Island—stood at the bar, but kept a watchful eye upon his guests. Our entrance created no surprise nor even curiosity; the boys, young "sneak-thieves," incipient burglars, and garroters, some of them, smoked, and knocked the billard-balls about, and ventilated their playful epithets, scarcely taking the trouble to look at us. The negro boy, half aroused with difficulty, gave us with shut eyes the information that he was from South Carolina, and his former master's name was Dick Hatch, after which he relapsed into sleep.

Most of the faces, I noticed, had the wide Celtic mouth and stumpy nose. The younger boys, for all their aping of the manners of the older, retained a certain frankness and openness of expression; but the others were already stamped with low cunning, alert and wary as those of full-grown thieves. For these there is no reclamation. I wasted no pity upon them, for they would have hooted at the very idea.

Our next visit was subterranean. The wet, rotten steps descended almost perpendicularly against a door of planks, barred on the inside, but swiftly opened at our policeman's summons. I inhaled a last mouthful of fresh air, and plunged into a dim, dank, pestilential atmosphere. The walls were of bare stone, trickling with moisture; the floor boarded, indeed, but so covered with dirt as to be rather that than wood, and there was neither window, flue, nor hole of any kind to admit the air. Most of the space was taken up with berths of rough plank, built up in double tiers; the beds in them were either bundles of black rags or layers of foul straw. This was a lodging-house, made to contain twelve or more persons in a space fifteen feet square. The price of a bed is ten cents, and the rent paid by the lady-proprietress of the den ten dollars a month!

A few paces off there was another still worse, a part of the front cellar having been taken for the storage of lager-beer, so that the "lodging" was ten feet from light and air. We had barely room to stand between the bunks and the trickling wall. Ragged articles of clothing hung from strings along the beams, and I was obliged to stoop to avoid shuddering contact with them. In the reeking, sodden beds lay several married (?) couples who had already retired, while the other lodgers sat upon the floor around a kerosene lamp, which seemed to burn under difficulties. One of these persons, a woman with a baby and bruised eyes, informed us that she was "bespoke" to the man sitting beside her. Thereupon the two laid their cheeks lovingly together, and said they were going to be true to each other. We were not much moved by this exhibition of affection; for both were tolerably drunk.

The landlord, an old Irishman, seemed to take a curious pride in showing us the vileness of his den—how damp the walls were, how dirty the floor, how impossible for fresh air to enter. Rent, ten dollars a month—that of a comfortable two-story house in Philadelphia. When I mentioned this to him, he said: "Ay, I know it—or in Albany or Massachusetts, either." As we turned to leave, he added, whimperingly, "You won't do anything to my injury, will you?" This, the policeman explained, was a gentle hint for a contribution.

The next place appeared, at first sight, to be slightly better, inasmuch as there was a penny-grocery in front and two rooms in the rear, each of the latter containing two double beds instead of the usual bunks. But here, also, there was neither light nor air, and the smell was hardly to be endured. In one bed lay two children, in another two men, chance lodgers. The whole cellar occupied a space of ten by twenty feet. Lodgings, ten cents; rent, *sixteen* dollars a month.

These places were types of six or eight others which we visited, all in the Five Points. Everywhere the same crowd of unwashed humanity, the same rags and filth, the same stifling, stagnant atmosphere. The men were either abject, besotted, and reckless creatures, or criminals of a low and cowardly order; the women, with one exception, coarse, hard-featured, and having, for the most part (as the Scotchman in "Alton Locke" says), "their mouths full of vitriol and beastly words." That exception was a young Irishwoman, whose husband is lying in one of the hospitals with a broken arm. She had a pleasant, pretty face, and kept herself as decent as the miserable circumstances of her life would allow.

There was, also, a little back from the street, an old, rickety frame house, where the appearances slightly improved. We waded through a pool of mud and water to the door, and inspected the two dwellings (about ten by fifteen feet each) on the ground floor. In one there was a quantity of shabby furniture; the walls were covered with cheap pictures, and the inmates had evidently made some effort to conceal the repulsiveness of their poverty. But the two stalls in the rear were simply air-tight boxes, so small that the sleepers would have been rapidly suffocated had the doors been closed. The other lodging was even worse. There was neither floor nor bed in the sleeping-stalls; only a thin litter of straw covered the damp earth. In one stall lay a child, so curled and twisted among the rags that only a tuft of soft golden hair was visible; in the other two young fellows of twenty slept, huddled close against each other for warmth.

It was a great relief when the officer conducted us to a billiard-saloon frequented by the Italians of the region. Here we found order and comparative decency. The polite, graceful manners of the men implied a certain amount of self-respect, the utter absence of which had painfully impressed us in the lodging-houses. Certainly no races are so lacking in natural courtesy as the Anglo-Saxon and the Celt. The proprietor of t room, a lively little man from Forli, in the Romagna, answered my qu tions with a light, cheerful dignity, and begged me to take a glass of wine with him. The officer, also, gave testimony to the superiority of the poor Italians over the other classes. With proper treatment, he said, they were very obedient and orderly, and gave the police little trouble.

A large lodging-house, fitted up from cellar to garret with narrow bunks, and patronized mostly by Germans, was closed. A little examination, however, showed that one of the cellar-doors was open. On descending the steps I plunged ankle-deep into water, and was then ushered into a narrow, dark hole, where there was barely room to pass between the bunks and the bare wall. Half a dozen persons, all Germans, were sleeping in an atmosphere which can neither be imagined nor described. The officer aroused a woman, who told me, in a broad Bavarian dialect, that she was a house-cleaner, and that her husband, snoring beside her in the cramped berth

made a living by mending harness. Why they lodged in such a place she would not explain.

Close at hand was Cow Bay, and here the officer announced that he was going to take us up Jacob's Ladder. Somehow or other, through the rain and darkness and deepening mud, we reached the foot of a broken, rotting, outside staircase leading to the second story of a miserable building. I will not describe one by one the horrors it contained. One room—and I think we visited eight in all—was a repetition of the other. Worn, broken floors, cracked walls, patched and broken windows (where there were any), and roofs and ceilings through which the rain leaked in streams, were the features of the dwelling. There was more diversity among its inmates. In one room we found an old man in bed, his head cut and swollen to double its size by the erysipelas which supervened, with his wife tending him; in another an old negro, in a singular garment of rags—at least three hundred pieces in his trowsers. He informed us, with a grin, that his rent was always paid in advance—three dollars a month—and every pitcher, pail, or dish he owned catching its separate stream of rain.

Two of the rooms were warmed by open iron kettles of coal, collected from ash-barrels during the day, and the gas was so dense that we could scarcely breathe. In one there was no window, only a square hole closed by a sliding shutter. Here, in a space six feet by twelve, lived a negro pair, paying three dollars a month. In another room, without fire or furniture—a cold, bare, filthy closet under the roof—a woman lay upon the floor. She turned over, looked at us, her face flushed with liquor, answered a few questions, and then sank back with a desperate, dreadful groan, as we turned to leave.

With qualms at the stomach and bitter saliva in the mouth, we crept down this hideous Jacob's Ladder and returned to the mud and rain with a luxury of relief. The first question that came to our lips was: "Who owns these places?" But here it was not so easy to obtain information. It appears that the most of them are leased to parties who sub-let in their turn, so that the money drawn from filth and vice and pestilence undergoes two or three purifications before it is paid for boxes at the opera or cushioned pews in up-town churches.

Yet there had been, so the officer said, even a lower deep than that into which we had descended. The establishment of the missions, to the beneficent operations of which he accorded full credit, the widening of Worth Street, and, lastly, the admirable system of police inspection organized by Captain Jordan, have brought some elements of order into this seething chaos. We were struck with the universal respect paid to the officer, and the obedience, for the most part cheerful and willing, which followed his orders. He knew the people by name, had a kind word for all, and was evidently looked up to by them as a protector. When the doors were locked, we frequently heard the words within, in answer to his voice: "Open, it 's Frank!" and one woman, sitting alone in a dark, horrid den, paused in the midst of indescribable talk to say: "I 'll never forget *you*, Frank; you once 't got my shawl back for me!"

One little thing touched me in this dismal round. Wherever there was the least attempt at ornament—sometimes even in the poorest rooms—there was the portrait of Abraham Lincoln. A cheap, colored lithograph; a wood-cut from an old newspaper pasted on the wall; a large, rude head from a placard; or, in the dram-shops, an engraving draped in black, with Tom Sayers on one side and John Morrissey on the other—in whatever form, the sad eyes of the martyred President looked down upon the degraded inmates, with malice towards none, with charity for all.

Yet, hence came no vote for Abraham Lincoln; but there came, in July, 1863, the vilest of Horatio Seymour's "friends." Curiously enough, in this home of denunciation of "the nigger" we found blacks and whites living harmoniously together—in one instance, one black man and three Irish girls occupying the same room!

The dram-shops and groceries were well lighted and orderly. In each there were a dozen or more pickpockets, "sneak-thieves," and prostitutes, some of whom, having no lodgings, had laid themselves to sleep on the saw-dusted floor. One of the girls said to the officer, "Frank, when are you going to get me out of this?" It was difficult to decide whether she was really sick of that wretched life, or merely wished to excite our sympathy. I moved towards her, intending to ask some questions, but was met on the way by a villainous looking fellow, who, after a sharp, quick glance, stretched out his hand. "I've seen you in Sing Sing, have n't I?" he asked in a low voice. I was so astounded at being taken for a "pal," that the man drew back his hand. "How long were you there?" I asked. He hung down his head, muttered "three years," and walked out.

The condition of the streets was horrible. In some places the layers of filth appeared to be nearly two feet thick, and the oozings from it were carried by the rain into inhabited cellars. The wonder is, not that such places breed pestilence, but that pestilence is not a permanent condition. We saw a number of sick persons, all afflicted with "rheumatism," which was frequently, no doubt, a euphemism for something else. Human life must require much less oxygen than the physiologists suppose, or many of these dens would lose their tenants in a single night.

Another wonder is, not that the people are vicious and degraded, but that, living in such a condition, they are not utterly brutalized. I suppose there is no possible reform for the most of them, for with self-respect goes the last thread by which they might be pulled out of the mire. But the question has other aspects, which the city ought seriously to consider. The law which removes a soap-boiling establishment out of the reach of sensitive nostrils permits disease to be engendered in damp, airless cellars, crammed to suffocation with human beings. The police has established order, so far as order is possible: the streets are quiet and secure; but in all other respects there is criminal recklessness. Why should not the owners of these dens be forced to have them, at least, cleaned, whitewashed, and ventilated? Why, indeed, should not the names of the owners be ascertained and published? As for the accumulated filth in the streets, so long as New York pays nearly twice as much to be the dirtiest city in the world as Paris, with 1,700,000 inhabitants, to be the cleanest, it is useless to hope for any improvement.

The intelligent officer who accompanied us from headquarters gave me much interesting information in regard to these and other questions. But it is not my intention to discuss them. It is enough, for the present, to attempt a plain picture of such misery and degradation as I have never found in any part of the world. One of my companions declared that in all his experience of life in Esquimaux huts, during the Arctic winter, he had never seen anything so repulsive.

We visited some establishments of a different class, where the comparative cleanliness and order produced, by contrast, almost the effect of a better moral atmosphere. These, also, are under careful supervision, though necessarily imperfect, since government ignores, and public opinion decries, any attempt to deal with an important social fact.

At two o'clock in the morning we had finished our inspection in the Sixth Ward, and it was then too late, and we were too fatigued with saddening and sickening spectacles, to undertake more. B. T.

New York, Feb. 28, 1866.

THE SOUTH AS IT IS.

FROM OUR SPECIAL CORRESPONDENT.

XXXI.

New Orleans, Feb. 20.

One day this week I made a visit to the house once owned by Mr. Pierre Soulé, and now in the hands of the Government. For nearly a year it has been used as an asylum for colored orphans. A young lady from Boston, Mrs. De Mortié, has been its manager from the time when it was founded, and, indeed, may be regarded as its founder and preserver, having successfully overcome the many obstacles which stood in its way at the beginning, and the perils which have threatened its existence since. It was only after wearisome delays that the Federal officers quartered in the house could be got out of it in order to make room for negro children. The citizens resident in that quarter were, of course, violently opposed to the establishment of a negro school and house of refuge in their neighborhood; and others, not aggrieved by its vicinity to their residences, were very angry at seeing so elegant a mansion given up to such uses. A guard had to be stationed round the building to protect it from destruction and its occupants from insult. This was furnished by General Banks, who warmly befriended the enterprise from the outset. On the part of some people who had been expected to render aid there was a good deal of backwardness at the first, and it is only recently that a society, called the Louisiana Association, and made up for the most part of wealthy people of color in New Orleans, has been formed, and has pledged itself to give the institution pecuniary assistance. At one time it was in great danger from an order issued by the Assistant Commissioner of the Bureau, which seemed to contemplate the apprenticing of all the inmates of the asylum. There were at once a great many visits from Southern men demanding apprentices in the most confident manner, one even threatening the matron that she would do well to be careful of her language or she might find herself apprenticed. Prompt recourse to General Canby averted that danger. Courage and patience constantly exerted have kept the asylum in existence and successful till the present time. And now a French gentleman, who has recently visited this country, and while here gave a careful examination to the institution, offers

to bestow upon it $10,000, on condition that $20,000 additional is raised, and Mrs. De Mortié entertains the confident hope of soon seeing her enterprise carried to a prosperous conclusion.

That there is need of such an asylum is evident from the fact that it is now giving support and an education to fifty-six children. The number of inmates was at one time as high as one hundred, but that was while many of the negroes of this city and the neighboring country were yet in the Federal army and the Confederate camps. In many of these cases the mother died during the father's absence, and the child found refuge in the asylum. Then upon his return it was removed and cared for by him.

I found children of all ages, from those of four months old up to fourteen and fifteen years, and some whom I did not see, and who are more than fifteen years old, were away at work, and are only to be found in the asylum at night. The school is held in what was once the dining-room, and contains about fifty pupils, two of them being day-scholars, who pay for their tuition. An increase in the numbers of this latter class may be expected, I was told, and their tuition fees will be applied to the expenses of the establishment. The list of studies embraces the common branches of an English education, history and physiology among the rest, and there is a class of ten who study French. Plain needlework is also taught. One of the teachers is paid by the National Freedmen's Relief Association, and the others by the Freedmen's Bureau. One of them informed me that her scholars behaved very well in school and gave her no trouble, so far as discipline was concerned, but she thought them indolent and averse to study. I only heard them singing, an exercise which they performed with a great deal of spirit. The dormitories, dining-rooms, play-rooms, and the grounds were all very neatly kept, and evidently pains had been taken to preserve the house from injury.

The general work of educating the freedmen of the State seems to be carried on with considerable vigor and probably with more success than in any of the other Southern States. I learn that on the 1st of February, 1866, the whole number of schools for freedmen was 140, with 267 teachers and 14,500 scholars. These schools are nearly all in the eastern part of the State, near the Mississippi River, although efforts are now being made to extend them over the other parishes. The cost of supporting the 140 schools now in operation is not far from $20,000 per month. It is defrayed by the United States Government, but the Bureau is charged with the expenses, and they in turn charge them to the State of Louisiana, which, it is probable, will eventually be compelled to pay them; for in 1864 a tax was imposed on the real estate in Louisiana by General Banks, who intended thus to support the schools which he had been mainly instrumental in establishing. For some reason this tax was not collected in 1864, and it was not until 1865 that a small portion of it, about $40,000, was paid into the treasury. Just then, if my information is correct, General Fullerton, the successor of Mr. Conway in the office of Assistant Commissioner, ordered that the collection should cease. Meantime the Bureau had been allowed to borrow from the Quartermaster's Department about $300,000. General Canby has recently declared that the tax was imposed by proper authority and must be paid, so that it seems likely that the instruction hitherto given to the colored people of Louisiana will be paid for by the State. For their future instruction General Baird, the present Assistant Commissioner, adopts a new plan. To the people in each district he gives their choice whether or not they will have a school. If they decide to have one they are obliged to pay its expenses. The agent of the Bureau is instructed in the case of such negroes to direct the employer to withhold from them and pay over to him five per cent. of the laborer's wages. This cannot be done where negroes enter into contracts that are not submitted to the Bureau for approval, and it cannot well be done in the cities, where few laborers work under a written contract. In the cities, therefore, each child is expected to pay a tuition fee of $1 50 per month. The Superintendent of Education is now sending his agents into all parts of the State to urge upon the negroes the importance of supporting schools, and hopes for good results from the new policy, which, except as to its principles, it is of course too early yet to judge. The hostility of the white people to the Bureau, so far as his official information enables him to reach a conclusion, is decreasing, the good influence being exerted by the best class of planters. But there is still much of it in existence, and it is only this week that one of his subordinates comes to him severely beaten, with the complaint that he has just been driven out of the parish of Point Coupee.

In the plantation department of the Bureau I was told that there are not laborers enough to supply the demand of the planters, and that in consequence some of the contracts made very recently give the negroes $18 a month. But the greater number of contracts filed in the office set forth $10 and $12 a month as the rate of wages; and I am told that not only shelter, food, fuel, and medical attendance are given by the employers, but clothing also. Five-sixths of all the contracts made agree that the laborer shall be paid in money; the rest give him a share of the crop.

Outrages upon negroes are said to be of infrequent occurrence, for very few complaints reach the Bureau; and cases of fraud, though by no means so rare, are not remarkably numerous. The gentleman at the head of this department of the Bureau is often in receipt of letters from Northern men who are cultivating cotton here. He believes that the danger of injury and insult to Northerners from their neighbors is very much less than it was a few months ago. He mentioned as one instance—and was able, he said, to give many—the case of a Mr. R——, a Massachusetts man, who, three months ago, found his neighbors so hostile that few of them would speak to him, and he had even received threatening letters. Now, he reports, there is very little trouble of that kind. Some of them come to him for advice as to the proper management of free labor, for he is a more successful planter than they. That circumstance, by the way, was an illustration, he thought, of the great difficulty which every officer of the Bureau found constantly coming up in his own experience. The planters as a class required more teaching, before they could adapt themselves to the new system, than even the negroes. At any rate, they required as much teaching, and they were less willing to be taught.

On this same question of Southern hostility to the North and the Government I talked not long since with a staff officer, who gave me as an example of it this account of an affair in which he had borne a part: He happened to go with some friends not very long ago into a hotel that has recently been opened here, and in the office he saw hanging up a printed announcement that on such an evening a concert or lecture, or some entertainment or other, would be given, and then came the big letters, "for the benefit of the Hon. Jefferson Davis and family." A portrait of Davis was fastened to the lower corner. The sight of the thing stuck up there made him angry, and he at once jumped up and snatched down handbill and picture. Going then to the clerk he demanded his reason for insulting a part of the guests of the house. The clerk said "no offence was intended, they had to please everybody," and made other lame excuses, and referred him to the proprietor. The proprietor was away at the time and could not be found. Well, on the next night there was quite a company of Southerners assembled in the hotel office, and the handbill and Jeff's picture were hung up again. Of course he did right in pulling it down the first time, but what should he do the second time? Consulting with his friends he decided that he would not be justified in going there without business of any kind just to make a quarrel, kill somebody, or get killed. He could not go there and let it hang; so he decided to stay away altogether. But he believed that was the way they all hated the Union.

TROUBLES OF FRENCH PUBLISHERS.

PARIS, Feb. 20, 1866.

A FEW years ago, a young Belgian publisher, Lacroix by name, came to Paris and opened a new establishment on the Boulevard Montmartre, at the corner of the Rue Vivienne. M. Lacroix had already made a large fortune in Brussels; but he was ambitious—he wished to become in Paris a sort of Murray, or Longman, or Fields, a friend and almost a patron of the *littérateurs*. His great fortune allowed him to offer to them more liberal terms than those which were usually given by the old Parisian publishing houses. His first recruit was no other than Victor Hugo. Lacroix became the happy publisher of the "Misérables," a work which has gone through any number of editions and has found its way into every house into France and into many foreign countries. I think I am not mistaken if I state that Lacroix paid Victor Hugo the sum of 400,000 francs (80,000 dollars) for the "Misérables." The great success of this popular novel induced him to offer to Victor Hugo still more liberal terms for all his forthcoming works. The great poet receives now from him 10,000 dollars for every volume he writes. Such was the price paid lately for the two volumes of the "Chansons des Rues et des Bois."

The magnificent *magasin* of M. Lacroix was fast becoming the most attractive on the Boulevards, and his affairs were most prosperous. He published the magnificent work of Quinet on the French Revolution, the "Lettres sur l'Angleterre" of Louis Blanc. Unfortunately, M. Lacroix confined himself to publishing serious works, written by French liberals. A liberal himself, he did not well conceal his political opinions. He had been once a member of the municipal council in Brussels, and he preserved in Paris the imprudent habits of free thought and free speech. Every day, towards one o'clock, M. Lacroix could be seen after his breakfast in the Café de Madrid, which faced his *magasin* on the other side of the boulevard, taking his coffee and smoking his cigar among the members of the literary

Pleiade, which has made the name of the place famous in the *grande et petite Bohême des lettres.* I do not wonder myself if Lacroix sought for a moment's relaxation from the cares of business among the wits and *beaux esprits* of this literary and artistic club; in no place I know of is so much *esprit* spent with so much gaiety, so much humor, with so much prodigality. But, alas for Lacroix! French *esprit* and the Second Empire are not on the best of terms. He was to pay dearly for his intimacy with *la jeune France,* and with old enemies of the government, such as Hugo, Louis Blanc, and Quinet. A pretext was looked for and soon found. After the death of Proudhon, the well-known socialist, many unpublished manuscripts were found among his papers. Lacroix undertook to publish them for the benefit of his wife and children, who were left almost destitute. A committee of young writers, who had been the personal friends of Proudhon, were to be the supervisors of the publication. The manuscripts were chiefly unfinished, and were notes rather than complete works. But some importance was attached even to the notes of Proudhon. The great critic, Ste. Beuve, lately made a senator by Napoleon III., had just begun a series of articles on Proudhon, in a Government review called the "Revue Contemporaine." These articles were an apotheosis, or rather a rehabilitation of the socialist writer and agitator. With the artistic indifference of a critic, Ste. Beuve judged the monstrous doctrines of Proudhon as he would have done the doctrines of a Hindoo or a Chinese reformer; he only admired the terseness of his style, the energy of his invective, the fertility of his sophistry; he placed him on a level with the greatest men of our age, and paid even a high tribute to his merit as a man and as a moralist. With the versatility of his nature, the academician, the senator, the supporter of despotism, identified himself for a moment with a man who despised all the political, religious, and social institutions of his time. Might not Lacroix think himself allowed to publish Proudhon's posthumous works when Ste. Beuve was extolling him in a ministerial review? He thought so, and first published notes which Proudhon had written on the New Testament; short, often unfinished, sentences placed next to almost all the verses and chapters. This embryotic exegesis, in its present form, will hardly be read by any but the systematic admirers of Proudhon; his "Evangiles Annotés" will never become popular like the "Vie de Jésus" of Renan. But the publication was used as a pretext for prosecuting Lacroix; he was accused of having edited and sold a work where the Catholic religion and all the other Christian doctrines recognized in France were attacked and ridiculed. Lacroix appeared himself in court and spoke in person, instead of employing a lawyer.

His speech was forcible and eloquent. Vainly did he repudiate all responsibility for Proudhon's doctrines, and urge that a publisher is not an author; that he, a man of business, could not seriously be accused of sharing the views of the writer who once said, "La propriété c'est le vol;" that, himself a father of a family, he had no desire to destroy the institution of the family, which Proudhon had been accused of desiring; that he had not wished to offend anybody's religious feelings in publishing Proudhon's ideas on the New Testament; that he did not force his book on the public; and so on. The court condemned him to one year's imprisonment and to a heavy fine, in virtue of an article of a law of 1822. The real crime of Lacroix was his political independence and the support he offered and promised to all the writers of the liberal school. His condemnation has increased the feeling of terror which has been for a long time common to all our publishers. The patent of a publishing house is a privilege which represents a large capital; it is in the power of the Government to take back his patent from any publisher. It happened in the case of the publication of the "Lettre sur l'Histoire de France," by the Duke d'Aumale. The prince had to indemnify his editor for the loss of his patent. Under such legislation, you may imagine that truth can no more easily find its way into books than into newspapers. Lacroix was getting too troublesome; his career, till now triumphant, was suddenly stopped. A year's imprisonment is almost ruin to a man of business. Lacroix announces that he will transfer his house again to Brussels, and shake the dust of Imperial France from his feet; and I cannot much wonder at his anger.

If I have entered into so many details about the recent condemnation of M. Lacroix, it is because such an incident will throw more light to the eyes of distant witnesses than general denunciations of Imperial tyranny. Since I wrote last the Mexican question has not lost any of its importance; it ranks foremost among all the questions which occupy the public mind. The French Senate, in its answer to the Imperial speech, has a paragraph on this question which, it is said, was inspired or revised, at least, at the Tuileries:

"As for the United States," says the Senate, "if, in consequence of a misunderstanding, the presence of the French flag on the American continent seems to them less opportune than at another and famous period of their history, the firm despatches of your Government have shown that our return will not be determined by proud and threatening words. France is accustomed to choose her own hour for action. She likes, however, to remember her old friendship for the United States. All you ask from them, sire, is neutrality and obedience to the law of nations. They must see that a war undertaken for the protection of French citizens against a disloyal government is not converted, merely because it is a successful war, into a war of conquest, of domination, or of propagandism."

I leave to you to pass judgment upon the eloquence, the good taste, and the political wisdom of the French Senate. The Mexican question will only be seriously discussed in the Lower House. It was said some time ago that M. Thiers intended to attack the policy of the Government in the Mexican question, but his ardor is cooling since the Emperor has promised to withdraw his troops. The publication of the diplomatic correspondence between the Government of France and the Cabinet of Washington has also caused some uneasiness to those who intended to treat the Mexican question in the Lower House. It is not without some astonishment that they have learned that M. Drouyn de Lhuys has been once *informally* asked whether the recognition of Maximilian by the Cabinet of Washington would be followed by the withdrawal of the French troops. To be sure Mr. Seward has since *formally* refused to bind together the two questions, and has clearly denied the recognition of Maximilian. For the present, the French Government seems willing to be contented with the neutrality of the United States: if you promise to behave yourselves, and not to trouble Maximilian's peace of mind, then we shall leave him alone and withdraw our regiments. Of course, if the Austro-Belgio-French guard which he must keep is sufficient to protect him against the Mexican rebels, if he can remain in Mexico without our Zouaves, you will have to recognize him sooner or later. M. Drouyn de Lhuys reminds you that you always recognize *de facto* governments; besides, in your own diplomatic correspondence you confess that the republican government in Mexico has been a failure; why should you not allow a fair trial to the monarchical system? Thus reason all those who have taken the pains of reading your documents and our "Yellow-Book." So everything is comfortable, and this crumpled rose-leaf in our Imperial Sybarite's bed has been again neatly spread out by the skilful hands of diplomacy.

A. L.

Correspondence.

RIGHT OF SUFFRAGE FOR STATE CONVENTIONS.

To the Editor of The Nation:

I was much interested in your remarks on *the right of suffrage for State conventions,* in your paper of February 22. I must also acknowledge to have been somewhat startled by the view you have presented, though I know that doctrine very similar has long been maintained, how consistently I will not enquire, by many of those calling themselves *par excellence* the Democrats. I have not been able to look at the history of State conventions in other States to see how far it may support your view. I have only examined a little into that of conventions in this State. The convention which established the first constitution of the State, April 20, 1777, was elected on the recommendation of the Congress of the colony, May 31, 1776, prompted by a previous recommendation of the Continental Congress. The resolution of the Provincial Congress recommended "to the electors in the several counties in this colony, by election in the manner and form prescribed for the present Congress," to authorize their deputies to consider the propriety of forming a new government, "and if the majority of the counties, by their deputies," should be in favor of it, then to institute such government, etc. The elections were to be determined by the county committees. The Congress also "earnestly recommended to the committees, freeholders, and other electors in the different counties diligently to carry the same into execution." Here was a period confessedly revolutionary. But the electors were those who had elected the Provincial Congress, and they were, I believe, those who had had the right of voting for the Colonial Assembly. Your view is certainly confirmed by the action of the legislature, March 13, 1821, when, in declaring who should be electors of delegates to the convention, they adopted a different standard from that in the existing constitution determining electors for members of assembly and for senators. The very calling of the convention might be termed a revolutionary act, for there was no provision in the constitution then in force authorizing the legislature to do this, and, of course, none authorizing them to determine the electors to the convention. But if the legislature had more power in the

premises than any collection of private persons, they must have derived it from the former electors.

The constitution of 1821 prescribed one qualification for electors of "all officers elective by the people." The extension of the qualification to what is known as "universal suffrage," in 1826, was by a constitutional amendment in the manner prescribed by the constitution itself, being adopted by a majority vote of the electors, after having been proposed by a majority vote of one and approved by a two-third vote of the succeeding legislature. There was in this constitution no provision for calling a convention of the people. Yet *an act recommending a convention of the people of this State* was passed by the legislature May 13, 1845, providing for submitting the question of calling a convention to the electors at the next State election, and for an election of delegates, if the majority should be for a convention, and providing that all persons entitled to vote for members of assembly shall be entitled to vote for delegates. This was recognizing the standard of electorship by the existing constitution. But the call of the convention by the legislature was itself an unauthorized assumption of power.

The constitution of 1846 prescribes the qualifications of voters for all officers elective by the people, and also that "at the general election to be held in the year 1866 and in each twentieth year thereafter, and also at such time as the legislature may by law provide, the question, 'Shall there be a convention to revise the constitution and amend the same?' shall be decided by the electors qualified to vote for members of the legislature, and in case a majority of the electors so qualified voting at such election shall decide in favor of a convention for such purpose, the legislature at its next session shall provide by law for the election of delegates to such convention."

Now, from your article I should understand that, if this year the vote is in favor of a convention, the next legislature, "in providing by law for the election of delegates to such convention," may determine the electors by some other rule than that in the present constitution, determining who shall vote for officers of the State government. For instance, they may allow any man of color to vote for delegates, without regard to property qualification (we will say nothing now about the women). Indeed, I must suppose that you would say that the legislature cannot refuse to do this, and that if any persons of color are not permitted to vote for want of property qualification, they will be therein deprived of a right. In other words, that they are constituent members of that *people of the State* by whom a new constitution may be framed.

I think your proposition, "Whenever heretofore a State convention has been called, it has been by a special statute, prescribing the qualifications of electors for that occasion only, and expiring with that occasion," will not be accepted by lawyers. You say truly, "The theory of government upon which all the States have acted since 1776 is, that no constitution, charter, or law can fetter the right of the people of each State by the action of a convention to frame that fundamental law anew from time to time at their discretion." But the question is, Who are this *people?* Your article hardly explains, though it implies that this consists or may consist of other individuals than those recognized as electors by the former constitution. The act of this State, March 13, 1821, and the adoption of the constitution under had a revolutionary character. The identity of the political people of the State changed in that occurrence.

But this I think was an exceptional event in the history of the State. The present constitution seems to me to affirm the principle that the people of the State are found in the former electors. If the legislature should make a special determination of electors for delegates to the next convention that may be voted for under the constitution, it is probable that the constitution next adopted would provide that electors for delegates to future conventions should be only such as were electors by that constitution. But if your theory is correct, even this would not settle it, because, as you say, no constitution can fetter *the people*. I think the people of a State are, in the political sense, those who under the existing state of things hold the elective franchise. Of course I admit that a revolutionary assumption of power may take place by a different set of persons in number greater, or, it may be, less, than the previous electors. But there is no rule about revolutions.

How far *the convention*, supposing it formed by delegates properly elected, may proceed in determining the new constitution, is an entirely different question, which I think you have mixed up with the other. Whether the convention has authority to establish the constitution, as you say it has, or has only power to propose one to the electors who chose the delegates, is a question of fundamental law, but not determinable by any principle—only by customary law, and hardly by that. It has been different, I think, in different States. The question is as to the intention of the political people of the State, either that their delegates shall give them a constitution or offer one for their adoption. In neither case is there any revolution. It seems a contradiction in terms to say that the highest power in the State is engaged in a revolutionary act—a normal revolution. What is that? It may well be that the existing constitutions of Alabama and other Southern States provide that the convention shall determine the constitution without again referring to a popular vote. The action of the recent Maryland convention, in referring the adoption of the proposed constitution to electors discriminated by a rule different from that determining the electors who sent the delegates, was anomalous. They submitted the constitution to a people made by the convention which offered the constitution! You might well say, Why did they not at once declare the constitution?

The fact remains that a written constitution cannot be the ultimate constitution. It must rest on some external authority; and where this authority is—that is, the unwritten or, as Dr. Brownson calls it, "the providential constitution"—is a mere question of fact.

The Dorr controversy, in 1842, is generally understood to prove precisely the contrary of the doctrine which you claim to be supported by it. The cases of Territories have no application here, because in such case the political people of the new State comes into being or attains self-recognition when recognized by Congress as the people of one of the United States. Your doctrine is an illustration of what Dr. Brownson calls *humanitarian democracy;* mine rather of what he calls *territorial democracy*. And, by the way, I think that in your recent review of his "American Republic" you misunderstood his use of the term, and represented him as meaning a landed-proprietor democracy.

Yours respectfully, J. C. H.

MORE ABOUT THE WEST POINT ACADEMY,

ITS ABUSES AND DEFECTS.

To the Editor of The Nation:

From the facts adduced in the former letter under this head, it is noticeable that the tendency of legislation for this institution has been to stamp upon it a reformatory and pauper character, by keeping the standard of acquirement for admission to it below the average of common schools throughout the country, on the plea that it should be open to rich and poor alike; and by taking off all checks upon the abuse of patronage, by allowing youths to be sent back and retained in the school after their incompetency for the military service had been passed upon by a board especially called upon to do so by law. Now, that neither of these features would meet the favor of the American people, were they squarely brought to their attention, there can be no question. That they are desirous of keeping up this school on the most liberal footing has been fully demonstrated, in the teeth of all the opposition that has been made to it in so many quarters. That, in doing this, their object is one of public utility, and not one in the interests of either individuals or classes, it would be an insult to their common sense to doubt. And yet their representatives in Congress, whilst professing to recognize this state of public opinion, have virtually ignored it by their official acts; and, in hundreds of cases, by their interference as individuals. If the national military school is not all that it might become, the responsibility lies with Congress, and with Congress alone.

Turning now from outside influences as they may affect this institution, let us examine some of the defects alleged against it as growing out of its internal government; and for this purpose take up those counts which are so well and strongly put in the article in The Nation of Dec. 28, 1866, headed "West Point Military Academy." The first point which attracts attention in this article is the following statement, which can only be accepted *cum grano salis*. It reads as follows: "It is not the purpose of this article to discuss the effect of West Point training upon the management of our military affairs; or whether the exclusive spirit nurtured by it, which has practically turned the army into a close corporation, has been productive of more good than evil. Its influence controls all the higher appointments in the service." With a people so jealous as we are of everything that seems exclusive, West Point has been brought into disrepute more by assertions of this kind than perhaps by anything else. Now let us examine how far this is true.

In the former letter on this subject the various methods for officering an army were sketched out, and the objections to each, fairly it is thought, were stated. All of these methods have been resorted to in our army, as its official registers will show, and the officers from each placed upon an equal footing for promotion and service. What the "exclusive spirit," as here used, is intended to convey is best known to the writer of that article. If it means that men specially trained for a profession, and having entered upon its duties, think they know more about them than one who takes upon him its exercise without any such preparation, and that men so trained have more

confidence in those who have been trained like themselves than in untried men without any training, this certainly is as true of West Point as it is of every other profession and trade. Why, consult the records of the army. Whom do our generals appointed from civil life select for the working men of their staffs? Why, with but very few exceptions, and those usually persons who, through their prejudices or from other causes, have committed themselves against West Point, they take West Point graduates whenever they can get them, and on the same grounds that men select their agents in all affairs of life. This is the sum and substance of the matter. If you desire to eradicate this spirit you must first destroy all *esprit de corps* in all walks of life.

Now, as to the other count, that "its influence controls all the higher appointments in the service," write *events* for *influence* and we shall be nearer the mark. That the graduates of West Point should, as intelligent and educated men, exercise some influence in the country, it would be little to their credit as a class to deny. It is but the natural result of their education. But how does the record stand upon this subject? Although some of the graduates of West Point had served in the war of 1812, and were still in the service in 1860, having in the meantime rendered distinguished services to the country, there was *not one* of their number who had been made a general officer up to that time except Joseph E. Johnston, who, upon the death of General Jessup, the quartermaster-general, was placed in that position by the influence of his connection, John B. Floyd. All the general officers, the quartermaster-general, and the commissary-general, were not graduates. When the rebellion broke out, three major-generals were at first appointed, John C. Fremont, Geo. B. McClellan, and H. W. Halleck. None of these men were at that time in service. Fremont was appointed through party influence; McClellan through the political influence of Ohio; and Halleck through the recommendation of General Scott, who knew him to be a man of talent, a military student, and of high standing as a lawyer in California. Neither Grant nor Sherman was in service when the rebellion broke out. They were comparatively unknown men. Both were borne into high command by political influence. Burnside and Hooker were also out of service at the same period, and both were pushed forward by the same influence. This statement is not made in disparagement to the real merits of these men, but to show how little West Point influence had to do with their rise to high office. It was charged at the time, and still is believed by many, that Fremont was sacrificed to West Point jealousy. In what way? Neither Mr. Lincoln, with something of that prejudice against West Point which is more or less prevalent in the West; nor Mr. Cameron, then Secretary of War; nor Mr. Stanton, had any particular bias towards West Point. Why should they have sacrificed Mr. Fremont to this influence against a very large fraction of the Republican party, who had made Mr. Fremont their leader? When we see McClellan, Burnside, Hooker, and other West Point graduates set aside, and Halleck loaded with abuse and odium, where was this influence? The fact is, that to bear the title of a West Point graduate was one of disqualification in the minds of no small number of the most prominent influential politicians in the country; and when some graduate's name was brought forward for confirmation, honorable senators have been heard to say, "There's another damned West Pointer." The whole sum and substance of the matter is simply this: the West Point graduates were the only educated military class in the country. They were put into responsible positions not because the Administration looked upon them with any favor, but from the necessity of the case. They were, in fact, a *pis aller*. But no administration in such a crisis would have dared to take the responsibility of ignoring them. The great coming general, with heaven-born talents and intuitive military knowledge, was hoped for, and expected to spring from the body of civil life fully armed, like Minerva from the head of Jove. But this military messiah failing to appear, the country was obliged to fall back upon West Point; with what result let the names of Grant, Sherman, Meade, Sheridan, Thomas, and the large and distinguished band of their younger comrades answer.

There are some strictures, perhaps, rather in a tone of *dénigrement*, of a minor character, in the article in question, which the public would hardly take sufficient interest in to hear discussed. Whether West Point graduates look upon their *alma mater* as the great engineering and mathematical school of the country, and whether the *curriculum* of studies on these subjects of Harvard and Yale is so much superior to that of West Point, that "their extent would make a cadet just about to graduate stare and gape," is a mere matter of opinion, easily settled by a reference to the printed programmes of the course of study and the text-books of these celebrated schools. Yale and Harvard have each invited and accepted a West Point graduate to fill the chair of engineering in their special scientific schools; Columbia College, New York, another of the leading schools of the North, has taken three—two for mathematics and one in her scientific school; and graduates before the rebellion were to be found all through the Northern and Southern States as prominent teachers. The West Point mode of teaching the exact sciences is now followed almost universally throughout the country. West Point text-books, on one branch of science or another, are to be met with in every school pretending to science in the land. Some of them have been republished in England, translations of them have been published in Germany, and they are taught in India. West Point reckons her Tottens, and Thayers, and Delafields, and Barnards, and Gillmores at home—names that rank with the first engineering talent abroad. She has made her mark in Russia in her Whistler and Brown. Mexico is, if ever, to be reached by a railroad from Vera Cruz now under West Point graduates. It has given a Bache to our great Coast Survey, a Humphreys and an Abbott to one of the first hydraulic publications of the age, the survey of the Mississippi. And the names of Bomford, Parrott, and Rodman stand associated with the greatest improvements in ordnance.

One more quotation from this very clever article, with a few remarks, must close this already too long notice of West Point deficiencies. It says:

"Unfortunately, the effects of this neglect of the study of language do not confine themselves to the cadets while at the Military Academy. The officers of our army, especially those in high positions, are obliged to write much. The productions of most of them, both before and during the late war, have added no reputation to the service or to the school at which they were educated. So long as they confine themselves to the bare statement of facts and opinions, they are usually respectable, if eminently dry and dull. But when they leave the level ground of simple narration, and venture on more ambitious movements, their failure is conspicuous.* With few exceptions, their productions will scarcely stand the fire of five minutes' criticism.

"The whole course should be reformed altogether, for the only real education in the use of their mother tongue the officers of our army now gain at the Military Academy is in the line of profanity."

Now this showing up is very bad, it must be confessed, but is it just? The writer of these lines knows the hackneyed commonplace phrase: *Non omnia possumus omnes.* If West Point cannot furnish to the country men who, like Cæsar, write with the same spirit that they throw into their fighting, let it be satisfied with those who are "usually respectable, if eminently dry and dull, in the bare statement of facts and opinions;" and let it congratulate itself that, at least, there are so many the fewer who "venture on more ambitious movements," by which the good taste and common sense of plain men are shocked; and which permeates our pulpits, our bar, our legislative bodies, and our public press. Whenever a West Point graduate ventures upon such "movements," let it be hoped that his failure may be eminently conspicuous. Yet there still exist the reports and despatches of General Taylor, known to have been written by his son-in-law, Colonel Bliss. We have had the reports of McClellan, and more recently those of Grant and Sherman, upon all of which the press, the *arbiter elegantiarum* both at home and abroad, has bestowed high encomiums.

As to the grave charge of profanity, which is here repeated from the report of the Board of Visitors of last June, nothing can be said in the way of extenuation. Profanity, the vice of camps, of garrisons, of crews, of the slums of politics, and of rowdyism, is equally detestable for its silliness and impiety. Unfortunately, it ever prevails where the restraining presence of woman is not felt; and, however much to be regretted, it is not to be wondered at that some of a large body of immature youths should fall into the habit. But the good taste, and the good effect to be hoped for, in spreading such a wholesale charge, in their report, by this Board, may be fairly questioned; and perhaps the right reverend gentleman who was a member of that Board might have acted more charitably, and not less wisely, if, with his colleagues, he had addressed a few words of kindly advice and remonstrance to these youths, instead of arraigning them, in this manner, before the public for a thoughtless local and temporary habit.

But, after all, these points, however open to some grave fault-finding and a little sarcasm, are not those in which the public are likely to interest themselves. The question that interests them is, How has West Point answered the purposes for which it was created? And to answer this question they will go to its record. From this record it is to be hoped no West Point

* It will hardly be necessary to call the attention of this well-informed writer to the fact that the productions of very few of even good writers will stand the test of trenchant verbal criticism. He may not have forgotten, on this score, the objections that have been made to the opening lines of two of the celebrated productions of our two first classical writers, Dr. Johnson and Addison—"The Tragedy of Cato" and "The Vanity of Human Wishes." It is much more important to the public to learn that if the officers of the regular army cannot stand this species of fire, they have, for four years, withstood daily that of the rebel batteries and their sharpshooters; and, as an evidence of it, have left dead upon the battle-field one hundred and eighty-nine, and five hundred wounded, out of twelve hundred in the beginning of the war, or more than one-half.

graduate will take an appeal. Have they performed the duties for which they were specially educated to the best of their ability? Have they acted with carefulness and integrity in the great responsibilities, both pecuniary and in trusts of public property, that have been devolved upon them? These are questions that can only be answered by the record of facts, and by these must West Point reputation stand or fall. Opinions, discussions, and invectives are mere idle wastes of time and paper before such facts. Aided by prejudice and individual jealousy, they may crush, it is true, this now world-wide celebrated national school. But, so long as its fair fame is untarnished, its graduates will have cause to be proud of the name of a

WEST POINTER.

Literature.

LITERARY NOTES.

THE new volume of Mr. Bancroft's history, being the ninth of the work, may be expected in a few weeks; after a short interval it will be followed by two others, a final instalment, completing the author's design, and carrying forward the narrative to the adoption of the Constitution of the United States. Considering the scarcity of authoritative books of information regarding the succeeding period, it is to be hoped that a continuation of the history may be undertaken by its author; but as to the prospects of this, nothing certain is known. The volumes of the Bancroft history hitherto published have never acquired a copyright in England, from the uncertain state of the law on the subject when they appeared, and several unauthorized reprints are in circulation there. Under the recent interpretation given to the act of Parliament an effort will probably be made to secure the property of the concluding volumes, as their value is very considerable, and the possession of them would give a control over the entire work.

—Considering the late rush of English translations of Dante that the press has teemed with, it is a singular fact that the first attempt at naturalizing any portion of the great Florentine's writings in English dates no further back than 1782, when the "Inferno" was translated and published by a Mr. Rogers. Boyd's version of the whole "Divina Commedia" appeared at the commencement of the century, in 1802, and Cary's, which still holds its ground, a year or two later. The number has recently increased to about twenty. How Dante escaped the notice of the Elizabethan writers, who were so familiar with Petrarch, Ariosto, and Tasso, is unaccountable, but, from the fact being as it is, we have probably missed a standard translation—one whose archaisms would faithfully reproduce to our minds the corresponding obscurities and dim oracular utterances of the poet, while the majestic flow of diction peculiar to the age would do justice to his mighty line. The very latest English translator is Mr. Dayman, who twenty-three years ago published his version of the "Inferno," and has now completed the entire poem. It is written in the *terza rima* of the original, a form of verse ingeniously supposed by Mr. Dayman to form a fundamental feature of the ternary structure of the whole poem, and, consequently, to be preserved by all who have a true feeling for poetry. According to the present very laudable fashion, he prints the original text on the opposite page to his own version, which is composed in nearly the same number of verses. Meanwhile, Mr. Longfellow's "Divina Commedia" is looming in the distance, and may probably be looked for from Messrs. Ticknor & Fields's press in the course of the present year.

—Unusual praise is bestowed by the English press on a selection of English love poems, edited by Thomas Dunn English, "The Book of Rubies," and brought out last Christmas by Messrs. Scribner & Co. The *Athenæum* says: "We do not know any similar collection which so honestly fulfils its purpose as this one does. The task of selection has been performed with great judgment and almost perfect taste. Many of the poems, being of American authorship, will be new to the English reader. This does not reduce the value of the collection in this country." The *Reader* also is equally laudatory. The typography of the book, a choice specimen of Mr. Alvord's press, meets with commendation equal to that bestowed on the intellectual portion of the work. The plan of the editor, Mr. English, includes a companion volume to "The Book of Rubies," entitled "The Book of Sapphires," a collection of sacred and serious poetry, got up in the same exquisite style.

—The curious matter constantly coming to light since literary relics became property of a valuable and scarcely negotiable description, was well illustrated at a recent sale in London of choice books, wherein occurred several autograph letters by Lord Byron, several of them unpublished. In one of them he says: "I hope you will find me an altered personage. I do not mean in body but in manner, for I begin to find out that nothing but virtue will do in this d——d world." This sold for seven guineas, and another for ten guineas, dated from Greece, in which he describes himself as "left to my own resources, which consist in tolerably fluent *lingua Franca*, middling Romaic, and some variety of Ottoman oaths, of great service with a stumbling horse or a stupid servant." The gem of the collection, however, was the letter dated June 30, 1809 (printed in Moore's "Life"), written in the exhilaration of the first start for foreign travel, and containing the verses commencing "Huzza, Hodgson, we are going," etc. This sold for ten guineas. In the same sale a collection of writings and tracts by Cotton and Increase Mather, extending to thirty-nine volumes of various dates and sizes, sold for £72 19s.; and a unique fragment of a volume consisting of thirty-two leaves, containing sentences from Terence in Latin and English, "Terencii vulgaria, in Anglicam linguam traducta," brought £36. It was supposed to have been printed at Oxford during the fifteenth century, by a comparison of the type, and may probably have been a portion of a volume printed for all the schools, which would account for its almost total disappearance, as belonging to a class of books made to be "used up" while serving the purpose they were intended for. It was purchased by the Bodleian Library.

—The American public will learn with regret that Prof. Goldwin Smith contemplates the resignation of the chair of modern history in the University of Oxford through ill-health. That a gentleman who, in this position, possesses so great a power of moulding the opinions of the most influential class of the generation now coming forward in public life, and who has exercised that power in a spirit totally new to the locality and at variance with its established traditions, should think of giving it up, is very much to be lamented, as the peculiar qualities which have given such freshness and interest to his teachings are not likely to be found united in another eligible person. The purpose, however, only gives a signal proof of Prof. Goldwin Smith's elevated standard of conduct, as instances abound, nay are rather the rule than the exception, where Oxford professorships are held for years under a total incapacity to fill any duty connected with the office. Prof. Smith does not contemplate a cessation from literary labor by this step, but, if his health permits, intends to concentrate his studies on an elaborate history of the Great Rebellion and Commonwealth of England under Charles I.

—Two interesting books lately brought out in London, independently of each other, testify to the continued attraction possessed by the literature of Scandinavia for the kindred people of more southerly local position. One is "The Story of Gisli, the Outlaw," from the Icelandic "Gisli Saga," by Dr. Dasent, whose beautiful edition of the "Njala Saga" and his "Norse Tales" gave him high rank as a Scandinavian scholar. The events described in the work occurred in the tenth century, shortly after the colonization of Iceland, the heroic age of the North. By his editor Gisli is pronounced to be "a true poet," and his work in genuine thought and feeling superior to any other saga. The translation is beautifully got up in small quarto, with illustrations by St. John Mildmay. The other work appears in a more unpretending form—"Viga Glum's Saga"—the story of Viga Glum, from the Icelandic, with notes and an introduction by Sir Edmund Head. This is of ruder character than the former work, being one of the earliest known sagas composed in the pure old language, and containing important contributions to the history of manners, legislation, and religious ideas. The translation is made from the original, with which Sir Edmund Head shows a perfect familiarity, as well as with the literature of the subject. Lord Derby and Mr. Gladstone have brought Greek into fashion, so this small work is prefaced by a Greek epigram on Iceland, from the pen of Mr. Robert Lowe.

—The announcement of the death of Thomas L. Peacock in his eightieth year will fail to convey any association to the minds of most readers of the present generation, though the few who are familiar with the series of his works, commencing with "Headlong Hall" and extending to "Gryll Grange," published as late as four or five years since, will hear of it with regret. Mr. Peacock, though a Liberal in politics, never wrote for the million. His works are rather the outpourings of a full mind, all assuming a similar quaint and peculiar form, faithfully reflecting the writer's idiosyncrasies, than works of art, though passing for novels among circulating libraries, whose customers must often have been puzzled at the curious learning, general good-fellowship, and out-of-the-way discussion that they exhibit. They comprise, besides the two named, "Nightmare Abbey," "Maid Marian," "Crotchet Castle," and "The Misfortunes of Elphin." As the friend and executor of Shelley, Mr. Peacock also published in "Frazer's Magazine" a series of papers most important for the true understanding o

the poet's career, and especially respecting the circumstances of his first marriage and early wedded life. These would well repay separate republication. No particulars of Mr. Peacock's life are given in the books of reference. It was probably uneventful, and mostly spent in that nursery of talent, the old East India House, where he was the official companion of John Stuart Mill, among the highest in position of the whole vast establishment. He was, to judge from his writings, a native of Wales. Among several charming lyrics scattered through his books are some splendid translations of Taliesin and the Welsh bards, including the only lines he ever wrote that have obtained general currency, the Celtic war-song commencing:

"The mountain sheep are sweeter,
But the valley sheep are fatter;
We therefore deemed it meeter
To carry off the latter," etc., etc.,

which is given in "The Misfortunes of Elphin" as the version of a Welsh original.

—We regret to notice that the anxiously expected "Life of Charles Lamb," announced as in preparation by Barry Cornwall (B. W. Procter), has dwindled down to a selection from his works, with a life (in all probability a brief sketch) prefaced. It will form a volume of Moxon's "Miniature Poets," for which series Mr. Algernon Swinburne, author of "Atalanta in Calydon," etc., will edit a selection of Lord Byron's works, prefaced by a critical essay.

—The new volume of poems by Mr. Robert Buchanan, "London Idyls," is more ambitious in its aim than any of his previous works. Its plan seems modelled on some of Mr. Browning's writings, apparently, as it consists principally of monologues, forming psychological studies (like the famous "Bishop Blougram," etc.) of a somewhat unusual kind. As described in advance of publication, the analytical skill of the poet is employed on subjects sometimes of a repulsive character, as "The Murder Idyl," in which the speaker is a woman whose husband has been hanged; "The Ballad Maker," a writer of street songs vainly endeavoring to express his feelings, and who catches a gleam of poetry without knowing it in his efforts to comfort a poor dying carter lad with a song; and "The Real Mr. Honeydew," a fashionable preacher who recalls too forcibly Thackeray's secular character of Charles Honeyman. Besides these idyls there are promised in the volume a modern poem of considerable length, lyrics, and several north-coast idyls—studies of local dialect, following the example set by Tennyson in his "Lincolnshire Farmer." The mention of the laureate's name reminds us of the current rumor that he is busily engaged on a poem of which nothing further is made known than that it is founded on a classical subject.

—A lady who has been a voluminous authoress in fiction and journal literature, and, under the name of "Holme Lee," has acquired an extended reputation, is about to make her appearance in public *in propria persona* as Harriet Parr, in connection with "The Life and Death of Joanne d'Arc, called the Maid," in two volumes crown 8vo. The liberality of the French Government has made public, in the "Monument Historique," the whole series of documents remaining in the national archives on the trial and condemnation of Joan of Arc. They form an invaluable mass of contemporary records, and will afford Miss Parr much material new to English readers. The very curious evidence lately brought forward by M. Octave Delepierre to prove that the Maid of Orleans, instead of being burnt at Rouen, actually survived till the next reign, married, and had children, must be noticed, though so lame a conclusion to a story rich in the noblest tragic interest can never be accepted without the strongest possible confirmation. Miss Parr's work will be issued by Messrs. Smith & Elder.

—The list of books in press by Messrs. Blackwood & Son includes the third and fourth volumes of Count Montalembert's earnest, eloquent, and picturesque history of European monachism, "The Monks of the West, from St. Benedict to St. Bernard," the translation authorized by the author under the provisions of the international copyright law; "Geology for General Readers," by David Page, F.G.S., the gentleman who is supposed to have found the science for the once famous "Vestiges of Creation;" "The Operations of War Explained and Illustrated," by Col. E. B. Hamley, author of the "Story of Sebastopol," in one vol. quarto, with plans, etc.; "The History of Scotland, from Agricola's Invasion to the Revolution of 1688," by John Hill Burton, author of "The Bookhunter," etc.; "Physiology of the Farm, in Raising and Feeding the Live Stock," by Henry Stephens (whose "Book of the Farm" is a standard authority) and William Seller, M.D. It has been one of the characteristics of Messrs. Blackwood's career as publishers not to permit any books issued by them to be thrown on the market at a reduced price, to the prejudice of book-buyers and the unsettlement of trade values. Any book not found salable that they publish is silently withdrawn from sale and the entire number of copies destroyed. Their liberality to authors is well exemplified in their transactions with the family of Robert Pollock, author of "The Course of Time," to whom they had gratuitously paid several thousand pounds after becoming fairly the owners of the copyright for a very trifling sum. Under their management Sir Archibald Alison is supposed to have received a larger amount of copyright money than any author in Great Britain, with the possible exception of Sir Walter Scott. This is accounted for by the bulk and high price of the historical works and the numerous editions they have gone through.

ROBERT OWEN.*

EARNESTNESS is so remarkable a quality—earnestness in behalf of the neglected and the poor is so very remarkable—earnestness amounting to a life-long devotion and based on a principle is so rare—that, in our opinion, it should have the hearty admiration of every man who is himself in earnest. If the earnestness is wild, smile at the wildness, but give the earnestness its praise. If it is misspent, be sorry for it, but honor it with even more tenderness. If it proceeds on a mistaken principle, kindly show wherein the principle is mistaken, and show, if possible, how a different principle would answer better; but still protect the earnestness from slight or depreciation. This would seem to be the part of a wise man. But if it be, the author of this little book is not wise; for, though he will not admit that he is insensible to the claims which an earnest man has on his admiration, he thinks something else—his own theory of human nature and human society for instance—so much more respectable than earnestness, that the latter great quality gets but a modicum of commendation, and that of a patronizing sort, in consequence of its alleged theoretic unsoundness.

Whatever else Robert Owen may have been, he was an intensely earnest man. He spent great sums of money, devoted large portions of valuable time, exposed himself to many and severe personal privations, submitted to repeated misunderstandings, discouragements, and failures; and through all, with unabated fidelity, with undimmed hope, with a cheerfulness that never gave out and an amiability that would never be crossed, he—a rich and able and prosperous man—labored for those who were neither able, prosperous, nor rich—the working classes of Scotland, England, and every part of the earth. His patience was admirable, his resolution untiring, his heart generous, as we say, to a fault; his spirit was, in the true sense of the word, humane. He knew no distinction of persons, but placed the poor man on the same ground of humanity with the rich. He deplored the jealousy that existed between capitalist and laborer to the injury of both, and did his utmost to remove it by proving their interests identical. He had great faith in reason mingled with kindness, in kindness supported by reason. He was a man of unimpeachable integrity, unquestioned veracity, and unsullied purity. But of all this the reader of this life will obtain very little information and very grudging admission. A great deal is said of Mr. Owen's vanity and inflation and fussy self-importance, but when his nobler qualities are mentioned they are mentioned with such invariable abatement and qualification as to raise a doubt whether they substantially existed at all. We are not allowed to forget for the space of a single short chapter the social and religious heresies for which the reformer was unhappily famous, and which no personal consecration should, in this author's judgment, be allowed to palliate or conceal.

To those heresies we are by no means blind or indifferent. They were certainly very grave, as Mr. Owen's experience proved. They were put forth with a zeal that was intemperate and with an air of authority that was disagreeable. With his crudely digested dogma of human irresponsibility, according to which man is the creature of outward circumstances and of physical organization, a dogma which reduces society to a piece of mechanism, we disclaim, of course, all agreement and all sympathy. His other cardinal doctrine of "communism," apart from its irrationality and error, seems to us void and sterile. But these two dogmas do not sum up Mr. Owen's faith, and if they did, there was something in the spirit in which he held them that should shield him from opprobrium. It is better to hold error in the spirit of truth than truth in the spirit of error. Mr. Owen held error, grave error, deplorable error, if you will, but he held it in the spirit of truth; he held it in charity; and so holding it, he in a measure disarmed it. His own devoted energy corrected the fatalism of his creed; his own glowing zeal warmed up its coldness; his own independence balanced its rigidity; his incessant hopefulness helped to take away the dead-level character of its range; his own ardent goodness saved it under his advocacy from the charge of immoral tendencies. In order to condemn his theory we must separate it from himself.

But in condemning his theory we must not suppose, with the writer of

* "Life of Robert Owen" Philadelphia: Ashmead & Evans. 12mo, pp. 264.

this life, that we have put his faith under condemnation. Robert Owen's faith was something more than his dogma. He believed in an eternal and infinite Creator, who made the world in order that it might become happy in becoming perfect, and who had planted in the constitution of undivided and associated man the vital principles and laws by which the perfect happiness might and must be attained. Religion, in his view, consisted in charity to all mankind, devotion to the truth, patient study and faithful observance of all the facts and conditions which indicate and produce personal and social well-being; charity, moderation, kindness, contentment, cheerfulness, obedience to the divinely enacted and imposed laws of being, were the qualities that were well pleasing in the sight of heaven. He lived in the faith that the end of existence would be fulfilled in the practice of mutual good-will, and the earnest desire to contribute to the happiness of mankind without distinction of race, blood, or color. True happiness, he went on to contend, was the result of a sound mind in a sound body, the elements thereof being a purpose to increase the happiness of our kind and to augment the sum of human knowledge; freedom from superstition, freedom from malice, freedom from unveracity, freedom from indifference, freedom from all that hampers personal independence and hinders individual development.

These beliefs may be very wild and visionary, foolish, utopian, and all that. They certainly are so regarded by the great mass of mankind in and out of Christendom. We may smile at them, but have we any right to smile contemptuously at them? Is there not a certain beauty in them which makes them lovely to the imagination, even if they seem impalpable to the common understanding of mankind? Yet the author of this new "Life" suspects no elevation here. After confessing in one paragraph that Mr. Owen, in his address before the American Congress, in 1824, "proposed greatly to enlarge the liberty of the people, which he considered rather nominal than real; for while in a political sense, as in the choice of rulers, the enactment of laws, etc., they enjoyed great freedom, the 'national mind' was yet under the tyranny of prejudice"—while admitting that "he proposed to disenthral it, and introduce an order of things under which there should be no restraint save that of mutual love and good-will, all sources of discontent, poverty, controversy, crime, and misery should be dried up and the inhabitants of the land compose one harmonious brotherhood"—after giving a condensed summary of his positions, among which are these, that "the constitution of our nature was formed by the power which originally gave it existence to be influenced by the circumstances which should surround it; it is the science of circumstances by which, without any chance of failure, virtue, intelligence, affluence, and happiness may be secured to every individual of the rising generation," he opens the next paragraph in this wise: "In spite of the offensiveness of Mr. Owen's doctrines and pretensions to all sober and well-informed minds, we always find something to admire in the earnestness and single-mindedness with which he pursued his aims." Now see what he means by "admiration of earnestness and single-mindedness:" "A visit to an insane asylum is, in many respects, very painful, yet there is no more interesting school for the student of psychological phenomena. Among the patients we have often observed with surprise that one apparently supposes himself to have an advantage over another, and rather shuns association with him, or looks on him with evident sympathy [we presume the writer means *pity*], as if himself were exempted from so dire a calamity. We heard something analogous to this [pity of the more insane for the less?] in connection with the two discourses delivered by Mr. Owen in the halls of Congress."

We repeat, to the social and ethical theories propounded in those two discourses, and in other writings of Mr. Owen, we give no assent whatever. We hold them to be superficial and fallacious—so superficial and so fallacious as to carry with them their own refutation, and be practically, to any considerable extent, harmless; but we consider that the aims, purposes, endeavors and spirit of Mr. Owen receive no just treatment at the hands of his biographer. Why was this biography written? was the question that kept coming up as chapter after chapter was left behind in the reading. As an account of Robert Owen's life it would be unsatisfactory by reason of the meagreness of its detail and the narrowness of its view, even if the author were not every now and then throwing suspicion on the only authentic narrative in his possession, namely, the "Autobiography," by intimating that the writer's self-conceit probably got the better of his veracity in some particulars. As an account of Mr. Owen's work, the book has little value, for the effort to underrate its importance and set down its accomplishment at the lowest figure is apparent on almost every page. As a statement of Mr. Owen's social philosophy it is wholly inadequate, for, while casual mention is made of St. Simon and Fourier, there is no attempt to describe their systems or to define the points wherein they were distinguished from the Scotchman's. As a presentment of Mr. Owen's religious philosophy, the volume is worse than inadequate, for it leaves the positive side of it entirely out of view; intimates, in fact, that it had no positive side at all.

Why, then, was it written? Was it written for reproof and warning? Warning against what? Surely not a general disposition to copy Robert Owen either in his aims or his methods. There is no occasion for bidding our generation beware of one or the other. The elevation of his purposes is not likely to find many popular imitators, and the time for such experiments as he made is gone by—not for a very long time, at least, to return. Communism is a dead scheme; or if not, the name of Robert Owen has no power to bring it again into favor. The new science of "sociology" makes small account of his studies or his labors. They who would meet to-day the philosophy which teaches that man is the creature of organization and circumstance, the subject of conditions and the result of law, must be prepared to deal not with Robert Owen, but with Buckle and Draper. And this man is not the man for that. Why did he write this book? The only answer we can give to the question is this: he imagined that the modern doctrines of social science, in their latest form of development, were no stronger than the weakest part of Owen's immature theory.

MISS SEWELL'S PRINCIPLES OF EDUCATION.*

THE first thing to do in noticing this book is to clear away its local peculiarities and references. Many, perhaps all of them, would have been modified or suppressed by the author herself, had an opportunity been offered her by the American publisher. She would have widened her range, had she been invited to prepare an edition for this country, by applying her principles to "female education" not only "in the upper classes," but in other classes by whom her lessons would be equally appreciated. She would have laid less stress upon the immorality, or the tendency to immorality, in the circle she addressed; she would have said little or nothing of separation between mothers and daughters or the means by which they might be re-united. On the other hand, she might have spoken of some evils among us which do not exist among her people, and, sensitive as we are to English criticism, we might have welcomed such criticism as hers. Yet after admitting the Anglicanism of the book, and ascribing it, as we ought to do, to the publisher who does not consult his author, we can say that Miss Sewell has written a work capable of doing great service to the cause of education in the United States.

To say that it is emphatically a woman's book is to say nothing against it, but rather a great deal for it. Written by a woman, it is the more sensitive to

> ——"those first affections,
> Those shadowy recollections,"

in which the training of the child begins. Written for women, it addresses those to whom the care of the young first falls, and by whom the growing years are most deeply and most lastingly affected. When Doña Oliva Sabuco dedicated her "Philosophy of the Nature of Man" to Philip II. of Spain, she told his majesty that a woman was then rendering him a greater service than any which he had received from men. No woman can write of education, especially of female education, in a spirit like Miss Sewell's without doing what a man cannot do, though he write ever so wisely or powerfully.

The book before us is "the result," as the author remarks, "not of theory but of experience." She might have said, of unusual experience. Miss Sewell has had the care of very young children, orphans in their infancy, and brought up by her as by a mother. She has taken charge of private pupils, to whom she has devoted herself with daily fidelity for years. She has been constantly writing, now a book to be used in the school-room, now one to be read in the closet, besides the tales which have rendered her name familiar wherever the contemporary literature of England is known. In all these writings the purpose to teach, and to teach out of the full measure of the writer's experiences, is a distinguishing characteristic. They are the utterances of a life of responsibility and of exertion for others, and, whatever else may be said about them, this much is indisputable, that they deserve to be received with respectful attention.

These principles of education that Miss Sewell has drawn from nature and revelation are addressed, above all, to mothers. She would assist them in their care; she would give them something of the reflection, something of the self-control, which they always need but do not always possess; she would not relieve them of their duties, perhaps she would not even lighten them, but she would help them to consistency, completeness, and success.

* "Principles of Education, drawn from Nature and Revelation and applied to Female Education in the Upper Classes. By the Author of 'Amy Herbert,' etc., etc." London: Longmans. Republished by D. Appleton & Co., New York.

There are few mothers, very few young mothers, who will not thank us for having urged them to read this volume, if they read it thoughtfully. But it is not for mothers alone. It speaks to daughters of the dutifulness they owe their parents, of the graces they may cultivate, the errors they may shun. It calls upon them to bear their part in their education, to control themselves, to give as well as to receive, and to live for the good of others, their kindred and their neighbors, as well as for their own. There are other passages for teachers, particularly for those who, like governesses, are brought into personal relations with their pupils. The sympathy expressed in their labors, the opportunity of comparing notes, the correction of effort already begun, the suggestion of effort yet to be begun, will excite the interest of all engaged in offices of instruction. Nor will it fail to strike female teachers particularly, how earnestly Miss Sewell pleads for the consideration that is due to them, and for the exaltation of which she justly thinks their present condition susceptible.

All this is said, and said in detail to which we can do no justice here, with precision and clearness. The book is decided. It is also, and that in these days is to its credit, intelligible. It is not one of those treatises that puzzle the mind with problems they leave unsolved. Education is treated as a subject involving grave questions, but not too grave to be answered, just as it involves serious labors, but not too serious to be discharged. Mothers, daughters, and teachers are all to be watchful, even anxious, but not despondent. The most painful of their efforts need not be fruitless; the most threatening of their difficulties need not prove insuperable.

> "So others shall
> Take patience, labor, to their heart and hand,
> From thy hand, and thy heart, and thy brave cheer,
> And God's grace fructify through thee to all."

"The one sole desire of the writer," says the preface, "has been to base the principles of education upon the teaching of God in nature and revelation." To do this, Miss Sewell confesses that she has neither relied upon nor sought after anything that can be called new. "Education," she says in her first chapter, "can by no possibility be founded upon any principles in the nineteenth century which were not equally in existence and equally binding at the time when man's present state of probation began." Why, then, another book upon a subject so very old? Because, as Miss Sewell insists, "every age and every phase of society has its own characteristics, its own dangers, and its own fallacies, and will therefore necessarily view the subject of education in a manner peculiar to what may be called its own idiosyncrasies." As for the present age, its idiosyncrasy is described as an excessive regard for what it terms system. "Everything undertaken—more especially if it refers to the training of the young—is to be carried on upon some definite plan." But it is especially in the training of the young that system—in other words, a single unbroken mode of action—is objectionable. "A system must, so far as it is a system, act without regard to the varieties of character; it must aim at producing the same tone of mind in every individual subjected to its influence; and the first elementary truth in education—because lying at the foundation, as it would appear, of all God's dealings with man, and all His purposes for him—is, that we are neither required nor intended to have the same tone of mind." From this point Miss Sewell goes on to show how God has actually dealt with some of his chosen instruments, as with Joseph and Moses in the Old Testament, or with St. Paul in the New, giving a different discipline to each, and training each to the achievement of its appointed ends. Hence comes the inference that if such is God's system of education, man's systems must correspond to it, or else inevitably fail to educate those whom they take in charge. Of all the principles set forth in the book this is the sum: "that the object of education is the carrying out of God's will for the individual; that the purpose of His will is hidden from us in the eternal counsels of God, but that the direction in which we are to work is pointed out to us by the peculiar endowments of character and of intellect with which every person is gifted, whilst the principles which are to guide us are contained in the two great commands—to love God wholly, and to love our neighbor as ourselves."

Such is the Scriptural theory of education, the only theory, as our author argues, which can be employed with any confidence or hopefulness. It removes, as will be seen at once, many of the embarrassments in which education is necessarily involved, though it cannot, of course, remove those which are essential and inevitable. To some of these, to all indeed of most frequent recurrence, Miss Sewell proceeds to advert, taking them up from the human nature that underlies them all to the forms which each assumes according to the dispositions or circumstances in which it appears. Perhaps a general idea of the manner in which they are treated may be gathered from the view that is taken of evil as a whole. It is not, according to Miss Sewell, "a distinct principle in itself, but a perversion of good." When, therefore, we would deal with the evil that appears in the nature of a child we must not set ourselves madly against it as something to be utterly annihilated, but must be patient with it, and indeed make use of it as an indication of latent good, in order that the good may be evolved and rendered the predominant power in the character which we are attempting to form. Falsehood or temper, pride or vanity, whatever the fault may be, covers some fine trait from which the film must be taken away and the blur removed, but which is itself to be tenderly rather than roughly handled. A philosophy like this lights up the darker passages of education and gives buoyancy to the step which threads them in the hope of reaching the open day. But we must refer to Miss Sewell's chapters for illustrations of the practice to which her theory leads.

Two things above the rest appear to characterize the work under review. One is its determination to look forward, to regard the child not only as the child, but as the woman that is to be; and more than this, to regard both the child and the woman as on the way toward eternity. The other characteristic is the reference to a higher power than any which the parent or the teacher can wield, and on which they, as well as the children committed to them, are dependent for every fruit of education or of life. We are free to say that such things as these seem to us to stamp this book with a nobleness far above the educational works that lay stress upon the present as if it were the only time for which education is a preparation; or yet more blindly extol the human intellect as the one sufficient source of knowledge and power for the race. To those who prefer these views, Miss Sewell's book will not be acceptable; but it will have not its welcome only, but its abiding place, with such as, like her, look forward and upward. That touching letter to John Wesley from one of his followers recurs to us as we would describe the education to which Miss Sewell's principles apply:

"I have had as blessed times sitting at work as ever I had in my life, . . . with God in my sight and heaven in my soul. I think myself one of the happiest creatures below the skies. I do not complain that God has not made me some fine thing to be set up or to be gazed at; but I can heartily bless him that he has made me just what I am, a creature capable of the enjoyment of himself."

As Joubert said, "Nous vivons dans un siècle où les idées superflues surabondent, et qui n'a pas les idées nécessaires." Here in this book, of which our account is evidently an imperfect one, the reader will find the ideas most necessary in education. We trust they will have a large circulation and, better still, a lasting influence throughout our country.

THE BARDIC SCALE.*

In attempting the study of this volume we were somewhat staggered by the following sentence in the introduction:

"There are no rules belonging to any art that need no changing to meet the requirements of subsequent discoveries but the bardic rules of the Cambrians; and there are no inventions by any nation that will not bear improvement, when used by other nations, except these metres."

The illiberal spirit here exhibited pervades the whole volume, and detracts from the merits of a composition showing great labor and research in the compilation and arrangement of materials, for the author disclaims originality, as indeed it is difficult to see how he could be original in treating of an art already brought to perfection, except in his style of explaining its mystic rules to the uninitiated. Another objection to this otherwise excellent work is the controversial spirit in which it is written. The bardic fraternity are divided into two factions—the one advocating what is known as the "Carmarthen System," and the other the "Glamorgan System." Our author belongs to the latter, and it would be difficult to find for it a sturdier or abler champion.

It appears that a bardic assembly was held at Carmarthen in the year 1451, under the auspices of Griffith ap Nicholas, of Dinefor, where the bardic rules were recast, and new metres adopted to supply the places of those that were supposed to have been lost in the wars and commotions of preceding years. These rules were adopted without much opposition at the time, and became the acknowledged rules of bardic composition for many years. Indeed, they have not lost their supremacy to this day, notwithstanding the most strenuous efforts on the part of their opponents.

Those who disapproved of the rules of bardism as established in 1451, went zealously to work to recover the "lost art" of their forefathers and arrange the old materials into a system, and claimed that these were the true rules of composition, until they finally succeeded in having both systems put on an equal footing, so that the poet could follow either or both at his

* "The Bardic Scale: an Essay on the Metrical Rules of Cambrian Poetry in Ancient and Modern Times, and explaining the Nature and Value of the Four-and-Twenty Metres of Song. By Robert Ellis." With an Introduction by A. Jones.

own option. There is considerable difference between the two, but this difference exists more as to quantity than to quality; the one allows more variety than the other, but both call for a strict adherence to the rules of alliteration or consonancy, which is the distinguishing feature of Welsh poetry—a feature that could not possibly be introduced into the poetic compositions of any other language. Though considerable latitude is allowed to the poet, still there must be a certain amount of alliteration or consonance in every line; and a failure to comply with the rules on this subject is sure to consign any composition, no matter what may be its excellence in other respects, to eternal oblivion. There is much written in Welsh in what are called the "free metres" (similar to English metres), but these are considered as only inferior compositions, and the true poet scorns the idea of being engaged in such baby-work. To give the reader an idea of this alliteration we will offer an example in the language itself:

"*Trwst taran tros y tiroedd.*"

It will be observed that all the consonants in the first two words are the same as those in the last three, with the exception of the last in the second and fifth. But the two *t*'s at the end of the first word and the beginning of the second are allowed to answer for the *t* at the beginning of the fifth. The consonants in the first half of the verse are in the same order as those in the last half. Had the poet introduced another consonant in the first part, without a corresponding one in the last, or had the order been different in one of the parts from what it is in the other, or had the last consonant of the second word been the same as the last of the fifth, the inexorable bardic law would have been violated, and the composition condemned. The poor bard is not always required to have all his consonants alliterate as they do in this line; but whether few or many, he must follow the same general principle in his composition. A style much easier than the foregoing, and more commonly used, is the alliteration of two or more syllables in the verse.

There are twenty-four metres, and the lines vary from four to twelve syllables. The metre most in vogue is the "epigram," which is well adapted for the expression of a sentiment in a terse, vigorous, and pithy style; and many of the best authors make it a point to have the *sound* of the words as well as their *sense* remind the reader of the subject. The following, descriptive of a cataract, is undoubtedly the best in the language:

"Uchelgadr raiadr dwr ewyn—hydrwyllt,
Edrych arno'n disgyn;
Crochwaedd y rhedlif crychwyn,
Synu pensyfrdanu dyn."

In some of the metres of the Carmarthen system the principle of alliteration is carried to such an absurd extreme that they have been generally abandoned by a kind of mutual consent.

It would be a mistake, however, to suppose that these characteristics are the essentials of Cambrian poetry. These are the garments in which it is to be dressed and the ornaments with which it is to be decorated. It is no wonder that sometimes more attention has been paid to the ornaments than to the thing itself, and good rhythm has been allowed to supply the place of poetic sentiment. According to old Welsh authority, it is required of a poet to "have an eye to see nature, a heart to feel nature, and courage to follow nature;" and when the principle of this sentiment is carried out by a master of the rules of composition, when the inward spirit corresponds to the outward appearance, the effect is wonderfully charming. The ear is attracted by the sound, as the mind is attracted by the sentiment.

Poems Relating to the American Revolution. By Philip Freneau. With an Introductory Memoir and Notes. By Evert A. Duyckinck. (W. J. Widdleton, New York.)—Freneau was a native of New York and a descendant of one of those rather numerous Huguenot refugees who sought an asylum on the shores of our bay. He was a graduate of Princeton College, in the same class with James Madison; and in Jersey he spent the greater and the latter part of his days. We learn from Mr. Duyckinck's entertaining memoir that the poet was as warm an admirer as Jefferson of the doctrines of revolutionary France; and it is evident that his French blood strengthened his patriotic hatred of Britain. He suffered, too, at this port, in the prison-ships of the enemy, such hardships as were calculated to make his resentment implacable. As he sang the exploits of John Paul Jones in the first war with the mother country, so he lived to celebrate the naval victories which alone redeemed our warfare in 1812. We have called him a poet rather than an apt rhymester, because the present selection from his poems is evidently not a fair sample of his imaginative powers, and we are willing to concede something to the estimation in which he is held by the editor; and also because even among the contents of this volume we detect a trace of the divine afflatus. "Arnold's Departure," in imitation of Horace, shows no little skill and scholarship, and full intellectual sympathy with the spirit of the original. The following is worth quoting for its intrinsic merit and for its pertinency to the late civil struggle. It is called

THE NORTHERN SOLDIER.

In vain you talk of fruits and flowers,
When rude December chills the plain,
And nights are cold, and long the hours,
To damp the ardor of the swain;
Who, parting from his social fire,
All comfort must forego,
And here, and there,
And everywhere,
Pursue the invading foe.

But we must sleep in frosts and snows
No season breaks up our campaign;
Hard as the oaks, we dare oppose
The autumnal or the wintry reign.
Alike to us, the winds that blow
In summer's season gay,
Or those that rave
On Hudson's wave,
And drift his ice away.

Traitors and death may cloud our scene,
The ball may pierce, the cold may kill,
And dire misfortunes intervene:
But Freedom shall be potent still. . . .

Mr. Freneau had a green old age, dying not earlier than 1832. His political verses are inseparable from the history of the formative period of our government, and deserve the present substantial edition of them. This city is under renewed obligation to the publisher for his preservation of its local antiquities.

Robert Dalby and His World of Troubles. Being the Early Days of a Connoisseur. (J. B. Lippincott & Co., Philadelphia.)—This anonymous romance, an English production, excites a certain sort of interest by its incidents, which are varied enough and not improbable, but scarcely any by the character or want of character of its hero. With all his troubles, this personage risked far more than he encountered, and, considering the number of times he was rescued from impending misfortune by unlooked-for benefactors, might as well have had something to say about his world of friends. He virtually admits his failure as a painter, and the little art-talk in which he indulges creates the suspicion that his pretensions to the title of connoisseur are mistaken and ill-grounded. The author seems to have conceived a life, as he thought, eminently favorable to an artistic temperament, and to have attempted to portray it in the form of a novel, revealing, however, neither an intimate acquaintance with nature nor with the technics of his profession. The story has very little plot; the actors die or are dropped off according as they become inconvenient; and the few conversations which are tolerated are generally formal as in a play. Nevertheless the descriptions of sundry localities, chiefly in one of the university cities, have an air of reality, and there are some effective touches in a few of the personal delineations. The "world of troubles" is bounded by the four seas, and in Holland the connoisseur finds wealth and a wife.

Wanderings over Bible Lands and Seas. By the author of "The Schönberg-Cotta Family." (Robert Carter & Bros., New York.)—These notes of travel begin with Malta and end with Smyrna. The ground has been so thoroughly gone over and described in all manner of detail that little is left for ordinary tourists to descant upon. Nor do we learn here for the first time how a devout mind is affected by scenes which are sanctified in the history of the Christian faith. Yet we would not say that this volume is without instruction both geographical and religious. Its value for the reader will depend upon his previous acquaintance with the library of the East.

Fine Arts.

TWO PICTURE SALES.

AN important sale of foreign pictures, principally by French artists, will begin on Thursday evening, the 8th of March. As we write, the pictures are on exhibition, under the charge of Mr. S. P. Avery, at the "Old Düsseldorf Gallery" on Broadway, next door to "Tiffany's."

An auction sale and the antecedent show do not offer a good opportunity for criticism of works of art. That is especially the case in the present instance, on account of the shortness of time, the great number of pictures ("250, by 135 different artists"), the imperfect light upon them in the gloomy old gallery where they hang, their varying merit representing

every grade but the highest, and the absolute impossibility of so using words as to express rightly all those grades among such a jostling crowd of canvases. But many of these pictures we have spoken of before. Here, for instance, is that picture by De Jonghe, of which the name is "La Causerie Intime," one of the painter's most recent works, and exhibited in the Paris Exhibition of last spring. It is No. 163 A of this sale-catalogue, and is called "The Two Friends." Here is that admirable picture by M. Florent Willems, of which we spoke at length in THE NATION of January 11, 1866—"Au Roi!" It is No. 59 of the catalogue. Here, No. 60, is Gérome's "Diogenes," the little picture with which New York is grown somewhat acquainted and knows well in photography. No. 178 is that picture of Tissot's, "The Attempted Abduction," miscalled "The Duel," which we described in THE NATION of February 1. It seems to us the best Tissot that has been brought to this country.

A landscape by Otto Weber, of Berlin, No. 48, "The Ox-cart—Brittany," is of great merit. Long acquaintance with it enables us to say that it "improves upon acquaintance." Another, by the same artist, No. 172, "The Wood Merchant—Brittany," we now see for the first time; it seems to be of nearly equal value with its fellow. The best landscape by Lambinet that we know of is the large one, No. 170, "Autumn [afternoon] at St. Marc de la Bruyère." This is the best landscape in the room, unless the darkness of the miserably lighted gallery makes things seem as they are not. The little landscape by M. Plassan is pleasantly characteristic of the painter and, in its peculiar way, really "a gem." The merits of his landscapes do not inhere in his figures. The portrait by Merle, for portrait it seems to be, belongs to an order of pictures for which we have as little sympathy as for any work of man, but partly explains the popularity of the painter, from the character of the notice it commands. Every visitor to the gallery is compelled to look at it within five minutes after his entrance. Mr. Boughton, our countryman, sends a picture of thought and interest, No. 43, "The Past." One Spanish painter, at least, is represented, Señor Parra, who has sent two pictures, from which it appears that flower painting is a specialty of his. Baron Wappers, one of the lights of the Flemish school, is not well represented by his great picture "Italia;" but that is generally and naturally the case with the more celebrated painters in American exhibitions—their best work does not cross the water. Every brush-mark of so celebrated an artist will fetch an exorbitant price.

Among the numerous drawings, in water color, in pencil, and (*à la française*) in both, the charming fruit-piece by dead William Hunt is unquestionably the most beautiful. Why is it hung up above the eye? It has been hanging in a good place in Mr. Avery's pleasant rooms on Fourth Street; where it now is, it is hardly recognizable. There are six little drawings in water color by Calmelet, very charming, though not—perhaps not pretending to be—literal in color. A little pen-and-ink sketch by Gavarni is worth notice, and worth money. The drawing by Gustave Doré is not good, very unworthy of the artist, but is also worth money, and plenty of it.

The catalogue of this sale would serve anybody for a text who might wish to preach thoroughness in small things. In the first place it is not a *catalogue*, but a very helter-skelter list. The numbers of pictures are not arranged as the pictures are hung, nor according to any alphabetical order of artists' names, nor according to schools, nor according to any discoverable system. Even the works of one painter are not printed together. The pictures have been hung as came handy, with some regard to placing two works by the same man opposite to each other or balancing on the same wall; and the "catalogue" for its part must have been made out from old invoices. But they were not invoices of the original shipments from Europe, for the names of painters suffer dreadfully. The existence of accents is ignored; e, è, and ê were evidently all one vowel to the proof-reader, and even the somewhat important circumflex accent merely a form. The mistakes in printing *Frere* and *Leon* without the accents are not very serious mistakes, but it is worse when we find Honoré and René turned in the same line into *Honore* and *Rene*, and even the well-known name of Gustave Doré printed *Dore*. Then, for misspelling of names, Mr. Boughton has an important letter left out of his, and appears as *Bougton* (207), Mr. Merle appears as *Huges* Merle (175), Mr. Athanase Aufray has his saintly Christian name (Athanasius) turned into *Athanse* (133), and we have marked perhaps a score of other such blunders, Emille for Emile several times, Isadore for Isidore, etc. People should remember that Frenchmen's names are as important to them as Yankees'. But there is yet to be noticed perhaps the most delicious bit of all. M. Louis Lanfant was born at Metz, and is often called Lanfant de Metz, just as a certain Herr Meyer is called Meyer von Bremen. The latter is called Meyer *of* Bremen, very properly, in the catalogue, and the former, very properly, too, but inconsistently, is left untranslated. But there appears a little hand-catalogue printed on foolscap paper, and the well-known painter of No. 63 appears as "De Metz" merely. That is as if Mr. Boughton were to be called "of Albany," or Mr. Whistler "Bostonian," in France, which we believe they are not. Is Düsseldorf always to be printed Dusseldorf?

A number of pictures by Mr. George H. Hall are on exhibition at Miner & Somerville's gallery, to be sold on March 12. They look better all together than when contrasted with pictures brighter in color. The gallery walls are pleasantly filled, and all the pictures easily to be seen; moreover, Mr. Hall does not defy the public by asking them to bid for sketches and scrawls and used-up studies, but he has sent seventy finished pictures. The sale is intelligently arranged, too; the frames are not to be sold at auction, but must be taken at cost price by the purchasers of the pictures to which they belong.

Of Mr. Hall's pictures those we like the best are the cherries on bough and strawberry plants, and like groups of fruit in a state of nature. So Nos. 9 and 30 and 61 seem to us much better worth having than the "dining-room picture" of fruit prepared for dessert. And the pictures we like the least are the Spanish figure subjects, some of them, indeed, as No. 60, too nearly like reminiscences of Murillo to look well unacknowledged as such. These figure subjects are in fact very undeserving of praise, and would call for severe censure if this were the fitting place for it. Nor does it seem to us that the beauty of color in natural fruit and flowers has justice done it; the tone of coloring adopted in all Mr. Hall's work is not pure or bright enough for that; purple is shaded not with darker purple, but with grey. It is not fair to compare water-color with oil painting, but, as far as can be judged by such comparison, Mr. Farrer's drawings at Goupil's three months ago were as forcible as these works, and more beautiful in color.

RIVERSIDE EDITIONS.

CHARLES SCRIBNER & CO.,

124 GRAND STREET, NEW YORK,

HAVE NOW READY

A NEW AND UNIFORM EDITION IN SIZE, BINDING, etc., printed at the Riverside Press, on tinted paper, of

IK MARVEL'S WORKS.

I. REVERIES OF A BACHELOR. 1 vol., 12mo, $1 75.
II. DREAM LIFE. 1 vol., 12mo, $1 75.
III. MY FARM OF EDGEWOOD. 1 vol., 12mo, $1 75.
IV. WET DAYS AT EDGEWOOD. 1 vol., 12mo, $1 75.
V. SEVEN STORIES, etc., etc. 1 vol., 12mo, $1 75.

Also the cabinet edition of REVERIES OF A BACHELOR and DREAM LIFE, 16mo, bound in green vellum cloth, price $1 75 each.

NEW BOOKS NOW READY.

I.

THE STRUCTURE OF ANIMAL LIFE.

Six Lectures. Delivered before the Brooklyn Institute, by Prof. LOUIS AGASSIZ. 1 vol., 8vo, 46 illustrations, $2 50.

II.

ELEMENTS OF POLITICAL ECONOMY.

By ARTHUR LATHAM PERRY,

Professor of History and Political Economy in Williams College. 1 vol., crown 8vo, price $2 50.

III.

HISTORY OF RATIONALISM.

EMBRACING A SURVEY OF THE PRESENT STATE OF PROTESTANT THEOLOGY.

By the Rev. JOHN F. HURST, A. M. 1 vol., 8vo, price $3 50.

IV.

A new and revised edition, with a Supplement, of the

CYCLOPÆDIA OF AMERICAN LITERATURE.

By E. A. and G. I. DUYCKINCK.

Embracing Personal and Critical Notices of Authors, and Selections from their Writings from the earliest period to the present day. Royal 8vo, cloth, $10; half-calf, $16. The Supplement sold separately when desired. 1 vol., $2 50.

V.

BY PROF. GEORGE P. FISHER.

ESSAYS ON THE SUPERNATURAL ORIGIN OF CHRISTIANITY,

With special reference to the Theories of Renan, Strauss, and the Tübingen School. 1 vol., 8vo, price $3 50.

VI.

TIMOTHY TITCOMB'S NEW WORK.

By DR. J. G. HOLLAND,

PLAIN TALK ON FAMILIAR SUBJECTS, uniform with "Titcomb's Letters to the Young," "Bitter-Sweet," "Lessons in Life," etc. 1 vol., 12mo, cloth, price $1 75.

VII.

THE VICARIOUS SACRIFICE;

GROUNDED ON PRINCIPLES OF UNIVERSAL OBLIGATION.

By HORACE BUSHNELL, D.D.,

Author of "Sermons for the New Life," etc. 1 vol., 8vo, price $3.

VIII.

NATURAL HISTORY AND ZOOLOGY.

By PROF. SANBORN TENNEY, A.M.

With over 500 Engravings, in 1 vol., School Edition, $3; Library Edition, on tinted paper, $4 50.

IX.

LIFE AND TIMES OF DR. SPRING.

PERSONAL REMINISCENCES OF THE LIFE AND TIMES OF GARDINER SPRING,

Pastor of the Brick Presbyterian Church in the City of New York, with a fine Steel Portrait. 2 vols., crown 8vo, on tinted paper, price $4.

Copies sent by mail, post-paid, on receipt of price, by

CHARLES SCRIBNER & CO., New York.

PHILIP FRENEAU'S POEMS

RELATING TO THE AMERICAN REVOLUTION.

With Notes and Memoir by

EVERT A. DUYCKINCK.

A handsome crown 8vo volume, with steel portrait and fac-simile poems. Price $2 25.

No collection of this kind has appeared in America since the edition, now exceedingly rare, published in Philadelphia in 1809. The Poems of the Revolution, by which the author's reputation was established, are now brought together in one volume for the first time.

FINANCIAL REVIEW.

NATION OFFICE, Saturday Evening,
March 3, 1866.

THE price of gold continues to decline, though Government has ceased to sell. No sales have been made this week by the Government broker, but yesterday the price fell to 134¼, to-day to 133¼, and closed at 133⅜. So much gold was thrown upon the market by the Government sales in Feb-

ruary that the bears find no difficulty in borrowing it for delivery, and the bulls have to pay money to get their gold carried. Among operators the opinion prevails that gold must fall considerably lower, to 130 at least, before midsummer. Exchange continues to rule ¾ to 1 per cent. below the rate at which specie can be profitably exported as a remittance.

All eyes are directed to Washington, in the hope of discovering some indication of the probable course of Congress on the finance bill. Nothing trustworthy has been given to the public on the subject by the Washington correspondents of the daily papers. It has transpired that the reason why the bill was not taken up on the 28th ult., according to agreement, was the discovery that its fate, if then pressed to a vote, was very uncertain. There are a certain number of Congressmen who object to invest Mr. McCulloch with plenary powers because they desire to spite the Executive branch of the Government. Others object to the same feature of the bill because they deem it unsafe to create any one man dictator of the money market. And others, again, interested, directly or indirectly, in national banks or manufactures, object *in toto* to contraction in any shape. The latter party claim that the President is with them, and certainly some recent speeches of his, in which he seems to imply that the admission of Southern representatives to Congress would somehow or other cause such an absorption of greenbacks at the South that their value would presently approximate to the specie standard, afford some color of justification for the claim. On the other hand, Secretary McCulloch and a large number of the ablest men in Congress adhere to the belief that the way, and the only way, to restore specie payments is to contract the currency—to reduce the volume of legal tenders until they shall become as scarce as gold. Between these conflicting views Congress halts. Three months of the session have already expired, and nothing has yet indicated what policy will be pursued. Some weeks may elapse before a compromise is reached between the contending parties. Persons in the confidence of Secretary McCulloch announce that he has determined to resign in case Congress should refuse to pass the measure he deems necessary. But even without any new legislation, he is in a position to carry out his views to a large degree by substituting long bonds for currency whenever the money market offers favorable opportunities. He might, for instance, to-morrow, reduce the interest on the temporary loan to four per cent. This would lead to a withdrawal of probably half of the $118,000,000 now on deposit in the sub-treasuries—say $59,000,000—which sum the large balance on hand—say $115,000,000—would enable him to pay without difficulty. The effect of the withdrawal would be to cheapen money at all the financial centres and to enhance the price of Government bonds. Taking advantage of this, he might at once sell $100,000,000 to $200,000,000 of new five-twenties at a premium, and with the proceeds pay off half the outstanding debt certificates, cancel a few millions of greenbacks, and still keep a balance on hand which, in the event of a pinch in the money market, would enable him to pay off the remainder of the deposit certificates on demand. This would be a commencement of contraction, and might be effected without any new legislation. Congress will probably act on Mr. Morrill's suggestion with regard to the compound interest notes. Bankers seem agreed that they must hereafter be held as investments, and not as reserve. They are all now held at a premium which prevents their circulating as money. No financial expedient of the past four years has worked so well for the Government or for the country as this issue of compound interest notes; and it is due to J. Howard Wainwright, of New York, that he should be remembered as the author of the scheme.

Money continues fairly active at 7 per cent. on miscellaneous collateral and 6 per cent. on Governments. Mercantile paper is slow of sale, especially for second-class names. Capitalists are all waiting for the action of Congress on the finance bill, and no man is willing to let his money pass beyond his control for more than a day or two. At the West considerable embarrassment is reported. Notwithstanding the bounteous crops of the last two years, the West has been paying so much for Eastern and European goods that it finds itself in debt. Produce is selling at such low prices that when the forwarders' charges are paid, there is nothing left for the producer. A marked discontent prevails in commercial circles at the West, and both private and public advices from that quarter point to a season of "hard times." When navigation opens, a fair amount of cereals will come forward by way of the lakes to the seaboard. But if gold be maintained at present quotations, and the West brings as much as usual of those articles of general merchandise which are sold for gold, it is doubtful whether all the wheat and oats and corn and pork sent forward from Chicago, Milwaukee, and Detroit will pay for the sugar, tea, coffee, hides, and dry goods that will be sent West by the merchants of the seaboard.

The following table will show the course of prices during the week in the stock, gold, exchange, and money markets:

	Feb. 24.	Mar. 3.	Advance.	Decline.
United States Sixes of 1881	104	104⅜	⅜	....
5-20 Bonds, old	102¾	103	¼	....
5-20 Bonds of 1865	102¾	103	¼	....
10-40 Bonds	94	90¾ exc.	....	....
7.30 Notes, second series	99⅛	99¼	⅛	....
New York Central	91⅛	90⅝	....	½
Erie Railway	80⅞	85¼	4⅜	....
Hudson River	102	103	1	....
Reading Railroad	100	98¾	....	1¼
Michigan Southern	68⅞	69½	¾	....
Cleveland and Pittsburgh	77	76⅜	....	⅝
Chicago and North-western	27¼	26¾	....	½
" " " Preferred	54¼	53⅜	....	¾
Chicago and Rock Island	103¾	105	1⅛	....
P., Fort Wayne, and Chicago	92⅛	90¼	....	2⅛
Canton	44¼	44¼	....	⅛
Cumberland	44⅜	44¾	....	....
Mariposa	11¾	11½	¼	....
American Gold	137	133¾	....	3¼
Bankers' Bills on London	108⅜	108⅛	⅛	....
Call Loans	7	7	....	....

The feature of the week in the stock market has been a sudden advance in the stock of the Erie Railway. It rose on Thursday to 87, sold to-day as high as 86½, and closed at 85¼. The advance is due to a clique movement, managed by the veteran director of the road. It is understood that the clique has, for the third time within a year, bought up all the floating Erie, and expects to realize its profit by supplying the luckless speculators who are "caught short." Nothing short of a miracle can render such an operation profitable. It was tried in June, 1865, and by great good luck the clique made a small profit. It was tried again in January last, and the clique lost over half a million. How this third experiment will turn out remains to be seen. Every railroad man is aware that the Erie Railway Company is not making money at the present time; that the low price of produce and the general depression of business have led to a competition for freight in the course of which rates have been reduced to a point which leaves no profit for the carrier, and that no midsummer dividend can be fairly earned on the Erie. Under these circumstances there is not, and cannot be, any enquiry for Erie Railway stock for investment, and a clique which buys up all the stock may possibly make a trifle by cornering some foolish bears, but in the end it must inevitably be saddled with an immense quantity of stock which it cannot sell at any price. An effort in February to sell a few thousand shares knocked down the price from 97 to 75. A similar effort made now would lead to quite an equal decline. The recent cornering operations in Erie, managed by the leading director of the road, have generated a wholesome disgust in the public mind, and the stock itself is tabooed in many offices. Among the shorts to-day as much as ¼ to ⅜ of 1 per cent. was paid for the use of stock till Monday. Apart from Erie and Rock Island, which is also being bought up by a clique, the general course of the market has been downward. Fort Wayne, one of the soundest of the dividend-paying railways, has declined to the neighborhood of 90. The earnings continue to show a heavy falling off, and there are rumors that the dividend will be reduced. New York Central has also been pressed for sale by the party which bought on the prospect of the passage of a bill through the Legislature authorizing an increase in the rate of fare. It seems that this prospect is not quite as brilliant as it was. Reading, another of the sound dividend-paying stocks, has declined 1¼ per cent., partly in sympathy with the decline in the price of coal. Michigan Southern remains pretty steady. The leading director of the road, emulating the performances of the leading director of the Erie, has been selling a large quantity of "puts" at or about 69, and he will take care that, till his "puts" expire, the stock shall not decline much below that figure. When the puts have run out, buyers and holders will have to take care of themselves. No position in the world offers more brilliant opportunities for making money than that of leading director in a railway whose stock is active in the market. But it not unfrequently happens in such cases that the gains of the stockholders are in inverse ratio to those of their chosen directors.

Losses paid to date	**912,342 00**
Dividends paid to date	**412,748 00**

This is one of the oldest wholly *Mutual* Life Insurance Companies in the United States, and has been uniformly successful, having always made large returns in Cash dividends to all the Policy-holders.

We refer to the following well-known Clergymen who are insured with us:

HENRY WARD BEECHER, R. S. STORRS, JR., HENRY ASHTON, W. P. STRICKLAND,

and are allowed to make the following extract from a private letter of the Rev. W. P. Strickland, D.D., as follows:

From what I *know* of the Union Mutual Life Insurance Company, 151 Broadway, where I am insured for $5,000, I believe that the Company is placed upon an immovable foundation; that its officers and agents are competent and honest, that it will faithfully and promptly meet all its covenants. I make this statement without any compensation, and without any hope of fees or reward whatever.

Brooklyn, July 31, 1865. W. P. STRICKLAND.

We invite careful attention to our table No. IV.,

"Non-forfeiture Endowment,"

being peculiarly adapted to those on salary.

Efficient agents are wanted,

J. W. & H. JUDD,

General Agents for New York and New Jersey.

The Nation:

A Weekly Journal of Politics, Literature, Science, and Art.

THIS journal will not be the organ of any party, sect, of body. It will, on the contrary, make an earnest effort to bring to the discussion of political and social questions a really critical spirit, and to wage war upon the vices of violence, exaggeration, and misrepresentation by which so much of the political writing of the day is marred.

The criticism of books and works of art will form one of its most prominent features: and pains will be taken to have this task performed in every case by writers possessing special qualifications for it.

It is intended, in the interest of investors, as well as of the public generally, to have questions of trade and finance treated every week by a writer whose position and character will give

his articles an exceptional value, and render them a safe and trustworthy guide.

A special correspondent, who has been selected for his work with care, is pursuing a journey through the South. His letters appear every week, and he is charged with the duty of simply reporting what he sees and hears, leaving the public as far as possible to draw its own inferences.

TERMS:—Six Dollars per annum, in advance; Six months, Four Dollars. When delivered by Carrier in New York or Brooklyn, Fifty Cents additional.

JOSEPH H. RICHARDS,
PUBLISHER,
130 Nassau Street, N. Y.

WILLIAM KNABE & CO.'S
Celebrated Gold Medal
GRAND, SQUARE, AND UPRIGHT
PIANOS.

These instruments have been for thirty years before the public, in competition with other instruments of first class makers. They have, throughout that long period, maintained their reputation among the profession and the public as being unsurpassed in every quality found in a first-class Piano.

THE BEST SEWING-MACHINES IN THE WORLD.
THE WEED MACHINES,

With all their valuable improvements, entirely overcome all imperfections. They are superior to all others for family and manufacturing purposes, simple in construction, durable in all their parts, and readily understood. They have certainty of stitch on all kinds of fabrics, and are adapted to a wide range of work without change or adjustment, using all kinds of thread. Will hem, fell, bind, gather, braid, tuck, quilt, cord, and, in fact, do all kinds of work required by families or manufacturers. We invite all persons in search of an instrument to execute any kind of sewing now done by machinery to inspect them, and recommend all parties engaging in the sale of sewing-machines to make sure they secure the best by examining the WEED before purchasing. They make the shuttle-stitch, which cannot be excelled for firmness, elasticity, durability, and elegance of finish. They have received the highest premiums in every instance where they have been exhibited in competition with other standard machines. The company being duly licensed, the machines are protected against infringements or litigation.

Reliable agents wanted, to whom we offer great inducements. Every explanation will be cheerfully given to all, whether they wish to purchase or not. Descriptive circulars, together with specimens of their work, will be furnished to all who desire them by mail or otherwise.

32 PARK ROW, N. Y.

Upwards of 100 styles of Toilet and Staple Soaps. For sale by all Dealers.

Improvements in Piano-fortes.

One of the simplest and most truly valuable improvements yet made in the Piano-forte is that invented and patented by

DECKER BROTHERS, 91 BLEECKER STREET,

in this city. By correcting the only imperfections arising from the use of the full iron-plate, and that, too, by not detracting in the slightest degree from its many positive advantages, the Messrs. DECKER have developed in their instruments a tone at once admirable for its purity, fulness, prolongation, and sweetness, and the high estimation in which their improvement is held is well shown in the rapidly increasing business of their firm.—*Tribune.*

MARVIN'S

PATENT FIRE AND BURGLAR SAFE.

Superior to any others in the following particulars:
They are more fire-proof.
They are more burglar-proof.
They are perfectly dry.
They do not lose their fire-proof qualities by age.
Manufactured only by

MARVIN & CO., 265 Broadway.

721 Chestnut Street, Philadelphia.

Send for a descriptive Circular.

Make Your Own Soap with B. T. BABBITT'S Potash, in tin cans, 70 Washington Street, New York. Pure Concentrated Potash or Ready Soap Maker. Warranted double the strength of common Potash, and superior to any other saponifier or lye in the market. Put up in cans of one pound, two pounds, three pounds, six pounds, and twelve pounds, with full directions in English and German for making Hard and Soft Soap. One pound will make fifteen gallons of Soft Soap. No lime is required. Consumers will find this the cheapest Potash in market.

Premiums on policies in hands of agents and in course of transmission	197,601 54	
		$4,881,919 70

The Trustees have declared a return premium as follows: A Scrip Dividend of FIFTY PER CENT. upon all participating premiums on Life Policies in force, which were issued twelve months prior to Jan. 1, 1866, and directed the redemption in full of the dividends declared in 1863 and 1864.

Certificates will be redeemed in cash on and after the first Monday in March next, on presentation at the home office. Policies subject to notes will be credited with the return on settlement of next premium.

By order of the Board.

WILLIAM H. BEERS, Actuary.

During the year 5,138 new policies were issued, ensuring $16,324,888.

BALANCE SHEET OF THE COMPANY, JAN. 1, 1866.

Assets as above, at cost		$4,881,919 70
(Market value, $5,018,449 06.) Disposed of as follows:		
Reserved for losses, due subsequent to Jan. 1, 1866	$78,841 45	
Reserved for reported losses, awaiting proofs	26,000 00	
Reserved for special deposit for minor children	285 76	
Amount reserved for reinsurance on all existing policies (valuations at 4 per cent. interest)	3,520,297 66	
Reserved for:		
Dividends declared prior to 1863, due or payable on demand	118,211 88	
Dividends, 1863 and 1864, now to be paid	232,895 00	
Dividend, 1865 (present value)	315,042 00	
Dividend, 1866 (present value)	406,117 00	
Special reserve (not divided)	184,228 95	
		$4,881,919 70

RAVEN & BACON'S PIANO-FORTES.

(ESTABLISHED 1829.)

A full assortment of these Instruments, which have been well known in the New York market for more than thirty years, constantly on hand. We are continually adding improvements to our Pianos, and our facilities enable us to furnish them at terms and prices satisfactory to purchasers. Pictorial circulars sent by mail.

Wareroom, 135 Grand St., near Broadway, New York.

DECKER & CO.,

MANUFACTURERS OF PIANO-FORTES,

419 BROOME STREET,

One Block East of Broadway, N. Y.

These Pianos stand unrivalled in regard to their singing quality; volume and purity of tone; sympathetic, elastic, and even touch; and durability of construction, which enables them to remain in tune much longer than ordinary Pianos.

Bradbury's Pianos "the Best."

Pronounced "THE BEST" by the most renowned artists. SUPERIOR in tone, touch, power, DURABILITY, and elegance of finish." Warerooms 425 and 427 Broome Street, corner of Crosby. Call or send for circular.

WM. B. BRADBURY.

Light Biscuit made in fifteen minutes with T. B. BABBITT'S STAR YEAST POWDERS, 70 Washington Street, N. Y.

MANTEL ORNAMENTS,

Bronze and Marble French Clocks, Fine Vases, Parian, Bisque, and Bronze Statuettes, Groups, etc., etc.

We are now offering a fine assortment of the above goods at a reduction of 25 per cent., to make room for new goods now being bought by Mr. Ovington, who is in Europe.

OVINGTON BROTHERS,

FULTON, near CLINTON STREET, BROOKLYN.

FLORENCE SEWING MACHINE CO.,

505 BROADWAY, N. Y.

THE BEST FAMILY MACHINE IN THE WORLD.

Wonderful REVERSIBLE FEED MOTION. SELF-ADJUSTING Tension. No Snarling and Breaking Threads. FOUR distinct Stitches.

JOSEPH GILLOTT'S STEEL PENS.

OF THE OLD STANDARD QUALITY.

TRADE MARK: **Joseph Gillott, Warranted.**

or Descriptive Name, and Designating Number.

New Series, Good and Cheap, from No. 700 to No. 761.

TRADE MARK: **Joseph Gillott, Birmingham.** With Designating Numbers.

For sale by

JOSEPH GILLOTT & SONS,
91 John Street, New York.

HENRY OWEN, Sole Agent.

STEINWAY & SONS'

GRAND, SQUARE, AND UPRIGHT PIANO-FORTES

Have taken Thirty-two First Premiums, Gold and Silver Medals, at the Principal Fairs held in this country within the last ten years, and in addition thereto they were awarded a First Prize Medal at the Great International Exhibition in London, 1862, in competition with 269 Pianos from all parts of the World.

That the great superiority of these instruments is now universally conceded is abundantly proven by the FACT that Messrs. Steinways' "scales, improvements, and peculiarities of construction" have been copied by the great majority of the manufacturers of both hemispheres (AS CLOSELY AS COULD BE DONE WITHOUT INFRINGEMENT OF PATENT RIGHTS) and that their instruments are used by the most eminent pianists of Europe and America, who prefer them for their own public and private use, whenever accessible.

STEINWAY & SONS direct special attention to their

PATENT AGRAFFE ARRANGEMENT,

which, having been practically tested in all their grand and highest-priced Square Pianos, and admitted to be one of the greatest improvements of modern times, will hereafter be introduced in EVERY PIANO MANUFACTURED BY THEM WITHOUT INCREASE OF COST to the purchaser, in order that ALL their patrons may reap its benefits.

STEINWAY & SONS' PIANOS are the only American instruments exported to Europe in large numbers, and used in European concert-rooms.

WAREROOMS, 71 & 73 EAST FOURTEENTH ST., between Union Square and Irving Place, New York.

JOSEPH H. RICHARDS, PUBLISHER, 130 NASSAU STREET, N. Y.

The Week.

THE substance of the testimony reported the past week from the Reconstruction Committee is, that there is very little natural, unfeigned loyalty at the South; that there are even secret organizations to obstruct the acts of Government; that it is not yet safe to withdraw the troops from any of the seceded States, nor can a time for this withdrawal be confidently set. On the other hand, some progress was admitted, and Gens. Fisk and Thomas thought the loyal spirit in Tennessee would be fostered by the re-admission of that State. Gens. Grierson and Saxton agreed in the belief that at one time, immediately after the collapse of the rebellion, the Southern people would have submitted to any conditions, but that the lenient policy afterwards pursued towards them had encouraged them to one demand after another. Hon. John Covode recalled what he could of the report he had submitted to the President, but which never saw the light. It was by no means complimentary to the condition of Louisiana or the animus of Gov. Wells.

WITH few exceptions—so few as to be relatively insignificant—the press of the country has sided with Congress in the issue raised by the President. The local elections have even exhibited accessions to the Republican ranks, and the resolutions of the State Republican Convention at Harrisburg, last week, may convince the President, if he is open to conviction, that Pennsylvania at home, whatever may be said of her at the Capital, is game that he cannot afford to despise. True, his great defection was not alluded to—he was simply entreated to stand firmly by the loyal masses who put him into office; but a resolution expressing hope and confidence that he would do so was voted down, the moral obligation to protect the freedmen affirmed, and the Hon. Mr. Cowan called upon to resign the seat in the Senate which he had so unfaithfully filled. There could scarcely be a stronger statement of the position of Congress than this: "that the most imperative duty of the present is to gather the legitimate fruits of the war," and "that failure in these great duties would be scarcely less criminal than would have been an acquiescence in secession." Gen. Geary, we believe, is well qualified to be the nominee of such platform.

MR. BLAINE'S amendment has been defeated in the Senate by a majority of three, but it is to be reconsidered to-day. Mr. Sumner voted with the majority, having made last week an able and elaborate onslaught on the measure. We discussed the amendment some weeks ago, and have nothing further to say about its merits. The *Tribune* denounces Mr. Sumner for his course "in helping the Copperheads;" but we trust Mr. Sumner does not care whom he helps or who is helping him as long as the object he has in view is the right one. We have had nearly enough of the practice of frightening people from saying or doing certain things lest certain rascals should rejoice over it. Mr. Blaine's amendment would be a very good thing if it were, as the *Tribune* thinks it would be, a stepping-stone to something better. But to assume that it would be, is to beg the question; and begging the question is now, we regret to say, a very common trick in political discussion. What we fear is, that the amendment would be considered by both North and South a final settlement, and that it would furnish the South with a strong inducement for improving the blacks off the face of the earth. What we hope is, that by waiting and agitating we shall get something better.

IN another paragraph directed against Mr. Sumner's speech on the Blaine amendment, the *Tribune* pronounces his assertion that the amendment was a license or authority to disfranchise, to be "just as true and reasonable as if he had argued that a legal penalty of thirty lashes or three months' imprisonment for petty larceny is a license to steal." This is a curious little fallacy. The amendment would be, if adopted, not perhaps an "authority" to disfranchise, but a recognition of the right of a State to do so, if it pleased. The registry law of this State denies a man the right to vote unless he registers himself a certain number of days before election; this is a legal recognition, however, of his right to abstain from voting if he chooses. When the law attaches conditions to the exercise of any right, it acknowledges that people are not bound to fulfil them, and the creation of the conditions is not a penalty, any more than the refusal of a county clerk to give a certified copy of a paper without receiving his legal fees, is a penalty.

IT is impossible not to be amused with the manner in which Thaddeus Stevens has disposed of the President's speech, but we think there are few men who care much for the good name of the country who have not perused the report of the proceedings in the House on Saturday with "smiles that might as well be tears." The reading by the Clerk, at Mr. Stevens's request, and with his implied approval, of the article on Mr. Johnson from the *World* of March 7, 1865, probably one of the most disgusting pieces of billingsgate to which any journal ever descended, was, there is no denying it, a painful incident. No matter what Mr. Johnson may do or say, he is our President, and his shame is our shame, a fact which people in the excitement of party contests are apt to forget. Our quarrels with him are, in some sense, family quarrels, and the less they are exposed to the public gaze the better. It is perfectly proper that a man should be shocked and disgusted by seeing his father drunk in the streets, but the diversion of following him to jeer at him and make a sport of his staggering gait and thick utterance were better left to others.

THE President seems to be making a general jail delivery. The Associated Press despatches announce that in one day last week he pardoned two postmasters who had robbed the mails and a New Jersey counterfeiter of fractional currency. We suppose the good work will go on, and each week will see a few desperate characters released from the restraints of prison to make one more effort after the better life. We suggest as a means of saving time and expense—the subject is an important one—that all persons indicted for crimes before the Federal

courts file their applications for pardon before trial. The President can then look into their cases, and perhaps release them without subjecting them to the trouble and mortification of going before a jury. The annoyance given at present to mail robbers and forgers by legal formalities is very great, and, in endeavoring to relieve them, the President only shows how far he rises above the vulgar prejudices of his time.

We print in another column the report of the Reconstruction Committee recommending the re-admission of Tennessee. Messrs. Boutwell and Washburne oppose the measure, unless the suffrage may be shared by loyal citizens without distinction of color. They argue forcibly against the impolicy of committing the government of a State to a minority—in the present instance, three-eighths of the population—when it is certain that it cannot long nor effectively be so administered against the spirit of our institutions. Loyal representatives, they add, are not of so much consequence as a permanently loyal constituency, which cannot be had without including the negroes, and then may soon safely absorb even the lesser grades of rebels. Their position is completely justified by the present disorganized state of Tennessee. Spite of rebel disfranchisement, a faction of the Legislature have broken up that body by absenting themselves from its sessions, and Governor Brownlow has been obliged to order new elections to keep the machinery of government from stopping.

Governor Humphreys, of Mississippi, who was pardoned, but ought not to have been, for the express purpose of qualifying him for the position of governor of Mississippi, has done what in him lies ever since his accession to office to keep alive the feeling of hostility to the Government. He is now engaged in promoting a movement for the collection and preservation of the records of the Confederate army—a perfectly harmless and even proper work in itself, provided it be done in a proper spirit—but when he calls for the preservation of documents or "details of robberies, conflagration, and vandalism," "to be transmitted to posterity in vindication of the truth of history and the rectitude of our (the Confederate) cause," and all this is in a letter signed by him as governor and dated from the "executive office," he is guilty of abusing his office, and abusing the confidence which has enabled him to fill it. Men like Humphreys, who were leaders of the rebellion, ought to have been left in the background for many a year to come, and, whatever plan of reconstruction be now adopted, we have no hesitation in saying that Mr. Johnson's qualifying him for the governorship was at least a great mistake. The letter before us is an insult to the Government, an insult to our army, an insult to the loyal men of the North, and to ask us to believe that Mississippi or any other State lately in rebellion can be really and truly restored to the Union under the auspices and direction of men like Humphreys is an insult to the common sense of those who shed their blood and spent their money in trying to rob him of his powers of mischief. We are in favor of magnanimity, of oblivion, of conciliation, of forbearance, of everything that can in reason be demanded of us; but we are not in favor of putting rebels into high office to pass their leisure hours in keeping alive the spirit of rebellion.

Gov. Orr, of South Carolina, has written concerning the attractions which that State holds out to foreign emigrants, to the secretary of the German society of this city. He speaks of the general desire there for foreign immigration, and says that since the abolition of slavery no difficulty is found in purchasing lands of good quality and in quantities to suit. He believes no such auspicious time as the present for acquiring real estate will ever occur again. He cites the example of very prosperous German settlements before the war—one, a colony of 4,000, in what he calls the third division of the State, running up to the mountains and bounded by North Carolina and Georgia, which produces all the cereals, beef and pork, some cotton, and fruits, and abounds in water power. The governor especially invites mechanics with their tools, remarking that every article of furniture in his own parlor, and most of it in his house, was manufactured in New York, while all the noble woods are plentiful in his immediate vicinity. We hope our German friends will take the governor at his word, but, as we have once before had occasion to urge, we hope they will go *en masse*.

Gen. Pope has issued instructions to the commanders of military posts on the great plains in regard to the regulations which they are to exact of all the emigrant trains that shall pass from one to the other during the present season. If these regulations are only observed, the trains will be comparatively safe; but the experience has hitherto been that the military organization with which they set out is rarely kept up, and the hostile attacks of the Indians find them fatally unprepared for resistance.

The agitation about the eight-hour movement, still kept up by the working-men and the political demagogues who prey on their ignorance of economical laws, is producing its legitimate effect in frightening builders and increasing the rent and price of houses. Unhappily, none will suffer from this so much as the working-men themselves, especially in the large cities, where they suffer enough already. It needs but a very little reflection to perceive that there is no class on which any diminution in production bears so heavily as on those who live by daily wages, for none is separated from positive privation by so narrow a margin. The interest of all working-men is to be served not by finding them means to escape work, but by finding means of securing them a larger share of the results of work. We suppose, however, that in this, as in many other things, wisdom must be learned by bitter experience. In the meantime, anybody who publicly tells the truth about the matter must expect to be denounced as the working-man's enemy—an "aristocrat" and "heartless" political economist. Political economy, in the minds of some people, is a plan devised by the enemies of the human race for the confusion of the poor.

The excitement in Canada about the Fenians continues to increase rather than diminish. The total collapse of the Fenian movement in Ireland, and the consequent failure of the O'Mahony policy, having given a vigorous impulse to the Sweeney plan of invading Canada. The servant-girls are buying up the bonds of the Irish Republic freely, and, lest there should be any deficiency in the supply, bands of counterfeiters have gone to work to print them, and are producing them in great quantity. The swindle is probably the greatest in history. Some Irishmen of influence and common sense ought to try and expose it for the sake of the poor. There were 1,500,000 Irish men, women, and children in the United States in 1860; and if we suppose that there are now 2,000,000, we shall probably be over the mark. Of these, at the outside, only one-fourth are able-bodied men; and all are in the poorest ranks of life. Suppose all the men to volunteer and form an organized army, with materiel, artillery, cavalry, and other requisites, its expenses would be about a million of dollars a day. Where is it to come from? Could the cooks and washerwomen support it? The attempt of this handful of poor men and women living in a foreign country to engage in an armed conflict with a first-class power 3,000 miles away is, perhaps, the most discouraging incident in the history of the Irish race. The movement against Canada will probably result in some plunder and a little bloodshed.

M. Thiers delivered a remarkable speech in the Corps Législatif on the 26th ult., the question under discussion being the proposed address in response to the Emperor. He demanded personal liberty and security, freedom of the press and of elections, and the responsibility of ministers; these as means to "national sovereignty," or "the will of the country directing the government." He reviewed the foreign and domestic policy of the Second Empire, to show how different it would probably have been if the country had been consulted in regard to it. The reign of Louis XIV. was cited as evidence that the grandest administrative genius cannot dispense with political liberty. He insisted that there was no genuine liberty but that which puts a nation in possession of its destinies, and named England and America as incontestably free because they enjoy this possession, though the one is a monarchy and the other a republic.

THE appearance of the Empress Eugénie at a masked ball in the character of Marie Antoinette revives the rumor that she has been engaged on a life of that unfortunate queen. The Emperor himself seems emulous of Louis XV. Having heard Thérésa sing at Gen. Fleury's, he sends her a bracelet worth three thousand francs.

PRUSSIA still maintains an ominous attitude towards Austria and pursues its high-handed policy at home. The Minister of State returned to the Chamber its resolutions concerning Lauenburg and the decision of the supreme court, as transcending its powers; and on the 23d ult. the King dissolved the Diet, on the ground of the antagonistic spirit of the lower House. A public meeting had previously been called in Berlin, and, after having been once dispersed by the police, voted an address of sympathy and support to the Chamber, promising to share its perils in defence of the constitution. But for the apathy of the great body of the Prussian people, there might be some hope from the present crisis.

THE Spanish Red-book has stirred up the Roman question afresh, on the heels of the manly letter of Gen. La Marmora. In May last, according to the Spanish minister at Vienna, France made overtures to Austria to favor the levy of a legion to reinforce the Papal army, in view of the now proximate evacuation of Rome. But Austria declined to entertain the proposition unless France would promise the volunteers material assistance in case of need. A difference was also alleged to exist between the French Emperor and Drouyn de Lhuys, the former wishing to have the French element predominate in the foreign legion. His organs, since the exposure, have made haste to deny that the proposition to Austria was anything more than an accommodation to the Holy See, or that the French contingent was intended to retain its national character and relations. Cardinal Antonelli now orders the suspension of recruiting, as the Papal ranks are full.

THE city of Florence having sent Victor Hugo the medal struck to commemorate the Dante centenary, he accepts the honor in the name of France. "There is," he says, "in me, as in all Frenchmen, a little of the soul of France; and this soul wishes light, progress, peace, and liberty, and the greatness of every people; and the soul of Italy is its sister."

AUSTRIA has voluntarily extended to Italy, through the mediation of France, the advantages of trade now enjoyed by the most favored nation having intercourse with the empire. This concession to Italian unity comes in good time to the rescue of M. Scialoja and his financial policy; but it has not yet been officially reciprocated.

CONGRESS.

WASHINGTON, March 10, 1866.

THE conclusive legislation of the week has been the defeat, in the Senate, of the proposed constitutional amendment fixing the basis of representation, which passed the House some weeks ago. This defeat was accomplished by the combination of five "radical" senators (Messrs. Brown, Henderson, Pomeroy, Sumner, and Yates) with six "conservative" senators, elected as Republicans, whose combined vote, added to the regular Democratic strength, prevented the adoption of the amendment by the required constitutional majority of two-thirds. Now that all the various pet propositions of the radical senators are defeated by so decisive a majority, it becomes manifest that the present Congress, at least, is not ripe for universal suffrage. It also appears that not only these gentlemen, but a large number who voted with the majority for the proposed amendment of the House, will have to surrender their prejudices, and go for some proposition which can command a two-thirds vote, or else do worse by leaving "the Constitution as it is, and the Union as it was," with three-fifths of the late Southern slaves represented by reconstructed rebels in Congress. In this dilemma, the amendment which seems likely to unite the most suffrages in its favor is that proposed by Mr. Schenck in the House and by Mr. Doolittle (in a slightly modified form) in the Senate. This bases representation upon the number of actual legal voters under the existing laws of each State, and, while it takes away from the South her existing unequal privilege, supplies a motive to her to extend the franchise to all her citizens. On the other hand, it is partially unjust to New England, favoring the new States where the voting population is in the ascendency, at the expense of the older ones, where women and children preponderate. It also disfranchises, as a basis of representation, large bodies of unnaturalized foreigners in New York and elsewhere. Still, it is much more likely to be carried than any other of the proposed schemes for modifying the fundamental law.

The singular anomaly was presented on Monday of a communication from the present governor of North Carolina being received and printed without objection by the Senate, while the House, on the same day, refused to receive the paper by the astonishing vote of 100 yeas to 38 nays. If there was inadvertence in the reception of the paper by the Senate, it being presented by its presiding officer while senators were too busily engaged to notice it, it might certainly have been corrected at a later period. Does the ground on which its reception was objected to by Mr. Thaddeus Stevens, viz., "it is perfectly well known that we do not recognize the State government of North Carolina," as followed by the House in the very strong vote refusing to receive it, indicate a standard of political virtue so far superior to that of the Senate?

The continued postponement of matters relating to finance and revenue, so vitally important to the welfare of the people, in order to occupy nearly the whole session of each day in speeches upon reconstruction which are productive of no practical result, is much to be lamented. The only possible excuse for this—and it is a very poor one—is that, in pursuing such a course, this Congress only follows in the footsteps of all its predecessors.

DIARY.

Monday, March 5, 1866.—In the Senate, numerous petitions were presented asking for equality of rights and security against renewed attempts at secession. A communication from the governor of North Carolina, enclosing resolutions of the Legislature of that State accepting lands donated by Congress for support of agricultural colleges by act of July 2, 1862, was received and laid on the table. Mr. Brown offered a bill to fix eight hours' labor as a day's work in all cases of laborers employed by the Government of the United States. Referred. Mr. Wilson offered a joint resolution to provide for the representation in Congress, and resumption of practical relations to the United States, of the States lately in rebellion. Referred. The House joint resolution proposing a constitutional amendment to regulate the basis of representation was discussed by Mr. Pomeroy, who hoped it would be adopted, but argued that Congress has the power and should exercise it, under the constitutional amendment abolishing slavery, to confer the elective franchise upon the freedmen. An appropriation of $15,000 to Miss Clara Barton for expenditures by her in discovering missing soldiers was passed. Also, a bill to enlarge the Winnebago Indian reservation.

In the House, a resolution that fifty millions of bonds, to be issued by the Mexican republic, be guaranteed by the Government of the U. S., was referred to the Committee on Foreign Affairs—ayes, 64; nays, 64—by the casting vote of the Speaker. A resolution to incorporate the National Association to educate colored men for the Christian ministry was referred. Also referred, a resolution to add fifty per cent. to the existing tariff on imported goods, for one hundred and fifty days, or until Congress shall amend the revenue system. The Joint Committee upon the condition of the late rebel States made a report, embracing testimony and other papers relating to Tennessee; also a joint resolution as follows: "*Resolved, by the Senate and House of Representatives in Congress assembled*, That whereas, the people of Tennessee have made known to Congress their desire that the constitutional relations heretofore existing between them and the United States may be fully re-established, and did, on the 22d day of February, 1865, by a large popular vote, adopt and ratify a constitution of a government republican in form, and not inconsistent with the Constitution and laws of the United States, and a State government has been organized under provisions thereof, which said provisions and laws, passed in pursuance thereof, proclaim and denote loyalty to the Union; and, whereas, the people of Tennessee are found to be in a condition to exercise the functions of a State within this Union, and can only exercise the same by the consent of the law-making power of the United States; therefore, the State of Tennessee is hereby declared to be one of the United States of America, on an equal footing with the other States, on the express condition that the people of Tennessee will maintain and enforce, in good faith, their existing constitution and laws, excluding those who have been engaged in rebellion against the United States from the exercise of the elective franchise for the period of time therein provided for, and shall exclude the same persons, for the like respective periods of time, from eligibility to office, and the State of Tennessee shall never assume or pay any debt or obligation contracted or incurred in aid of the late rebellion, nor shall said State ever, in any manner, claim from the United States, or make any allowance or compensation for, slaves emancipated or liberated in any way whatever; which condition shall be ratified by the Legislature of Tennessee, or the people thereof, as the Legislature may direct, before this act shall take effect." Recommitted, to be called up, at the pleasure of the committee, next week. A communication from Governor Worth, of North Carolina, relating to lands donated by Congress for agricultural colleges, was read by order of the Speaker, to whom it was addressed, whereupon Mr. Stevens objected to the reception of the paper, on the ground that Congress does not recognize the State government North Carolina. The House voted, by yeas and nays, on the question of receiving

communication, and refused to receive it—yeas, 38; nays, 100. Mr. Stevens offered a resolution calling upon the President to inform the House how many pardons he has issued to rebels, with their names; how much confiscated property has been restored to these parties, and how much abandoned property has been taken away from freedmen and restored to returning rebels, and by whose order. Adopted. The bill making appropriations for the U. S. Military Academy was considered and amended. Mr. Schenck moved a proviso that no money be paid for any cadet from the States late in rebellion appointed after January 1, 1866, until such State shall be restored to its original relations to the Union by act of Congress. Adopted—yeas, 89; nays, 39. The bill was then passed. The army appropriation bill was taken up and passed, including an amendment prohibiting the payment of any money to the Illinois Central RR. Co. for transporting the troops, etc., of the Government, and requiring a suit to be entered against the company for moneys already paid on that account, their charter requiring them to perform such service free.

March 6.—In the Senate, a joint resolution was referred providing quarantine regulations to prevent the introduction of cholera. A bill appropriating about seven millions of dollars to reimburse the State of Missouri for money expended in raising militia to suppress the rebellion was passed. Mr. Saulsbury spoke at length in opposition to the proposed constitutional amendment regulating the basis of representation. A message was received from the President transmitting, in response to a call of the Senate, reports of assistant commissioners of the Freedmen's Bureau; also, a large amount of documentary matter relating to the provisional governors of certain States late in rebellion, in compliance with a call of the Senate. House resolution giving the consent of Congress to the transfer of the counties of Berkeley and Jefferson to West Virginia was passed.

In the House, the Joint Committee on Reconstruction reported evidence taken by them on the condition of Arkansas, Mississippi, Alabama, and Georgia. Ordered to be printed. The bill reported by the Ways and Means Committee regulating trade with the British North American provinces was discussed by Messrs. Morrill and others.

March 7.—In the Senate, Mr. Sumner presented a petition from Bishop Hopkins and other American authors praying for an international copyright. Also, a petition from R. S. Mackenzie and others, authors and editors, to the same effect. Referred. On motion of Mr. Wilson, the Judiciary Committee were instructed to report what legislation is necessary to protect army officers from prosecution in civil courts for acts done in discharge of their duty under the Articles of War. The House bill declaring the meaning of the Internal Revenue Act so as to raise a larger revenue from corporations was passed. Mr. Sumner spoke three hours against the proposed constitutional amendment fixing the basis of representation, denouncing it as admitting into the Constitution the idea of inequality of rights, defiling that instrument with a "political obscenity and a disgusting ordure," a "compromise of human rights the most immoral, indecent, and utterly shameful of any in our history." Mr. Doolittle opposed the amendment as capable of being evaded by any State disposed to disfranchise colored men, and advocated an amendment basing representation upon actual voters by State laws. A bill granting lands to aid in the construction of a railroad from Folsom to Placerville, California, was passed.

In the House, Mr. Eliot offered a bill to continue in force the Freedmen's Bureau. Referred. A bill to reimburse Pennsylvania for moneys advanced to the Government for war purposes was made a special order for March 14. The bill which passed the Senate to reimburse Missouri was referred. Mr. Washburne, from the Joint Committee on Reconstruction, submitted testimony on the condition of Louisiana, Texas, and Florida. Ordered to be printed. Resolutions of the Legislative Assembly of New Mexico in favor of a State government for that territory were received and referred. The bill to regulate trade with the British North American provinces was opposed by Messrs. Kelley, Wentworth, Spalding, Phelps, and Blaine, and advocated by Mr. Brooks.

March 8.—In the Senate, Mr. Poland offered a constitutional amendment providing that no person ever engaged in rebellion shall exercise the elective franchise or hold office under the authority of the United States or of any State. Referred. Mr. Henderson offered resolutions declaring that Congress alone can decide whether the causes of the rebellion are removed; that the States lately in rebellion are without a republican form of government; that the people who abjured their allegiance to the Federal Government have become alienated and denationalized; and that the Union is not restored until State governments republican in form, and not excluding nearly one-half their entire people, are established and recognized by the Federal Government. The joint resolution, proposing to amend the Constitution as to the basis of representation, was advocated by Mr. Wilson.

In the House, Mr. Boutwell presented a minority report from the Joint Committee on Reconstruction in the case of Tennessee. The Senate bill to reimburse Miss Clara Barton for moneys expended in discovering missing soldiers was passed. The bill providing that all railways shall have equal privileges in transporting passengers, etc., from State to State, was discussed and laid over. A bill to reduce the number of judges of the United States Supreme Court from ten to nine, and to re-organize the distribution of their circuits, was passed. The Senate bill, to restrict the expense of collection of soldiers' claims against the Government to ten dollars, was discussed and recommitted. The Senate bill, to protect all citizens in their civil rights, was discussed by Mr. Boutwell in its favor, and by Messrs. Raymond, Delano, and Kerr against it.

March 9.—In the Senate, petitions were presented praying for the abolition of all distinctions as to color or race. The bill to extend time for withdrawal of imported goods from bonded warehouses came up on a motion to reconsider its passage. Mr. Sprague made a speech against it. The Senate proceeded to the final consideration of the House constitutional amendment fixing the basis of representation. Mr. Fessenden replied to Mr. Sumner's argument, which he characterized as intolerant, unfair, untenable, and impracticable. After a running debate between several senators, the vote was first taken upon Mr. Henderson's substitute, proposed by him as a constitutional amendment, viz.: "No State, in prescribing the qualifications requisite for electors therein, shall discriminate against any person on account of color or race." The amendment was lost—yeas, 10; nays, 37. The question was then taken on Mr. Sumner's substitute, which was simply a joint resolution providing "there shall be no oligarchy, aristocracy, caste, or monopoly invested with peculiar privileges, and no denial of rights, civil or political, on account of color or race, anywhere within the United States.' This was lost—yeas, 8; nays, 39. The vote was taken on Mr. Yates's amendment providing that no State shall make or enforce any distinction between citizens of the United States on account of race or color, and that all citizens shall hereafter be protected in the exercise of all civil and political rights, including the right of suffrage. Lost—yeas, 7; nays, 38. The original amendment, as reported by the Joint Committee of Fifteen, was reported as follows: "ARTICLE —.—Representatives shall be apportioned among the several States which may be included within this Union according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed: *Provided*, That whenever the elective franchise shall be denied or abridged in any State on account of race or color, all persons therein of such race or color shall be excluded from the basis of representation." The question being taken, there were yeas, 25; nays, 22. Two-thirds not having voted for the same, it was defeated. The question recurred, on a motion to reconsider, upon Mr. Doolittle's substitute, basing representation upon actual voters in each State. On motion of Mr. Fessenden this was postponed to March 15. Adjourned to March 12.

In the House, the civil rights bill was further debated by Messrs. Shellabarger and Wilson in its favor, and Bingham and Latham against it. The question was taken on a motion of Mr. Bingham to recommit the bill so as to amend by striking out all the penal provisions, and also the clause prohibiting States from discriminating between citizens. Lost—yeas, 37; nays, 113. The question recurred on a motion to recommit the bill without instructions, which was carried—yeas, 82; nays, 70. The bill to regulate trade with British North America was further discussed and amended.

March 10.—The Senate was not in session. In the House, speeches on the state of the Union were made by Messrs. Orth, Stevens, Holmes, Goodyear, and Ashley, of Nevada. Adjourned to March 12.

THE FREEDMEN.

CAPT. C. B. RICHARDSON, sub-assistant commissioner of Altamaha District, Ga., reports the general condition of all classes in that quarter to be reasonably satisfactory. The freedmen are all at work under Government contracts, showing nothing of the laziness predicted by the white people before Christmas. The latter, while confessing their error in this regard, confidently prophesy that the romance of industry will be worn off by hot weather, and the cotton crop prove a failure. Their prejudice against the education of the colored people is still strong. Recently, on hearing that an adult night-school was in operation, they sought to break it up by feigning another use for the building. The commissioner examined the lease, which was in writing, and found that the colored people were entitled to hold meetings there throughout the year, and he sustained their occupancy, whether for educational or other purposes. "It is impossible for any people to be more earnest and patient in obtaining knowledge than the colored people here. They also exhibit an anxiety and watchfulness unparalleled in their efforts not to be offensive towards their former masters."

—The February report of the Superintendent of Schools for the Department of Washington shows the number of colored schools to be 43, and of pupils 4,294, more than three-fourths of whom can read. In Alexandria there are 1,200.

—The Freedmen's Savings Bank is said to have received within a year over a million of dollars from the negroes of the country. It has twenty-nine branches—most of them at the South. In Washington alone the deposits amounted to upwards of five thousand dollars.

—It is complained that in Mississippi colored people who are fully able to support their children may have them seized at the request of any white person and bound out, by the probate courts, to white masters, for a small rate of compensation, until they arrive at the age of twenty-one.

—On the 6th inst. an unsuccessful effort was made in the Texas State Convention to base representation in the legislature on the number of free persons in the State. Mr. Degener made a minority report in favor of impartial suffrage, which was sustained by some three or four of his fellow-members.

—So long as the colored man is attainted with inferiority in the eye of the law, he will be exposed to the violence of the brutal, and especially of those whose social position, nominally higher than his, is in imminent danger of finding its just level below him. Out of a thousand instances of probably daily occurrence, the following has been communicated to us by a responsible eye-witness:

"I was waiting at Culpepper C. H. for the train from Gordonsville to Washington City. I was walking up and down the platform, about the time the train was due at Culpepper, when the following scene ensued: A very black negro man said, as he stood a few feet from me, and while three or four white men were standing by him: 'You called me crow when I went along thar.' One of the white men, who held a heavy club in his hand, replied, 'You are a liar.' The negro answered, 'You did call me crow, for I

heerd it wid my own years.' The white man said, 'Then I'm a liar, am I?' The negro answered, 'I do n't know what you is; but I heerd you call me crow, and now I'm done wid it.' The white man replied, 'But I'm not done with it.' He then struck the negro several terrible blows with the club, and one blow was so hard that it laid the poor man's scalp quite open and felled him into the railroad track. He continued to beat him when down, and another of the white men who stood near rushed at the poor fellow and kicked him in the head and face. A very old grey-bearded colored man ran up and caught hold of the club, got between the assailant and his victim, and cried, 'Please do n't, master, you will kill him.' The assailant struggled hard to free the club, but the old negro held on, and at last got an opportunity to drag the poor bleeding man off the track. In a few minutes more up came the train. I got on it, and, sick at heart at what I had seen and heard, I was borne away. I could not but feel that the blood I had seen poured out would cry aloud from the earth to God. I could but hear ringing in my very ears the fearful question, 'Shall I not visit for these things, saith the Lord?'"

Minor Topics.

WHAT 's in a name? Much, if the name is a title. The common theory of equality is to be a little better than one's neighbors; the practice, to let them see it or feel it in some indirect way. Tattooing and barbaric trappings are out of fashion—even uniforms are not considered as in good taste for everyday use; but a man can wear a title at all hours. The word governor, or judge, or general goes before him like a herald, proclaiming his superiority over non-governors, non-judges, and non-generals. The world does homage, mildly, if you choose, but still agreeably, when it addresses him by his title. Although there is no legal tender act to oblige us to take men for more than they are worth, we are apt to accept them at first sight at the valuation they put upon themselves. To many people it does not much matter what their title is. Captain Owen saw a naked negro potentate on the West Coast who wore for the likeness of a kingly crown a cast-away tin can labelled "concentrated gravy." The monarch had adopted the two unknown words as an additional title of honor. Civilization has not entirely extirpated the savage element in the white people. Very many are willing to stick any feather in their caps without considering too curiously its color or the bird whence it came. After four years of grim war, individuals who have never been under fire may be found sporting militia titles in the faces of men who won the same nominal rank at the risk of their lives.

Akin to this first "infirmity of noble minds" is the love of fine names. A great many persons, who are above their business or their position in life, seem to believe in the efficacy of a practice described by John Quincy Adams in two lines of a squib he let off against Jefferson:

> "And if we cannot alter things,
> By Jove! we 'll change their names, sir."

Smith thinks he has undergone a transformation when he writes it Smythe. A waiting-woman generally gives her daughter some, if not all, of the Carolinas and Wilhelminas of Goldsmith's Miss Skeggs. Silly little girls, who were unfortunately christened Susan or Dolly by their Brown or Jones papas, engrave on their cards Miss *Susie* H. Brown or Miss *Dollie* C. Brown, and are happier in consequence. And Brown and Jones, as soon as they have bought and built near Tubby Hook or Dobb's Ferry, try to get the old historical appellations changed to Inwood or Glendale. Fitness and meaning are lost sight of for the sake of a fine name. The English words for everyday occupations are scornfully thrown aside by the aspiring fellows once designated by them. Every shop is a store; costermongers are grocers; peddlers, merchants; haberdashers, furnishers; dressmakers, modistes; and if you should say "slops" to a "dealer in ready-made clothing" he would knock you down. At first, no doubt, everybody feels bigger and better for their brevet rank; but in time the new words sink down to the real state of things; then, as with paper money when it depreciates, a new issue is required to purchase the same amount of consideration, and the next best word in the vocabulary is seized upon without reference to etymology, so that in the end nothing is gained. When magnificence of phraseology is allied to meanness of fact, the *mésalliance* does not ennoble the fact. A servant is none the less a servant when he is called a "help;" neither his wages nor his social position is higher. It is really to no purpose that we have raised the score of our daily talk an octave to express this pinchbeck ambition. We speak in superlatives, like women. Nothing can be said simply, and circus play-bills will become the standard of the language, unless we can create a new office: commissioners of philology, whose duty it shall be to seize upon all words and phrases that have strayed and to return them to their original meanings.

The teachers of the generation now undergoing schooling ought to be such commissioners. The infirmity of fine words and of fine writing springs from an uncultivated taste and half an education. There is no subject outside of morals—if indeed it be outside of morals, as it is in a certain sense a violation of truth—on which instruction, line upon line and precept upon precept, is more needed in our schools, than the duty of all to speak and to write simply, to call things by their names, and not to be above their business. But, unfortunately, it looks as if the guards themselves needed a guardian. The gentlemen composing the faculty of the Free Academy seem to be infected with the fashionable epidemic. They have petitioned the Legislature, through Mr. Murphy, to change the name of that institution to the New York College. The reason, it is said, is that they do not like the word academy. The sound does not come up to their ideas of their position. It perhaps suggests village schools, composed of dirty boys in the A, B, C stage of polite learning.

There are two opposite theories respecting the influence of names. One finds expression in the well-worn line, "A rose by any other name will smell as sweet;" the other was emphatically stated by Mr. Shandy when he spoke of a man's being "Nicodemussed into nothing." Our professors are evidently Shandeans. They think they are academussed into mere pedagogues.

Words have their vicissitudes of fortune, like men, and in their decline are sometimes put to mean uses. But one would have thought that the word academy might have kept its place, at least with scholars. There is such a flavor of antiquity about it, so many reminiscences of philosophy, of Aristotle, and of Plato, that even dirty little boys ought not to be able to degrade it. And then it actually occupies the highest position in France. Every French author is ambitious of a seat among the illustrious forty who compose the Academy. The word college means in England one of the dozen houses in which the students of a university live, and in the United States, it often means a high school in which a diligent boy can get a good ordinary education. It would seem odd to one not aware of the prevalence of the complaint just mentioned that educated men should prefer college to academy—or that, preferring it, they should not think it rather beneath them to wish to change so well-established a name for so childish a reason. Nevertheless, if academy is not good enough for citizens of this great country, and if the professors think they will be happier and enjoy more respect from the world if the scene of their labors is re-named college, the State will probably humor them in spite of common sense. What they ask for is comparatively harmless and costs nothing. It is rarely that petitioners are willing to let the legislature off so cheaply.

Another difficulty will soon present itself. "Professor" is losing caste rapidly. There are professors of chiropody and of palmistry; Professor Anderson amuses the public with his tricks, and Professor Hanlon demonstrates the flying trapeze. The title will soon be unworthy of the dignity of the teachers of youth. To what new appellation will they be driven? Instructor, tutor, schoolmaster, preceptor, pedagogue are all old and objectionable. They will have to apply for a name to those ingenious neologists, the inventors of cosmetics; or else adopt the plan recommended by Lakanal, in his report on education to the French convention—of wearing around their necks a medal with the inscription: "Tout instructeur est un père." Louis Blanc, in his "History of Ten Years," speaks with enthusiasm of the "glorious age" that gave birth to such noble ideas. We may live to see them extending to the "setting sun."

The special attention of the reader is directed to the Financial Review on another page. Its place among the advertisements is by no means significant of its value, but is resorted to only that we may obtain the latest intelligence of the market.

Articles on any of the subjects usually discussed in this journal will be received from any quarter. If used, they will be liberally paid for; if rejected, they will be returned to the writers on the receipt of the requisite amount of postage stamps.

All Communications which pertain to the literary management of THE NATION *should be addressed to the Editor.*

THE POLITICAL SITUATION FROM A COMMERCIAL STANDPOINT.

AN effort is being made in some quarters to diffuse the impression that the mercantile world is interested in a peculiar degree in having Congress give way to the President, in order that, the political future being settled, business men may make their calculations with a fair certainty of being able to carry them out. There is no doubt that it is most important for the sake of our national as well as other interests that there should be speedily a settlement of some kind; but that the adoption of the President's policy "pure and simple" by Congress would be the best settlement, or would be any settlement at all, is by no means certain. There is always a tendency amongst business men in every community to incline in favor of whatever arrangement of political difficulties seems to promise quiet soonest, and they are apt to be unwilling to trouble themselves about remote results. There is always, too, a good deal of the speculative spirit in the relations between commerce and politics. Let the political sky be ever so cloudy, if the danger is not imminent, each merchant or banker is apt to hope that he will escape before the storm bursts, and goes to work diligently not to provide shelter but to make the most of the sunshine. Everybody remembers the way in which politicians both North and South played upon this feeling before the war. Southern agitators rarely held out much hope that the Union could be permanently maintained. All that they said was, that its dissolution might be postponed by the election of this or that man, or the adoption of this or that compromise, and a large part of the commercial world grasped eagerly at these shreds of hope and did whatever was required of them. It abused the abolitionists, toadied everybody and everything Southern, eschewed anti-slavery discussions, edited the Bible and prayer-book and religious tracts in a Southern sense, subscribed money *ad libitum* to carry elections for Southern purposes, and, it must be confessed, continued to do, during the most troubled years of the anti-slavery controversy, a roaring trade. Everybody, probably, who sold goods to Southern dealers, and listened with a bland countenance to abuse of his neighbors while he pocketed the proceeds, flattered himself that he would be able to get out of the arena before the crash came, and he was therefore ready for anything which promised to defer it if only for a little while.

But we believe there are few sensible men at the North who are not now sensible that the whole policy pursued by the business men of this country during the twenty years preceding the war was a gigantic mistake, not simply in a moral or political but in a business point of view. It encouraged the South to persevere in a course which made the final catastrophe unavoidable. Nothing did more to encourage disunionists in their course than the attitude of the great cities of the North, the sympathy or indulgence which the Toombses and Wigfalls and Yanceys received from our business circles, and the visible tremor which they were able to send through the counting-houses by their threats and boasts. They were, in fact, so deluded by the subserviency of the commercial world of the North that they counted on its indifference to the overthrow of the Government, and its refusal to lend money for its support, as absolutely certain, and made them the basis of their plan of action. And the impression created by this timidity and time-serving was not confined to the South. It was firmly believed on nearly every exchange in Europe, after Mr. Lincoln issued his first call for troops, that the war would come to an end in three months for want of funds, and the notion that New York bankers would make a loan to the Treasury was treated with derision. The result has been the loss to the country of some thousands of millions in hard cash, and of an amount incalculably greater in the suspension of trade and industry and the destruction of property throughout the South during the four years of hostilities. So that the system of compromise, of half settlements, makeshifts resorted to for the purpose of putting off the evil day, was, commercially considered, a tremendous blunder.

We trust we shall not witness a repetition of this mistake. We are not now arguing in favor either of the President's plan or that of Congress. What we ask is that, in considering any plan, business men will look beyond immediate results, and will not settle down upon any scheme that seems likely to promise tranquillity or a good crop of cotton this year or next. We must now look much further into the future than we ever did or could look before, much further than the founders of the government could look, and with a confidence, too, which they were very far from feeling. So that it is our duty to weigh well what we do, and whatever we do ought to be done not for the next five years, but for all time. Our business is not simply to wipe out the traces of the war in the shortest possible period, but to see that no discordant elements are left in American society to produce in due course another convulsion. No state of things, it ought to be remembered, is good for business purposes that is not a natural state of things. No state of things in which any large class of the community is laboring under a sense of wrong or injustice can ever have that fixity and certainty which is necessary to commercial prosperity over a long series of years, and prosperity that does not extend over a long series of years is apt not to be prosperity after all. If we deduct from the gains of the years of compromise the losses sustained by the war, we shall find a very small balance remaining to our credit. Moreover, inconsiderate action now will be irreversible. Whether the President have his or Congress have its way, whatever is done now will probably fix our fate. So that there can hardly be too much said in favor of deliberation and caution. No man, whatever his opinions may be now as to the way in which the South should be recognized, can object to delay. For no damage that can possibly be done by keeping the South waiting could possibly equal the damage that would be done by a mistake in the conditions imposed upon her for her readmission.

CITY YOUNG MEN.

IT is now nearly fifty years since Sismondi was driven by what he saw in all European countries of the increased separation between the rich and poor, and of the increased selfishness infused by the spirit of individualism—the most marked feature of modern civilization—into all the relations of life, to compose his "New Principles of Political Economy." In that work he dwells in eloquent terms on the evils of the general abandonment of attempts to organize labor, of the decay of all feeling of union or sympathy between employers and employed, and of the isolation produced by competition, and, though he does not suggest any remedy, he leaves on the mind of his readers a tolerably dismal impression of the state and drift of modern society. If he had lived until our time we are afraid he would have found ten reasons for the one which then existed for adhering to his conclusions. Seen from his point of view, the world has certainly not been improving since he wrote. Even here in America, the vices which are eating the heart out of European society are assailing us with almost as great force as they have ever displayed there. In all our great cities the separation between capitalists and those whom capitalists employ goes on steadily; the links that bind the poor to the rich every day become weaker and weaker; the influences which drive masters and servants, merchants and clerks, further apart, every day become stronger and stronger. We doubt, in fact, if there is at this moment any other city in the world in which there is less friendly communication between the poor and rich. The two classes rarely worship at the same altar, and have very seldom even that feeble sympathy which grows out of having lived long together in the same place. Wealth, too, has here achieved what feudalism in its best days was never able to accomplish, in monopolizing all the good churches and good preachers. It was one of the glories of the Middle Ages that on the floor of the splendid piles which they built for the worship of God, and which to this hour no man, let his creed be what it may, ever enters without emotion, all were equal and all were at home. The lord and the serf knelt side by side on the same pavement, were thrilled by the same eloquence, softened by the same music,

joined in the same prayers, and were reminded by every sight and sound of their community of origin and of destiny. And in all the old countries in which the abuse, as we consider it, of an established church is still kept up, this great tradition of the nothingness of human distinctions is kept alive by the fact that all churches are public property and all ministers agents of the state. The humblest *ouvrier* in Paris can, if he pleases, enjoy as much of all the eloquence the church can supply as the daintiest lady of the court. Notre Dame and St. Sulpice are as much his churches as those of the Duc de Mouchy; and the commonest London "cad" has a common-law right to attend the parish church.

There is perhaps nothing which illustrates more fully the dangers of the course on which we are drifting than the social condition of the young men in this city, as revealed in a "memorandum" which lies before us, prepared by some members of the Young Men's Christian Association. Of this body, or of its mode of working, or of the success which attends its efforts, we know but little from personal observation; but the figures it has collected here are eloquent beyond measure, and the aims it has in view in preparing this document certainly belong to the very highest sphere of Christian usefulness. It is estimated that there are in this city 111,091 young men between the ages of 15 and 30. Of these probably more than one-third are newcomers, who have drifted here from all parts of the country and of the world. They have no homes, in most instances not even rooms to themselves, and have to depend for all recreation, for even the means of securing light and heat during the long winter evenings, upon "saloons" and theatres. The circumstances which contribute most to the misery of their condition are thus enumerated in the "memorandum:"

(*a*) Many are utter strangers from the country and Europe, and pick up friends and acquaintances by accident.
(*b*) Owing to the change in the mode of conducting business during the past twenty years, the attention of employers has gradually and unnoticed become diverted from the social and moral interests of young men.
(*c*) The general inadequacy of salaries to the cost of living.
(*d*) Increased exclusiveness of society, and the consequent difficulty experienced by strangers in obtaining access to that which is beneficial and elevating.
(*e*) Formerly clerks and apprentices boarded with, and were directly under the eye of, their employers. Now, the virtuous and the vicious are oftentimes herded together in the same boarding-house, room, and bed. Driven to these places by limited salaries, and unable to afford fires in their rooms, they are consequently led to frequent saloons and like places, where they are exposed to the most contaminating influences.

They are, we need hardly say, excluded by the peculiar conditions of city life from all society that would be of any moral or intellectual benefit to them. The church might be expected to take care of them, but it does nothing of the kind—for these reasons among others:

(*a*) The exclusiveness—more or less necessary—largely prevailing among the regular attendants of many of the churches.
(*b*) The lack of social feeling and sympathy with young men, which has been largely increased for the past few years.
(*c*) The cost of sittings in the more attractive churches.
(*d*) The unwillingness of young men to accept charity in the form of mere mission churches.
(*e*) The unattractive character of many others in which the price of sittings is more moderate.

They are thus left to shift for themselves. Having no private rooms, and not being able to afford fires if they had, they pass the long evenings roving from one haunt of vice and dissipation to another, playing billiards for "drinks," playing cards for their scanty earnings, roystering in concert saloons, swallowing blackguardism at cheap theatres, drinking everywhere, the older and more experienced leading the "greener" new-comers every day into lower depths. Drinking habits amongst them are frightfully on the increase. The daily consumption of spirits in New York now is said to be six hundred barrels, and although, of course, this cannot all be set down to the account of single young men, we fear a large proportion of it may. How far even the better class of them are gone in this respect may be guessed by anybody who takes the trouble to watch that, to us, very repulsive performance, an election of officers at the Mercantile Library Association. And yet it is from the ranks of this soiled and demoralized crowd, whose prime has been thus wasted in vulgar vice, vice which does not bring with it even the poor lessons of what is called "social experience," that the business men who are to maintain the reputation and prosperity of this city in the next generation will have to be drawn.

The Young Men's Christian Association is making an effort now to do something towards remedying the evil by procuring a large building in some central position, with branches in outlying districts, to contain a free reading-room, a circulating and reference library, and to furnish lectures and other means of instruction, besides advice to the friendless and assistance to the sick or needy. If instruction be not made too prominent, or, at least, be not forced too eagerly upon the members or frequenters of the institution, and if the imperative demand of all healthy young men for hilarious amusement be reasonably regarded, there can be no question of the immense good it will accomplish. But there is nothing in which so much care and discretion has to be exercised as in an attempt to improve the moral and religious condition of young men. At the outset the physical comfort of the institution ought to be allowed to furnish the main attractions—the warmth, the light, the reading matter, the easy seats, the good coffee, and freedom from undue restraint, or over regulation. In short, it ought to be made as close an approach in all these things to rich men's clubs as its nature and objects will permit. Unless these points are carefully attended to by the managers, those whom it is most desirable to attract, the men of strong and coarse natures and the men of weak and frivolous natures, will inevitably be driven away.

The movement has the very strongest claims for support on every employer in the city. No man carrying on business in a Christian community to-day can possibly rid himself of all responsibility for either the moral or physical condition of those who earn their bread by doing his work. And unless the churches in our great cities can muster up a little more interest than they display at present in the fate of those who, for whatever reason, know nothing of city churches except their architecture, we can promise them that the religious culture of this generation will leave very few traces on the next. Religious teaching is already declining in quality and in the estimation of the people in the country districts through the wretchedness of the pittance offered to the teachers. The cities have monopolized all the talent of the profession, because they only are willing to pay the market price for it; but even in the cities the pulpit is losing the power it once possessed, as a great moral agent, owing to the manner in which ministers are made to "run with the land," like a water privilege or an "ancient light."

THE HUNGARIAN ADDRESS.

The address of the Hungarian House of Representatives in response to the speech with which Francis Joseph, the Emperor of Austria and uncrowned King of Hungary, lately opened the Diet of Pesth, is now before the world in the form of a draft elaborated by Francis Deák, and read to the House, in the name of the committee on the address, by Anthony Csengery, the gifted Magyar translator of Macaulay. We call it "the address" in advance, for, though the European mails have not yet brought us the debates on that interesting subject, there can hardly be a doubt that, like its two precursors of 1861, the productions of the same pen, it will, without any, or with only trifling, modifications, be sanctioned by an immense majority of the Hungarian National Assembly. For about thirty years, with the exception only of a short period—during the brilliant but too brief career of Kossuth—Deák, "the great son of Zala" (a south-western county of the Transdanubian Circle), "the Aristides of Hungary," has indisputably been the parliamentary leader of his people, the chief representative of its constitutional liberalism, and, on the most solemn occasions, its voice. As such, since the attempted restoration of constitutional life in Hungary, in 1860-61, almost every important utterance of his has been received by Austria and Europe. The address now pending, though hardly more than an abridgment of the two great parliamentary state papers of 1861, to which reference is frequently made with great emphasis, was received with the liveliest acclamations by the assembly in whose name it is to speak, and with commensurate interest by the European press. As a calm, logical, and lucid statement of the past and present international relations of Hungary to her dynasty and her Austrian sister states, of her actual abnormal condition, and her determination concerning the future, it amply deserves the universal atten-

tion it has attracted, as its dignified tone and clear and eloquent, yet unaffected, diction fully justify the expectation of the public. The following, drawn from the original, may serve as a synopsis:

The Diet expresses its thanks to the monarch for his avowed purpose to rule his nations henceforward in a constitutional way and with their own co-operation; for having put an end to the oppressive misrule which so long and so heavily weighed upon Hungary; for having assembled the national legislature, discarded the pernicious theory of a forfeiture of rights, and unequivocally placed himself upon the platform of the Pragmatic Sanction (of 1723). The worst apprehensions having thus been dispelled, the Diet can begin the work of regeneration with calmness and hope. It appreciates fully the difficulties of the task. "There are critical moments in the life of nations which may be decisive not only of the fate of citizens, but of the entire future of the people, of its very national existence." The present is, perhaps, such a moment. The reconciliation of conflicting interests, after the vital change wrought in the constitution of Hungary by the laws of 1848, would have been attended with uncommon difficulties even in times of peace. But tranquillity would have made a natural process of transition possible; a regular development could have served as a criterion of the soundness of the new system. Unfortunately, stormy events interrupted the work of transformation, and it remained unfinished, its defects unremoved. Life alone unveils the faults of a living law. Experience points out the remedies. Fate deprived Hungary of the time required for observation, a peaceable transition was made impossible, and thus "seventeen years were torn out of the constitutional life of the nation." While circumstances became complicated, Hungary was doomed to inactivity. Now the task is, to do at once all that remained undone, to remedy so much that was ill done.

However, the monarch's speech from the throne has opened the path of useful action, has inspired confidence and hope, and the Diet will do its duty, "so that the constitutional demands of the King and the legitimate demands of the nation may be realized harmoniously and jointly." The Pragmatic Sanction was well chosen by the King as a base and starting-point in the work of restoration. One of the principal objects of that compact was, to secure to the monarch, as well as to the nation, the unbroken succession to the throne of a legitimate heir of either sex, which serves, on the one hand, to perpetuate the dynasty, and, on the other, to guard the nation against the perils of a war of election in the case of the extinction of the male line; another principal object was, to secure to the various countries and provinces which were to remain inseparably united under the same dynasty and the same order of succession a degree of collective power which would enable them easily to resist every attack from without or within. Events have justified the wisdom of that act. It saved Austria in 1740. The importance of the common solidarity it established is too great to be overlooked by Hungary; she cannot desire that the mutual support and strength it warrants to all should be diminished.

But the compact of 1723 sanctions, besides, another fundamental principle, which was the condition of its acceptance by the nation, to wit: the national and administrative autonomy of Hungary. The Diet is happy to see this principle, too, re-acknowledged by the King. History proves it to have been compatible with the integrity and power of the empire. Since it was re-enacted, in 1723, Austria has stood the most tremendous shocks from abroad without the necessity of abrogating it. In spite of all the changes that have taken place in regard to the equilibrium of power in Europe, the integrity of the empire and the autonomy of Hungary are not conflicting things. There is no contradiction in these two ideas; neither must be sacrificed. The task is to harmonize them and preserve both. The rights of both nation and King rest on the Pragmatic Sanction; to infringe it would be legally wrong, politically dangerous.

It is true, what the King emphasizes, that there are common affairs growing out of Hungary's connection with the other countries of Austria, as established by the Pragmatic Sanction. The Diet will immediately apply itself to framing a law to regulate these common relations. There can be no happier augury for so doing than the King's determination to govern *all* his countries and provinces constitutionally. Liberty increases instead of diminishing by common use. "The sameness of the political condition brings nationalities nearer to each other in sentiment, removes estrangement, distrust, and bitterness." The liberty of the other countries will strengthen that of Hungary, for they cannot desire a constitution which would destroy hers. She is ready to enter into relations with them as with constitutional countries, as a free nation treating with another free nation, without prejudice to the independence of either party. What the constitutional forms of those countries shall be, what their relations to each other, are questions transcending the sphere of the Hungarian Diet, and legally concerning only themselves and the monarch. Hungary will hail with joy their deliverance from the evils of an unconstitutional rule, and, in arranging her international affairs with them, will readily even exceed her legal obligations, guarding only her constitutional rights and full national independence.

The Diet has taken into friendly consideration the diploma of October 20, 1860, and the patent of February 26, 1861, which the Emperor has laid before it. It finds the former highly important as first inaugurating liberty for the non-Hungarian countries of the empire, and as a promise of a return to legality in Hungary. This promise, however, has not been kept. The latter act, which tried to establish a common Austrian constitution, was as unconstitutional as it proved futile. Hungary's constitution dates not from 1860. It is coeval with the nation; it sprang from its life. All regal rights in Hungary rest on it. Her elected kings swore allegiance to it. On condition of its preservation, the hereditary right of succession was established in the house of Austria. Each coronation was accompanied by a new written guaranty, in the shape of a royal diploma. For Hungary to accept a constitution based on the diploma and patent would be an act of national suicide of which the Diet will not become guilty. Neither would such an act promote the objects of the empire. It could never be final. Could the mutual good understanding between the countries, which the monarch declares to be his aim, be advanced by an arrangement securing constitutional freedom to one, and at the same time depriving the other of a constitution made sacred by the use of ages and by numberless solemn guarantees?

But while guarding the integrity of the Hungarian constitution, the Diet is not averse to a revision, in a legal way, of the laws of 1848, if circumstances should require it. Modifications desired by the crown must be proposed by Hungarian ministers. It begs the monarch to complete the restoration of the law by an unreserved return to a constitutional rule, and to give that return the high sanction of a legal coronation, before which no law, modified or framed, could be legally presented to him for his signature. Legislation, however, is demanded by the material as well as moral wants of the nation. The Diet will act in the spirit of the constitution, as well as of equal justice, without regard to nationality or creed. It will not forget that the non-Magyar inhabitants of the country are its citizens and entitled to equal rights. It is ready to facilitate, by the greatest possible concessions, the voluntary and cordial return of Croatia and Slavonia to their old union with Hungary proper, even by acknowledging and treating them as a separate nation, if demanded. It thanks the monarch for having invited their representatives, as well as those of Transylvania, to appear in its midst; but it is aggrieved to see that the like has not taken place in regard to Dalmatia and Fiume, which are just as much integral parts of the Hungarian crown.

The Diet appeals to the heart as well as the interest of the monarch to restore to their liberty and property all those who have been condemned to punishment for political acts—these belonging now to a past over which the veil of oblivion is to be spread.

In its concluding parts the address dwells at length, and with more emphasis than elsewhere, on the immediate necessity—if the new system is to be regarded as a reality and not as a mockery—of restoring the municipalities of the country, and chiefly the counties, to all their rights and functions of self-government; of giving free scope to their deliberations, so highly productive of enlightenment for all classes of the people; of removing all unconstitutional authorities introduced during the ill-fated period of absolutistic or sham constitutional rule; and of appointing, agreeably to the laws of 1848, an independent Hungarian ministry. To the latter all possible forbearance and a friendly

co-operation are promised in advance on the part of the nation, to facilitate the work of transformation begun in 1848, and then suddenly interrupted, as well as all attempts at putting the interests and institutions of independent Hungary in full harmony with those of the other half of the Austrian Empire, and with the legitimate demands of the common dynasty. All this is urged in a dignified tone, which is significantly strong without being overbearing or threatening.

We regret that want of space prevents us from quoting any considerable part of this important state paper, which, in its entirety, is not only a political but also an historical document.

THE MERCHANT SERVICE.

Anybody who has paid much attention to maritime affairs, or even to the reports of our criminal courts, must be aware of the terrible degeneration of our merchant service. A comparison of the present social condition of the officers and seamen of merchant ships with what it was twenty years ago may render some assistance in getting at the reason why. It is true, while officers have held equal rank with the owners, seamen, excepting New Englanders, had hardly a recognized standing off their ships, but were known as brave, honest, cheerful, improvident men, invested with romantic interest. As classes, both officers and men have lost character, a fact of deep national concern. It is the common complaint of officers that ignorant, lazy, careless, insolent representatives of the worst classes of the world's worst seaports have succeeded the formerly well-instructed, prompt, tidy, respectful crew. The change may be partially referred to the extensive introduction of steam navigation, the discontinuance of long voyages, and the employment of very large ships, requiring the services of experienced commanders and many men, and the gathering to the few principal ports of the commercial enterprise of the many small ones, which formerly tempted home-bred boys to an apprenticeship to the sea. Its chief cause, however, is the substitution of degrading treatment of seamen for suitable discipline. Of this ill-usage little is known out of courts of justice, though a miserable reality to those taught as well the abuses as the uses of the belaying-pin, the handspike, and the capstan-bar. Their ignorance and insolence are too often reflections of the characters of masters who have passed into the cabin without the nursery education of the forecastle, and of mates appointed from among the thriftless relatives of owners, men unfit to live at home, whose qualifications for command are profanity and the "brass knuckles" and "slung-shot" that have given them authority in bar-rooms. It is not unfrequently said by worthy men who have "followed the sea" that self-respect has compelled them to abandon it. The evil reveals the cure. Vessels must be suitably officered before they can be well manned. The means of reform lie largely with ship-owners. That they will apply them is not to be anticipated. While trustworthy consignees receive the cargoes, and attend to the business of their vessels in foreign ports, and they do not absolutely require reliable officers of character to superintend these affairs, they will employ anybody who can safely navigate a vessel and be cheaply hired.

Legislation must be resorted to. The federal laws testify to the high popular regard for shipping interests and for the protection of seamen, but further enactments are needed in order to carry out the public policy. As the law clothes officers of vessels with unusual powers, it should fasten upon them a corresponding responsibility. Before their prerogatives can be acquired, it ought to be ascertained by some fair test whether they are fit for them, and the power bestowing them should provide for their revocation whenever they are abused.

At present there is no means of preventing a master convicted at the termination of every voyage of the grossest brutalities to seamen, or a mate repeatedly guilty of stealing his men's clothing, from retaining their commands, habitually and boastfully indifferent to law. A license system appears to be what is needed to make responsibility real. A license, or certificate, to be granted under proper restrictions, and liable to temporary or permanent forfeiture for misconduct, should be required of every officer. A valuable standing should attach to its possession, the loss of it should entail loss of employment, and there would thus be the strongest motives for behaving well.

A sure accountability to the laws should be established by provisions making arrest for their breach certain. Mates who have exposed themselves to punishment, customarily obtain an adjustment of their wages, get themselves put ashore, and are out of reach before the crew is discharged. The unfortunate seaman who patiently bears abuse till arrival in port enables him to ask justice, finds the privilege of asking his only redress. This stimulates lawlessness.

No employee ought to be permitted to leave a vessel till regularly discharged by a government officer, who should, before granting a permit, investigate all complaints.

Regulations for the shipment of proper crews are also needed. The large foreign element they present is the most commonly alleged cause of trouble. Inexperienced men are not seldom led by shipping masters, eager to fill a crew, to ship as able seamen. Of course the discovery of their incapacity breeds abuse. Would it not be well to have on every American vessel a fixed proportion of actual American seamen, speaking the language? No vessel should sail without a substantial inspection and approval of its crew. Some changes in our judicial system, not calling for discussion here, might well be made to meet the necessities of maritime and certain domestic interests.

In this time of steady and wonderful advancement, the deplorable condition of our merchant service is a disgrace to the nation. A vigorous attempt at reform in the particulars indicated, it is believed, is demanded for the honor of our commerce and the individual welfare of our seamen. Self-interest and humanity alike call for it, and now is the time to undertake it.

T. C.

I.

Up from the narrow prison of forms and creeds—
Out from the courts of charlatans and quacks—
Brushing aside whole fields of briers and weeds,
And with strong arm and keen, wit-sharpened axe
Opening his way apart from beaten tracks,
He led us like a father by the hand
Up to the splendors of an undiscovered land.

II.

His heart we loved; his genius we admired;
His quaint and sportive talk endeared his name;
His prophet tones and words our spirits fired;
A breeze of morning from his presence came;
The sunrise touched us with a ruddier flame,
As upward still we trod the heights with him
When truth's white light turned falsehood's blazing dim.

III.

But he, alas! who saw the light so plain,
Who slaughtered shams with scathing pen and tongue,
Deceived by some false phantom of his brain,
Now gropes through cavern windings, darkly hung
With lurid lamps, whose smoky fires the young
Aspiring faith of Christendom derides,
Turns back from in amaze, and seeks for wiser guides.

IV.

O leader up the mount—where visions grand
Burst on our youthful eyes, while others groped
Through tortuous ways—we held thee by the hand
With springing footsteps, as the prospect oped
Wider and wider. Vainly, it seems, we hoped
Companionship with thee in age as youth.
Despair is in thy voice. Alone we seek for truth.

V.

No, not alone—for many a mind which thou
Scornest, proves thy impartial judge and peer.
O tuneless bard! whose jangling wires now
Play o'er thy one half-truth, so sad to hear—
We mourn for thee, as when some gifted seer
Is snatched from reason's light and love's warm spell
To mumble witless words in a poor maniac's cell!

C. P. Cranch.

HINTS FOR TOURISTS AND INVALIDS ON ITALIAN CLIMATES.

THE annual tide of travel from this country to Europe will very shortly set in, with the usual tendency, after traversing the Continent during the intervening months, to rest in Italy during the winter. This will especially be true of such as are in feeble health, and are led to anticipate the most salutary effects from their sojourn upon the peninsula. As their disappointment will be most serious, and ought as far as possible to be prevented, we have thought some suggestions as to what to expect, what to avoid, and what of benefit and enjoyment may be obtained in the kingdom of Victor Emanuel, would have a timely interest and value.

In the minds of many the climate of Italy is little short of tropical. In winter, their imagination pictures a land smiling under an unclouded sun, whose burning rays are tempered by cooling breezes from the Mediterranean —in summer, a hotbed of pestilence that none but a Park or a Livingstone would be foolhardy enough to explore. There are those who have been known to leave their woollen garments in Paris when preparing their wardrobe for a winter in Italy; and some have written thither for information whether it would be safe, hygienically, to visit Florence in October.

To such as these, if we were to say that we have in Italy suffered greater inconvenience from cold and less from heat than we have in Boston or New York; that, in Florence, Austrian sentinels have died on their posts from cold, while the lives of Italians, similarly exposed, were saved by their superior hardihood; and that, sometimes, in the latter part of June and the beginning of September, overcoats and violent exercise are essential to comfort, we should be accused of indulging in paradoxes. Physicians send their patients to Italy as to a Pool of Siloam. Without a word of warning from the hosts of travellers and book-makers, the consumptive patient leaves his furnaced house, his tight double windows, his wooden floors covered with three-ply carpets, his furred walls, and, after various trials by sea and land, he reaches his winter quarters to find less provision often for the comfort of lodgers than we allow our state prisoners. If he is fortunate enough to be well-advised in the choice of his apartments; if he gets a southern exposure on a broad street or square, not on the ground-floor and not immediately under the roof; if, in spite of brick floors and solid walls (for Italians totally ignore the fact that an air-tight compartment in the walls, such as we make with laths and plaster, is a bad conductor of heat, while bricks and mortar are among the best), he has a stove which, by a constant supply of fuel, is capable of renewing the caloric as fast as it flies off at all six sides of his room and by the thin, rattling, unputtied windows and makeshifts for doors—then, all these conditions being complied with, he *may* be able to stave off discomfort and preserve his lungs from irritation and his feet from freezing. But let him beware how he goes rashly into a back chamber, looking on a courtyard or a narrow, sunless street, or turns a corner off the sheltered southern front of his house. In the one is a chill like the grave, and at the other he may encounter a blast savoring of icebergs from the Pole.

It is not invalids alone who suffer. All nations obliged to resort to artificial warmth abuse it, and render themselves in so far delicate and unable to resist the effect of cold. The Americans of the Northern States are among those most dependent on fire. To us, then, this feature of Italian winter-life, this want of comfort, is most interesting, and deserves more notice than it has received at the hands of travellers. It is attributable to two causes: to the character of the air, and to the construction of the houses. Of the latter of these something has been said; but of the former, little or nothing.

The air of Italy, as of southern countries generally in the eastern hemisphere, is heavy and inelastic. We say most southern countries, though in our Southern States and the West Indies the damp chill that in the eastern hemisphere pervades ground floors and all places hidden from the sun is not observed. This want of elasticity in the Italian atmosphere appears most strikingly when one goes out of sunny streets or open squares into a narrow street where the sun cannot penetrate. The contrast one feels instantaneously is so great that the two bodies of air seem like solids, that cannot combine or influence each other but at the point of contact. So, too, you may open the windows of a room long shut up, and it will require much time to effect the equalization of temperature with the outer air for which in a more northern latitude a few minutes suffice.

There is a property of Italian air, of which the thermometer takes no account, tending to keep down the circulation. The mercury may be many degrees higher than with us, and yet the sensation of cold, after sitting some time still, is greater, and it will require much more time to get into a glow by exercise. During the winter of 1857–58 even Italian sentinels were frozen to death in Leghorn, though snow was never seen; and an American informed us that he had slept many winters in Paris under a single blanket, but that during a November in Tuscany no covering was sufficient for comfort. It is common to attribute this peculiarity to dampness; but this cannot be a satisfactory solution, for the north and north-east winds in winter are dryness itself, and under their influence the nails become brittle as glass; yet they abstract caloric in a manner we are quite unused to, and so the poor Austrians found in the cold winter of 1848–49, when, in their own country, with the thermometer much lower, brisk exercise would have kept warmth and life in their bodies. Hence the danger of draughts in Italy, the speedy cooling of the whole body in the hottest days of summer when one faces a gentle breeze, the cooling process of driving in an open carriage, the chill that succeeds sea-bathing in the dog-days, even when the water reminds one of a hot bath, and the miraculous effect of the fan, which ladies must find here gifted with double power.

It would be a better explanation, we think, to say that there is a chemical property of the air which tends to diminish the rapidity of the circulation and to abstract caloric, and that this quality is increased by dampness, altitude, and motion of the air. We suffer, too, more in Italy from dampness, because the unelastic, stagnant nature of the air prevents its rapid diffusion as in northern countries, so that it hangs about narrow streets and lower stories, shady side-walks and the neighborhood of gardens and trees, and prevents the mortar from drying in new buildings. We blame the Italians for want of taste in not planting trees in their towns and laying out gardens in their public squares, but they are not without reason; and it would be wiser not to condemn anything hastily in a foreign country, however contrary to our own habits and ideas. The maxims and old saws of a people regarding health are a sort of common-law drawn from the experience of countless generations; an unenlightened experience, it is true, but the conclusions are rarely altogether wrong. A gentleman with weak lungs has told us that he could always distinguish by his sensations the limits of a garden in an Italian town abutting on the street. We laugh at the Italians for their bathing code, which confines sea-bathing to July and August alone. But there can be no doubt that bathing is not so innocuous as with us, and a chill is more easily taken. Sometimes great benefit and enjoyment are lost by foregoing the bath during a hot June and September; but it is thought wiser not to modify the common-law by statutes, and so the Italians will go on bathing only in July and August, though it sometimes happens that these two months are cooler than the two former. In this extreme they err, but their prudence is not without a color of reason.

Altitude increases the sensation of cold more than with us. Whether mercury is equally affected at a less height, we are not prepared to say. We speak only of our sensations. The inhabitants of villas on Monte Nero, near Leghorn, though it is only a few hundred feet above the sea, and almost destitute of vegetation, represent the evenings and nights as cool in the hottest period of summer.

After all, though we do not believe in the wisdom of sending invalids to Italy, yet it would be idle to argue that it is not a most delightful residence, in spite of drawbacks. The host of foreigners who flock to it and make it a second home would refute such a position. These very drawbacks may be made, with due prudence, a source of good. It is much better to run the risk of catching cold from chilly apartments than, by the over-application of artificial warmth, to become delicate and unable to resist cold. Doubtless many a child has perished under the rigorous régime, sent to an early grave by croup caught by sitting on damp ground or on stone benches, which seem colder here than elsewhere; or by getting into a perspiration on a hot winter's day and returning into a cold, damp cell, sealed to all external influences. But if one has the will and ability to guard against the dangers of a treacherous climate; to dress warmly in-doors, and not be shocked at the seeming paradox of sometimes going out lightly dressed on a winter's day and resuming a warmer garment on returning to the house, and other similar precautions, it is, we think, clear that a child, or even an adult, is better for such physical education than he would be in a climate where, during a long winter, he is coddled in a furnaced house, and where all the temptations and inducements are to an in-door life.

The Italians, with the exception of the wealthiest classes, make no use of fire for the purpose of warming except what they can get into a little earthen pot, called a *scaldino*, which they carry about in their hands during the day, and put into their beds at night an hour before they get into them. To them the poetry of the fireside is a dead letter. Their winters are indeed gloomy affairs, and, as this is the only season when they are seen by foreigners, it is impossible for the latter to form a very cheerful picture of Italian life. Firewood is looked on as a very great luxury, and it is thought more economical to spend money in dress than in providing for comfort. They are not, however, indifferent to the agreeable sensation of warmth, in spite of their

hardihood. They would almost suffocate in one of our furnaced parlors; but we remember the cook of one of our Tuscan landlords, notwithstanding her master's boasting that the climate was so mild that fire was unnecessary, confessing to us, after making our fire, that if she could have her choice between going to the theatre and spending the evening before such a fire, she would choose the latter. Government employees, to whom firewood is furnished gratis, use it profusely.

A large middle-ground is open between the economical extreme of the Italians and our own hot-houses, and, following a few simple rules, the traveller in Italy of average health will find he can make himself tolerably comfortable.

Avoid *new* houses at all seasons, three years being held here necessary to be sure of perfect dryness.* Choose an open square for winter and a southern front; or, what is better, south-eastern, so as to get the first morning sun. Avoid the neighborhood of gardens. Get as many front rooms as possible. Avoid the lowest and highest stories. The fireplaces are never good; but an open earthenware stove costs but little, and the landlords are always willing to put them up if the tenant will share the expense.

In Florence the best situations for winter are the sunny side of the Lung' Arno, the Piazza Pitti, and the Piazza Maria Novella. The Piazza dell' Independenza is not quite so warm in midwinter, but it has the advantage of meeting the spring sooner, being a sort of *rus in urbe*, while the streets in the central part of the town bottle up the winter's cold some weeks longer.

In Pisa, as in Florence, the Lung' Arno is the warmest exposure.

In Rome, Via Gregoriana, the sunny side of Via Felice, of Via Capo le Case, of Piazza di Spagna, and of the streets leading from it to the Corso, viz., Condotti, Croce, and Frattina. But all of these must yield to the first two, where the advantage of height is added to that of sun. Every one must be struck, in coming down the steps of the piazza, with the damp, cellar-like chill of the lower parts of the town. After a rain the highest part of the Via Capo le Case is the first to dry. In the lower streets it is particularly important to live high up in the house, thus getting more sun and less damp. The penultimate is the best; but the highest is better than the lowest or even second story.

As spring advances and summer is approaching, the great flock of travellers is on the wing; but let our readers be persuaded that there is no good cause for flight. *Experto crede.* Believe the word of one who passed through fifteen Italian summers, and is alive to tell of it. You can never see Italy in her beauty if you confine your visit to the cold weather. It is not enough to stay through the spring. We have a letter before us from a distinguished writer, dated Naples, at the end of May, according to which, "if the Italians would only get over the delusion that they live in a warm climate, we could get on very tolerably." Indeed, the houses are built and arranged only with reference to the summer; and it is not till we have got over the damp and chill, even of spring, and can throw ourselves on the turf under the trees, that the true charm of Italy is felt.

Then as for heat, the same quality of the air that, in winter, freezes up your blood, now tempers the opposite extreme. A slight breeze, a friendly shade, a moderate elevation, the neighborhood of woods or the sea—all have an effect that, to an American, seems magical. If the traveller is at Naples, he can spend his summer at Castellamare, Sorrento, or La Cava; or he may pass over to the island of Capri, and there, according to an account of a friend who tried it, go through July and August without a sensation of heat. So much as this cannot be said for Sorrento, where we once spent four months and a half, from the middle of May till the end of September, on a villa on the edge of a cliff that hangs 200 feet over the sea, embosomed in an orange-grove, and covered with vines and climbing roses. Before the house lay the whole expanse of the beautiful Bay of Naples, Vesuvius smoking in the distance. The path to the sea goes through immense caves cut in the *tufa* rock by the ancients, and leads to a smooth sand-beach, where the bathing leaves nothing to be desired. Here it is imagined that the sirens used to sit, and hence, it is pleasant to believe, came the name of the town. The cost of living was but little in this earthly paradise. The villa cost us, furnished, but $25 a month. A boatman (we remember his name well, Raphael, and his honesty, too) used to come every afternoon to bring purchases from Naples, and receive orders for the next day, his boat being one of a fleet that leaves every morning at daylight for the metropolis. He was a perfect Phœnix, and we used to wonder how the Pre-Raphaelites used to get through the season. Boats are in abundance to make excursions to the blue grotto of Capri or along shore; donkeys are ready saddled for climbing the hills that surround this beautiful valley; and one of the most romantic drives in the world is on the road to Castellamare, from which a railroad leads to Pompeii, Herculaneum, or Naples. That was a pleasant summer, if a hot one. But now—*quantum mutatus ab illo!* Our villa is no more, but in its place has arisen the envious palace of the Prince of Syracuse. We doubt not there are many more to be found; and, if not, a summer might be passed in many a worse place than the Hotel Tasso, one of the very best in Italy. It was formerly the family mansion of Tasso and the place where he spent his youth. Things change but little in Italy, and here you may feast your eyes on the identical scene which first woke a responsive chord in the bosom of the future poet.

In the neighborhood of Rome the choice of a summer residence may lie among Albano, Frascati, and Tivoli. In Tuscany the chief resorts for the summer are Leghorn and the baths of Lucca, also Sienna and the mineral waters of Monte Catini. These last and Leghorn are the places most frequented by the Tuscans; Lucca is that most resorted to by foreigners, especially the English.

For our own part, we prefer Leghorn. We know that foreigners are not generally of our opinion, but we think it is because it is not fairly tried. The few who, to our knowledge, have spent a summer there, generally repeat the visit. The Bagni di Lucca, though high and abounding in vegetation, and, therefore, enjoying cool evenings and almost cold nights, are quite shut in by mountains which cut off the ventilation and offer a concave reflector for the sun's rays, which thus become doubly potent. There is a sense, too, here of confinement. One longs to see a sunset, and, like the Prince of Abyssinia, to get beyond the lofty ridges that shut in this Happy Valley. The air seems stagnant and oppressive, and we shall not soon forget the delightful effect, after a hot summer at Lucca, of the fresh sea-breezes of Leghorn. Here the season begins and ends with July and August. The Italians talk of going to the *bagni* in the summer as a prime necessity of life. People of very moderate circumstances, who would not buy a stick of firewood in the winter, leave their houses and crowd themselves into a narrow, dirty apartment, paid for at an exorbitant rate, trusting to the mystic influence of the air or to an occasional dip in the sea to produce a miraculous influence on their bodies. It would be thought by them a tempting of Providence to bathe before the first of July, even if, as often happens, the weather and water have got their maximum of heat; and the first rain that may fall towards the end of August is a signal for all to stop for the season. They talk of a bath as of a most violent therapeutic remedy; and while they dose their insides habitually with the mineral water of Monte Catini, they seem to dread the application of common water, whether salt or fresh, hot or cold, to their skin as they would a surgical operation.

The best position at Leghorn is outside the Porta a Marc. Here, for two or three miles along the coast, are villas and furnished lodgings of all descriptions. The best position is thought to be at Palmeri's baths, and his apartments are always the first to be taken. A mile beyond, *i. e.*, two miles from the gate, is the Casino of Ardenza, much resorted to by the fashionables. There are also villas, further back from the sea, very prettily situated; and if one wishes a cool residence without bathing it can be found a mile or two further, on Monte Nero, where Byron once occupied a villa.

Another place is Sienna, which (to its credit be it said), though like Leghorn offering few attractions as a residence to the passer-by, yet is spoken of highly by those who have tried it during summer, and often returned to. Some ambitious students of the language exile themselves winter and summer in Sienna, on account of the recognized superiority of accent claimed by its inhabitants. Such self-sacrifice is praiseworthy, and it would savor of harshness to suggest to these martyrs that the chance is very slight of their approaching near enough to the true thing, in any part of Tuscany, for the space between Florence and Sienna to afford an appreciable parallax.

Another mode of passing the summer is villa life in the neighborhood of Florence. The country is perfectly studded with these residences, mostly furnished (scantily, however); and, by choosing situations on the brows of the many neighboring elevations, country-life, coolness, and independence may be combined with the advantages secured by proximity to a capital; such are Bello Squardo—chosen by the author of "Aurora Leigh" for the residence of her heroine—San Miniato, and the Poggio Imperiale.

In conclusion, we can only repeat what we have said—that, for invalids and children, Italy is not the place, unless they and their friends bring a large stock of prudence, and are willing to profit by the experience of others. Under these conditions, they can make Italy, throughout the year, an agreeable and healthy resting-place. Let them neglect these precautions—let them get an apartment on the ground-floor of a new house, opening upon a garden to the north, and they may only serve to prove the truth of the law

* As a proof how little travellers are prepared for the climate in spite of all the books written on Italy, a lady, just arrived in Florence, took an upper story just built on the top of an old house. She remarked there was little to be said in favor of the apartment, but that it had *one* very decided advantage—it was *perfectly new*.

maxim: *Cujus est solum, ejus est usque ad cœlum*—which may be thus paraphrased: Whoso takes a ground-floor in Italy will have need of no other lodging this side heaven.

A DESCENT INTO THE DEPTHS.

DIVERSIONS OF THE FOURTH WARD.

THE Fourth Ward, I believe, is the only rival of the Sixth in its triple distinction of filth, poverty, and vice. At the close of our inspection of the latter we held a consultation with Captain Thorn, who recommended not only a separate night for this district, but also two or three hours during the day, and kindly offered his services as guide and protector. We met, by appointment, on Monday afternoon, at the police station in Oak Street.

The sharp north wind which was blowing not only froze the filth and garbage of the streets into a solid mass, but almost completely deodorized the lanes and alleys we visited. In this respect we were not called upon to endure a very severe trial, but there was still enough left to stimulate the imagination and cause us to shudder as we anticipated the effect of summer heat upon these low-lying, swarming quarters.

Since our exploration of the Five Points, ten days previous, an event had occurred which is destined, let us hope, to relieve the city of much of the reproach and the danger which I have already described. The new Board of Health had been appointed, and the owners of these barracks and cellars becoming suddenly conscious of a change in the atmosphere, began at once to clean and ventilate and purify. The names of Dr. Willard Parker and Mr. Schultz have run far in advance of their official action. Fifteen hundred loads of filth have been already removed from the Fourth Ward, and in many courts and alleys only a dirty tide-mark on the walls remains to tell of their recent condition. Some streets (Cedar Street, for instance) were still ridged up to the height of nearly two feet for their entire length, but the accumulations had been loosened and broken up preparatory to removal.

We first visited some houses in Fisher's Alley, which may possibly be a little better than the dwellings in Cow Bay, though of this I cannot venture to speak positively. There may be slight degrees of comfort—or rather discomfort—perceptible to the inmates, which an inexperienced eye would fail to distinguish. It is difficult to draw comparisons below a certain grade of wretchedness; whether true or false, they are equally odorous. In these houses we found a family in each room, some with half a dozen lodgers in addition. Children swarmed in the dark passages, on the broken stairs, and in the noisome back-yards. The walls were cracked, the ceilings leaky, the broken floors mended, in some places, with barrel-staves nailed over the holes, and the windows so patched and dirty as to exclude much of the light. The rent varied from three to five dollars a month. In almost every instance it had either been recently increased, or an increase was threatened.

The custodian of one of the houses—a woman with black eyes and bruised nose—was anxious to impress upon us the fact that the place was soon to be cleaned. Arrangements would be made in a day or two, she said, to remove the great pile of refuse in front of the door. There were also hints of scrubbing and whitewashing; but all such improvements will be very temporary in their effects. There is no permanent cure short of tearing down the buildings.

We next descended into a number of lodging-cellars, not more than one in five of which was lighted, except, perhaps, by a window in the upper part of the door. Dark, damp, unventilated, and so cramped that we were frequently unable to stand upright, these dens paid a rent of from nine to sixteen dollars a month! The price of a night's lodging is fifteen cents. Although we were always careful to leave the door open wherever we entered, a few minutes in such an atmosphere were enough to produce oppression of the lungs and a disagreeable taste i the mouth. What must it be towards morning, after a dozen men and women have been sleeping there for hours?

In the lower part of Cherry Street we found barracks a shade better in appearance, and very much more expensive. The rooms were still miserably shabby and dilapidated, but the ceilings were higher, the windows larger, and some rooms of southern aspect were tolerably cheerful. Here the families have a habit of arranging their crockery in open dressers, the shelves of which are ornamented with cut paper; pictures are common, and the reckless untidiness of the people is chiefly to be seen in their beds. Some of the families occupied two rooms, and furnished board as well as lodging. The fronts of the houses present a better appearance than the rear, but there is little difference in the rent.

In one of the attics we found a German chair-maker sitting at a table, with a bowl of pieces of carrots, potatoes, and turnips before him. He looked at us with an idiotic stare, scarcely answering our questions, though put in his own language, and, finally, after tapping his breast and saying, "I'm sick!" fell to eating again. There was no fire in the stove nor any furniture in the room. Another miserable den brought double the usual rent, because it was a "furnished apartment." The furniture was a bed, two chairs, and a chest of drawers, all on the point of falling to pieces. The inmate, a broad-faced, unkempt girl of seventeen, informed us that a man lived with her. Two other girls, visitors, made a pretence of turning away their heads and laughing, but she faced us with a defiant boldness which might indicate either courage or depravity.

Turning into East Gotham Court we found a block of tenement-houses, upwards of one hundred and fifty feet long, standing at right angles to the street. There were six houses, and twenty families to a house, and a similar block in an adjoining court—making two hundred and forty families, living in the rear of the street, within a space a hundred yards long! The narrow alley-way which gave access to these dwellings was pierced, at regular intervals, with open gratings, down which we looked into a continuous open sewer, the common sink of all. It was fortunate for us that the keen cold kept down its terrible exhalations. There was only one thing to be said in favor of these blocks, and a similar one upon the other side of the street—the cellars were not inhabited.

Two hours sufficed to make us acquainted with the life of the poorer classes in the ward. After seeing the three varieties—the cellar, the vile back tenement, and the shabby front tenement—our further exploration was simply a repetition. The same state of things was continually reproduced, in different phases of repulsiveness. We grew weary of looking upon a degradation so passively accepted.

Captain Thorn promised us a different experience for the evening, and we were not disappointed. We proposed seeing the diversions, the delights, the indulgences, of the same class of people, to whom the dance-houses of Water Street are what the Academy of Music is to the dwellers on Murray Hill. We waited until nine o'clock, that the curtain might first fairly rise on the subterranean orgies, and then set out again in the company of our stalwart friend.

Many nationalities are here represented—mixed in some localities, clannishly separated in others. China was the first with which we made acquaintance. Into a basement, along a dark passage, where a furious little dog gave warning of strangers, and the door opened upon a misty atmosphere of opium and tobacco, a perspective of sleeping-berths in the background, and a group of flat Mongolian faces around a table covered with huge dominoes. The pieces were hastily mixed together, and the game broken off, when the captain made his appearance. The landlord, however, greeted us courteously, and some twelve or fifteen of his boarders gathered around, a mild curiosity lurking in their small eyes. The opium-smokers, stretched at full length in the berths, and inhaling the precious vapor through hollow reeds, looked at us listlessly through the mists of their dreams. It was evident that to them we were phantom figures, standing somewhere in remote space. In an inner room the same indulgence was going on, and the air was dense with the peculiar odor of the drug.

These Chinamen were mostly sailors. Some who had given up the sea, and now sell bad cigars and other cheap commodities, have married Irish women, and are adding a new Celto-Cathayan race to our cosmopolitan population. For board and lodging (the former including, as the landlord informed me, much rice and chop-sticks) they pay two dollars and forty cents per week. Captain Thorn stated that they were the quietest and best-behaved people in the ward. Their demeanor to us was polite and respectful; and, although I have an exceeding dislike to the Chinese as a race, I could not help acknowledging that these specimens, at least, were by no means so brutalized as their Caucasian brethren next door. Their obtuse moral sense, it seems, does not lead them into such depths of degradation as the perverted moral sense of the Anglo-Saxon. The latter, when he is ignorant, is the most ignorant, when vicious the vilest, when brutal the most of a brute, of any race on the earth.

A native-American establishment in Water Street was the next point of interest. Viewed from the street it was a drinking saloon, but through a half-open door in the rear came the sound of music and glimpses of white and pink figures. The floor was clean, the bar in admirable order, pictures on the walls, and an air of order—almost of respectability—about the whole place. A man of firm, sharp features, and keen, intelligent eye, bade us welcome. We passed through the bar-room and took seats in a rear hall, upwards of fifty feet in length. At the further end, on a platform, sat four musicians; on the floor twelve girls were dancing a quadrille. Half of the latter were *décolletées* to the last point; their heads were decorated with ribbons and flowers, and their distended skirts reached a little below the

knee. They resembled giant children of eight or ten, except that their dancing had none of the grace of childhood. The others, in plain dresses of dark calico, moved like nuns among these bedizened creatures.

Presently the host came into the room, took his station by the door, and commanded a march. The music struck up, and the girls formed a double line across the hall, swaying from side to side in time with the measure. Then commenced a series of evolutions, marching, countermarching, right-about facing, the word of command being given by the host in a loud, sharp tone—nor those words only, but many a savage reprimand, as some happened to fall out of step or line. His cold, severe, classical face formed the strongest possible contrast both to the scene and the other actors in it. His authority was unquestioned, whether cheerfully acknowledged or not. My friend ordered some refreshment for the dancers, and it was furnished without interrupting the evolutions. The girls fell into single file, marched, still swaying from side to side, to a counter near the music, took, in turn, a glass of something (apparently beer, from its color), emptied it with a "Here's to you, gentlemen!" and danced on.

The proprietor of this place appeared to be a man of considerable intelligence, if not education. He was no common character; his ascendency among those abandoned creatures was the least manifestation of his capacities, and if his gains are in proportion to his shrewdness (which I suspect is the truth), it will be safe to predict that in three years he will be alderman, in five member of the legislature, and that in ten he will have a house—possibly on Fifth Avenue.

Water Street abounds with dance-houses of similar character. We visited twelve or fifteen, which differed only in the proportions of the dancing-saloons in the rear, and the number of female performers. There are portions of the street where almost every other house is so occupied, and the rents paid by the proprietors are enormous. There are frequently two counters for the sale of liquor, one next the street, and the other at the rear end. Over some of these I saw the notices, "Twenty cents for a dance," and "Ten cents for a drink." Notwithstanding the greater expense, much more dancing than drinking was going on. Perhaps the captain's presence put a stop to the latter indulgence, or it was too soon in the evening; but certainly there was very little drinking to be seen, and no intoxication anywhere.

Towards midnight the dancing became incessant. The Scotch reel seemed to be most popular, though there were occasional waltzes and quadrilles. The male dancers, to judge by their peculiar swing and shuffle, were mostly sailors—many of them boys of eighteen, or even less. The girls went through their part with a weary, mechanical air, often drawing their naked shoulders together as the cold wind blew upon them. At first, on entering, the general effect was coarse and repulsive; and it was singular how soon this impression was softened by the wonderful sensuous glamour which belongs to music. The air, impure as it was, presently became rhythmic; the dancing figures, though by no means graceful, assumed a fawn-like character, and the real purpose of the establishment, carefully kept in the background, was no longer suggested.

I could easily understand that vice, thus embellished, should be attractive, especially to the inhabitants of the dens we had visited in the afternoon. It is, in appearance at least, a step above their reckless wretchedness. Warmed, lulled into semi-forgetfulness by some potent stimulant and "flattered by music's golden tongue," no one can wonder that a week's earnings are so often spent for a night's dissipation. The exhibition of moderate neatness and partial order, in these places, was so agreeable, by contrast, that I found myself constantly forgetting their disreputable character. The first step towards reclaiming the lower classes of our population must be the introduction of some innocent form of recreation and amusement—not moral lectures, but music, dances, puppet-shows even—diversions which give more than the dance-house now offers, without its temptations.

In the midst of this region there is a Mission House, which we also entered. We found a clean, well-lighted hall, with plain benches for the auditory, a platform for speakers, and texts of Scripture upon the walls. The services were over, but the janitor, a grey-headed man, was very enthusiastic in setting forth his own redemption from evil ways. "In two weeks I shall be eight years old," said he—"eight years in Christ. I was once a miserable creature; no one would receive me, or have anything to do with me. I tried to join the Odd Fellows, but they would not have me. No more would the Freemasons; for I was a drunken sot. Then, at last, I went to Jesus, and he took me just as I was." This old man was the happiest person we saw; he was completely filled and satisfied by his faith.

After we had exhausted the principal attractions of Water Street, Captain Thorn proposed taking us to a "dago crib"—a very mysterious and suggestive term, until I learned that Spaniards were called "dagos," when I guessed that it was simply a corruption of the individual name "Diego" applied to a class. The place was kept by a Messinese Sicilian, married to a Hamburg woman. Dancing of an animated character was going on down the centre of a long room, on either side of which sat a row of villanous-looking Spaniards and Italians, with an occasional German. The glances they shot at us from under scowling brows boded no prepossession in our favor, and the captain's company was more agreeable than ever. Yet the landlord and his assistant were models of graceful courtesy. The former sent for a bottle of sweet Sicilian wine and filled glasses for us, the Hamburg woman joining in the salutation. This place, being more wicked than most of the others, was proportionately interesting, and we spent half an hour watching the appearance and movements of the persons assembled.

A round of the lager-beer saloons of Chatham and William Streets closed our labors for the night. If the dance-houses seemed respectable by contrast with the lodging-cellars, these saloons were aristocratic. Here there was plenty of space, plenty of light, ventilation, ornament, music, and, above all, order and (at least external) decency. The proprietors are semi-cultivated men, most of whom have had a wide experience of the world. The beer is excellent, its quality not having diminished with the size of the glass. Many of the saloons do an immense business and their proprietors are rapidly becoming wealthy. Those in the Fourth Ward are in no wise inferior to the similar establishments on the Bowery.

A few steps up Frankfort Street brought us to a view of the City Hall by moonlight. Here, also, there is a foul atmosphere which no Health Commissioners can purify. Which is worse, vice in low places or dishonesty in high? As I reflected upon this question, I found myself less inclined to pronounce harsh judgment upon the classes we had just visited, seeing how inevitably their phase of poverty produces filth, and filth loss of self-respect, and loss of self-respect vice, and vice crime. More than half the evil in the world springs from material rather than moral sources. And missions, charities, schools, and associations for reform work against wind and tide until we have a good municipal government. B. T.

New York, March 8, 1866.

THE SOUTH AS IT IS.

FROM OUR SPECIAL CORRESPONDENT.

XXXII.

Parish of Orleans, La., Feb. 17, 1866.

I WISHED after leaving New Orleans to visit Baton Rouge, and, for the sake of seeing the country and the people between these two cities, I decided to make the journey on foot. My valise and overcoat, therefore, were sent forward by express, and I carried with me only a very light equipment of such things as would be indispensably necessary during a week's walk. I reached the little suburb of Carrollton before twelve o'clock, and there enquired for the road to Baton Rouge. "The river," everybody answered with a stare; "a boat; nobody went by land," and at last they told me to take to the levee. Accordingly I climbed the bank and was fairly on my way. At the end of the first five hundred yards a colored soldier ordered me to halt, and referred me to his officer for the reason. The lieutenant said that he had orders to keep all Jews and peddlers out of the camps; the men were being paid off. Satisfying him that I was not a peddler, he suffered me to pass on, and for a little way I walked in company with two negro women who were going into the country to make a Sunday visit to their relatives. They talked about the capture of New Orleans, the cannonade at the forts, the first appearance of the fleet, and the fright among the citizens. That was the day, one said, when them rebels run all about. Yes, said the other, that was the time when the stripes come off 'n their pantaloons! They told her the d—n Yankees had come, and the very first thing they 'd blow up the city and kill all the people. They would n't kill her, she told 'em. She knowed she 'd never done nothin' but work hard; not her, not since they done sell her out o' old Virginny. They told her a heap more 'n she believed. Same as they said that Confederate flag never should come down off 'n the Custom House; the man that laid a hand on it should die sure. But she noticed the Yankee flag went up very quick. As for herself, her mind was all made up to run for them same cannon that talk' down the river, if the Yankees did n't come up.

These recollections the women dwelt on with much apparent enjoyment, as is usual with the negroes whenever they talk of Federal successes. By-and-bye we came upon another guard, and I went on alone, leaving the soldiers examining the baskets of the women to see if they contained whiskey, and soon I fell into the company of a young man who, after finding out my business, informed me that he was a teacher employed by the Freedmen's Bureau, and urged me to spend the night with him. He would show me a

usus naturæ, he said. He would introduce me to Mr. B——, a man born in the South, once the owner of several slaves, afterwards for a long time an overseer, who was not only a Unionist, but actually believed that the negro was the equal, and in many respects the superior, of the white man, and should be allowed to vote. Mr. B—— was manager of the plantation he was living on, which was only twenty-five or thirty acres further up, and I would find him very hospitable.

I consented to go with him, and as we walked along he bade me remark that the surface of the river was eight or ten feet higher than the land, and that the field-ditches all ran not towards it but away from it. The country along the Mississippi for many miles above and below New Orleans and Baton Rouge was a narrow strip of good land, with the river on one side of it and a swamp on the other. Then each plantation was a strip of land, the most of it worthless, extending back, sometimes many miles, into the swamp water; and in estimating the size and value of the farm the important element entering into the calculation was always the number of acres fronting on the levee. The country is exclusively agricultural. It is customary, therefore, in measuring length to use the measure applied to the farms, and to speak of points upon the road as being so many acres or so many arpents distant from each other.

It was not long before we came to the dwelling-place of my new acquaintance. The house was a low building, shaded by magnolia trees, in the middle of a flat yard, which looked like a goose-pasture with its slippery mud, its short green grass, and shallow pools: His school-house was on the next plantation. On first coming into the service of the Bureau he had been compelled for several months to live in a part of one of the negro cabins; but Mr. B—— had taken him out of those disagreeable quarters, and established him more comfortably where he was then. His pay was eighty dollars a month, the same with that given other teachers of his rank. Those of lower grades received sixty-five and sixty dollars a month, and no one was employed without first passing a thorough and severe examination. In no other State, he thought, had the rate of wages for teachers in freedmen's schools been so very high, and from all I hear of the examination to which teachers in Louisiana have been subjected, I should say that the standard of qualification also has been exceedingly high. General Baird's recent order, directing that the negroes shall hereafter pay the expenses of their schools, goes into operation in March, and during February all schools are suspended. Meantime agents go about explaining its provisions to the people. Its effect, this teacher thought, would be to diminish considerably the number of persons under instruction. Anticipating its promulgation, he had offered to keep his school open during the intermission if each pupil would pay one dollar. Formerly, he had eighty-three pupils; now he has only thirty-five. But, if I am not mistaken, a compulsory support of schools is intended.

At night we walked out half a mile to the negro quarters of a neighboring plantation, and visited the cabin of one of the laborers. Several of his friends dropped in, and the schoolmaster directed the conversation to the subject of education. Two men were spokesmen for the others, and presented the different aspects of the question. Here they were, one said, working for only twenty-five dollars a month. Out of that amount they had to buy food and clothes and everything else they wanted, and were also taxed half a dollar a month to pay for the regular visits of the doctor. If he ordered medicine, that had to be paid for. Mr. M——, their employer, did n't want women in the field—not now, at any rate—and the man's wages were all that was coming in. It was pretty tight living, and come to put on a school tax on top, nobody could stand it. The wages all went for victuals. How could they save a dollar a month for schools?

The other man, a carpenter and engineer, said that the school tax would n't be a dollar; it would be only seventy-five cents a month. Mr. M—— had explained that all out to them; and by-and-bye the women would have work as well as the men, and would be getting half a dollar and a dime a day for it. Education was the greatest of all things. What made the difference between a white man and a black man? Knowledge and wisdom. Look at this: Mr. M—— hired him and paid him thirty dollars a month, and he had to find himself out of it; but he hired Baptiste and paid him a hundred dollars a month and found him everything he wanted. Now he could do the work Baptiste did, just as well, and perhaps a little better; but when it came to taking a pencil and paper and calculating and figuring, he could n't do it. Baptiste could tell the feet in a load of boards; he could n't. Education was the thing. "For we old gineration," he thought, it was too late to go to school; but the children ought to be educated. Leaving learning to your children was better than leaving them fortune; because if you left them even five hundred dollars, some man or education than they had would come along and cheat them out of it all; but learning they could keep. He ended by begging the teacher if his boys would learn their lessons in no other way to whip them night and morning. The little girl was more easily managed; she sometimes sat up half the night over her geography book. The other men fully agreed with him as to the importance of education; it was the tax that frightened them, and they so poor; but of course they meant to keep their children in school as long as they could.

Going back in the dark, we could hear the steamboats panting down the distant river, but could only see them as moving clusters of lights, floating as it seemed in the air, the river was so high above us. Mr. B—— had returned in our absence, but had immediately gone away again, for a squad of soldiers, searching for a stolen mule, had forcibly taken away one of his, and he had ridden to the camp to recover his property. He had not come back when I rose in the morning, and I lost the opportunity of talking with him.

February 18.

The morning was close and warm when I set out again, and it was a constant pleasure to walk through the unfamiliar scenery in the delicious weather, the air full of the earthy smell of the new herbage and ringing with the songs of birds. For miles together the appearance of the country is the same. On the levee one is in the middle of a great oblong space, almost flat. The bank he walks on is about six feet high and a yard wide at the top. Its sides are covered with sods, and a trodden footpath, edged with grass and small-leaved clover, and slightly elastic beneath the step, winds away before him and seems like a green ribbon with a wood-colored stripe running through it. On the left hand is the yellow stream of the river, more than a mile wide. The trees along the further bank are not thick together, and the white houses, never far apart, shine through them For the most part they are leafless and indistinct, and as one looks away up the river the low shores of the distant loops and bends range themselves irregularly behind each other, and at last would almost fade into the hazy sky, but that one sees the globe-like deep green mass of some live-oak standing out against the dim background of blue grey. There is little on that side to break the monotony: the shadow of a buzzard skims along the bank; a skiff runs out and, making fast to the roots of some floating pine, tows it in; a negro silently fishes, swinging a long-handled scoop-net; a steamboat is seen now and then, and perhaps she suddenly turns her bow to the shore, the current carries her stern down the stream, she swings to the bank broadside on, picks up a passenger, and is off again.

On the right hand, at the foot of the levee, is the dirty road. Behind this road the brown fields, with spots of green, and marked by fences and long ditches and canals, stretch back for a mile or two, sloping with an almost imperceptible inclination to the swamp. This appears as a line of bleached and leafless forest, hung with heavy masses of what one knows to be grey moss. Dotting the great muddy plain are the various farm buildings, the dwelling houses near the road, further in the rear the village of negro houses, then, sometimes a mile away, the sugar house with its massive red chimneys, and furthest of all, on the edge of the swamp water and close to an unseen levee, the roof that covers the cumbrous draining machines.

These lowlands of Louisiana are in appearance by far the richest country and the best populated that I have seen in the South. Sometimes for a mile or more the houses stand so close together as to form a continuous line, and one is never out of sight of some dwelling place. In walking twenty miles one usually passes two or three of these villages, with their foreign-looking inhabitants, the shop signs in the French language, the chapel where a bell is ringing for service, and the little houses sometimes plastered with mud, but usually seeming neat and clean. The planters' houses are often handsome buildings, and it is common to see them standing in a fine grove of evergreens, orange trees, perhaps, with loaded branches, while the ground beneath is golden with the fallen fruit. At two o'clock it began to rain, and I took refuge in a wayside grocery, where a young man talked with me about political questions. It was strange, he said, to see what fools the Southern people had been since the surrender. They would n't wait till their Congressmen were admitted, but showed their hand plainly. He had told a good many men that all this legislation about the niggers ought to be put off; there was no hurry; but they thought things ought to be fixed right off, so that they could make a crop this year, and they went on doing what he called playing the radicals' game. Of course the North would stand by the nigger. A couple of months ago he had been in Alabama, and two niggers came into that country from the North; one was a well-educated fellow, too, and had something to do with a newspaper in his own State. The young men run 'em both out of the country. He told them they had no business to do it; of course that nigger told his story when he got home, and made it ten times worse than it was. The result of

that kind of thing would be that negro suffrage would be forced on the South. He had prophesied it for months; but they laughed at him, and said that anyhow they could control the negro vote. Well, when a man was d——d fool enough to talk like that he 'd better be left alone. The niggers would vote for the men that gave them their freedom.

While I sat there several negro men and women stopped on their way home from church and bought whiskey and tobacco. The store was a miserable little room in the yard of a large house, and the storekeeper was the planter's son, a young man and apparently a person of some education. The rain ceased for a little while, but before I had walked far recommenced, and I began to look for a place to stay in for the night. I found it at what is called Rost's Colony, a plantation twenty-five miles distant from New Orleans. It was for some time held by the Bureau as confiscated property, but the owner, having been pardoned, now receives rent for it. It is not only worked as a plantation, but is also an asylum for negroes disabled by age and sickness. There are now 745 people living there, of whom 100 are able-bodied persons receiving pay for their labor. Fifteen dollars per month is the amount given to each full hand, in addition to shelter, food, and two suits of clothing yearly. They are said to work very well; although a man formerly employed as overseer went away in disgust at free labor. The expense of carrying on the farm during 1866 will be about $40,000. Should the season not be a bad one, it is estimated that the value of the molasses, sugar, and cotton produced will be $90,000. The cost of maintaining the colony will be $25,000, including the expenses of supporting an hospital and keeping a physician at a salary of $100 a month. Six per cent. on the net profits is paid to an experienced sugar planter who acts as overseer. This is the only institution of the kind in Louisiana, I am told.

Here I met the agent of the Freedmen's Bureau for the parish of St. Charles. He reports the condition of the freedmen as being satisfactory. They are all at work, except upon some few plantations which are not under cultivation, the lessees having abandoned them for one reason or another. Ten dollars and fifteen dollars a month are the wages commonly paid, and where more than this is given the laborer buys his own food and clothing. The women are not paid so much as the men, and are not always hired by the year, but often by the day. No planter gives his laborers the whole amount of wages due them when the monthly pay-rolls are made out, but one-half of the money remains in the planter's hands until the end of the year. Outrages or frauds upon negroes were very infrequent.

There was only one opinion among the gentlemen at this house about the political sentiments of their Southern neighbors—that they were hostile to the Government and to Northern men. None of them, however, complained of having been himself injured or insulted.

February 19.

In the morning I was invited to ride out and see the plantation, which is considered a model, and has evidently been carefully managed for some years. The powerful and complicated machinery for sugar-making is said to have cost nearly a hundred thousand dollars. There was also the gin-house with its separate engine, the grist-mill and the engine, and heavy water-wheel of the draining-machine in the swamp. The negro houses formed a long street, and, like most that I see in Louisiana, were superior to the laborers' quarters in other Southern States. The house, now used as an hospital, had been built for that purpose by the owner of the place; there are now twenty-one inmates, some of them men more than a hundred years old. After looking at these things I bade good-bye to my kind entertainer, who insisted on my taking one of his horses and riding two or three miles. A little negro boy, mounted on a creole pony hardly bigger than a yearling calf, accompanied me, and was full of chat. When he grew up he intended to be a hand on one of the steamboats; that was better than working on a plantation, only they turned a man away too quick. Freedom was better than slavery, he thought; for one thing, in free times, you could go to school. His horse could run mine down; it was God's truth, and, if I did n't believe it, I could try it. Then he rode straight up the steep bank of the levee, showing off the powers of the animal, and brought her down again safely, and made her jump a ditch. He was sometimes whipped in school, he said. Leaving him to go back with the horses, I walked on in the face of a strong wind which ruffled the river into waves, and made me glad when the levee now and then forsook the bank and interposed between me and it a screen of willows growing up out of olive-colored pools of water. Soon a young man on horseback overtook me, and we travelled together. He was a Bostonian, who came into this State in 1864. Last year he cultivated a plantation on "the coast," as everybody calls the river-shore, and this year he rented one place on the coast and two in the Red River country. The negroes worked as well as could be expected of people who had been brought up as they had, and fed on such food as the slaveholders gave their hands; of course, they were not so efficient and profitable laborers as whites were. He intended to make his home in Louisiana, and desired no better country to live in. He weighed ninety pounds when he left Massachusetts, and now he weighed a hundred and forty, and was afraid of no kind of weather or work. The people always treated him like a perfect gentleman, and there was no greater mistake than to suppose that they did n't like the Northern men. When the war first broke up a Yankee was not very favorably received; it was much the same in the South as it was then in the North when a Southerner was seen; people looked at him and said: "Perhaps that 's the scoundrel that killed my son or killed my brother." But that feeling had worn away. He had lived among the people of this State, he had recently made a long journey on horseback into Texas, and everywhere he had been treated as well as he could ask. And he never denied that he was from Massachusetts nor concealed his hatred of slavery. So far as danger was concerned, there were many mean fellows in the country, who cared nothing for law, who always had been in the habit of using the pistol in any little dispute; but it was easy to take the necessary precautions against such men, and he felt just as safe here as in New England. As to negro suffrage, universal negro suffrage, the men that advocated such a measure as that must be lunatics or fools. At any rate, they had a very poor idea of what made the glory and strength of true republican governments. The niggers were destitute of honesty; they did n't know the meaning of principles; they were ignorant and debased; and to put the ballot in the hands of such a set as the common plantation negroes would be ruinous. Could n't any man of common sense see that the country would be filled with a tribe of miserable demagogues, worse, if possible, than the John Slidell democracy, the moment that the negroes got political power? Of course, if a man could honestly believe in the right of these ignorant men to vote, he had a right to uphold his belief by speech and writing. It would partly depend on how he talked about it whether he could talk with safety in this country. Let him be as civil to his neighbors here as he had to be in New York or Massachusetts, and there was no doubt he could express any opinions that he might hold. Intelligence and good character, in his opinion, should be made the conditions of exercising the electoral privilege; but Congress had no right whatever to interfere in the matter; it should be left to the States.

The gentleman's plantation on this road, a small farm devoted to the culture of rice, was not far from the place where I first met him, and he invited me to dinner. The house was a small cottage, with about two hundred acres of land behind it, and was occupied by his overseer, who has entire control of affairs here, his employer being absent most of the time on the Red River plantations. As we entered the gate a bell was ringing calling the laborers to their afternoon work. They go out at six o'clock in the morning and work till sunset, an hour and a half being allowed for breakfast and three-quarters of an hour for dinner. The food of each laborer consists of a peck of meal every week and five pounds of bacon, or three pounds of mackerel, the cost of a week's rations being $1 40. Two suits of clothing—one worth $25 and one worth $15—are furnished each laborer yearly, and he is paid $15 a month. The quality of the food and clothing is better on this plantation, I am told, than on any other in the neighborhood; and the general management of the place is so well liked by the colored people that when, on commencing work, the overseer wished to hire seven hands, he had more than fifty applications. Seven men receive permanent employment, and there are six women who work occasionally, and are paid fifty cents a day.

At night I stayed at the Grey Eagle Coffee House, the tavern of the creole village of Bonnet Carré, where there was no one able to speak English but the old negro cook. They made me a bed on two benches in the billiard room, and I went to sleep to the sound of my landlord's voice, who read aloud to his wife from a copy of "Les Trois Mousquetaires."

February 20.

In the morning I found him again at his book, from which he was once in a while called away by men, some of them barefooted, who came in with their hands in their pockets and drank absinthe at the bar or played billiards. I received a dozen *bon jours* when I left the party and walked briskly on till noon. Then I stopped at a little shop to buy bread and cheese. Half a dozen creoles were lounging there, and my appearance excited a good deal of curiosity. They gathered round me while I ate, and one who could speak English asked many questions, interpreting my answers to his friends. From New Orleans, eh? When did I leave? I was out of my work and was seeking for place? Perhaps I was a schoolmaster? At last I gave him a full account of myself, but he seemed unable to believe it; a newspaper correspondent was an unknown personage to him. It must be there was something wrong with me. Oh no, not that I was not all

right; but there was some trouble, it was plain, or why should I be travelling on foot. Was there no trouble, no sweetheart? But it was very strange. I knew my own business, but I did not tell to strangers. He liked my look in the face, however, and, though he was a poor man, if I would come dine with him I should be very welcome. He had been a traveller himself.

I should say that nearly three-fourths of the white people along the road from New Orleans to Donaldsonville are creoles, and a great proportion of them are ignorant of English. They are neither large nor handsome, and have the name of being an indolent, careless race. Most of them cultivate no cotton or cane, but raise crops of corn and vegetables on their little farms, which border the road, while the larger property of their neighbors extends behind theirs, cutting them off from the swamp. They live for the most part, one of them told me, on chickens and eggs, and their wood and water comes from the river. A ball on Saturday night and billiards on the other six evenings of the week, it is said, are their pleasures. But some of them are both wealthy and well educated. I stayed at night in the neighborhood of a great white convent, with a family of these creoles, who readily received me. None of them, except the oldest son, spoke English, and he seemed little inclined for conversation, but showed me silently to my room. I learned afterwards that the father had died only the day before.

DONALDSONVILLE, La., February 21.

To-day I was for the first time afloat on the Mississippi, having been ferried across at a point seven miles below Donaldsonville. The ferryboat was a light skiff, manned by a creole and a colored man. Their little pine oars were rudely shaped, but they handled them well and took the boat over in a straight line in less than ten minutes. The row-locks were iron pins driven into the gunwale, to which the oars were tied with cowhide thongs. Landing on the western shore, I was told that the distance to Donaldsonville was six miles and seven or eight arpents by the levee, but by the "cut-off" it was only five miles and two arpents. I therefore chose the cut-off, and was soon exceedingly tired of it, the sun being oppressively hot in the fields and the road now painfully rough and now muddy. I was glad of half an hour's rest under the roof of a lonely draining-machine, and a drink from the ditch, for a walk of seventy or eighty miles enables one to relish very simple pleasures. A little after noon I reached the town.

ENGLAND.

LONDON, March 1, 1866.

THE bill suspending the *habeas corpus* in Ireland was passed almost without opposition. The debate, indeed, which ensued on its introduction was not unworthy of the occasion. Sir George Grey for once was impressive in his appeal to the good sense and patriotism of the nation; Mr. Gladstone spoke with an air of command which of late has sat upon him not ungracefully; and Mr. Mill was, as usual, clear and logical; but the speech of the evening was that of John Bright. Speaking as he did on an unpopular side, he completely carried away an almost hostile assembly by the force of his impassioned, earnest eloquence. Even the reporters' gallery, the most unenthusiastic, and, in a popular sense, unsympathetic, body of men I have ever met with, felt the influence of that rhetorical power. Yet to those who merely read the debate, I should doubt if this speech of Mr. Bright's will appear by any means the finest of his printed harangues. When you read it over in cold blood, it labors under the fatal defect of proposing nothing. The great free-trade orator felt as keenly as any Tory colonel on the opposition benches that when the Government asked for such abnormal powers on behalf of the safety of the empire, no true Englishman could possibly refuse to grant them. He did not, therefore, object to the motion in itself; he only declaimed against the policy or want of policy which had made that motion necessary. And to me, personally, Bright's position, as a non-objector and yet a critic, seemed a somewhat false one. Either the demand of the Government was just or not. If it was not just, he ought to have opposed it with his vote; if it was just, he was scarcely justified in seizing this opportunity to complain of a policy which belonged to a bygone time.

I have no doubt that the Fenian movement will create considerable interest on your side of the Atlantic, and, therefore, I hope that you will excuse me in speaking of it in somewhat of a personal sense. It is my wish, as far as possible, to exclude my own individuality, if I may use the term, from these letters. I only speak of myself or of my own opinions now because I consider, with regard to this matter, I am a fair representative of ordinary English thought. Now the one thing with regard to the whole movement about which I feel absolutely and positively certain is, that it will be crushed if ever it comes to an outbreak. The town is full of rumors of disaffection among the troops quartered in Ireland; making every allowance for the exaggerations of panic, I have no doubt there is too much truth in these rumors. But, if any regiment in Ireland was to mutiny to-morrow, I should have no more doubt about the restoration of the imperial authority than I should have about the sun rising to-morrow. If there should be any attempt at a Fenian rising, all I can say from the bottom of my heart is, God help the poor wretches who are participators in the outbreak! For them, on this side of the grave, there will be no chance of mercy. We can pardon a "cabbage-garden" conspiracy, like that of Smith O'Brien; we can laugh at the constructive treason of the *Irish People;* but if it once comes to an actual tangible endeavor to upset the Government of Great Britain and Ireland by force of arms, then all England will be united as one man. If once it becomes clear that the suppression of an Irish revolt is essential to the safety and integrity of the empire, then men of all creeds and all parties will be alike in calling for decisive measures. I am not saying now whether this feeling is right or wrong, Christian or unchristian; I am only saying that it is the ruling sentiment of the English nation, and that any person who, judging from speeches like those of Mr. Bright, should imagine that an Irish rebellion would find any sympathizers in England, would find himself most wofully mistaken.

Thus much I feel bound to say, in common honesty, and, even more than that, I must also admit that even liberal Englishmen find themselves hopelessly embarrassed when they are asked what they think ought to be done for Ireland. Our forefathers acted cruelly and iniquitously towards the Catholic population of the island. But because our fathers did wrong we cannot reasonably be expected to give up our imperial system. It would be as reasonable to plead that the Northern States had no right to uphold the Union because in former generations the citizens of those States fostered or tolerated slavery. As far as I can learn, no policy that could be suggested consistently with the maintenance of the empire would satisfy the authors of the Fenian agitation. The existence of the Established Church in Ireland I hold to be a valid grievance; the tenure of land, as it is practically worked across St. George's Channel, I believe also to be a hardship; but if we were to abolish the establishment and establish "tenants' rights" to-morrow, the Fenians would still remain as hostile to our rule as ever. The end and object of Fenianism is the detachment of Ireland from the empire; and this object we neither shall nor, as I hold, ought to assent to, so long as we have power left to resist its consummation by force.

However, I am writing now rather with a view to express what I believe would be the national policy under certain given conditions than to describe it as at present existing. Up to this time the whole Fenian agitation has not taken hold of the English mind. The Government are, as I have reason to know, infinitely more perturbed about the whole matter than the ordinary public. Throughout the week troops have been leaving, evidently for Ireland; but the public cannot yet take Fenianism seriously. Not a single paper, as far as I know, has even sent special correspondents to report upon the state of Ireland; and the money market itself, that most sensitive of all political barometers, has shown no indication of being affected by the rumors of an expected insurrection. Indeed, the optimist view, that everything in the British isles is, on the whole, as good as it could possibly be anywhere, or at any time, is so deeply ingrained amongst us, that it would need a moral or political convulsion before we begin to doubt the truth.

A short time ago, Mr. Thompson, a rich manufacturer, who contested South Lancashire unsuccessfully in the advanced Liberal interest, visited the United States. Being a strong sympathizer with the cause of the Union, he was painfully impressed on his return to England with the utter ignorance of the educated classes on all American affairs. He therefore proposed to found a professorship at Cambridge with a sum of five thousand pounds. The professor was to be nominated by the authorities of Harvard College, and, if approved by the senate of Cambridge, to deliver a course of lectures on legal, social, and historical questions connected with America. A large party amongst the dons of the university disliked the project because it seemed to involve the assumption that something good could "come out of America;" but still this was an argument which even the old-fashioned college deans were ashamed to put forward; and the only overt opposition to the scheme proceeded from an obscure master of arts called Dodd, who propounded the following ingenious theorem—that an American professor must inevitably propound doctrines hostile to church and state, and therefore either he would pervert the minds of the students, or else, what he obviously regarded as more probable, he would so incense their loyal hearts that they would wreak summary vengeance on his devoted head. However, though I suspect, at many of the Common rooms, while the after-dinner port was being imbibed, many of the old fellows opined there was a good deal of truth in what Dr. Dodd said, yet nobody of any note had courage enough to support him. The proposition that the offer hould be accepted was eloquently supported by Professor Kingsley, who had

been somewhat conspicuous during the war for his pro-Southern sympathies. His speech was a genial and friendly one enough; but I think the Harvard professorate will be rather surprised to learn that their especial recommendations, in the eyes of the sometime author of "Alton Locke," are the conservatism of their characters and their keen appreciation of the defects of republican institutions. On the first discussion, then, at which only the resident members of the university were present, the opinion in favor of accepting the proposal was overwhelmingly in the ascendant. But between the first and second discussions the country clergy had been summoned to the rescue of bigotry. As usual, they responded nobly to the call. Circulars were sent round informing the non-resident clerical members of the senate that Harvard College was the chosen abode of Socinianism; that any professor nominated by Harvard would seek to corrupt the youths of Cambridge from the doctrines of the Church of England to those of Socinianism; and that therefore all loyal sons of Mother Church must vote against this attempt to Americanize our faith. The appeal was not made in vain; the rectors and curates of the neighborhood flocked into Cambridge, and a large majority of the senate decided that to allow a professor nominated by Harvard to give lectures at Cambridge would be a dereliction from the duty we owe to the one Catholic and Apostolic faith, as expounded by the Church of England.

I was present the other day at the celebration of a grand, though I fear unsuccessful, effort to revolutionize one of our great social institutions. The public dinner, with its heavy four courses, its fruity wine, its lugubrious glees, and its solemn after dessert oratory, is one of the hardest social inflictions which Englishmen have to undergo. On all such occasions ladies are rigidly excluded. They may, indeed, sit in the gallery, and eat cakes and ices, and watch their lords and masters over-eating themselves below; but they are not allowed within the dining-room. Some years ago there was started a fund for the relief of poor comedians, and this dramatic institution had, of course, to be promoted by an annual dinner. At this dinner it was resolved to admit ladies. Naturally, the supporters of the institution do not belong to the most strait-laced classes of the community. But somehow the experiment has not answered. English prejudices are against it, and English prejudices are quite as strong amongst actors and actresses as amongst the commercial and professional classes, in whom "respectability" is, as it were, incarnate. The actresses who are married do not come because their husbands will not allow them, and those who are not married will not come because the married ones stop away. Even the extraordinary popularity of Charles Dickens as chairman could not induce the theatrical profession to rally round him; and the society, I fear, will never prosper greatly, though an excellent one in itself, till the ladies are sent back to the place whence they came.

By the way, Mr. Sothern is going to bring an action against the owners of the *Spiritual Times* for publishing a libel upon his moral character in a communication from an American correspondent.

PARIS GOSSIP.

PARIS, Feb. 14.

THE ingenuity applied to the invention of new amusements in fashionable life continues to grow week by week. The quadrille of "The Gazelles and the Leopards," for instance, which was got up at the ball of the Minister of Marine, was a curiosity in its way. The "Gazelles" were the handsomest women, the "Leopards" the finest men, of the season; the spots on the skin of one of the latter were composed entirely of diamonds. The favorite feature of a ball nowadays is the cotillion, which is always the concluding dance, and is sometimes kept up, under the inspiration of spirited, active, and ingenious leaders, for three or four hours. The latest and most popular novelty introduced into the cotillion is called "The Davenport Wardrobe;" an imitation of which famous piece of furniture, made very light, so as to be easily moved, being placed in the middle of the ball-room, and one of the gentlemen being shut up in it, the ladies put their hands, one after another, through the holes in the door, and the captive is kept prisoner until he has divined the owner of at least one of the hands. When he has performed this feat, another gentleman takes his place, and so on, until the divining power of the cavaliers present has been sufficiently tested, and a sufficient amount of laughter has been got out of the affair.

An old game, called *Le tournoi burlesque*, has lately been revived, and is an infallible mirth-provoker. The jousters in this novel style of tournament (always gentlemen) seat themselves on the ground, with their knees drawn up, their shins crossed, and their hands clasped round the latter. A stick, rather over a yard long, is then placed under the knees of each player, and tied firmly in place with a handkerchief, in such a way as that knees, stick, and hands are securely fastened together. At a given ignal the players, divided into two squads, dodge themselves about upon the floor, each endeavoring to upset the others by poking at them with his stick, and those who are upset, or only touched, are at once put out of the game; the ranks of the combatants are soon thinned, and the fight is presently narrowed to a duel between the two most skilful of the rival knights. It is difficult to imagine anything more ludicrous than the spectacle presented by twenty or thirty of these combat ants, all equally busied in laying about them with their sticks and in avoiding or parrying the thrusts of their adversaries; especially when, perhaps, half a dozen of the heaviest have had the ill-luck to lose their balance, and flounder into the most ridiculous attitudes, in their vain attempts to get themselves again into a sitting posture.

Paris has been making diligent use of the last days of its short carnival, and laying up a stock of satisfied mundane souvenirs for the enlivenment of Lent, which penitential period begins next Wednesday, and will be varied by small, cosy dinner-parties of the most luxurious description and "dancing teas," at which the traditional humiliation and breast-beating of the time will be duly recognized by the rigid tabooing of the word "ball" and the substitution of the piano for the violin. Some very *recherché* little dinners, worthy of Lent, have already been given, the fortunate purchasers of an immense and very fine tortoise, caught last week on the coast near Toulon, and forthwith sent up to Paris and divided among three or four of the leading gastronomic celebrities, having each given a prandial entertainment, worthy of Lucullus, to a few intimate friends, in honor of a windfall most unusual in this part of the world.

Soirées, with or without music, have also been numerous. At the one given by Princess de la Trémouille, the cards of invitation contained the significant word, "Thérésa," and not a soul of all those who received them missed the chance of hearing, in the princess's splendid saloons, the renowned *diva* of the smoky interior of the Alcazar. It is all very well for the devotees of high art and rigid propriety to declaim against the novel style of the popular songstress, and the occasional breadth of suggestive implication contained in her ditties; but it is impossible to deny that the woman is a wonderful artist in a line of her own creating, and that it would be difficult to imagine anything more perfect than her songs and her singing of them in her own peculiar way. At all events, she has taken so firm a hold on the liking of Paris that not even the most strait-laced duchesses would now think of sailing out of a drawing-room to testify against her presence; while Patti, in all the radiance of her starry glory, is one of Thérésa's most enthusiastic admirers, and claps her little white-gloved hands in ecstacy whenever she hears her, which she does as often as she can. Patti, by the way, had engaged to sing a few evenings since for the moderate sum of 5,000f. at the soirée given by the fabulously rich Jewish grandee, Mme. de Gunzberg, but subsequently declined to fulfil so trifling an engagement; whereupon Mme. de Gunzberg engaged that other wonderful warbler, Mme. Miolan-Carvalho, lessee of the Théâtre Lyrique, who accepted 2,400f., and sent the guests into raptures with her exquisite singing.

A couple of brilliant theatrical successes have marked the last week, one being the conversion into an opera of Lamartine's beautiful story, "Fior d'Aliza," by those skilful playwrights, Michel Carrée and Hippolyte Lucas, the music being furnished by Victor Massée; and the other a new play, "Héloïse Paranquet," the manuscript of which was deposited in the letter-box of the manager of the Gymnase theatre, accompanied by an anonymous letter, requesting that the piece, if approved, might be put at once upon the stage, and adding that the writer renounced beforehand all share in the profits of the play, being determined to remain *incog.* The new candidate for the honors of representation having been pronounced a *chef d'œuvre*, was at once put in hand, and has now been brought out in admirable style and with a strong cast, and most successfully, the enthusiasm of the public being wrought up to an unusual pitch, and the house, at the fall of the curtain, making frantic demands for the author. But these demonstrations only succeeded in bringing the manager to the footlights, and in drawing from that dignitary a solemn assurance that it was out of his power to accede to the demands of the audience, the author having intimated his fixed determination to remain unknown, whether his piece proved a failure or a success. The curiosity of the public is greatly excited as to the authorship of the new play, but the knowing ones have arrived pretty unanimously at the conviction that it can only have issued from the practised and fertile pen of the younger Dumas, and explain the mystery by supposing that the dramatist has taken this method of proving his authorship of "La Supplice d'une Femme," claimed, as your readers doubtless remember, by M. Emile de Girardin. The latter, in order to show to an incredulous public that at least he *could* have written that play, brought out "Les Deux Sœurs," a flat, tedious, and absurd affair, which effectually convinced the public that the man who could perpetrate such a lump of theatrical

lead could not, by any possibility, have written the brilliant play whose paternity had been so hotly contested by the rival claimants. It is surmised that Dumas, junior, in order to demonstrate more conclusively the truth of his claim, has taken this method of showing the superiority of his dramatic talent over that of the editor of *La Presse*. "You brought out your 'Deux Sœurs,'" the public imagines the author of "Héloïse Paranquet" to say to M. de Girardin, "with an immense flourish of trumpets and all the publicity of the Parisian press, and it fell heavily, irrecoverably. I send my play anonymously, to make its way solely by its own merits, unaided by the *prestige* of its author's name, and Paris, judging it solely on its merits, lauds it to the skies. It is easy, therefore, for the world to judge which of us two has the best right to lay claim to the authorship of the 'Supplice d'une Femme.'"

The Emperor, amidst his innumerable pre-occupations, has found time to read portions of the forthcoming volume of his "Life of Cæsar" to M. de Sacy; the new senator, it is said, expressing enthusiastic admiration of the passages thus made known to him.

Two eminent chemists have sent to the Academy of Sciences a learned memoir on "the transmutation of metals," which they state to be feasible, and on their method of transmuting several of the other metals into gold, a feat which they claim to have accomplished. The Abbé Caselli has given a lecture, illustrated by diagrams and experiments with his machine, in the amphitheatre of the School of Medicine, on the system of telegraphy which bears his name and which reproduces the exact writing or other design transmitted by the operator. The students were so much interested by the lucid explanations of the learned inventor, who spoke in French, that they cheered him vehemently at various stages of his demonstration, and passed a unanimous and enthusiastic vote of thanks at the close. And a society has been formed at Magdeburg with a view to ascertaining the truth of the solemn declaration contained in the testament of the late Dr. Julius Flschweiler, of that town, recently deceased there, at the age of 109, to the effect that his unusual length of life and the mental and physical vigor he enjoyed to the last are due simply to his having always slept with his head due north, and his feet, consequently, turned to the south, by which means the iron in the blood has been constantly magnetized by the currents of terrestrial magnetism, and the vital energies of the system constantly renewed.

It seems odd enough that, within a day's journey from this brilliant and luxurious city, there are wide districts so infested by wolves that the peasantry are in constant alarm for their flocks and even for their children. Government gives twenty francs for every male wolf, twenty-five for every female, and a smaller sum for each cub, and the skins and fur of the animals fetch a few francs more; thus wolf-hunting is regarded as a profitable employment, and *battues* are organized among the inhabitants of the villages for their destruction. These *battues* usually take place in May, when the lady-wolves are about to add to their families; and in December, when the savage crew, maddened by hunger, come down from the hills to prowl after food.

The head-ranger of the district having announced a wolf-hunt for a certain day, the whole country-side comes together, the landed proprietors, their servants, peasants, doctors, conscripts, and schoolmasters, who, armed with bludgeons, fire-arms, pitchforks, bells, brooms, and saucepans, sally forth at a given signal to the ravines most frequented by the wolves. The riflemen are then arranged in a semi-circle, with their backs to the wind, along the roads which border the woods in which the wolves are concealed. No one is allowed to fire in the rear; and, to prevent accidents, marks are made on the trees for their guidance during the confusion of the *battue*. Everything having been prepared in a dead silence, a signal is given, and the assembled peasants, with the aid of pots and kettles, stout lungs, and iron-shod staves, combine in the production of a general uproar. Owls waken from their slumbers, deer are startled from their covers, foxes and hares bound away panic-stricken. But none of these creatures are shot, every bullet being reserved for the wolves, which appear, at last, in a pack, rushing on like a wave, roaring as it goes; and as the yelling creatures cross the fatal path, every gun sends forth its murderous discharge, and thirty or forty wolves are often the result of the volley. After the *battue*, the peasants mount the heads of several wolves on a pole, and march through the villages, beating drums, singing the local hunting-songs, receiving presents of money, meal, grapes, and wine, and finishing the day with a feast and a dance.

The *battues* of December are differently managed, and the rich land-owners make them the occasions of much jollity. Previous to the meeting a number of carpenters repair to the woods, choose a suitable site, and erect thereon a large square hut of undressed logs, strongly placed together, and with intervals of about four inches between each. This hut is left untouched for several nights, that the animals may become accustomed to it; and a duck or two, a goose, or a sheep are tied up near it as a bait for the wolves. On the evening appointed for the *battue*, the huntsmen and a long line of servants start for the forest, taking with them four calves, a cask of cold meats, a hamper of wine, and a horse-load of pale cognac. Ensconced within their wooden fortress they eat, drink, and smoke; but not the least noise is permitted, not a laugh, or a cough, or a whisper, or even a sneeze. When night fairly sets in and the wolves begin to sniff the air, the calves are led out and each—must it be said?—receives an incision in the neck which sets it bleeding and bleating, and thus unconsciously appealing to two of the keen senses of their enemies. Nine, ten, half-past; the dead silence of the forest is broken only by the screech of an owl, or the crash of a branch snapped off by the wind. Suddenly the calves break out into a fresh fit of bleating; they bellow and groan and tug at the ropes, trying to escape. Every cigar is put out, and the sportsmen pick up their rifles and place their muzzles in the gaps between the logs of the hut. Black spots are seen upon the snow; the wolves are scenting the calves, and, imagining them to have come astray, attempt to carry them off. Four or five of the leaders rush forward and plunge their ravenous jaws into the flesh of the poor animals; their numbers increase every moment, and, just as this hideous banquet is at its height, the sportsmen open their fire; the wolves fall or fly, but return again, and are received with another volley. Other wolves, attracted by the smell of their bleeding comrades, press to the scene and are met by showers of fire and death. This slaughter of malefactors continues for several hours, when the few surviving wolves slink back to their dens, and the sportsmen, leaving their hut, make a huge fire on the ground, round which they sit and eat and crack jokes until the morning, when the peasantry assemble, gather the dead wolves together, and march in triumph through the villages, adding the gifts of the villagers to the rewards given by the Government and making a handsome sum out of the affair.

Preparations for the great exhibition of next year are going on with the utmost activity. The Champs de Mars is boarded in to prevent the irruptions of an inquisitive public. Within the magic circle an army of laborers are at work, and ere long the rising walls of the future edifice will be visible from the high ground of the Trocaders, which is itself being pared, levelled, built on, and beautified as only the determined genius of a Haussman could have decided. The Emperor is determined that the world shall wonder at the splendor of Paris, and he is hardly likely to fail in carrying out this determination.

STELLA.

Correspondence.

WEST POINT.

TO THE EDITOR OF THE NATION:

I have read with satisfaction the comments on the Military Academy which have appeared in your paper, and, as the subject is of great importance, I venture to make further criticisms on the system of discipline.

You have pointed out the absurdity of appointing cadets per Congressional districts; the impropriety of investing members of Congress with this patronage as anti-republican, generally used injudiciously, often corruptly. You urge the necessity of raising the standard of qualifications for admission, and of dismissing pupils pronounced by the faculty unwilling or incompetent to follow the course; so that the country shall maintain an academy wherein the art and science of war shall be studied, and not the rudiments of a general education; and support and tuition expended only on those able and willing to receive it and to render a fit return. When these improvements take place the $3,500 which each graduate now costs the country will be reduced to about half that sum, and this paid for a more complete military education than can be given to the present unprepared pupils.

There is another objectionable feature in the West Point system which impairs its usefulness and its popularity. The monastic seclusion of the cadet detaches him from society, destroys his sympathy with his fellow-citizens, whom he calls civilians and regards as strangers and inferiors. This would be all very well in a monarchy, where wisdom and patriotism are required only of the one who rules, and passive obedience is the virtue of all the rest, who are but puppets in the hands of the showman. But as the success of our government depends upon the intelligent interest of every citizen, any system of education which, instead of cultivating that intelligence and stimulating that interest, tends to incapacitate or disincline young men from taking a part in the affairs of their town, their state, or their country, is anti-republican and disintegrating. This enforced segregation tends also to cramp and warp the mind, withdrawing young men from the world just when their observing faculties are most keen and their un-

burthened memories most retentive. Nor does this unnatural seclusion from the innocent gaieties of youth, from the healthy influences of women's society, affect the morals more favorably than the mind. These young monastics are likely to become either morbid ascetics or to substitute the gratification of the appetites for the enjoyment of the affections from which they are cut off.

Such, it seems to me, must be the consequences from this conventual system, and, as far as I have had an opportunity to observe, such they are.

There are many intelligent and enlightened men who received their education at West Point, but as a general rule the army men are neither so well informed nor so liberal-minded as men of other professions, graduates from our colleges. There are many officers temperate in their speech and in their habits, but they have a tendency (a tendency, I say) to become either saints or satyrs.

Whoever looks over the list of graduates will be surprised to see the number of Catholic priests, Puseyite and other clergymen, bred at this school for soldiers; and whoever has associated much with officers or has heard the history of our battles for the four last years will testify that there are too many who are not temperate in all things, and whose conversation is not simply yea, yea! nay, nay! And if this war has proved the absolute necessity of a national academy where military art and science can be learned, it has also shown that common sense and tact and sympathy with their fellow-citizens with whom or over whom they are placed are essential qualities in an officer, which can only be acquired by mingling more with them in their early and plastic years.

The biographies of many of our volunteer officers, the history of many of our regiments, demonstrate the fact that a soldierly character may be impressed and rigid discipline enforced upon a command by men whose minds and hearts have not been starved and wasted by four years' exile from the world.

L.

Literature.

LITERARY NOTES.

CALIFORNIA has wisely kept pace with the older States in investigating and publishing the results of scientific explorations intended to develop her physical structure. The second volume of the "Geological Survey" of the State is just commenced. Its subject will be the "Palæontology of California." The portion now issued contains the first instalment of the description of the tertiary invertebrate fossils, by W. M. Gurr, to be illustrated by thirteen plates. The technical execution of the work compares favorably with any of the other State surveys, not excepting Prof. Rogers's splendid volumes on the geological survey of Pennsylvania, which were executed at Edinburgh by A. Keith Johnston, and other eminent artists.

—Mr. Wm. Gilmore Simms has announced his purpose of editing a collection of the "Poetry of the South during the late War." He requests copies "of all such pieces as relate to the war, or any of its incidents" from their authors, and desires that the copies sent should be dated, the name of the newspaper or periodical where they originally appeared being also given. Communications should be addressed to Wm. G. Simms, at the office of the *South Carolinian*, Charleston, S. C. If any one can dig out gems from the poetic mine it is one who, like Mr. Simms, possesses an ardent temperament in strong sympathy with the cause of his insurgent fellow-statesmen. Hitherto the specimens that have reached us of poetical inspiration from that quarter do little credit to the superior culture so persistently claimed for the region; grammar and rhyme have as often been wanting as reason in the best known specimens.

—It is difficult to keep up with the great amount of scientific matter relating to anthropology and the questions connected with the material history of man now publishing in separate works or journals in Europe, and equally so to arrive at definite conclusions in which men who are considered as authorities are willing to unite. Prof. Huxley, one of the cleverest and best known of writers and lecturers on the subject, is one of the most contentious, and is conspicuous above his fellows for violent denunciation of contemporary opinions. His last work is on the human remains found in ancient burial mounds in the county of Caithness, in the north of Scotland. He seeks the nearest analogies for these remains in the bones of the aboriginal Australians, and, recording from scattered data the early inhabitants of Britain, gives anything but a flattering picture of them. His description of a female is summed up: "Putting all the elements of the picture together, No. 1, with her long shins and heels, narrow hips, relatively broad shoulders, retreating forehead, and projecting jaws, can hardly have been either a graceful or a comely personage." Prof. Huxley's memoir appears in a volume by Mr. Samuel Laing, M.P., the well-known statistician and economist, on "Prehistoric Remains of Caithness." Other important contributions to the science of man are promised by Mr. Greenwell in his "Decade of Skulls from Ancient Northumbria," devoted to the illustration of funeral interments usually known as British, with detailed views and accounts of the circumstance of each discovery; and by Dr. J. Barnard Davis in a more general and important work, "Thesaurus Craniorum: Catalogue of Skulls of the Various Races of Man." The materials of the work are derived from the author's own collection, the result of many years' research and labor, comprising between fourteen and fifteen hundred skulls. It will form an octavo volume of three hundred pages, with wood-cuts. It is remarkable that, in America, where this science first sprung into being, from the labors of the late Dr. Morton, of Philadelphia, little has been done of late in its prosecution, and no successor has been found to carry on the enquiries and line of research opened by the "Crania Americana" and "Crania Egyptiaca" of Dr. Morton, which are now among the rarest and most valuable works ever issued in America, whose appearance raised the scientific character of the United States in every learned society abroad.

—Messrs. Bunce & Huntington, the new and enterprising firm, who seem to appreciate more than most of our publishers the advantages of combining artistic taste and execution with literature, announce an embellished book on a subject that every New Yorker should take a paternal interest in, "The Central Park," illustrated by A. F. Bellows, of the National Academy. It will contain a full history and description of the Park, with delineations, literary and graphic, of its picturesque and notable features. Though elegantly executed, it is not intended to be an expensive work; but rather to be of service to the million, by making them familiar with scenes and beauties not always appreciated as they deserve from their very accessibility and freedom to all.

—The "Critical History of Christian Literature and Doctrine, from the Death of the Apostles to the Nicene Council, by James Donaldson," of which Vols. II. and III. are just published by Messrs. Macmillan, is a book that may almost be said to inaugurate a new era of theological criticism in England. The author's name is new to the literary world; no clue is given by the work itself to his ecclesiastical "stand-point," though every step of his progress leads him through a land studded with doctrinal pitfalls for the unwary. With no exceptions the early remains of Christian literature have been studied in England only for purposes of attack and defence. They have been examined by the light of preconceived opinions, and such testimony as they afford has been strained and warped as best suited the objects of contending parties. Mr. Donaldson's point of view has been different. After a full literary history of each work, its edition, etc., and a biography of its author, he digests in a purely objective manner the passages it affords that bear upon all the great leading questions of doctrine and polity, respecting which each writer is an undeniable witness of the opinions prevailing in his own day. One of the many interesting results of the process, when faithfully performed, is the proof it yields of the gradual evolution of what passes for the body of orthodox Christian doctrine from the original simplicity of idea that predominates in the apostolic fathers of the first century to the complex metaphysical theories of the Athanasian and Augustinian schools. The first volume of this work is devoted to "The Apostolic Fathers," the second and third to "The Christian Apologists," and others yet remain to be issued. It is an augury for the good success of Messrs. Clark's projected "Library of the Early Fathers" that Mr. Donaldson is named as one of the editors of the series.

—The new edition of the great "Dictionnaire Universel des Contemporains," by G. Vapereau, is an unanswerable argument against all who would reproach the present age with a scarcity of "great," or at least of "notable," men. The ample pages, nearly two thousand in number, must certainly contain ten to twelve thousand biographies, all of persons whose claim to be found there arises from the possession of a certain European celebrity, though to merely Anglican ears by far the larger number will sound strangely. English notabilities come in for their share of attention, though in this department allowance must be made for the inevitable blunders that are found in any Continental treatment of British names, titles, etc. The whole work, however, in its colossal dimensions, is a favorable specimen of the executive skill brought to bear by French littérateurs on compilations of the kind, a skill which has rightfully made them the source of the reference books of the world. One difficulty common to books of this class has been avoided by M. Vapereau, the fact that a name is left out of living biographies as soon as the person dies, though it is very often not until the consecration of death that any general interest is felt about him. In the "Dictionnaire des Contempo

rains" no name is excluded of persons who were living on January 1, 1860, though they may have since deceased; only the article given to them is abbreviated. By comparison with the two previous editions the growing importance of the American rebellion as a subject for the "world's debate" may be ascertained. In the first one Abraham Lincoln was ignored; in the present one all the generals distinguished in the contest are given. Messrs. Stachelto & Co., of Paris and London, a firm renowned for their spirit and enterprise, are the publishers of the work.

—The completion of Mr. Howard Staunton's photo-zincographic facsimile of the famous "first folio" Shakespeare places that much coveted volume within the reach of all who can afford eight guineas for the critical luxury. All its typographical imperfections, whims, and oddities that have so exercised the ingenuity of commentators, are, of course, reproduced in it with lineal accuracy, and probably a new crop of emendations—conjectural and otherwise—will follow, from the increased accessibility of the volume to the popular curiosity. For convenience in reading, the fac-simile edition in a reduced size, printed from type in the ordinary way, by L. Booth, forming a small quarto, may be preferred; but although its accuracy is generally acknowledged, it wants the positive claim to authority that the actual identity of the photographic copy with the original confers on it. The indefatigable Mr. Halliwell, whose colossal edition of Shakespeare is nearing its completion, seems unwilling to abandon the subject, and already announces the commencement of another enterprise of nearly equal bulk. It will be apparently a miscellaneous collection of matter illustrating in its widest sense, by literary and pictorial details, the life, writings, and times of the dramatist, including reprints of rare tracts, etc. It will be published only for subscribers, and is got up in folio to range with Halliwell's folio Shakespeare.

—"The Fine Arts Quarterly Review," a periodical whose expensive and elegant appearance seemed suggestive of a short life only, and which, in fact, deceased, to the regret of connoisseurs, after two years' experience, when published by Messrs. Chapman & Hall, will be resuscitated in the spring, under the editorship of Mr. B. B. Woodward, librarian to the Queen. The publishers will be Messrs. Day & Son, whose name is a guaranty for the artistic excellence of the embellishments. Among the previous writers who will still contribute to its pages are Messrs. Rossetti, Hamerton, Palgrave, and other well-known names in art. The elaborate critical account of Gustave Doré and his works (with specimens), by Mr. Hamerton (author of a "Painter's Camp in the Highlands," etc.), given in the two last numbers of the "Fine Arts Quarterly," has caused a great demand for them, and has probably been of influence in the revival of the work. The literature of the fine arts will also be enriched by a new edition of the great work of Nayler, "Künster Lexicon." The author has lately died, but had completed the revision of his work preparatory for the press a short time previously. As a vast magazine of information, where light is often thrown on the arts and artists of countries, when nothing about them can be found in their own special books, its reputation is universal.

—It is a fact scarcely conceivable amidst our plethora of daily supplies of paper and print that in the whole of Great Britain and Ireland there are only seventy-eight daily papers issued for the supply of some thirty millions of readers. This small number, too, is claimed as a great advance on the numbers ten years ago, under the old stamp law, when, in 1856, only thirty-two daily papers were in existence. The list now is divided thus: of dailies fifty-two are published in England, one in Wales, twelve in Scotland, twelve in Ireland, and one in the Channel Islands. The total number of newspapers for the United Kingdom of every kind is twelve hundred and fifty-seven. Of magazines the number and variety is comparatively much larger, as, including the quarterly reviews, they amount to two hundred and thirty-seven; of these one hundred and ninety-six are of decidedly religious character, representing the views of almost every shade of denominational peculiarity.

—One of the men who have recently passed away, scarcely in the enjoyment of the renown merited by his acquirements and discoveries, is Sir William Rowan Hamilton, professor of astronomy in the University of Dublin, and Astronomer Royal of England. This injustice of his contemporaries is attempted to be remedied by an "Eloge" which (following the French fashion) was recently delivered before the Royal Irish Academy by its president, Dean Graves, and is valuable as containing the first detailed account of the scientific and personal career of its subject. Hamilton was born in 1805. Such was his precocity that while an under-graduate of Trinity College, Dublin, at the age of twenty-one, he was appointed to the chair of astronomy vacated by Dr. Brinckley. In 1834 he received the royal medal the Royal Society for his discovery of conical refraction; and, in the year next succeeding, his paper on mathematical and astronomical science gained him the applause of the first authorities of Europe. His last great invention, the discovery of "the calculus of quaternions," occupied twenty-two years in its elaboration. In early life he was devoted to poetry and literature. He learned modern languages almost by intuition. He anticipated by his own reflections some of the principal doctrines of Kant. He was remarkable for his proficiency in Greek, and twice gained vice-chancellor's prizes for English poetry. Like Descartes, Hamilton ranked metaphysics above mathematics in the hierarchy of science, and maintained that its highest province and the region of poetry lay in the same latitude. His views as to the connection (on which he strongly insisted) between the highest achievement of the modern analysis dealing with the infinitudes and imaginaries of space, and the shaping spirit of imagination which constitutes the soul of poetry, were communicated to Wordsworth. To the poet they were an entirely new revelation, and had the effect of raising his conception of the dignity of science and of its votaries. Sir W. R. Hamilton's manuscripts, in sixty volumes, many of them very large, are deposited in the library of Trinity College. A new edition of his "Calculus of Quaternions" is just published by Messrs. Longmans.

A PLEA FOR THE QUEEN'S ENGLISH.*

Dean Alford's book has enjoyed great and deserved success in England. The second edition, which lies before us, was issued, as we learn by the preface, in October, 1864, and in this date is to be found the only excuse, if it can be called an excuse, for the following passage. The author is speaking of the reflex action of language on national character, and through national character on national history:

"Look," he says, "to take one familiar example, at the process of deterioration which the Queen's English has undergone at the hands of the Americans. Look at those phrases which so amuse us in their speeches and books; at their reckless exaggeration and contempt for congruity; and then compare the character and history of the nation, its blunted sense of moral obligation and duty to man, its open disregard of conventional right where aggrandizement is to be obtained, and, I may now say, its reckless and fruitless maintenance of the most cruel and unprincipled war in the history of the world. Such examples as this (and they are as many as the number of the nations and their tongues) may serve to show that language is no trifle."

We do not care to comment on the bad taste of offering a gratuitous insult to a whole people, by holding them up as an example of depravity in a book on "speaking and spelling." The passage is chiefly valuable as an illustration of the condition in which the excessive word-culture of the English universities is apt to leave the reasoning faculty, even in such very able and excellent men as the Dean of Canterbury. He is throughout the volume before us very hard on the newspapers, and particularly the cheap and provincial papers, for their loose thinking and bad English; and yet we doubt very much whether either the *Morning Star* or the *Daily Telegraph* has ever furnished a better specimen of "reckless exaggeration" and contempt for facts than is to be found in the passage cited above. The true newspaper spirit—confidence in talking about things not well understood and haste in rushing to conclusions—runs through every line of it. As a matter of fact, a very large number of the phrases which "amuse" Englishmen in American speeches and books are old English, which have become obsolete in old England, as has been shown over and over again, certainly often enough for Dr. Alford to take some notice of it. Most of the solecisms and improprieties which deface our literature and parliamentary oratory are undoubtedly due, first, to the presence, and unavoidable presence, in Congress and the State legislatures of men of very imperfect education in the English sense of the word. In a new country most of the work of politics must be done by such men; but if we contrast American legislation with that of older countries, a subject to which Dr. Alford has probably not thought it worth his while to give much attention, we shall be driven to the conclusion that a correct knowledge of "the Queen's English" is not always the best preparation for the work of government. It is strange but true that, in spite of the "exaggeration and contempt for congruity" of our orators, there has not been a single reform made in the English law during the last fifty years which had not been previously adopted in America, if we except the admission of parties to suits to testify in their own behalf.

In the second place, there is a very much larger number of persons gifted with fluency in writing, and with the means of getting their compositions printed, here than in England. Consequently, we produce a relatively large number of books in which the authors' defects of education are only too

* "A Plea for the Queen's English: Stray Notes on Speaking and Spelling. By Henry Alford, D.D., Dean of Canterbury. Second edition." Alexander Strahan, London and New York. 1865.

faithfully reflected. Moreover, we have always had what the English have only had within a few years—a cheap newspaper press; and a cheap newspaper press will and must always reproduce in its columns the inaccuracies of speech and thought common amongst the majority of its readers. The cheap newspaper press of England, in spite of the influence upon it of aristocratic exemplars, is not one whit better in style or in tone than our own, and bids fair to become worse as the lowest and most ignorant class of English society—a class to which we have nothing to correspond—rises in political importance. Our newspaper press is, on the other hand, unquestionably improving, both in language, taste, and temper. The language of a people is not, however, to be judged from its most widely circulated periodicals, but from the best efforts of its best writers. Dr. Alford would be very unwilling, we have no doubt, to have English speech, to say nothing of English character, judged by either the English or the arguments of the cheap newspapers; and we must deny his right to apply this rule to us. If our national character is to be tested by our style, it must be by the style of our best authors. Of these, we say it with all deference, we have produced two at least in Dr. Alford's own lifetime—Washington Irving and Hawthorne—whose English for simplicity, manliness, purity, and elegance is at least equal to Dr. Alford's own. There is, too, a living American scholar, Mr. Marsh, whose knowledge of the history and structure of the English tongue is certainly not surpassed in England, and whose contributions to English philology are, we believe, even more widely known and more highly prized in England than here. We might extend the list further, but we trust we have said enough to show the absurdity of which Dr. Alford has been guilty, in inferring deterioration in our national character from the fact that certain phrases in our speeches and books "amuse" him and his friends. All changes in a language are, and must be, on Dr. Alford's theory, deterioration, and yet languages are constantly changing; and what is more to the purpose, the uneducated classes have in all countries far more to do with the changes than the learned have. Englishmen neither speak nor write the language of Shakespeare; but the England of to-day is certainly a better England than it was in the sixteenth century. What would Cicero or Quintilian have said to the Italian of Dante or Boccaccio, or the French of Racine or Voltaire? In fact, most of the languages of modern Europe are made up of corruptions, and will continue to be corrupted, in Dr. Alford's sense, from age to age; but is this a sign that the world is going backward? Is, in short, the attempt to judge of the condition of a people's morals by the extent to which they depart from an arbitrary standard of correctness in speech, not one of those fantastic theories which rhetoricians are constantly framing, in which facts are completely overlooked for the sake of tickling popular audiences and gratifying national vanity, and on which volumes of cheap philosophy are built up by such writers as Mr. Tupper, the "Country Parson," and our own irrepressible "Timothy Titcomb?" We are sorry to find the Dean of Canterbury serving out the same kind of wisdom.

To say anything worth listening to about the relation between our literature and our life, a writer would require some knowledge of American society, its history, antecedents, mental and moral characteristics, and its relation to external circumstances; but of this Dr. Alford is apparently quite innocent. We, for our part, believe that what people read is a far better index of their mental and moral condition than what their fools and blatterers are pleased to write, and we have no hesitation in saying that if Dr. Alford will devote a little of his time to ascertaining the comparative circulation in this country and in England of the great works of English literature, both of past and present times, he will find that every book which he considers a model of style is read by three times as many people here as there. And we hold it to be "his duty to man," to use his own phrase, to sit down and study this whole subject carefully, which he evidently has never done, before he brings out another edition of his book.

It is almost cruel to comment now upon his opinion about the late war. Still, we cannot help calling attention to the fact that the logician who ascribes our "open disregard of conventional right where aggrandizement is to be obtained" to the badness of our English, is an Englishman writing under the rule of a sovereign who reigns over 100,000,000 of people thereabouts, of whom not quite thirty millions are her subjects from choice, the remaining seventy millions having been incorporated in her empire by a series of conquests ranging over the whole period of the national history, and marked throughout by violations of conventional right which somehow or other have procured for England amongst all foreign nations (the unprincipled rascals!) the reputation of being the most unscrupulous and most selfish of powers. And be it remembered, too, that he is writing of a country which did not, when he wrote in 1864, own one foot of conquered territory, except the wilderness wrested from Mexico in 1847, which was immediately peopled, civilized, and endowed with liberty such as in Canterbury would seem license.

Dr. Alford's opinions as to the "fruitlessness" of our "cruel and unprincipled war" have been proved by events to be hasty and incorrect. They now need no refutation; but it is impossible to speak too severely of the "newspaper style" in which he seems to have formed and uttered them. To form even a tolerable opinion before the close of a war as to whether it is likely to prove fruitless or not, requires a very careful investigation, on the spot, of the resources, temper, character, military and political organization, and natural advantages of the belligerents, by a man familiar with military affairs. Of those of the American belligerents, Dr. Alford, like most Englishmen of his class and profession, knew little or nothing. His sole source of information about what was going on in America in 1864 was probably the veracious epistles of Dr. Charles Mackay, which were for this purpose about as valuable reading as Percy's "Reliques." Whether the war was "unprincipled" or not, required a very careful study of points in American history and American constitutional law which have for eighty years puzzled the wisest heads on this continent, but of which we dare say Dr. Alford has never heard; yet he does not hesitate to make up his mind about it and settle it in two lines, pronouncing it, with the most "reckless exaggeration," "the most cruel and unprincipled war in the history of the world." Dr. Alford has probably heard of the wars of Tamerlane and of Gengis Khan. If the reporter of the *Morning Star* wrote such stuff as this, would he not rap the poor fellow over the knuckles with terrible contempt?

We have left ourselves little space to speak of the book itself. We can only speak of it in terms of the highest praise. It does not go deep or go far. It is simply an attempt, by a man used to good society and who has studied the best English authors, to correct the vulgarisms, provincialisms, solecisms, and inaccuracies of all sorts current in the speech of everyday life, and to solve the doubts which even cultivated people constantly feel with regard to numerous expressions in very common use. A work of this kind is even more needed here than in England, as amongst us correct speaking is not, as there, a mark of a certain social position, and there is consequently less incentive to strive after it, even amongst people of education.

WALES, RELIGIOUSLY CONSIDERED.*

Like most Welsh authors, the writer of this volume has "reverend" prefixed to his name. The sermons are good of their kind; but we value the book mainly for its essays, which embody much valuable information as to the past and present religious condition of the Welsh people. The one on the "Welsh Pulpit" is devoted to a critical examination of the peculiarities of the Welsh pulpit as contra distinguished from those of other nations, especially the English. His remarks on this subject are, in the main, just and discriminating, though we are surprised to find him speaking so approvingly of what the Welsh people call "dawn," or the habit of singing or chanting the sermon. Of course, he condemns those who carry it into extremes; but the habit is intrinsically bad, and to be reprobated under all circumstances.

The essay on the "Social Religion of Wales" is a synopsis of facts illustrating the religious condition of the principality for the last two hundred years.

Wales is comparatively but a small piece of land, on the western border of England, with an area of less than 8,000 square miles. Including Monmouthshire (which politically belongs to England), it contained at the last census 1,286,266 inhabitants. It is a mountainous country, but has a few beautiful valleys, such as Clwyd, Lowry, Wysg, and others; but generally it is hilly and rugged. And this has had a marked influence on the character of its people. It has helped to develop a taste for the muse, in which the Welsh take such delight; and the study of theology, of which they are such zealous advocates. A fondness for the strong and sublime is one of their characteristics; so marked, indeed, is this tendency, that strong words are too often made to supply the want of strong thoughts. The influence of this natural scenery is observed in the seriousness and sobriety of the nation.

In treating of the "Social Religion of Wales" our author only refers to the Dissenting denominations. The Established Church has so little hold upon the masses of the people that it is proper to style the Welsh a nation of Nonconformists, and whatever of personal piety or Christian benevolence exists in the Established Church in the principality is an infusion of the Dissenting spirit, and an emanation from it.

It has been found very difficult to obtain correct statistical informatio

* "Essays and Sermons; together with an Account of his Visit to America. John Thomas, Liverpool." Utica, N. Y., 1865. [Welsh.]

of the different religious denominations, but the following table is believed to be as nearly accurate as it is possible to make it:

Denominations.	Churches.	Ministers.	Members.	Hearers.	Sunday-school scholars.
Independents	802	405	94,952	102,400	86,483
Calv. Methodists	908	288	94,996	165,400	134,157
Baptists	508	322	58,292	54,000	49,453
Wesleyans	*510	118	24,960	22,000	20,000
Primitive Methodists	100	—	—	10,000	—
Wesleyan Reformers	45	—	—	2,250	2,000
Unitarians	30	20	—	5,000	—
Quakers	7	—	—	—	—
Total	2,910	1,152	273,200	361,050	292,093

*Including rooms where there is occasional preaching.

From the above it will be seen that one-fourth of the population is immediately connected with the Dissenting denominations.

In the north the Calvinistic Methodists have a large preponderance of numbers. They have taken a strong hold upon the whole country; but in Anglesey and Carnarvon they may be said to reign. They are more numerous there than all the other denominations put together. The only portion of the south where they are strongest is Cardiganshire. In the south generally the Independents have the numerical superiority, but their main strength lies in Glamorganshire and Carmarthenshire. In Pembrokeshire and Monmouthshire the Baptists are strongest. Throughout the south they are very influential, but in the north their churches are generally weak. The Wesleyans are rather numerous in some portions of the north, and in Denbighshire and Flintshire are stronger than the Calvinistic Methodists. In one portion of Cardiganshire there are quite a number of Unitarians, and they have a few churches in other parts of the south, but in the north they have not a single congregation and but few persons hold their peculiar opinions. In tracing the history of the "Social Religion of Wales," it may properly be divided into three periods—the Puritan, Reformatory, and Literary.

The beginning of the Puritan period may be dated from 1639, when the first Dissenting church was formed in Slanfaches by Rev. W. Wroth. Walter Cradoc, William Erbury, and W. Worth were cast out of the Established Church for refusing to read the "Book of Sports." Wroth gave himself to serve the church at Slanfaches; Erbury formed a church in Cardiff; but Cradoc turned out into the "highways and by-ways," preaching the "unsearchable riches of Christ" through all parts of Wales. He found diligent and faithful co-laborers in Vavassor Powell, Morgan Lloyd, Morgan Howell, and others. During the time of the Commonwealth, Dissent made considerable progress, so that there were at least twenty-two Dissenting congregations in existence at the Restoration; and when the Uniformity Act was passed, in the time of Charles II., there were found 106 ministers of the Established Church in Wales who refused submission to that odious enactment. By 1736 the number of churches had increased to 130. This appears, it is true, but slow growth, considering how thoroughly religious the country is at the present day. From statistics collected by Dr. John Evans, about the year 1715, it appears that the Dissenters at that time numbered at least 30,000 church members.

At this period the ministers were generally educated men, and pulpit qualifications were held higher than at any period since. Great attention was paid to the *doctrines* of the Bible, and the people diligently instructed in the principles of the true faith. The following extract from Mr. Thomas, descriptive of a religious meeting during the Puritan period, strongly reminds us of those of the New England forefathers:

"Will the reader come with us to a Welsh congregation one hundred and eighty years ago? Let us start. It is a pleasant Sabbath morning in the beginning of May, and there are many going up into the house of the Lord. The hillside above the meeting-house is dotted with people afoot, coming along the by-paths, to worship; while on the rough, narrow road below may be seen others coming on horseback. The old church stands upon a rock overlooking a rippling stream, in a shadowy forest. It is a secluded spot, far from the noise and bustle of the world; and we can easily conjecture that the place had been selected in a time of persecution. The old church is a long, narrow, and dingy-looking building. Inside we find the altar and two large square seats on each side, evidently intended for some of the worshippers, a little better than the rest in the things of this world, while the middle is filled with benches having backs to them. There is a gallery at one end, with stone steps on the outside leading to it. The place is filled with devout, serious-looking people. Around the pulpit are a number of old persons having a very stately appearance. The cut of their garments and the length of their hair remind us of the old Jewish rabbis, but they are not bearded like them. There is the minister ascending the pulpit. He is a plain-looking man, but his earnest, impressive look makes us feel that we are in a holy place. We observe there more of seriousness than of warmth—more of devotion than of feeling; the meeting has more of the appearance of a teacher coming to instruct his class than a messenger of peace come to preach the Gospel of everlasting life to lost sinners. The service commences at half-past nine, with what is called the 'short prayer'—ten to fifteen minutes in length. Then one of the psalms of Rev. Edmund Pryse is given out to sing; for Williams, Pantycelyn, is yet unborn; they sing the whole psalm, doubling the last two lines of the last stanza. Then a long chapter is read in a slow and impressive manner, followed by the 'long prayer' of twenty-five or thirty minutes. Then a psalm as before. The minister reads his text; the subject to-day is the 'Sonship of Christ.' The sermon is a good composition, evidently prepared with great care; but somehow the speaker talks more about the doctrine than to the people, and he seldom makes an application of the truth to the famishing souls before him. The delivery is slow but distinct, and in the same tone from beginning to end. The sermon lasts an hour and a half, and though the congregation exhibited no signs of emotion during the delivery, they show no signs of weariness at its close. After singing another psalm and a prayer of ordinary length the services are closed, and the people return to their homes, having had enough until another Sabbath. This is an imperfect picture of the social religion of that period. We would not judge it too severely, and though we regret the lack of feeling in the services, still we admire the attentive and devout manner in which the people listen, and the attempt of the preacher to teach and enlighten his congregation, rather than to please and amuse them."

In tracing the agencies at work in the religious regeneration of Wales at this period, we notice a most inexcusable historical omission on the part of Mr. Thomas. The Quakers are entirely overlooked, though they were a very influential religious body at that time, especially in the north. They were certainly quite numerous in the shires of Montgomery and Merioneth at the north, and in Radnorshire at the south, generally composed of men of the middle and higher classes of society, whose simple manners and devout piety was a most powerful agency in laying the foundation of the solid religious superstructure now existing in that part of the country. Large numbers of these people emigrated to Pennsylvania from 1682 to 1730, and settled on what is known as the "Welsh Tract," in Chester County, under an agreement with William Penn that they were to be allowed to conduct their own affairs in their own language and on their own method, subject, of course, to the general laws of the province, as will be seen by an examination of the archives of Pennsylvania. That they formed a considerable part of the early settlers is fully attested by the annals of the colony, and by the fact that about 1720 a Welsh book, by Ellis Pugh, a distinguished preacher among the Friends, was printed at Philadelphia, and soon after translated and published in English. In 1730 there was printed at the same place a large folio "Concordance of the Scriptures," in the Welsh language, by Rev. Abel Morgan, who emigrated from Radnorshire, and was pastor of a church in Pennypack. Of the first of these books we know of but one original copy, which may be found in one of the Philadelphia libraries; but it was subsequently reprinted in Wales, together with a sketch of the author's life. Of the "Concordance" there are several copies now in the country—one in the possession of Rev. B. W. Chidlaw, of Ohio, the eminent Sunday-school missionary. Ellis Pugh, after his arrival here, was sent back to Wales as a missionary by the Friends in Pennsylvania; but he returned in a few years, and died soon after in one of the Welsh settlements near Philadelphia. Among the Welshmen who assisted Penn in building up his province we may mention Thomas Lloyd, the first lieutenant-governor; David Lloyd, the first attorney-general; Dr. Thomas Wynne, speaker of the assembly; and Rowland Ellis, a prominent preacher and influential man among the Friends.

But to return from our digression. Our author next treats of the Reformatory or Methodist period, the time when the fathers of Calvinistic Methodism gave such a powerful impetus to religious advancement throughout the principality. This period was peculiarly distinguished for religious *fervor*. The subject of religion was presented to the people in a new light; it was made to possess a livelier interest for, and take a stronger hold upon, the public mind. We quote a paragraph in relation to the ministry of this period:

"They spoke from the heart to the heart. . . . Their words fell like molten lead upon the hearts of their hearers and convinced all that heard them that they were in earnest with their mission. Their ministry was eminent in its practical tendency; every truth was brought home to the conscience; and they gave special prominence to the fundamental doctrines of the Gospel. Human corruption, the vicarious sacrifice of our Saviour, justification by faith, and the influence of the Holy Spirit, were the burthen of their message. These were the living principles of their ministry."

One of the natural developments of the lively religious interest of this period was a sense of the personal duty of individual Christians to preach, and not depend altogether on those filling the ministry. Consequently we find that quite a large number of men, noted for their piety and zeal, were put forward as exhorters; and, although they were mostly unlettered men, they made up in zeal what they lacked in education, and were instrumental in doing much good.

As time advanced and society became more settled, the more thoughtful began to feel the need of something that would be as it were a combination of the devout stateliness of the Puritan and the fiery zeal of the Methodist; something that would act upon the intellect as well as the sensibilities, and improve the understanding as well as elevate the affections. It was this desire that led to what Mr. Thomas somewhat inaptly calls the "literary period." The planting of Sunday-schools and the creation of a religious literature were its natural developments. The business of publishing received a new impulse, and commentaries, dictionaries, sermons, etc., made their appearance in large numbers. Soon various denominations began to publish magazines to advocate their claims and expound and defend their peculiar tenets. This is one reason why Welsh literature is so entirely religious in its character. The Bible is the national text-book, and theology the almost universal topic of discussion, not only among church members but among the people generally. This subjection of the popular mind to theological influences, a good thing abstractly considered, has operated injuriously on the intellect of the country by confining it too much to one channel. Few men have risen to eminence in Wales who were not somehow connected with the Christian ministry. The country, it is true, has produced men celebrated as poets and authors, but they have mostly been ministers or preachers. No popular movement was likely to succeed unless it was led by some minister of standing and reputation; and therefore men of genius and talent have generally turned their eyes to this profession as the natural one in which their abilities were to develop themselves.

Even the popular desire for amusements has taken a religious direction. We believe there is not a single theatre in the principality; but the "Sassiwn," the "Gymanfa," and Thanksgiving Day are popular institutions, and will draw together more people than anything else, not excepting the annual "Eisteddfod," or Literary Festival. This has been carried to extremes, so that the multiplicity of religious meetings may be regarded as a serious defect in the social religion of the country. It has other drawbacks that mar its symmetrical beauty; but they are as spots on the face of the sun, so that it may truly be said that the "Social Religion of Wales" is its crown of glory.

A SOUTHERN ABDIEL.*

It is worth while to learn something concerning a man who, twice in his lifetime, was obliged to ask himself whether he or the community about him was insane, and appears in truth alone to have preserved his wits. The subject of this biography wrote, in 1830, to a friend who belonged to the party of nullification in South Carolina:

"I am devilishly puzzled to know whether my friends are mad or I beside myself. Let us hope we shall make some discovery before long which will throw light on the subject, and give the people the satisfaction of knowing whether they are in their right minds. When poor Judge W—— used to fancy himself a teapot, people thought he was hypochondriac; but there are in the present day very good heads filled with notions that seem to me not less strange. That we are treated like slaves, that we are slaves in fact, that we are worse than slaves, and made to go on all fours, are stories that seem to me very odd, and make me doubt whether I am not under some mental eclipse, since I can 't see what is so plain to others."

A little more than thirty years later, when a stranger enquired of Mr. Petigru the way to the lunatic asylum in Columbia, he was pointed to the capitol where the legislature was then in session.

The reader will not find Mr. Petigru's attitude in these two periods set forth with equal fulness and distinctness; and in the memoir of a Union man, composed at the very focus of a still active rebellion, he must not expect any greater liberty of expression than we know to have been tolerated within the Confederacy. Neither can the stream rise higher than its source. Mr. Grayson's views may be inferred from the fact that in 1850 he wrote a pamphlet deprecating secession, and from an incidental remark in the present volume that secession is the "extremest remedy of the Constitution." Hence, his opposition to the late attempt at revolution seems to have been grounded on its folly, chiefly or solely, and if his sympathy with Mr. Petigru went no further, it would be natural for him to slight or suppress the loftier sentiment of his friend. Mr. Petigru himself, in a letter to Robert C. Winthrop, dated Charleston, February 25, 1861, declines to adjudicate between the two parties to the impending civil war, and adds: "I venture to say that whatever may be thought of the motives of the actors, their *folly* will be as much the subject of wonder as of censure." Before the year had closed he had an opportunity of resisting the despotism of the Confederacy, which he did so manfully as to draw in question, said his opponent, the district-attorney, "not only the constitutionality of the sequestration law passed by the Congress of the Confederate States, but the very authority of that Congress itself, and the solidity of the government which it represents." And because Mr. Petigru had said he might have recognized the authority of South Carolina in a similar case, the same official thought the admission "remarkable from such a quarter," though "accompanied by the explanation that such submission would be given only because there could be no successful resistance to the tyranny."

As a personal tribute to the character of Mr. Petigru, the volume before us is more satisfactory. He was, we gather, derived from Irish and French ancestors, and bore the names of his paternal grandfathers. His Huguenot blood, according to the ethnological speculations of Gliddon, Nott, Fitzhugh, and De Bow, made him a birthright member of the order of "chivalry," with a divine commission to rule over negroes and Yankees and other inferior stocks. Early poverty forbade the exercise of this prerogative, and the youth, neglecting the idle and vagabond sports of his peers, devoted himself assiduously to study. He passed from the school-bench to the teacher's chair, and finally to the bar, in each and every grade *facile princeps*. His biographer, who had himself "in graceful verse delineated the advantages which the Southern bondman possessed over the European laborer," takes pleasure in recalling his occasional conversation with the muses, but it has nothing to distinguish it from that of any susceptible young man. Tender-hearted and affectionate in all his human relations, he was generous in his living and in the practice of his profession. He was so generous that his friends became alarmed for his fortune, and persuaded him to adopt the homœopathic remedy of running into debt to avoid embarrassment. He engaged "in the ordinary and legitimate proceeding of investing his professional profits in a plantation and negroes."

"It was the approved Carolina custom in closing every kind of career. No matter how one might begin, as lawyer, physician, clergyman, mechanic, or merchant, he ended, if prosperous, as proprietor of a rice or cotton plantation. It was the condition that came nearest to the shadow of the colonial aristocracy which yet remained."

The result was not pecuniarily successful. The slaves, we are told, became sleek, fat, and proprietors in their way, but the crops were unprofitable, and the estate was swept away in the financial panic of 1837. The disappointed, but not discouraged, planter found himself not at the close of his career and in affluence, but at the beginning of a new struggle with the encumbrance of a heavy debt. This he spent many toilsome years in honorably discharging.

Mr. Petigru was a reluctant politician, and resigned his position as attorney-general for a nomination to the State senate only from his desire, if possible, to defeat the nullifiers. But they were too strong for him. How the election was conducted for him and his opponent is thus described:

"The parties supporting them resorted to every device, fair or foul. They bribed with money, with promises of office, with liquor and riotous living. They had their lock-up houses, where voters were imprisoned for days before the election, and kept continually drunk to secure their votes. Each prison had its keeper, responsible for the safe custody of his captives. Thousands of dollars were contributed by patriotic gentlemen and ladies to defray the expenses of these salutary provisions for the freedom of elections and the welfare of the people. The city was a model republic for the time being, with no shadow of difference between the two parties in the purity of their proceedings."

In small things and in great Mr. Petigru followed his sense of duty, no matter how it conflicted with public sentiment. His professional eminence and his well-known nobility of character saved him from the evil consequences of this independence, and won for him a respect which shielded him from harm and even from social proscription. When, in the second year of the rebellion, the legislature cast about for some one fitted to codify the laws of the State, he was selected, and his political heresies forgotten or forgiven. This last public service, like all the rest, he rendered faithfully and cheerfully, and died, having done what one sane man could to obstruct the evil counsels of his demented fellow-citizens. They paused long enough to do him reverence at his funeral, and then relapsed into violence and treason.

MIND IN NATURE.*

In this book Professor Henry James Clark treats of the origin of life, the five great animal groups, and the correspondence in the mode of development of animals with the type of the grand division to which each belongs. Nothing short of a full review would be sufficient for an examination of his discussion of the important questions involved in the subjects just mentioned. The work is largely made up of Prof. Clark's original observations, and contains admirable illustrations of details of

* "Mind in Nature. By Clark." New York: Appleton & Co. 1865.

structure and modes of development, as seen by him through the microscope, and drawn with his own hands. It gives evidence of patient research on his part, requiring the greatest skill in the use of the microscope, and discrimination in interpreting the appearances brought to his notice. In the discussion of general questions he is not fortunate in his mode of presenting them, is often obscure, failing to give the reader a definite idea of the points he attempts to make clear, and sometimes he falls into singular errors. As an example, we will take the last chapter—which is intended to prove that the mode of development of animals corresponds to the type of the grand division to which each belongs. He gives good illustrations of the development of individual members of each division, well described and well figured, but we are convinced that the reader will utterly fail in forming a definite conception of what the type of each division actually is. In fact, by the author's inattention to the arrangement of some of the details, one would be easily led into positive errors. Taking the turtle as his instance of the development of a vertebrate, one would suppose that the amnios, which is wholly absent in the class of fishes, was characteristic of the whole grand division. We are sure that Prof. Clark meant no such thing. Such oversights as this, and some errors which we could point out, such, for example, as the asserted existence in the vertebrates of the "nervous collar," common to all invertebrates, and of a gustatory ganglion included in this collar (p. 127), are open to criticism.

In treating of the origin of life on the surface of the globe, Professor Clark endeavors to show that life originated through the agency of physical causes, it being clearly maintained, however, that these physical causes were nothing else than the manifestations of the will of the Creator. His line of argument, stated in a few words, we understand to be this:—As we study the conditions of the development of animals in the descending series, physical causes play a more direct if not a larger part. The mammalian egg can be fully developed only within the parent, though here through heat and nourishment supplied from her body. In the bird development takes place out of the body, normally through the heat of the parent; but heat of the same amount from any other source is sufficient. In reptiles the ordinary heat of the atmosphere suffices; and the lower we go in the series, the less the dependence upon the parent both for heat and nourishment. The effect of light in addition to heat in the development of plants is adduced as still further proof of the agency of physical causes. But in all these cases the germ on which these agents act is derived from a parent. May we not go one step further, and suppose that a new being may originate wholly under the influence of physical agents? Our author believes we can, and accordingly treats, under the first head mentioned above, somewhat at length of spontaneous generation, a subject which for the last few years has excited sharp discussion in the French Academy, under the lead of Pasteur against the doctrine, and Pouchet for it. As appears from the last "Comptes Rendus," the dispute continues with as much acrimony as ever. Professor Clark believes this mode of generation proved, and adduces the experiments of Professor Jeffries Wyman in support of his conclusion. We must say at the outset, that we do not think the experiments referred to sustain him; nor does Professor Wyman himself claim that they are decisive in regard to this question. We see nothing in them, as reported by Professor Clark, which warrants the statement that "beings with motion, undoubted living beings, were produced where life *could not possibly* have existed previously." The previous existence of life is just the point at issue. It is certain that living organisms have appeared in solutions of organic matter, contained in hermetically sealed flasks, after these had been exposed to boiling water for a period varying from a few minutes to three hours. But to prove these organisms spontaneously generated it must be shown that the flasks were freed of all such living beings within them at the beginning of the experiment, and kept free from all such from without during the progress of it. The latter condition is ensured by the mode of sealing. But with regard to the first it may be fairly asked, are the organisms found in the flasks after the boiling the survivors of this process, or are they truly newly formed individuals? The argument to prove that they outlive the boiling is based almost solely on the earlier experiments of Schultz, and the later, more varied, and, in most respects, more exact researches of Pasteur. Other observers have seen organisms appear where both of these experimenters assert they do not appear. Pasteur asserts that exposure to boiling water for "two or three" minutes destroys life, while the experiments of Pouchet, of Professor Wyman, and the still later ones of Professor Childs of Oxford, and of many other investigators, show that after a much longer boiling than this life is still manifested. The theory of spontaneous generation, like any other, must be decided solely by the accumulation of experimental evidence, of which there is not yet enough. In view of the uncertainty of the whole subject, Professor Clark, we believe, would have been wiser had he treated spontaneous generation as only a probable and not as an observed process.

In connection with this subject, we will call attention to some very remarkable observations of Prof. Clark, which have an important bearing on the question whether "dead" organic matter in the process of dissolution can assume vital activity. In the ordinary process of nutrition, the dead, cooked, and digested food becomes living and active muscle, nerve, or brain. Whence the life and activity? Were they imparted to it by contact with the living organism, or were they "conserved" in it, in a latent form, the living organism affording only an opportunity for their manifestation? If Prof. Clark's observations are trustworthy, it would seem that dead organic structures contain a certain amount of vital force in a latent state, and that this may be made manifest without recourse to another living organism. In a communication read to the American Academy of Arts and Sciences he informs us that, on examining water in which muscular fibre was macerating, he found swimming about in it living organisms, moving with great rapidity, which he supposed to be vibrios, from which they could not at first be distinguished. But, on a more thorough examination, he was able to demonstrate the fact that the supposed vibrios were nothing else than detached muscular fibrillæ. He further states that he saw many times these fibrillæ begin their vibratory motions when only partially detached, and swim off when wholly freed. Another fact of the same nature was observed in the component cells of a decomposing jelly-fish (*Aurelia flavidula*), which, during putrefactive decomposition, became at first loosened, and then briskly agitated by means of slender processes, motionless during life, with which each cell is attached to the adjoining ones. These were not vibrating cilia. When these cells at length became free, "each moved independently and in every direction." Somewhat similar observations were reported many years since by Schleiden, and afterwards by Pineau; but their microscopes were of an inferior quality, and the evidence adduced was far from satisfactory. Knowing Prof. Clark's reputation for skill as an observer, and in view of the excellence of the instrument which he uses, we are strongly inclined to believe that his statement is trustworthy, and that, if there be any question, it is whether the locomotion, witnessed in the separated fibrillæ and cells, was due to vital or purely physical force. He has repeated the observation many times and in several kinds of tissues; but the fact, if it be one, is of such vast importance not only as bearing upon the question of spontaneous generation, but upon our conceptions of vital force, that it should rest at least on the concurrent testimony of several independent observers.

In treating of the egg, Professor Clark maintains views somewhat different from those of most naturalists, claiming that the egg is not simply the structure out of which the animal is formed, but is the animal itself, and is but one of a series of phases through which it passes by insensible gradations from the condition of a homogeneous fluid. Furthermore, the egg, being a developed structure, presents different stages, in any one of which it may be arrested in different members of the animal series, as may be seen by a comparison of a bird's egg with that of some of the infusorial animals; both agree in having a vitelline membrane or cell wall; that of the bird has, in addition, the germinal vesicle and germinal spot; but the other has neither; yet there was a stage of the bird's egg when these were not yet formed, viz., that stage immediately following the fluid condition. From the moment when the plastic fluid was first separated and began to differentiate into wall and contents, individual life may be said to have begun; and from this time onward we have only a series of gradational changes separated from each other by no sharp limits. From this time the egg absorbs materials, and by its inherent properties modifies and converts them into its substance. The Amœba, so simple in its structure but so wonderful in its properties, is brought forward as an illustration of the perfect individual having the same structure, or, more correctly, the same absence of structure, as the egg in its fluid or nearly fluid stage; without further complication, it absorbs, secretes, travels about, secures and digests its food, perceives and reproduces.

Professor Clark, who has made a special study of the subject, and has an especial fitness for it, maintains, as regards the egg, the doctrine of free cell development. It is a curious fact in the history of microscopic observations, that Schwan and Schleiden, the fathers of the "cell theory," were of the firm conviction that all cells originated anew, having no genetic connection with other cells, while among the latest observers, at the head of whom stands Virschow, there are many who have come to just the opposite conclusion, that no cell is so developed. Notwithstanding Virschow's dogma, *omnis cellula e cellula*, we believe his generalization is too sweeping, and that the egg which is a cell is not a derived, but a newly formed, structure. The vegetable physiologists have arrived long

since at a similar conclusion with regard to the "embryo-cell," which originates anew in the fluid of the embryo-sac. The first step in the formation of the egg is the separation from the ovary of "a minute aggregation of fluid matter;" but this fluid has not a uniform density throughout, though it is not yet a cell, and it reflects light somewhat differently on the two sides, in consequence of one side consisting chiefly of albumen and the other of albumen and a minute quantity of oil; the germinal vesicle or the nucleus, and the germinal spot or the nucleolus, and the outer cell-wall or the vitelline membrane—in fact all that makes it a cell—are subsequent formations.

In recognizing the existence of five great groups of animals instead of four, Professor Clark deviates from the course pursued by the most eminent zoölogists of the present day, including Agassiz and Milne-Edwards. The Cuverian group of Radiates, in addition to such animals as corresponded with the mode of structure which the term indicates, comprised others, as the infusoria, which in no way conformed to it. When it was found that some of these were embryos and others locomotive spores of plants, it was hoped that the difficulty would be removed. But there still remains a group of animals which, in the estimation of good and careful observers, can be resolved neither into plants nor into embryonic forms of other radiates or of higher animals, but are themselves completely developed, traceable through all their stages, and have a type of structure peculiar to themselves. Another great division—that of Protozoa—has been established for them, and this division must be admitted at least provisionally.

We have touched upon only a part of the subjects treated by Professor Clark. His book certainly contains many important suggestions and some positive contributions to science, faithfully worked out, but it is marred by a want of method and by occasional errors, some of which are, doubtless, due to too great faith in the statements of others.

COPPÉE'S GRANT.*

Books following in the wake of such great events as those which have recently excited and interested us possess necessarily a charm given them by the facts they describe which it is difficult to separate from the intrinsic merits of the description. An honest pride in the doings of Grant and Sherman seeks gratification in the reading of everything about them that is written. Besides this, some millions of Americans have a personal or family connection with at least one, it may be many, of the battle-fields of the South; Mr. Vallandigham and Mr. Cox even must feel an antagonistic interest in the war which they opposed, while generals successful and unsuccessful, lieutenants known and unknown, privates of four years or ninety days, are anxious to study the campaigns they fought. Mr. Coppée's book, however, invites the special attention of a small class, and, when the incidental attractions which at present enhance its value are out of date, will be judged by its merits as a work of military criticism. As a critic of military operations, Mr. Coppée has failed, and failed not from the disadvantage of undue haste under which he seems to have labored, but from a lack of ability to accomplish what he has undertaken. He is rather a compiler and condenser than a critic, and wants that professional insight which must be the first qualification for a reviewer of Grant's career. The sketch of the last Richmond campaign, for instance, is an elaboration of the general's report, instead of a critical account of the movements which he conducted; the enlarged edition, too, not having in style the merits of the original, does not easily bear comparison with it. The author throughout appears to draw his ideas from others, rarely to weigh, consider, and search carefully from a self-selected point of observation. Most people know by this time the general features of Grant's victories—the insertion of his forces between Johnston and Pemberton, the assaults and siege of Vicksburg, the crossing of the Rapidan, the advance of the rebels up the Valley to Washington, their repulse and destruction by Sheridan, but the ever changing' still unchanged, plans of the Lieutenant-General—but they wish to know something more. The military profession, at least, wish to look at these operations from a professional and critical point of view.

As a narrative for purposes of general information, the descriptions of Western operations are better, Mr. Coppée having had access to larger sources of information than of the Eastern; but even here there is sometimes a lack of clearness, due mainly to the absence of good maps, an inexcusable defect, and in some measure to the want of a thorough grasp of the events described. Had the Virginia campaign been examined as much in detail as have those in the West, the result would have been a popular military life, of value in proportion to the care with which the abstracts and compilations were made, though without any merits of special interest to military men; as it is, this part of the book is of little profit. But if this is the author's object, maps are essential, particularly one of the field of operations about Chattanooga, and another showing the extent of the immense campaign which began with the occupation of Paducah, ending with the capture of Vicksburg and the division of the Confederacy.

Mr. Coppée gives an interesting and curious reason for the defeat of our army on the first day of Pittsburg Landing. Halleck, he says, ordered the position in general terms to be fortified, but C. F. Smith opposed it, an opposition confirmed by Grant and all the division commanders, on the ground of injury to the morale of the soldiers and our ability to resist any attack. Besides this, a wide gap was left between Prentiss and McClernand. Beauregard, taking a natural advantage of this position, surprised our defenceless troops, went into the gap and hurled our army back. But why this gap should have been left open, whose fault it was, and why General Grant should then have held an opinion which seems now so strange, is left unexplained. Mr. Coppée, indeed, appears often too little inclined to enquire where blame is deserved; the only officer who gets it very roundly is Colonel Murphy, who surrendered Holly Springs, and thus defeated the first Vicksburg campaign. That campaign is on the whole perhaps the best in the book.

Coupon Bonds. By J. T. Trowbridge. (Ticknor & Fields, Boston.)—If there is any one who understands so thoroughly the New England life and character, and describes it so accurately and with so much sympathy and humor, as the author of "Neighbor Jackwood," we are not acquainted with him. Mr. Trowbridge has qualifications as a tale-writer which render all his productions respectable and even exceptional; but he is strongest when he keeps the Connecticut River, the Green Mountains, and Massachusetts Bay in sight. In "Cudjo's Cave" he showed very clearly that he had strayed from his native soil. For, if he is a master in his way, that way is not of the broadest. He cannot, like Gérome, paint you an Arab, Turk, Egyptian, Russian; he cannot call the past before you—the Roman amphitheatre, the Areopagus, augurs, players, philosophers; but he will give you the Yankee of to-day with absolute fidelity, and no historical work can be better—it ranks with the "Biglow Papers" and the domestic poems of Whittier, and will be prized as much hereafter. Readers of the "Atlantic Monthly" have already had their laugh over "Coupon Bonds," which appeared as a serial in that magazine. It will bear a second and a third perusal, and still Mr. Ducklow's tribulation with his "cowpons" will provoke their mirth. Indeed, we fear the paper covers of this handy little *brochure* will not outlast the interest of the contents.

ART EXHIBITIONS AND SALES.

In the first of a series of articles on the French and Belgian pictures New York, which was contained in The Nation for January 11, we ascribed to the Gambart collection in Tenth Street a relative value higher than some well-informed people thought was right. These were the words we allude to: ". . when the visitor, accustomed to average American pictures, goes to see European pictures which may naturally be assumed to be above the average European merit. The pictures which are selected to be sent to this country for sale are generally of a certain order of merit; embody much skill and represent great reputations." Some who know contemporary French art thought that the pictures brought here are not above the average European merit.

The only question is, What is the average merit of European art? We think it is lower than the average of Mr. Pilgeram's pictures at Tenth Street, or of Mr. Knoedler's and Mr. Avery's continually changing collections. We think, poorly instructed as most picture buyers may be, that they are not taken with unmixed chaff, and that it "does not pay" to import, pay boxing, freight, and duties upon, and run a risk for, any works of art below a certain standard. Every public and private sale proves that fact. We think the new collection of French pictures, now on exhibition at the Derby gallery, is going to prove it conclusively.

* "Grant and His Campaigns: a military biography. By Henry Coppée, A.M., Editor of the 'United States Service Magazine.'" New York: Charles B. Richardson; Cincinnati: C. F. Vent & Co.; Springfield: W. J. Holland. 1866. 8vo, pp. 13—521.

This collection more fairly represents the "average" than the Gambart collection. Let any one who is familiar with annual exhibitions of pictures in Paris, London, Munich, or Berlin remember how large they are and how small a percentage of each is of any peculiar value. Fifty pictures, perhaps, by *esprits d'élite*, as Gustave Planche was fond of saying, fifty more by promising pupils of the *esprits d'élite*, and a hundred more, large and small, minute and broad, careful and sketchy, which for some reason or other attract attention—such will be the two hundred among the two thousand. Now it seems to us that Mr. Gambart, in a spirit of exclusiveness, has tried to select pictures from among the first three classes named. The first class it is hard to get representatives of; we have often shown how poorly most of the leaders are represented by the pictures that come to America. But out of class two and class three are taken nearly all the pictures of which we have spoken at different times; and, therefore, we said that they are, taken together, above the average.

Now, in this new collection of "pictures, the contributions of artists of the French Etching Club," there is a strong contingent of the outsiders, the fourth class, the horde of pictures that nobody looks at unless compelled to do so. There are better pictures in it than these (else it would fall hopelessly below the average—for even with them we think it is rather below), but its prominent characteristic is inferiority to what we have learned to expect of French art exhibitions in New York. The three pictures by M. Chifflart are examples of work which it is hardly worth while to import; at least there is no reason for bringing them to America unless they can be sold to advantage, and we hope that will not be the case. M. Chintreuil's "Watering Place," M. Hereau's picture called, in strange English, "The Sheep's Return," M. Pons's four "Decorative Panels," M. Ribot's three pictures, and M. Yongkind's or Jongkind's two—all these, though we do not class them as equal in merit, are alike undesirable and unwelcome. There is a great deal of actual rubbish in the collection with which it is not desirable to spend time; and of the important pictures and other works of art therein, we defer consideration until another time.

—The auction sales of pictures are an important part of the news of the day. Mr. Avery's collection, of which we spoke last week, has been sold—perhaps, on the whole, at fair prices, although some important works brought less than represents their relative value. When Mr. Church's "Twilight in the Wilderness" was sold for four thousand three hundred dollars, it is little to say that M. Lambinet's large landscape, "Autumn," was sold too low at three hundred and fifty, and William Hunt's drawing of fruit cheaply at one hundred and eighty. As regards the latter, though, it is perhaps surprising that it should have brought as much as it did, for water-color drawings are not popular among the picture-buying community. It is a little to their discredit the stir and movement that begin whenever the last oil-painting is sold and the drawings come on, two-thirds of the audience disappearing and the proceedings becoming at once brisker and less solemn. Some one, however, bought the Doré drawing of "Angels Watching over Moses" for three hundred dollars. It and the Hunt were next neighbors—205 and 206 of the catalogue. If they had changed prices, both would have been sold at a fairer valuation.

Other sales are in progress. Mr. Hall's took place Monday, and Messrs. Miner & Somerville's gallery, having been stripped of the pictures of that collection, is filled up again with a large lot of American pictures for a sale which has long been advertised. More important than all, the Gambart collection is to be sold—not all of it, probably, but the greater part. There is to be a new catalogue prepared for the sale, which we have not yet received.

Science.

SCIENTIFIC NOTES.

A COMMITTEE of the French Academy, to which was referred for examination the process of one Louvel for preserving grain in rarefied air, has reported as follows: The apparatus employed consists simply of one or more sheet-iron cylinders, provided with a man-hole on top for the introduction of the grain and a hopper below through which it can be discharged. A partial vacuum having been made within the cylinders by means of an air-pump, it was found that this could be practically maintained during six months or more. All the insects which attack grain, and particularly the weevil, were quickly destroyed by the rarefied air of the cylinders. The grain was perfectly well preserved during the six months devoted to the experiments of the committee.

—In the reports of the juries of the Dublin International Exhibition of 1865 is an account of certain "wood-stuffs" for paper-making, prepared by Roether, of Cassel, in Germany. The samples were made from four kinds of wood—the linden, aspen, pine, and Scotch fir. The best qualities of these, it seems, can be sold for 13 and 16 shillings the 110 lbs. "The samples of papers," says the report, "made from mixtures of rags with different proportions of these stuffs are excellent, and show a decided progress in wood-paper manufacture since 1862. Among them may be specially mentioned a good writing paper, containing 45 per cent. of Scotch fir stuff; an excellent lapping paper, containing 65 per cent.; and a colored lapping tissue paper, which is exceedingly strong, containing 50 per cent. of wood-stuffs." No account of the processes employed in producing these stuffs is given in the report.

—The observations of Lionel Beale on the minute anatomy of nerves, published in the Transactions of the Royal Society for 1862 and 1865, are important additions to the previous knowledge of the subject. The physiology of the nervous system has always followed in the path of anatomical discovery, and no true theory of its mode of action is likely to be framed until the details of its structure are at least approximately made out. Each successive year the microscope reveals something which requires the modification of existing views. It has already shown the fallacy of the belief, recently general, that nerves form a direct and insulated communication between the brain and the sensitive surfaces or contractile fibres, for it is now a matter of demonstration that a large portion of the nerve-fibres end or begin in the spinal cord itself, where they are connected with the nerve-cells; further, these fibres have been found in many instances to branch freely, so that impressions received on the ends of the branches may be transmitted to the centre by a common trunk; lastly, several sensitive nerve-fibres coming from as many different trunks may be received into one and the same cell. How nerve-fibres end and how they begin is still one of the most important questions for the physiologist.

By better methods of preparation, and by the use of the higher powers of the microscope, Dr. Beale has succeeded in showing that both the central and peripheral portions of the nervous conductors are much more complex than had been supposed. First of all, he adduces evidence to prove that the cells in the ganglia, which he has especially studied, have at least two nerve-fibres connected with each of them, and that the so-called "bipolar" and "apolar" cells of microscopists, or the cells connected with but one fibre, or not connected with any, have no existence; secondly, the nerve-fibres in their peripheral portions divide into numerous branches, some of them of exceeding minuteness, and form a complex network, which is spread out either over the tactile surfaces or the contractile fibres; thirdly, this network is intermediate between two or more nerve-fibres which connect it with the nervous centres, or, in other words, it is intermediate between the out-going and in-going currents of nervous force. The central cell, the out-going and in-going conductors, and the intermediate network may be looked upon as the unit of the nervous system—the first being the dynamic portion, from which influences emanate and to which they are transmitted, the second the connecting fibres, and the third the place where nervous force is delivered, or impressions are received. The whole nervous system may, in general terms, be considered an aggregation of such units.

Dr. Beale claims to have made the further observation that the dynamic portions, namely, the nerve-cells, are continually undergoing decay and renovation, certainly in the young and adult, and probably in all periods of life. This, if true, shows the existence of a process entirely different from that previously supposed to exist, namely, that of simple molecular and not structural change. The plates accompanying the memoir, if true to nature, and his great skill as a manipulator and microscopic observer justifies the belief that they are, give evidence of the correctness of his descriptions.

—There exists upon the coast of Greenland a remarkable deposit of a mineral called cryolite, which is composed of fluoride of sodium and fluoride of aluminum. This mineral, but a few years ago a mere mineralogical rarity, has suddenly become the raw material of a considerable industry. During the last ten years it has been mined to a large extent and sent to Europe, particularly to Denmark and to Germany, and recently it has been brought in quantity to this country for the purpose of making carbonate of soda. About a year ago the Pennsylvania Salt and Alkali Manufacturing Company sent out to Copenhagen and obtained from the owners of the cryolite mines and from the Danish Government the right of mining this material. Ships were then chartered in England, in Quebec, and in our own ports, to proceed to Ivigtus, in Greenland, and take cargoes of the mineral to Philadelphia. Six thousand tons or more have already been imported and subjected to treatment at the works of the company, near Pittsburg. In the process of manufacture a mixture of pulverized cryolite and lime is calcined, by which means there is formed an insoluble fluoride of calcium and a soluble com-

pound of alumina and soda—an aluminate of soda. The latter is dissolved out with water and the solution treated with carbonic acid, so that carbonate of soda shall be formed, and the alumina thrown down as an insoluble precipitate. The solution being now evaporated, a very pure product of carbonate of soda is obtained, or the solution is at once boiled with hydrate of lime and the carbonate thus economically converted into caustic soda. It is evident that the alumina which is precipitated, as above-mentioned, may be advantageously used in the manufacture of alum or of sulphate of alumina.

—The quantity of coal dug in Great Britain in the year 1864 appears, by the returns of Professor Robert Hunt, to have been 92,787,873 tons. This would yield, if employed in steam engines of good construction, an amount of available force about equal to that of the whole human race. But in the combustion of coal not less than ten times this amount of force is actually set free, nine-tenths being at present unavailable on account of the defective character of the methods of application now in use.

—A new test, of apparent merit, for atropine, the intense poison extracted from belladonna, is mentioned in the German papers. On warming the atropine with diluted sulphuric acid, in a porcelain dish, an intense and exceedingly persistent odor is developed. This is so characteristic that, after a little practice, one can detect the presence even of imponderable traces of atropine by means of it. The sulphuric acid must be diluted to such an extent that it will no longer develop sulphurous acid on being boiled with organic matter.

—A method of removing fusel oil from potato brandy has recently been published in Germany. It consists in placing a small vessel containing some vegetable fatty oil—like olive oil—in such position that the alcohol vapor shall pass through it during the distillation. Since the fatty oil has a greater affinity for fusel oil than for alcohol, it will retain the former, while the latter goes forward to the condenser. The process is interesting as being a rational improvement upon the old empirical methods of distilling spirit over almond bran or bruised almonds, which, as it now appears, owed their efficacy to the fatty oil which is contained in the almonds.

—The well-known Spanish chemist, Reynoso, of Havana, proposes to bring about a radical change in the present system of sugar boiling, and to remove the water from cane juice not directly by means of heat, as now, but by cold. His process depends upon the familiar fact that water in freezing excludes foreign matters, and separates itself almost completely from the substances which it had previously held in solution. Instead, then, of concentrating the juice by boiling, Reynoso subjects it to such a degree of cold that it shall be converted into a magma composed of small particles of ice and a dense syrup. By means of a centrifugal machine, the ice-powder can now be readily separated from the strong syrup with which its interstices are filled, and the concentration of the syrup may then be quickly completed in the ordinary vacuum pans. The author of the process hopes, by means of it, to avoid the various complex reactions which occur when cane juice is exposed to the simultaneous action of air and heat—reactions by which much sugar is now destroyed during the process of manufacture. He claims, moreover, to have found that a weak syrup, marking only 6° of Beaumé's saccharometer, can be converted, by congelation, into ice and a syrup of 30°. Of course this process would have to be used in connection with some system of artificial refrigeration, such, for example, as that used in England by oil refiners, in which intense cold is produced by the expansion of air which has been previously compressed by mechanical means.

—The opium of Upper Egypt was formerly in excellent repute, but has of late years come to be very poor in morphine, and is now held in little esteem. In discussing the matter, M. Gastinel, the director of the Garden of Acclimation at Cairo, attributes the cause of this impoverishment to the system of excessive irrigation employed, which renders the juices of the plant very watery and the solution of the medicinal matters consequently too dilute. By correcting this fault, and by making the incisions in the poppy capsules when the plant is at a more advanced stage of maturity than is usual, M. Gastinel has found no difficulty in obtaining opium which contains three or four times as much morphine as that of his neighbors. He argues, from this result, that there need be no difficulty in re-establishing the old renown of the Egyptian opium.

No Pianist will Fail to Admit

That, of the hundreds of Books of Instruction in Piano-forte Music published, RICHARDSON'S NEW METHOD takes the lead, and seems destined to keep it. TWENTY-FIVE THOUSAND COPIES OF RICHARDSON'S METHOD ARE SOLD EVERY YEAR—a sale which no similar book has ever reached. It is adapted alike to the youngest and to the oldest, to the beginner, for first lessons, and to the amateur, for general practice. Price $3 75. Sold by all Music Dealers. Sent post-paid.

S N O W - B O U N D :

A WINTER IDYL.

By JOHN G. WHITTIER.

Third Edition, 1 vol. 16mo.....$1 25.

This new volume, from our favorite New England poet, has been greeted with enthusiasm both by the public and the press. It has already reached a sale of Ten Thousand copies. Its truth to nature, its rare simplicity, its sweetness of tone, and its high poetical beauty are recognized and admired by all.

"This poem is founded on the recollections of a Massachusetts Winter in the freshness of his boyhood. The plain old homestead, the driving snow-storm, the cattle in the barn, the fowls on the roost, the genial circle before the cosy fireside, are all revived to the imagination in faithful pictures. . . . It forms a gem of price among New England pastorals."—*N. Y. Tribune.*

"A simple, sweet, and graceful poem, full of home-felt New-England sentiment, . . . marked by the tender charity and piety that make the charm of so much of Whittier's writings."—*Boston Advertiser.*

"Not only one of the finest productions of Mr. Whittier, but one of the most admirable things in the language."—*Chicago Tribune.*

"Mr. Whittier has the rare faculty of blending distinctness of outline and rigid fact with a grace that is almost ideal. He has never been more successful than in this natural, tender poem, and we doubt not it will take its place among our most popular poetic treasures."—*Hartford Press.*

"It is a thoroughly home poem, and in thousands of homes it will surely find its place, for it is at once an accurate description and beautiful idealization of a New England household."—*Boston Transcript.*

"A perfect rural gem. It is a revelation of the genuine poetry that exists in the simplest country life, even at that season when the country is supposed to have lost its charm."—*Springfield Republican.*

Sent post-paid on receipt of price by the publishers,

TICKNOR & FIELDS, Boston.

PROFESSOR WILSON'S NOCTES AMBROSIANÆ.

WIDDLETON,

PUBLISHER,

17 MERCER STREET, N. Y.

THE NOCTES AMBROSIANÆ. By Professor Wilson, J. G. Lockhart, James Hogg, and Dr. Maginn. Edited, with Notes, by Dr. R. Shelton Mackenzie. A handsome library edition, on tinted paper, steel portraits and plates. 5 vols. crown 8vo, cloth, extra, $11 25.

CHRISTOPHER NORTH. A Memoir of Professor Wilson, author of "The Noctes Ambrosianæ." Compiled from Family Papers and other sources, by his daughter, Mrs. Gordon. Eight illustrations on wood, and fine steel portrait. 1 vol. small 8vo, laid tinted paper, cloth, extra, $2 50.

NOCTES AND NORTH. Uniform sets, 6 vols. in box, $13 50; sets, half calf or half Turkey, $25.

DR. DORAN'S WORKS.

Dr. Doran, F.S.A., editor of the London *Athenæum*, "is a charming writer, quaint, fresh, genial, correct, satisfactory, delightful. The world owes him a debt of gratitude."—*N. Y. Evening Post.*

Doran's Works are in 9 vols., elegantly printed and bound. Uniform library sets in box, comprising:

ANNALS OF THE ENGLISH STAGE, from Thomas Betterton to Edmund Kean: Actors, Authors, and Audiences. 2 vols.

TABLE TRAITS, with Something on Them. 1 vol.

HABITS AND MEN, with Remnants of Record touching the Makers of Both. 1 vol.

THE QUEENS OF ENGLAND of the House of Hanover (the Wives of the Four Georges). 2 vols.

KNIGHTS AND THEIR DAYS. 1 vol.

MONARCHS RETIRED FROM BUSINESS. 2 vols.

Sets, cloth, extra, $20; half calf or half Turkey, gilt tops, $35. Cloth vols. sold separately, per vol. $2 25.

PRAED'S POEMS.—The Poems of Winthrop Mackworth Praed. With Memoir by Rev. Derwent Coleridge. A handsome reprint of "Moxon's" authorized and complete edition, containing many poems before unpublished, and steel portrait from miniature by Stuart Newton. Fine tinted paper, 2 vols. crown 8vo, cloth, extra, gilt tops, $4 50; half calf or half Turkey, $8.

THE INGOLDSBY LEGENDS of Mirth and Marvel, by Thos. Ingoldsby, Esq. (the Rev. Richard Harris Barham), with a Memoir of the author. Reprinted from the 10th English edition, with 16 full-page illustrations by Cruikshank and Leech. 2 vols. crown 8vo, cloth, extra, $4 50; half calf or half Turkey, gilt tops, $8.

☞ Our books are kept in stock by the principal booksellers throughout the country, and mailed, post-paid, by publisher on receipt of price.

"Full of wit, piquant description."—*Hartford Post.*

"His eye is clear and keen, and his ear quick."—*New York Christian Advocate.*

"His sketches are all bright and fragrant."—*Springfield Union.*

"He writes like a scholar and a gentleman."—*Boston Post.*

"His style is classic."—*Christian Advocate.*

THE PILGRIM'S WALLET;

OR,

SCRAPS OF TRAVEL GATHERED IN ENGLAND, FRANCE, AND GERMANY.

By GILBERT HAVEN.

One Vol. 16mo, $2.

"He is a very pleasant travelling companion, sympathetic, sensible, and hearty. We like him very well on the swindling river Rhine, about which so much absurdity has got into literature. As a traveller, Mr. Gilbert Haven has many merits, among which we may name as chief the art of telling what he has seen, rather than what he went to see."—*The Nation.*

CONTEMPORANEOUS MATERIALISM. Study of the System of Dr. Buchner. By Paul Janet.

FINANCIAL REVIEW.

NATION OFFICE, Saturday Evening,
March 10, 1866.

GOLD continues to fall. Yesterday it touched 130; to-day it sold as low as 129¾, and then rallied, closing at 131⅛. Government has not sold since the price was 137½, seventeen days ago. The decline of 7 per cent. in so short a period must be ascribed to natural causes—a growing conviction that the currency is going to be reduced, a steady increase of our exports, a constantly developing foreign enquiry for our securities. Among speculators the opinion prevails that still lower figures—say 125—may be touched before midsummer. But, on the other hand, operators who were confident sellers at 137 to 140, are now buyers on the theory that the decline has been excessive. Notwithstanding large short sales by merchants who are trying by this hedging process to protect themselves against loss from a decline in the value of the goods they hold, gold is easy. It can readily be borrowed "flat," and more than once during the week holders had to pay 2 to 3 per cent. for getting it carried. So general is the impression that we are starting on the high road to specie payments, that specie is coming out of hoards on every side, and the enquiry for coin for investment or speculation has almost wholly ceased. It need hardly be added that the decline has gravely affected all the markets for merchandise and produce. A dead dulness pervades the cotton and produce markets. Large quantities of both are held at high prices both here and abroad; holders thus far decline to accept the decline in gold as final, and hold their property above the views of buyers. Should gold react, these parties will have acted wisely. Should it continue to decline, their obstinacy will cost them dear. A continued decline in specie or a tight money market would involve such a panic in cotton, breadstuffs, and provisions as has not been witnessed in this country for many years. In the dry goods trade more suppleness is developed by dealers. Prices have been marked down, both in foreign and domestic goods, to correspond with the decline in gold, and large invoices have been sent to the auction rooms. But neither the concessions of holders nor the apparent peremptory sales have aroused buyers to activity. All classes of people seem to be imbued with the feeling that prices must fall steadily for some time to come, and no one buys more than he absolutely requires. In the language of a shrewd Western man, "a panic is inevitable sooner or later this year, and when it comes goods will sell much lower than they should. Then we shall buy what we want for twelve months' consumption. Till then we shall hold off." At the West the decline in gold is gravely embarrassing speculators and their banks. Many of the national banks are said to have been unduly liberal to buyers of provisions and produce. Such institutions are likely to afford an opportunity of showing how national banks can be wound up under the new law. Exchange has advanced during the week to about 108⅝ for bankers' bills, still nearly one per cent. below the point at which specie can be safely shipped as a remittance.

Money continues in fair demand at 6 to 7 per cent., the latter being the general rule among brokers, the former the exception. The Sub-Treasury balance has been reduced twelve to fifteen millions; but, as most of this has gone to Washington and points further South, the market here has not felt the effect of the disbursement. It is realized on all hands that no such thing as an active money market can exist so long as the Government owes the public $118,000,000 payable on demand after ten days, and many persons question the sincerity of Mr. McCulloch's professions of a desire to contract the currency when they note his continued willingness to receive money on call at 5 per cent. interest. Real contraction can only begin when the Government has emancipated itself from the thraldom of the banks—when it has ceased to draw its breath by their sufferance. At present, with $118,000,000 due to the banks on call, Mr. McCulloch no more dare make money tight for a period of a month than he dare repudiate the interest due on the public debt. Momentary spasms in the money market suit the banks well enough, as they keep money well up to the legal rate and enable lenders to obtain full rates of interest. But a continued and severe stringency, such as would be involved by a persevering course of currency contraction, will not be tolerated by the banks, and cannot be produced so long as they hold the Secretary by the throat through the temporary loan. No further progress has been made in Congress with the finance bill. Rumors of a compromise among the contending parties—a large majority of whom favor currency contraction in the abstract—have been current during the past week, but no positive intelligence on the subject has been received. Parties interested in speculative operations in real estate, merchandise, and stocks have circulated the report that the bill will fail altogether, and that no contraction of the currency will be authorized by the present Congress.

But a sounder opinion is that, after a considerable delay growing out of the antagonistic views of the crude financiers of Congress, a bill will be adopted which may be in harmony with the wishes of the Secretary or may be in accordance with the requirements of Mr. Stevens, but which, in either case, will authorize and direct such a reduction of the national currency as shall develop a general enquiry for legal tender notes and shall compel the national banks to think at least as much of avoiding bankruptcy as of declaring inordinate dividends to their stockholders.

The following table will show the course of prices during the week in the stock, gold, exchange, and money markets:

	March 3.	March 10.	Advance.	Decline.
United States Sixes of 1881	104⅜	104¼	....	⅛
5-20 Bonds, old	103	103	....	....
5-20 Bonds of 1865	103	103	....	....
10-40 Bonds	90¾ exc.	90⅝	....	⅛
7.30 Notes, second series	99¼	99¼	....	....
New York Central	90⅜	91¾	1⅜	....
Erie Railway	85¼	82½	....	2¾
Hudson River	103	104	1	....
Reading Railroad	98⅜	97¾	....	¾
Michigan Southern	69⅝	74	4⅜	....
Cleveland and Pittsburgh	76⅜	75¾	....	¾
Chicago and North-western	26¾	25½	....	1⅛
" " " Preferred	53⅜	52½	....	1
Chicago and Rock Island	105	107¾	2¾	....
P., Fort Wayne, and Chicago	90¼	89¾	....	½
Canton	44⅛	43¾	....	⅜
Cumberland	44⅜	42¼	....	2⅛
Mariposa	11½	11	....	½
American Gold	133¾	131⅝	....	1¾
Bankers' Bills on London	108⅜	108½	....	....
Call Loans	7	7	....	....

The course of the stock market this week has been irregular. The "clique" stocks have advanced; other stocks have declined, or have remained stationary. Erie, which has been wholly in the hands of the clique controlled by the veteran director of the road, was made so scarce on Thursday that as much as ½ of 1 per cent. was paid for the use of the stock for a single day. With excellent judgment, the veteran director seems to have chosen this moment to sell his stock, and though there is reason to believe that his associates were not made aware of his operations, it would appear that he personally disposed of not less than 30,000 shares on Thursday and Friday. The consequence was a decline in the price from 87 to 81, and the failure of two or three operators who had followed in his wake. Considerable ingenuity was developed in the operation. While he was selling stock through half a dozen brokers, he was also selling "puts" at 81, 82, and 83 on the stock. Most of the buyers of these "puts" bought the stock against them, and it seems to be generally believed that they bought it from him. Gamblers are familiar with operations by which, on losing $10,000, the operator makes $25,000. This seems to have been the policy of the Erie director. The clique in Michigan Southern have succeeded in putting up the price to 74. It was understood in the Street that the short interest was so large that it would be comparatively easy to force up the price to 80 or 85. But, judging from the ease with which the stock is borrowed, and the general belief that the clique is going to put up the price somehow or other, it would seem not unlikely that the clique exaggerated the volume of the short interest, and that, when the time comes to corner the shorts, there may be no one to corner. A further advance in the price may be effected, but the ultimate decline will be none the less certain. No one is so sanguine as to expect a dividend this year. The movement in Rock Island continues, the present direction and their opponents bidding against each other for the stock, and will go on until one party or the other discovers that it is beaten and "lets go." Sales were made on Thursday as high as 108¼—a price quite disproportionate to the market value of other sound railway stocks. Pittsburgh declines slowly. The clique are said still to hold 25,000 shares of the stock. Reading and Fort Wayne sink, partly from the decline in the earnings and partly from the process of liquidation, which has already commenced on a small scale, and which induces all holders of property to contemplate its conversion into money. Experienced men in Wall Street do not hesitate to predict that for the next year, or perhaps two or three years, nothing will be so good to own as money; that within two years money will buy every description of property that is bought and sold at prices very much lower than those now current; that just as, in 1862–3, when the currency was expanding, the man who made money was the one who ran in debt, and was always buying more than he could pay for, so now, in 1866–7, when the currency is being reduced, the men who make money will be they who take care to owe nothing, and to hold nothing but money, or the funded obligations of Government.

FIRST CLASS FIRE INSURANCE

ON THE PARTICIPATION PLAN.

MARKET FIRE INSURANCE COMPANY,

37 WALL STREET, CORNER OF JAUNCEY COURT.

CONDITION OF THE COMPANY.

ABSTRACT OF THE ANNUAL REPORT OF DEC. 31, 1864.

TOTAL ASSETS	$414,729 18
Viz.—Bonds and Mortgages	$134,672 00
Temporary Loans	92,630 00
Real Estate	10,000 00
100 Shares Mer. Ex. Bank	5,000 00
Government Sec., value	144,514 00
Cash on hand	18,042 34
Interest due	3,085 58
Premiums due	6,785 26
PRESENT LIABILITIES	$15,995 92
NET SURPLUS	198,733 26

This Company will continue, as heretofore, to insure respectable parties against DISASTER BY FIRE

At fair and remunerating rates; extending, according to the terms on its Policies, the advantage of the PARTICIPATION PLAN OF THE COMPANY,

pursued by it for several years past, with such great success and popularity, and profit to its customers: whereby

(75) SEVENTY-FIVE PER CENT. (75)

of the Profits, instead of being withdrawn from the Company in Dividends to Stockholders, is invested as a "SCRIP FUND," and held for greater protection of its Policyholders; and Scrip, bearing interest, is issued to Customers therefor: thus, IN THIS COMPANY, those who furnish the business, AND PAY THE PREMIUMS, derive the largest share of advantages; and when the accumulations of the SCRIP FUND shall exceed FIVE HUNDRED THOUSAND DOLLARS, the excess will be applied to PAY OFF the Scrip IN CASH in the order of its issue.

☞ The liberal and prompt adjustment of Claims for Loss, WHEN FAIR AND SQUARE, is a specialty with this Company.

NOTE.—This Company does not insure on the hazards of RIVER, LAKE, or INLAND NAVIGATION; confining itself strictly to a legitimate FIRE INSURANCE BUSINESS.

H. P. FREEMAN, Secretary. ASHER TAYLOR, President.

JAY COOKE, H. C. FAHNESTOCK,
WM. G. MOORHEAD, EDWARD DODGE,
H. D. COOKE, PITT COOKE.

The Nation:

A Weekly Journal of Politics, Literature, Science, and Art.

THIS journal will not be the organ of any party, sect, of body. It will, on the contrary, make an earnest effort to bring to the discussion of political and social questions a really critical spirit, and to wage war upon the vices of violence, exaggeration, and misrepresentation by which so much of the political writing of the day is marred.

The criticism of books and works of art will form one of its most prominent features; and pains will be taken to have this task performed in every case by writers possessing special qualifications for it.

It is intended, in the interest of investors, as well as of the public generally, to have questions of trade and finance treated every week by a writer whose position and character will give his articles an exceptional value, and render them a safe and trustworthy guide.

A special correspondent, who has been selected for his work with care, is pursuing a journey through the South. His letters appear every week, and he is charged with the duty of simply reporting what he sees and hears, leaving the public as far as possible to draw its own inferences.

TERMS:—Six Dollars per annum, in advance; Six months, Four Dollars. When delivered by Carrier in New York or Brooklyn, Fifty Cents additional.

JOSEPH H. RICHARDS,

PUBLISHER,

130 Nassau Street, N. Y.

Improvements in Piano-fortes.

One of the simplest and most truly valuable improvements yet made in the Piano-forte is that invented and patented by

DECKER BROTHERS, 91 BLEECKER STREET,

in this city. By correcting the only imperfections arising from the use of the full iron-plate, and that, too, by not detracting in the slightest degree from its many positive advantages, the Messrs. DECKER have developed in their instruments a tone at once admirable for its purity, fulness, prolongation, and sweetness, and the high estimation in which their improvement is held is well shown in the rapidly increasing business of their firm.—*Tribune.*

MARVIN'S

PATENT FIRE AND BURGLAR SAFE

Superior to any others in the following particulars:
They are more fire-proof.
They are more burglar-proof.
They are perfectly dry.
They do not lose their fire-proof qualities by age.
Manufactured only by

MARVIN & CO., 265 Broadway.

721 Chestnut Street, Philadelphia.

Send for a descriptive Circular.

Make Your Own Soap with B. T. BABBITT'S Potash, in tin cans, 70 Washington Street, New York. Pure Concentrated Potash or Ready Soap Maker. Warranted double the strength of common Potash, and superior to any other saponifier or lye in the market. Put up in cans of one pound, two pounds, three pounds, six pounds, and twelve pounds, with full directions in English and German for making Hard and Soft Soap. One pound will make fifteen gallons of Soft Soap. No lime is required. Consumers will find this the cheapest Potash in market.

B. T. BABBITT,

64, 65, 66, 67, 68, 69, 70, 72, and 74 Washington St., N. Y.

WHEELER & WILSON'S SEWING MACHINES,

625 BROADWAY, N. Y.,

MAKE THE

LOCK-STITCH,

and rank highest on account of the elasticity, permanence, beauty, and general desirableness of the stitching, when done, and the wide range of its application.—*Report of American Institute.*

Lock-Stitch Sewing Machines

THE BEST SEWING-MACHINES IN THE WORLD.

THE WEED MACHINES,

With all their valuable improvements, entirely overcome all imperfections. They are superior to all others for family and manufacturing purposes, simple in construction, durable in all their parts, and readily understood. They have certainty of stitch on all kinds of fabrics, and are adapted to a wide range of work without change or adjustment, using all kinds of thread. Will hem, fell, bind, gather, braid, tuck, quilt, cord, and, in fact, do all kinds of work required by families or manufacturers. We invite all persons in search of an instrument to execute any kind of sewing now done by machinery to inspect them, and recommend all parties engaging in the sale of sewing-machines to make sure they secure the best by examining the WEED before purchasing. They make the shuttle-stitch, which cannot be excelled for firmness, elasticity, durability, and elegance of finish. They have received the highest premiums in every instance where they have been exhibited in competition with other standard machines. The company being duly licensed, the machines are protected against infringements or litigation.

Reliable agents wanted, to whom we offer great inducements. Every explanation will be cheerfully given to all, whether they wish to purchase or not. Descriptive circulars, together with specimens of their work, will be furnished to all who desire them by mail or otherwise.

STEINWAY & SONS'

GRAND, SQUARE, AND UPRIGHT PIANO-FORTES

Have taken Thirty-two First Premiums, Gold and Silver Medals, at the Principal Fairs held in this country within the last ten years, and in addition thereto they were awarded a First Prize Medal at the Great International Exhibition in London, 1862, in competition with 269 Pianos from all parts of the World.

That the great superiority of these instruments is now universally conceded is abundantly proven by the FACT that Messrs. Steinways' "scales, improvements, and peculiarities of construction" have been copied by the great majority of the manufacturers of both hemispheres (AS CLOSELY AS COULD BE DONE WITHOUT INFRINGEMENT OF PATENT RIGHTS) and that their instruments are used by the most eminent pianists of Europe and America, who prefer them for their own public and private use, whenever accessible.

STEINWAY & SONS direct special attention to their

PATENT AGRAFFE ARRANGEMENT,

which, having been practically tested in all their grand and highest-priced Square Pianos, and admitted to be one of the greatest improvements of modern times, will hereafter be introduced in EVERY PIANO MANUFACTURED BY THEM WITHOUT INCREASE OF COST to the purchaser, in order that ALL their patrons may reap its benefits.

STEINWAY & SONS' PIANOS are the only American instruments exported to Europe in large numbers, and used in European concert-rooms.

WAREROOMS, 71 & 73 EAST FOURTEENTH ST., between Union Square and Irving Place, New York.

JOSEPH H. RICHARDS, PUBLISHER, 130 NASSAU STREET, N. Y.

The Week.

THE correspondence between the President and his provisional governors, so reluctantly transmitted to the reconstruction "directory," is manifestly incomplete and not particularly fresh. His part seems to have been to recommend such measures as were calculated to "disarm the adversary," whom he afterwards identifies with the radicals, meaning those who were not disposed to restore the revolted States at once to their relations with the Union. Governor Perry makes the usual display of his shining qualities, and asks repeatedly after the chances of his being allowed a seat in the Senate. Governor Johnson, of Georgia, is "inclined to think a suspension of pardons might have a salutary effect" on the Legislature; and Governor Holden, of North Carolina, begs the President to pardon no leading men without consulting him. The same officer telegraphs, with a prophetic squint at the senators-elect from Georgia, "If I were a Northern member of Congress, I doubt whether I would consent to sit with any member of the so-called Confederate Congress." The correspondence shows clearly that Mr. Johnson demanded of the States far more than he was prepared to insist upon or they to render. Alabama and Florida both ratified the Constitutional Amendment "with the understanding that it does not confer upon Congress the power to legislate upon the political status of the freedmen of this State." Mississippi rejected it altogether, yet she has none the less found favor, though Mr. Seward, writing for the President to Governor Marvin, said: "He regards the ratification by the Legislature of the Congressional amendment of the Constitution of the United States as *indispensable* to a successful restoration of the true legal relations between Florida and the other States, and equally indispensable to the return of peace and harmony throughout the republic."

MR. BANKS'S "great speech" about the Paris Exposition is a fresh illustration of the difficulty there is in getting a large class of politicians to understand that in public as well as in private life there are such things as good taste and good manners. He is in favor of our taking part in the exhibition, but he wants us to go there in the most bellicose frame of mind possible. He would have us, when we arrive in Paris with our goods and our products, "stiffen the sinews, summon up the blood, and disguise fair nature with hard-favored rage;" in other words, make our appearance at a festival of peace with a pistol in each hand and a sabre between our teeth. He wants to have a mon[illegible] the French harbors to fire at all the navies of Europe, on condition that all the navies of Europe fire at it. In short, his great object in having us share in the exposition seems to be to make people afraid of us. His theory, and no doubt that of many of those who encouraged him to persevere in his fanfaronade, is that Europeans are frightened by these rhetorical broadsides. There never was a greater mistake. We doubt if there was anything which did so much to diffuse doubts of our military strength and courage at the outset of the rebellion as the enormous quantity of "brag," like this of Mr. Banks's, which was poured forth in Congress and on the stump for long years before the war broke out. We had hoped we had heard the last of it. If it is to be revived, Mr. Banks is certainly not the man to be charged with the task. We, for our part, believe in fighting hard in time of war, but that in time of peace "nothing so becomes a man (or nation) as modest stillness and humility." We are at liberty to stay away from the Paris Exposition if we please; but if we go, let us go with no thoughts save those of peace in our heads. If a man to whom you owe a grudge asks you to dinner, you need not accept; but if you do accept, it would hardly be seemly to make your appearance in his parlor in chain armor or put a revolver down beside your plate to mark your dissatisfaction with his general behavior. Mr. Bancroft got the foreign diplomatists round Mr. Lincoln's grave to listen to a funeral oration, and "improved the occasion" by slapping their faces—morally, of course. Mr. Banks now wants us to take part in an industrial contest—the great object of which is to promote peace and good-will among the nations of the earth—for the mere purpose, if we are to judge from his speech, of making our war-whoops more widely heard.

MR. JOHNSON has refused to interfere with Mr. Monroe's assumption of the office of mayor of New Orleans. Mr. Monroe was in office when the city was captured, and was very obstinate and defiant in his refusal to submit to Federal authority, and was very properly committed to one of the forts. We have nothing to say about this case except what we have already said about the case of General Humphreys. We believe it to be demoralizing to the loyal men of the South and against public policy to allow persons who have made themselves prominent leaders of the rebellion to fill high public offices, and take charge of the government of cities and States. No matter what view of reconstruction he may hold, no one will venture to affirm that such men are fit to be entrusted with the administration of the law at the South at a period so critical as the next two years are likely to prove. And we have no hesitation in saying that in pardoning such men for the purpose of qualifying them for office, Mr. Johnson has grossly abused his power. We talk of trying Davis for treason; but we may well ask, What moral weight would his condemnation have—supposing him convicted—when General Humphreys is governor of Mississippi?

THE Civil Rights bill has passed both Houses, and a more important bill—one calculated, if but fairly enforced, to effect more important changes in American society—has never come before Congress. It is the first attempt which the nation has made to put the theory of human rights on which it professes to be based into practice, and to extend the protection of the national authority over all classes and races occupying the national soil. None of the main objections which the President made to the Freedmen's Bureau bill lie to it. We trust he will leave the question of its constitutionality to the Supreme Court, which only is competent to decide it.

THE introduction of Mr. Stewart's resolutions proposing a general amnesty in return for [illegible] concession, amongst others, on the part of the

Southern States of the franchise to all persons on the same terms and conditions, making no discrimination on account of race, color, or previous condition—but leaving the status of those already in possession of the franchise untouched—has been, after the passage of the Civil Rights bill, the most exciting incident of the past week. There is no doubt that the voluntary adoption of such a principle by the Southern States, provided the qualifications for the suffrage were intelligence, and not property, would be a pleasant road out of a very embarrassing position. But a State vote is not sufficient to ensure the permanence of any such change. There can be no certainty that any measure of this kind if adopted by the South would prove perpetual, unless it were made irrevocable by a Federal guarantee.

Mr. Raymond is publishing in the *Times* select extracts from an enormous number of letters which he has received touching his course in Congress. They all seem to come from very good people, though we can hardly say that the extracts reveal as much intellect as virtue. But we think the public will agree with us in doubting the value of this kind of evidence. Letters to members of Congress, like witnesses in courts of justice, are to be weighed, not counted, and, when a man undertakes to represent the feeling current in his neighborhood on any public question, the important point is not what he says, but who he is. Then, again, few people write to a member of Congress except those who agree with him; those who do not like his course write to somebody else; and we venture to assert that if the opinion of the country on the President's policy is to be got at by counting the letters written to Washington about it, it will be found that Thaddeus Stevens and Charles Sumner can show more than anybody in either House. We hope, however, that neither of them will be tempted into producing his correspondence. The literature of reconstruction is already sufficiently voluminous, and if the private letters of all the wise men of the country districts were to be added to it, it would certainly raise the price of paper without very much increasing our light.

The lesson of the New Hampshire election—the first State election since the veto—is not merely, it seems to us, that the people side with their representatives in the difference at the Capital, but that they mean to stand by them in the highest effort upon which they can unite for the protection and elevation of the freedmen and the purification of the Republic. The measures which divide the radical majority in Congress would probably, if submitted to their constituents, reveal an equal divergence of opinion; but the vote in New Hampshire has shown, and all signs show, that the constituents trust the Congress and are ready to follow its lead because they sympathize fully with its motives.

By a vote of the Board of Aldermen of this city the flags on the City Hall were displayed from sunrise to sunset on Saturday, "to encourage the Irish people to perseverance in their efforts to drive the oppressor from their native land." The efficacy of this sort of aid and comfort of course remains to be seen. It is evidently cheaper than pikes, or gunpowder, or howitzers, or an iron ram; and if it shall prove to have carried terror to the heart of the British Empire, it will be justly regarded as the grandest improvement in modern warfare.

According to the census of 1860, Illinois produced only six bales of cotton, or from 2,500 to 3,000 pounds. Three years later there were shipped at her railroad stations 100,000 pounds, the next year 400,000, and last year 1,600,000. The total yield, however, for 1865 is estimated at 5,000,000 pounds, or 10,000 bales—twice as much as was exported annually from the whole country at the beginning of the century, twice as much as was grown by Kentucky, and nearly as much as by Virginia, in 1860. The laborers engaged in cultivating this staple are mostly negroes, familiar with the process. The cotton itself is said to equal that of Tennessee in quality.

A part of the miners of Nye County, Nevada, have undertaken a strike, the object of which is to compel their employers to discharge and refuse to employ all Cornishmen. They threaten to expel the latter forcibly from the county if their demand is not complied with. Hitherto only Chinese, Mexicans, and Negroes have been made the subjects of this kind of persecution. The next move may be against grey-eyed men or men over five feet seven in height, if they happen to be in the minority. In California a warm discussion of the eight-hour question is going on. The proprietors of a large woollen mill employing Chinese labor have publicly announced that if the proposed eight-hour law is enacted, they will be obliged to suspend operations, as they cannot compete with the mills in Oregon which would not be subject to the same interference.

Five years ago as many living presidents of Harvard College were able to be grouped on one photographic plate—Quincy, Sparks, Everett, Walker, and Felton. Mr. Sparks's death last week leaves Dr. Walker the only survivor. The event belongs not more to the annals of the university than of our national literature, which the deceased enriched in many ways, and most imperishably in editing the writings of Washington and the works of Franklin.

The Reciprocity Treaty with Canada has expired, and Canada now stands in the same relation to us commercially as the rest of the world. There is still some prospect of an arrangement, however, in spite of the late failure. Every argument that can be urged in favor of admitting Canada to the Union, supposing she were to seek admission, may be urged with nearly equal force in favor of an agreement with her which shall relieve us of the duty of defending the whole frontier against smugglers. How would the removal of the political frontier line affect us? is a question which, if fairly answered, would shed a good deal of light upon the course to be now pursued.

Some soldiers and one or two policemen are in custody in Ireland charged with Fenianism, and it is generally believed that the Government is fully determined to execute the soldiers. The London *Spectator* hopes that the executions will be restricted to those who can be proved guilty of having enlisted, as some undoubtedly have, for the express purpose of spreading Fenianism in the army; but adds, "This is one of the very few political offences which a constitutional government is bound to treat as mortal crimes. No society could endure if men in uniform who taught mutiny were allowed to escape." This is evidently a mistake, as we have scores of such men all over the country who are leading very comfortable lives, and yet society seems to hold together in the United States. We confess, however, that we consider the impunity which has attended the numerous desertions from our army which took place in the beginning of the war, as something more dangerous and more scandalous by far than the impunity which has attended the crime of treason. Civilians may have been misled by the doctrine of State-rights. It is hard to see how any military man could have been misled by anything whatever. The military oath of service to the United States did not derive any of its validity from the presence of any State in the Union, and lost none of it by its absence, and it was binding as long as the United States had an army and a flag. The process by which General Lee and others endeavored to get rid of their responsibility was the merest farce. Resignation at the outbreak of a war for the express purpose of joining the enemy is desertion, and is treated as such by every civilized country.

Reports of the evidence taken by the special commission to Jamaica during their first fortnight's session have reached England. It is conclusive only of the barbarities practised under martial law in suppressing the so-called insurrection, not only in the name of just punishment, but inquisitorially, to elicit information against obnoxious persons. Men and women were flogged naked with the cat, braided for the former with wire, but for the latter—out of a delicate regard for the sex—only with cord. One grave-digger counted upwards of two hundred interments in four days. Gov. Eyre was examined for about an hour and a half, but in that short time betrayed the insufficiency of the grounds on which his intemperate action was based. It seems proved

that the rioters who sacked the court-house at Morant Bay were guiltless of any wanton mutilation of the bodies of their victims.

THE Germans are not a little chagrined because Prof. Buschmann, the royal librarian at Berlin, has swapped the original manuscript copy of the "Cosmos" for a place in the Legion of Honor. This precious document is in five volumes quarto, of which the fundamental text was written out by the professor from Humboldt's scattered and unassorted papers. The whole was then carefully revised by the author himself, and bears his corrections and interlineations on every page. The pretext for the gift on the part of the donor is that Humboldt spent many years of his life in Paris, engaged in scientific investigations, and that "the soul of the wonderful *savant* always belonged to France." So to France and the Emperor the work has gone and has been accepted, and whoever wishes to consult it hereafter must visit the Imperial library, in which it has been deposited.

MAZZINI has at last been elected at Messina, after failing at Genoa and at Naples. He received 446 votes. *La Nazione* sees nothing deplorable in the event, though viewed as an act of hostility to the Government. It thinks the name, authority, and even the prestige of the famous republican have had their day in Italy.

HISTORY not only persists in repeating itself, but sometimes at very short intervals. The patriotism of Italy is just now fervid over the New York *Herald* scheme for paying off national debts. An association has sprung up quite spontaneously, and will be satisfied with nothing less than extinguishing the public indebtedness at whatever sacrifice of private interests or with whatever derangement of the plans of M. Scialoja. Every town has its committees of subscription. Turin subscribed ten millions the first day, and Milan may be reckoned on for twenty. The parallel will probably not lack completeness by reason of the success of this most laudable enterprise.

THE Bishop of Castellamare, having visted Naples ostensibly to care for the souls of the faithful in his diocese during their exposure to the cholera, was more than suspected of having a secret understanding with the reactionists of that city. He was accordingly requested by the Government to return to Rome, and was escorted to the frontier by a brigadier, who, on parting, enquired if his most reverend excellency had any commands for him to carry back. "Tell your superiors," said the bishop, "that we shall shortly meet again at Naples." "If you will only favor me with your address at Rome," said the witty officer, "you need not be at any trouble; we will endeavor to find you there and ascertain your pleasure."

CONGRESS.

WASHINGTON, March 17, 1866.

THE interest excited by the postponement to Thursday of this week of the various propositions before the Senate for a constitutional amendment now centres in the new scheme submitted by Senator Stewart, of Nevada. This gentleman, elected as a Republican, has been acting with the conservatives ever since the "parting of the ways" upon the Freedmen's Bureau bill. His known sympathy with the President lends significance to the plan he proposes for solving the difficulties of reconstruction, although it is not certain that it is submitted with the approval of the Executive. He claims in its favor that it avoids the difficulty of a remote and probably impracticable constitutional amendment, and disclaims any purpose to coerce the South into a particular line of policy, while that policy, if voluntarily adopted by the rebel States, will restore the Union and secure all that the people of the loyal States, as now represented in Congress, have ever claimed. One of the conditions proposed is the extension of the elective franchise to the freedmen on the same conditions as to white men —except that white men who voted before the rebellion are not to be cut off by any new test of intelligence. It was on this unexpected proposition that Mr. Sumner welcomed the senator from Nevada "with open arms" to the ranks of the friends of negro suffrage, while Mr. Wilson announced himself ready to go with this new convert for "universal suffrage and universal amnesty." Yet it is perfectly well known that Mr. Stewart is earnestly hostile to negro suffrage, and he disclaimed, in presenting this scheme, any committal of himself on that point. He simply offered it as a proposition to submit to the South what he believed to be the opinion of the majority in Congress. Why Mr. Stewart should expect that opinion to be adopted by the votes of the late rebels does not clearly appear. One of two things must be the result of this proposition, if adopted: either the Southern States will adopt it in good faith, and make the freedmen really free in the fullest sense of the term—in which case they will falsify all past and present indications of their spirit and purpose; or else they will avail themselves of the legal loopholes for dishonesty and oppression which the scheme leaves open—amend their constitutions so as to enfranchise only the intelligent of all colors (which will leave about nine-tenths of the freedmen out of citizenship), comply with the other conditions at once, get themselves restored with full amnesty to all their rights in the Union, and then turn round and repeal all this legislation and make their constitutions what they were before. Is it not possible that the Massachusetts senators are a little too hasty in welcoming Mr. Senator Stewart's panacea. Is it any better than the State-rights heresy handsomely sugar-coated? Can we trust communities of traitors outside of a constitutional amendment, irrepealable except by the authority of the nation?

The narrow majority by which the loan bill was lost in the House on Friday night is significant of a renewal of the struggle the coming week. Adding Mr. Garfield (who voted with the majority so as to move to reconsider) to the votes for the bill, it was defeated by only three votes.

The civil rights bill of the Senate, with immaterial amendments, went through the House by the heavy vote of 111 to 38, and was immediately repassed by the Senate without calling the yeas and nays. It goes to the President to-day, and the indications all point to a widening of the breach between him and Congress by another veto. It is a pretty stringent bill, and makes the courts of the United States the supreme arbiters of the rights of the freedmen, who are protected by its provisions.

Another select committee has been appointed in the House, with Mr. Jenckes, of Rhode Island, as its chairman, to consider and report upon a re-organization of the civil service of the United States. The bill drawn by Mr. Jenckes proposes to make merit, and not political services or favoritism, the passport to office under the Federal Government. It contemplates a civil service commission, which shall examine all candidates for office with special reference to their fitness for such office, thus introducing a feature which has worked eminently well in England. It also makes the tenure of office dependent upon good behavior and efficiency, not as now, in too many instances, upon political subserviency and the relinquishment of all personal independence. There is no doubt that Mr. Jenckes's bill ought to pass, properly amended so as to secure a thorough overhauling of the qualifications of all those now in office. This done, and the public service once purged of political partizans destitute of business capacity, on the one hand, and of political eunuchs with not force enough to call their souls their own, on the other, we might dispense with a costly portion of our present demoralizing Government patronage, and place the remainder on an honest basis.

Petitions for the passage of an international copyright law continue to pour in, and are referred without debate to the Senate Committee on Foreign Relations. This is the first time the subject has been broached in Congress since 1860, when Mr. E. Joy Morris (our present minister at Constantinople) introduced a bill to give foreign authors a right to protection in the United States. It was never acted on, however, and the former bill of Mr. Clay (offered in 1838 and renewed in 1842) was defeated, before it came to a vote, by the persistent remonstrances of the narrower portion of American booksellers, printers, and publishers. Then, as now, the best men in the trade signed petitions in favor of properly guarded international copyright, satisfied that, in the long run, honesty is the best policy between nations as between individuals.

DIARY.

Monday, March 12, 1866.—In the Senate, the Military Committee reported adversely on a bill ceding to West Virginia the property of the U. S. at Harper's Ferry. Mr. Grimes offered a constitutional amendment apportioning representation upon numbers in each State, but whenever the elective franchise is denied to male citizens above 21 years, except for crime or disloyalty, the basis of representation in such State to be reduced in the proportion which the number of male citizens so excluded bears to the whole number of male citizens over 21. Mr. Wilson offered a constitutional amendment apportioning representatives according to number of male citizens over 21, who are qualified to vote by State laws, adding thereto citizens disfranchised for participation in rebellion, and persons of like age not naturalized; also, fixing the quota of representation at 100,000 inhabitants to each representative. Mr. Sumner offered a constitutional amendment to regulate apportionment of representation of like effect with the one offered by Mr. Grimes. The bill extending to three years the time within which goods may be withdrawn from bonded warehouses for payment of duties and sale, was reconsidered, opposed at great length by Mr. Sprague, amended so as to take effect May, 1866, and passed—ayes, 24; nays, 10. The bill for admission of Colorado was advocated by Mr. Stewart and opposed by Mr. Sumner.

In the House, Mr. Julian offered a bill to fix eight hours as a day's work in the case of laborers employed by the Government of the United States. Mr. Spalding offered a joint resolution declaring that United States notes not bearing interest shall not be exempt from taxation by State or municipal authority. Referred to the Committee of Ways and Means, after rejecting a motion to lay on the table—yeas, 42; nays, 90. Mr. Shellabarger offered a resolution instructing the Judiciary Committee to report on the constitutionality and propriety of disfranchising by United States law, and rendering incapable of holding office, all persons disloyal to the Government or who have engaged in rebellion. Referred. Mr. Morrill reported back from the Ways and Means Committee the resolution imposing fifty per cent. additional duties on imports, with a recommendation that it be laid on the table. Agreed to. The bill to regulate trade with British North America was debated and amended, after which the enacting clause of the bill was stricken out—yeas, 76; nays, 52. This defeats the bill. Mr. Jenckes offered a resolution for a select committee to consider the subject of the civil service of the United States, and report measures to promote its efficiency. Adopted, and the committee was appointed by the Speaker. The Committee on Roads reported adversely on a bill declaring the bridge over the Hudson a highway, and it was laid on the table. The bill making appropriations for fortifications for the ensuing year was discussed and amended.

March 13.—In the Senate, Mr. Sumner presented a petition, signed by many authors and editors of the United States, for the passage of an international copyright law. Referred to the Committee on Foreign Relations. Mr. Sherman offered a joint resolution providing that the outstanding issue of United States notes not bearing interest shall not be diminished below $420,000,000; that all surplus in the Treasury beyond $40,000,000 in coin and $40,000,000 in currency shall be promptly applied to liquidate debt; and that the amount of interest-bearing legal tenders shall not be diminished by payment or conversion at a rate exceeding $5,000,000 per month. Referred. Mr. Lane, of Kansas, offered a resolution instructing the Judiciary Committee to report on or before Thursday next the following five amendments to the Constitution: 1. Basing representation on males over twenty-one years of age; 2. Apportioning direct taxes on the actual value of property in each State; 3. Pledging the faith of the country to the full redemption of the public debt; 4. Prohibiting the United States Government or the States from paying any of the rebel debt; 5. Prohibiting the general and State governments from paying for any slave property. Laid over. The bill for the admission of Colorado as a State was discussed by Messrs. Pomeroy, McDougall, Trumbull, Cragin, Ramsay, Williams, and Lane, of Kansas, in its favor, and Messrs. Grimes, Hendricks, Wade, Sumner, Doolittle, and Conness against it. The leading arguments against admission were an insufficient and declining population (being from 15,000 to 25,000 inhabitants), that the elective franchise is confined by the constitution of Colorado to white men (insisted on by Mr. Sumner), and that the enabling act, passed by Congress in 1864, had not been complied with. The bill to admit the State was then rejected—yeas, 14; nays, 21.

In the House, Senate bill to amend the act incorporating the National and Military Asylum was passed. The House concurred in the Senate amendments to the bill extending to three years the time for withdrawal of bonded goods, and the bill was passed. The Judiciary Committee reported back the bill to protect all persons in the United States in their civil rights, with amendments. The principal provision of the bill is that all persons born in the United States are declared to be citizens, and shall have, without distinction of race or color or previous condition of servitude, the same rights of person and property as enjoyed by white citizens, any law to the contrary notwithstanding. The bill was passed—yeas, 111; nays, 38. The Judiciary Committee reported back the joint resolution providing that neither Congress nor any State shall ever provide for payment for emancipated slaves, with slight amendments, which were concurred in, and the resolution recommitted. The fortification appropriation bill was discussed, amended, and passed. The House took up the joint resolution to provide for expenses attending the exhibition of the products of industry of the United States at the Paris Exposition of 1867. Mr. Banks made an elaborate speech in its favor. Mr. Ashley offered a constitutional amendment basing representation on numbers, provided that whenever male citizens of the United States over twenty-one years shall be excluded from voting in any State (except for rebellion) the basis of representation therein shall be reduced in the proportion which the number excluded bears to the whole number of male citizens over twenty-one years in such State. Referred.

March 14.—In the Senate, a bill was passed, granting lands to aid in constructing a railroad from Placerville, Cal., to Nevada. The bill to increase and fix the military establishment of the U. S., was taken up. An amendment was adopted authorizing the President to detail army officers to act as presidents or professors in colleges having 150 students or upwards, for the purpose of promoting military education. The bill was passed—yeas, 27; nays, 5.

In the House, the Senate bill to authorize appeals from the Court of Claims to the Supreme Court was passed. The bill to relieve officers acting under military authority from responsibility for their acts, and for trial of such cases in the U. S. courts instead of State courts, was advocated by Mr. Cook and opposed by Mr. Harding, of Ky. The joint resolution appropriating $100,000 for the expenses of a representation of American products at the Paris Exposition of 1867 was advocated by Messrs. Chanler, Grinnell, Raymond, and Garfield, and opposed by Messrs. Washburne, Harding, Le Blond, and Whaley. The resolution was then passed—yeas, 70; nays, 50.

March 15.—In the Senate, a long debate sprang up on a motion to print 10,000 copies of the report and testimony before the Joint Committee on Reconstruction. Mr. Davis charged the committee with unfairness in taking *ex parte* testimony, which was disproved by Mr. Fessenden, Mr. Johnson, and other members. The bill to protect all persons in the United States in their civil rights, with the amendments adopted by the House, was passed, without division, after a speech from Mr. Davis denouncing it as overriding the State laws of Kentucky, which provide different punishment for whites and blacks. The deficiency appropriation bill was amended and laid over.

In the House, the Indian appropriation bill was reported and made a special order for March 22. The loan bill was taken up, and debated by Mr. Wentworth in its favor and Mr. Hulburd against it.

March 16.—In the Senate, several petitions were presented praying for equality of rights throughout the country. A message was received from the President, communicating information called for by the Senate as to alleged kidnapping of freedmen. Mr. Stewart offered a joint resolution, providing that each of the States lately in rebellion shall be recognized as having resumed its relations with this Government, and its representatives shall be admitted to Congress, whenever it shall have amended its constitution so as to provide—1, That there shall be no distinction in civil rights among its citizens by reason of race or color or previous condition of servitude; 2, That all debts incurred in aid of the rebellion shall be repudiated; 3, That all claim for compensation for liberated slaves shall be relinquished; and 4, That the elective franchise be extended to all persons on the same terms, irrespective of race, color, or previous condition, provided that none be disfranchised who were qualified voters in 1860; and that upon these conditions being ratified by a majority of the present voting population of each State (including all qualified to vote in 1860), a general amnesty shall be proclaimed as to all who engaged in the rebellion. Referred. The deficiency appropriation bill was passed. The naval appropriation bill was considered and amended. Adjourned to March 19.

In the House, a number of private bills were passed. The loan bill was taken up and speeches made in its favor by Messrs. Garfield, Morrill, Allison, Spalding, and Darling, and by Messrs. Pike, Price, Boutwell, Stevens, Lynch, Baker, and Lawrence against it. An amendment repealing all acts authorizing the withdrawal from circulation of U. S. notes not bearing interest, and making all bonds hereafter issued payable, principal and interest, in lawful money, was lost. On motion of Mr. Morrill, the clause of the bill authorizing the bonds negotiated abroad to be made payable, principal and interest, in the currency of those countries, at an interest not over 5 per cent., was stricken out. Mr. Stevens moved to lay the bill on the table. Lost—yeas, 37; nays, 98. Mr. Stevens offered a substitute, authorizing the Secretary of the Treasury to sell bonds under act of March 3, 1865, to such an amount, and at such rates (not less than par) as he may choose, and use the proceeds only for retiring Treasury notes or other obligations bearing interest; also repealing all laws authorizing the funding or withdrawal from circulation of legal tender notes not bearing interest. This was defeated—yeas, 61; nays, 75. The question was then taken on the loan bill, and it was lost—yeas, 65; nays, 70.

March 17.—The Senate was not in session. In the House, speeches on the state of the Union were made by Messrs. Hill, Dumont, Anderson, and others. Adjourned to March 19.

THE FREEDMEN.

THE Bureau, acting on timely information, dispersed a large gathering of sharpers at City Point, Va., in anticipation of the mustering out of the 2d U. S. Colored Cavalry. The men were induced to deposit their pay and bounty money in the Freedmen's Savings-Bank, subject to their order. Nearly every soldier of this regiment had learned to read and write while in service. Far less provident was the 104th U. S. C. I., mustered out at Charleston, which deposited only $1,500 out of more than $130,000 which were paid to it. But in this case the officers themselves were engaged in defrauding their late command with bogus jewelry and by other means. The 128th Colored Regiment, which has just been paid off, deposited $15,000, in addition to $50,000 already to its credit from its last preceding payment. In this case, also, the entire regiment had learned to read and write since its organization.

General Sprague reports an increase in the number of dependent refugees and a decrease in the number of dependent freedmen in Missouri and Arkansas during the month of January. Although there is a great scarcity of food, the demand for labor is such that all who are able and willing to work may obtain employment for the coming year at good wages. Large numbers of freedmen are being brought into Arkansas from Georgia and other States, and hired on lower terms than those who were already on the spot. The regularly organized schools of Arkansas comprise 1,361 colored children, and many besides are taught in plantation schools.

Gen. Tillson reports from Augusta that, in a tour among the Sea Islands, he found nearly all the questions between the freedmen there and the former white residents to have been amicably settled. In many instances the latter have returned to their homes, and the freedmen without grants of land have cheerfully gone to work for them. The

commissioner is of the opinion that, in the present scarcity of labor, it is more profitable for the blacks to work for wages than to attempt to cultivate lands for themselves with inadequate means. There is great need in South Carolina of a sufficient military force to ensure the prompt arrest of criminals, with such an organization of the United States courts as shall place all classes on an impartial footing before the law. President Johnson has assured Mr. George T. Downing that no sudden change will be allowed to affect the occupancy of the lands to which Gen. Sherman gave a possessory title.

During the month of February 2,181 freed people were treated medically in the District of Columbia. Of this number, 72 died, and 1,384 were discharged cured. Sanitary precautions are in progress in Washington, in view of the cholera. All the houses and barracks occupied by the freed people are to be cleansed thoroughly and whitewashed, and all lanes and alleys cleared of rubbish and dirt. Vaccination has been applied in 2,056 cases among the freedmen of the District, and an effort is making to extend it to the entire colored population. The small-pox is spreading with considerable rapidity in many parts of South Carolina.

A large number of colored laborers have been, in answer to applications, distributed from Washington to all parts of the country—frequently 20, 40, 50, and even 100 at a time. The excessive accumulation in that city, therefore, has been much diminished, to the relief of those who remain. The latter have been visited with a sort of panic, having heard that these transportations were into slavery again. Pains have been taken to disabuse them of their error.

They are about to organize normal schools at Jacksonville and St. Augustine, Fla., to prepare colored girls for teachers.

A colored church, newly finished, and used for school purposes also, situated a short distance from Norfolk, Va., was burned down a few nights ago, in all probability by an incendiary.

Outrages upon the colored people in Maryland continue, and the perpetrators cannot be reached by law.

G. L. Eberhart, State Superintendent of freedmen's schools in Georgia, invites the co-operation of the various aid societies of the North in sending teachers and missionaries to that State, so that they may be ready to begin work by Oct. 1. He recommends each to select one of the large cities for its special charge. Savannah will furnish not less than 2,000 pupils, Augusta 1,500, Atlanta 1,200, Macon 1,600, Columbus 1,000. These five will require 100 teachers, of whom a fifth should be men, with particular reference to the night-schools—the only opportunity for adults.

—There was a mass meeting of colored people at Hampton, Va., on the 13th instant, to listen to the exposition of a scheme for transporting them to Florida in order to relieve the overcrowded peninsula and improve the material condition of the colonists. Major-General Miles and other officials addressed the assembly, but their advice was denounced by other speakers, among whom Mr. Calvin Pepper, a lawyer, of Norfolk, was prominent. The decision was to stay—not unnaturally, though perhaps not wisely.

Minor Topics.

We have received the following note from Mr. George H. Hall:

To the Editor of The Nation:

Your art critic, in noticing my fruit-pieces, says "his purple is shaded not with darker purple, but with grey." If he will hang a bunch of purple grapes against a grey wall, he will see, as I did, that its shadows are filled with grey reflections.

The American artist bears with patience a great deal of crude writing published by so-called art critics, and I think it only fair that he should sometimes expose the ignorance of these oracular gentlemen.

Yours respectfully, Geo. H. Hall.

We at first thought of refusing it insertion as an act of kindness to Mr. Hall himself, because we fear the last paragraph will not raise his temper in public estimation, and it certainly cannot serve his pictures. One can accomplish no more by telling a critic he is an ignoramus than by telling an artist or an author that he is an ass. The process to be gone through in all these cases was well described some years ago, we believe, in "Household Words," in a controversy between two pot-house politicians: "'Prove it,' says I. 'Facts proves it,' says he. 'Prove *them*,' says I." Whatever authors and artists may think or expect, the public will never accept the theory that a critic is *primâ facie* unworthy of attention because he is a critic and not a painter or a historian or a poet. It is now too late to get people to believe that nobody can form a correct opinion of works of art who is not capable of producing them. The fact unfortunately is, that it is the opinions of those who were neither poets nor artists which have built up all the great reputations that ever existed, and consigned all the daubers and rhymesters to obscurity or oblivion. And we must protest against the notion that the artist himself is the best judge whether his coloring is good or his drawing correct. If no one were allowed to differ with him on this point, of course every picture that is painted or that ever was painted would be a masterpiece. It is the critics after all—that is, in the vast majority of cases, men who can neither paint nor draw—who give an artist his fame or sentence him to damnation. We should like to know what artist has ever acknowledged that an unfavorable judgment passed on his picture by a fellow-man, whether lay or professional, was well founded?

We think, for our part, that American artists display in the matter of criticism an absurd and, let us add, very raw sensitiveness. We deny that they "bear with patience a great deal of crude writing," or any other kind of writing, about their pictures, that is not laudatory. They find themselves now, for the first time, subjected to the ordeal of hostile, perhaps often over-censorious, comment—something to which the artists of other countries have been exposed for two centuries, but no more think of flying into a rage about than they do of blubbering. We do not know any better proof of immaturity and "greenness" than a tendency on the part of either author or artist to lose temper over the public expression of unfavorable opinions of his work, and anybody who finds this tendency still strong in him may feel satisfied that his education in his profession is still far from complete.

There is one thing that artists should bear in mind, and that is that pictures are not put on exhibition for sale simply, like fish or butter. They are to be seen and commented upon. People will differ in opinion about them. Some will think them masterpieces—others daubs; and some people will publish these opinions, and others simply retail them at the dinner-table or in the club. But no matter where or how they may be expressed, the artist has no right to complain, much less to lose his temper or feel personally aggrieved, unless his motives or his character are assailed. The mere fact of exhibition is a challenge to criticism. If a critic says that he thinks either color, or drawing, or expression, or thought is bad, why it is simply an invited expression of opinion; and there is nothing more certain—we mention it for Mr. Hall's consolation—than that no good painter was ever yet written down by one critic or two or three. In fact, any criticism, let it be ever so hostile, is of service to any artist who has any merit at all. It leads to discussion; it causes the public to examine his work more carefully; and, if it is good work, of course the more it is examined, the better it will appear; if it is bad work, the interest of art requires that it be driven out of the field, and the artist be convinced of his own shortcomings as soon as possible. And we must remind Mr. Hall that if the artists have had to bear with a good deal of "crude writing," the critics and the public have had to bear with a monstrous deal of crude painting. People do see now and then historical pictures that are none the better for having had the subject strained through the artist's imagination; figure-pieces of all kinds that are simply bits of maudlin sentiment or affectation; fruit and flower pieces which, in spite of the artist's having taken the greatest pains with the coloring, are not well colored, after all, and are not so considered by the public, and will adorn the trunk-rooms of posterity. Of course, in saying all this, we neither express nor imply any judgment on Mr. Hall's work.

The special attention of the reader is directed to the Financial Review on another page. Its place among the advertisements is by no means significant of its value, but is resorted to only that we may obtain the latest intelligence of the market.

Articles on any of the subjects usually discussed in this journal will be received from any quarter. If used, they will be liberally paid for; if rejected, they will be returned to the writers on the receipt of the requisite amount of postage stamps.

All Communications which pertain to the literary management of THE NATION *should be addressed to the Editor.*

CONGRESS AND THE COUNTRY.

It is beginning to be understood even by those who, after the Freedmen's Bureau bill had been vetoed, were most disposed to conclude that President Johnson had, for some reason or other, more to do with the work of reconstruction than Congress, that his message did not by any means cover the whole ground, and that there is a great deal to be said in defence of the reluctance of Congress to admit Southern representatives, which is not by any means fully met by a dry statement of the constitutional objections to taxation without representation or trial without a jury. The more people reflect, the better satisfied they are that that branch of the Government, whose function it is to deliberate and debate as well as to legislate, and which is from its very nature in closer contact with the country and better informed of its thoughts and feelings from day to day than the Executive can possibly be, is the branch which has and ought to have most to do with such a work of re-organization as is now before us. We think, for our part, that not only ought the President not to flatter himself that the work of reconstruction is in an especial manner his work, but he should never have entered upon it at all without calling Congress together. He is empowered by the Constitution to convene both Houses on "extraordinary occasions," and if the overthrow of the rebellion was not an extraordinary occasion, calling for the exercise of this power, all we can say is, that we do not believe one is ever likely to occur. No government has ever entered on a task so important as that which Mr. Johnson found before him when Lee laid down his arms. It was one, too, for which he was not chosen by the people, and it is casting no reflection either on his honesty or ability to say that he would not have been chosen for it, and that he was not thought of for it by anybody. It was one such as, we will add, we do not believe any constitutional ruler has ever before ventured to charge himself with alone and unaided. The President ought not to have allowed one week to elapse after Mr. Lincoln's death without calling Congress together, hearing what it had to say about the crisis, and submitting his plans for its approval. If this was not necessary at such a time, we repeat that Congress is a useless institution, and ought to be got rid of. If the President is competent to do the work of reconstruction single-handed, he is competent to do the whole work of government single-handed.

We think the country is gradually awakening to a just perception of the real state of the case, and its reluctance to believe in the ability of one man to manage its affairs has certainly been strengthened by the occasional exhibitions which Mr. Johnson has lately given of his want of temper and discretion. His career has, in fact, furnished one more illustration of the folly of believing that any man, no matter what his character or capacity, is fit for the exercise of absolute power, such as he is now in effect exercising over half the continent. He has exercised it as far as the South is concerned, we confess, with a great deal of moderation, but it has evidently warped his judgment with regard to his own relations to Congress and to the rest of the country.

The public, though perhaps not as sensible of the importance of having Congress share in the work of reconstruction, when the war was over, as it ought to have been, was nevertheless, when Congress did meet, fully prepared to stand by it and see that its policy, whatever it was, should have a fair trial, and that Mr. Johnson's plan should undergo such modifications as it might deem necessary. But then it was assumed that Congress would have a policy. It has now, however, sat for nearly four months, and has nothing of the kind. We hear a great deal of the President's policy; it is something definite, determined, capable of being set down in black and white and discussed in all its bearings; but we never hear of the policy of Congress, because there is no such thing. The people are ready to keep the South out until it complies with certain conditions, but they want to know what these conditions are. They are ready to see that the South does not share in the work of government until it has given signs of repentance and reform, but they want to have these signs fixed and described. Congress has agreed upon none. The Reconstruction Committee has produced several valuable measures, each of them meeting some great want of the crisis, but not forming part of any well-defined plan, and not based on any well-defined principle, and nobody is willing to have the reconstruction process consist of a parcel of patches of various hues and textures. We have had a prodigious deal of spouting about the position of the States, whether in or out of the Union, the history of the war, the guilt of the rebellion, and the eternal fitness of things, but no complete and well-proportioned scheme has yet been set forth on which people could lay hold, or the drift of which, or the relations of which to our theory of government, they could see. In fact, a large proportion of the debates have been rhetorical exercises of about the same practical value as a discussion of Sir Thomas More's celebrated moot-point, "whether beasts of the plough can be replevined in withernam."

In truth, there has been only one thing on which the Union party has been thoroughly agreed, and that is, the propriety of keeping the revolted States out for the present; and this is all very well as far as it goes, but it does not go very far. It is simply the excavation for the foundation of the new building. The public is now anxiously waiting to see the structure rise, and it will be no wonder if it is soon tired of watching the builders who have contracted for the job pass their time in wrangling month after month, down in the hole, over the style of the architecture; no wonder if it is soon disposed to let Mr. Johnson or anybody else go to work, who promises to put up immediately a fabric of some sort which will afford shelter.

There is one thing more which causes the public to look with doubt upon the ability of Congress to meet the emergency, which is, that while it fails to unite intelligently upon any general policy, it shows a great readiness to be led. The most prominent man has been Mr. Thaddeus Stevens, and he has certainly, by sheer force of audacity and energy, earnestness and certain powers of vigorous speech, carried things with a high hand. But then, it must be confessed, the public has not been impressed by his performances with a very high estimate of his statesmanship. His ideas of government do not seem a whit clearer than his ideas of political economy, and it is a curious illustration of the advantage which the quality of mere pluck gives a man in Congress, that he carried the other day a change in the duty on coal—knowing absolutely nothing of the principles of taxation—against Mr. Morrill, who has made them a special study. His speeches throughout the whole session have been one long tirade against the South and its advocates, justifiable, perhaps, and well enough in its way; but very few people are disposed to accept them from the chairman of the Committee on Reconstruction as a substitute for a thoroughly studied, practical, and complete plan of reconstruction. Invective is a very spicy thing, but then people tire of spices. Even drunkards get sick of whiskey by having a little of it put in all their food.

More serious work than we have yet had must now begin. If it does not—if a greater willingness is not displayed by individuals to serve in the more obscure positions, and to unite upon some comprehensive plan—we greatly fear the coming fall will find the public thoroughly out of patience with Congress and quite ready to let the President and his friends have their own way. He would be a bold man who should venture to predict what would then happen, or to calculate how much of the fruits of our victories would be left us.

THE STATUS OF THE SOUTHERN STATES.

There are no questions of political law more important at the present time, and none upon which there is more confusion of ideas, than those which pertain to the civic rights of the States lately in rebellion. What is their political *status?* Are they States at all, or only territories? If they are not States, when did they cease to exist as such? If they are States, what are their rights? Are they entitled to elect members of Congress? Do they stand upon an equal footing with New York, Pennsylvania, and Ohio? If so, why does Congress exclude their representatives even for a day?

These are questions which are constantly and naturally asked.

"Governor" Perry, Mr. Vallandigham, the New York *World*, and the New York *Times* find no difficulty in answering them. According to these authorities, the answer to all such questions depends upon the answer to one, namely, Are these States *in* or *out* of the Union? If they are in the Union, it is confidently asserted that they must needs be entitled to all their ancient rights. If they are out of the Union, then it is said the war for the Union has failed of its purpose.

This fallacious reasoning, transparent as it seems to us, misleads a large portion of the loyal people, and confuses yet more. Let us carry it to its full extent, and it will be easily seen through.

A large part of Louisiana is kept from total submersion by water, only by a long line of dykes. Let us suppose that the *whole* State was in the like condition. Let us further suppose that, in order to carry out military operations, it became necessary to break down all these dykes, and to submerge the whole State, so that it should become permanently uninhabitable. Would the war have been necessarily a failure because Louisiana was destroyed? True, the war was not undertaken for the purpose of destroying a State, but neither was it undertaken for the preservation of a State. It was not commenced for the purpose of spending three thousand millions of dollars or of sacrificing five hundred thousand lives. It was waged to preserve the *nation*, and this was meant to be done whether the lives of individuals or of States should perish or not. So much for the argument from the supposed "failure of the war."

But, in truth, all that is said about States being "in or out" of the Union is utterly irrelevant to the argument. The Territory of Colorado is surely in the Union, notwithstanding it has not been admitted as a State. Does any citizen of a Territory find any difficulty in obtaining a passport as a citizen of the United States? Were not the residents of Louisiana admitted to all the rights of citizenship, by treaty, long before they organized a State government? These considerations dispose also of the argument that the election of Mr. Johnson proves that Tennessee was a State then in existence. There is nothing in the Constitution which prevents the election of a citizen of Nebraska or the District of Columbia to the Presidency. Nor is there anything in the fact that Mr. Johnson continued to act as a senator of the United States, after his State had become disorganized, which binds Congress now to recognize the continued existence of that State. It was a favorite doctrine of Henry Clay that every member of Congress represented the whole nation, and not merely his own particular State or district. This doctrine is unquestionably the true one, and has been gradually acquiesced in by all parties, though vehemently denied at first. It follows that no member can be deprived of his seat (except by regular process of expulsion), even if the entire State or district from which he comes should be swallowed up by earthquake or inundation. Much more is he entitled to remain, if he chooses, after his State has lost its corporate existence.

Coming then to the conclusion that the controversy is not to be disposed of by one or two phrases, let us consider what are the facts upon which it turns.

For the purpose of our present argument, we lay aside all considerations founded upon the belligerent attitude of the South, and dismiss entirely all question as to the effect of State rebellion upon State rights. Waiving these, the following facts remain:

1. That Virginia, North and South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Arkansas, and Texas elected regular State conventions, which, according to the universal law of this country, had a right to make any changes in their frame of government not prohibited by the Constitution of the United States.

2. That these conventions adopted ordinances declaring that their respective States were no longer within the Union, striking out the words "United States" wherever they occurred in their constitutions and laws, and substituting the "Confederate States" therefor, absolving all State officials from their oaths to support the Constitution of the United States, and requiring them to take oaths of allegiance to the new State constitutions and to the "Confederate States."

3. That Tennessee passed similar ordinances, only by her legislature instead of by a convention.

4. That all these States repealed the laws providing for the election of Representatives to the Congress of the United States.

5. That all the officials of these States took an oath of allegiance to the "Confederate States," and renounced their allegiance to the United States.

6. That long before the rebellion ceased, the official term of every State officer within these States, who had ever taken the oath of allegiance to the United States, had expired; and no one held office in any of these States, by virtue of an election prior to the ordinances of secession, except, possibly, a few judicial officers.

Now, in the language of Chief-Justice Bronson (Indiana *v.* Woram, 6 Hill, 33), "that a State is a corporation cannot be doubted." Viewed as a corporation, can there be much question as to the legal effect of such a course of action as we have set forth above? Setting Tennessee aside for the present, the other States took every possible means to destroy their corporate existence. What more *could* they do than they have done? Acting through the most authoritative exponents which they could summon into existence, they declared their fixed determination not to exist any longer as States of this Union. They abolished every law of their own which gave them a place in the Union. They vacated every office held as an office of a State in the Union. They destroyed every right which they had to elect representatives to a Congress of the Union. They left not one shred of legal and constitutional government in existence. True, they believed that they could exist as governments outside of the Union; but they broke down all the bridges behind them, and perilled all upon the hazard of their opinion. The war has settled that they were mistaken upon this point, but it has not provided any remedy for their voluntary destruction of their own institutions. That act of folly must be repaired by regular constitutional processes.

It is said that the States did not lose their identity, although they rebelled. But a State, like any other corporation, may cease to exist, although all its powers are assumed, all its property taken, and all its officers continued, by another corporation bearing precisely the same name. Thus, a number of banks in New York, which were organized many years ago under special charters, re-organized under the general act of 1838, without the slightest change in name, stockholders, officers, property, or business. A few years ago the question arose, in an action brought by one of these banks, whether it was one and the same corporation throughout. The courts held, without a shadow of doubt, that it was not, and that the new corporation was as distinct from the old as a son is from his father. Just so Virginia, as a State of the Union, is totally distinct from the Virginia which professed to exist as an independent or Confederate State. Nor does the fact that Virginia, as a Confederate State, never had a legal existence, have the least tendency to prove that the former Virginia did not destroy itself.

The case of Tennessee, as we have said, differs from that of the other revolted States in the fact that no convention was held therein. But all legal government was destroyed there for four years as effectually as in any other State, and, practically, it stands upon the same footing as the rest, except that its constitution remained unaltered, if a constitution can survive the destruction of all government under it.

In all these States, then, there was no civil government, no civil law, no civil administration of affairs, for years. Nevertheless, it is claimed that, by virtue of some undefined principle of immortality, the States outlived all the forms of government and law which are usually supposed to constitute a State.

Can a State continue to exist without a government or any lawful means of electing one? Can it exist after its people have, in a regular and proper method, declared their will that it shall *not* exist? Is there any self-acting power in a State government that keeps it alive after it has taken every conceivable means to put an end to itself? Were our forefathers wrong when they declared the right of the people to change, alter, or *abolish* the form of government at will, and can we only change, and *not* simply abolish?

These are questions which the supporters of the President's policy never discuss. But they are practical questions, and the President has himself conceded a great part of our position upon them. He has uniformly assumed that there were no legal governments in the rebel States after the passage of their ordinances of secession, and that not a single office, from governor down to

pound-keeper, was legally filled in any of these States when the rebellion ceased, except where Mr. Lincoln had re-organized their governments. The only difference between our conclusions and his theory is, that he believes in the continued existence of a State after its entire government has perished, while we hold, with Mr. Henry J. Raymond, that a State ceases to exist when its constitution and government are destroyed.

The real points in controversy are, whether the duty of restoring the States is a duty devolving on the President alone, or upon Congress, voting subject to his veto power (which we shall discuss hereafter), and, above all, what, as we pointed out two weeks ago, will be the effect upon the national safety of admitting the rebel States to their old places now?

CO-OPERATIVE SOCIETIES.

The eight-hour movement, regarded as an effort to secure to the mechanic or other craftsman larger opportunities for physical, intellectual, and moral culture, to do his duty better by his family, to qualify himself more thoroughly for the responsibilities of citizenship, and withal to produce finer work and to multiply the aids of the human muscle in every branch of industry, is one of the most hopeful auguries of social progress. The modes by which these advantages are sought to be obtained must be considered apart. A special commission appointed by the Massachusetts legislature to investigate this subject, after gathering all the testimony they could attract to their public sittings, decided adversely to any legislation in the direction proposed. They did, however, commend the hours of labor to the humane revision of employers, and to the great body of working-men the advancement of their cause "by temperate and industrious habits, by ambition in work and in workmanship, by the practice of that economy that will help them *to become their own capitalists*, by co-operative labor, securing to each workman a share in the profits of his work, by associations for mutual *good* as well as mutual gain." In these remarks the commission alluded to certain combinations of working-men abroad, which have been remarkably successful, and the success of which seems to be in a great degree due to the incorporation of a principle in their basis of organization to which it is important that the attention of our own working-men should be called. It is expressed in the following words: "The aim of this society is to elevate the moral and social condition of its members by receiving from them voluntary subscriptions for the purchase in common of groceries, clothing, etc."

Having no concern with speculation, they are able to bring the producer and the consumer together at the cheapest possible rates, and thus save directly the profits of the ordinary middle-men, the wholesale and retail dealers. They have a custom which does not fluctuate, and which can always be calculated to a nicety. As they buy, so they invariably sell, for cash, equally avoiding the perils of a credit system for themselves, and rescuing their patrons from its demoralizing effects. Another safeguard consists in their trading only in the necessaries of life; another economy, in their dispensing with advertisements. They have nothing to fear from the competition of capitalists, because there can be none unless the latter reduce their prices to the level of the societies', or, what is the same thing, share their profits with their customers; which would be in itself a triumph of the co-operative principle. As a fact, the societies sell their goods at current prices, and their dividends are paid not every day, with each purchase, but quarterly.

It is upon the last-mentioned practice that the usefulness of these societies hinges. It lifts them out of the category of soulless or purely mercenary corporations, and enables them to accomplish the beneficent design of their foundation. They are, in the first place, converted into savings-banks, with tickets for certificates of deposit. The working-man buying his pound of meal or of sugar is spared the constant struggle between his desire to hoard and the temptation to neglect a trifling gain. Without his own interposition or an effort of his will, or a step—very often the step which costs—from his lodgings to the bank, the saving is made. At the end of the quarter, when the amount to his credit may be something respectable, he has only to decline withdrawing it, and the accumulation goes on. It might go on indefinitely except that this would be to create riches rather than suppress poverty, and there is accordingly a limitation on these deposits. But the habit of thrift is sufficiently inculcated to ensure the social melioration of which it is always the parent, not only in the immediate membership but in the public, alike permitted to buy at the societies' counters and share their profits, and thus extend their resources and their influence.

The Rochdale Pioneer Society was organized during a strike of the linen-weavers in 1844, and commenced business with a wheelbarrow load of provisions in a shop opened only on Saturday evenings, with service supplied by some of the members gratuitously. The first year's profits were £32. The failure not long after of a local savings-bank caused a great accession to the ranks of the society. In a single year the capital trebled; new shops were leased and kept open every day at all hours; the employees were salaried; a bakery and a shoe and clothing establishment were put in operation. The census of 1864 showed 4,747 members, with a capital of £55,221, buying for £151,221 and selling at £174,937, with a profit of £23,716. In March of last year the Pioneers laid aside £221 for the reserve fund and £124 for the educational department, and the rate of the quarterly dividend was twelve per cent. per annum.

The government of this society is thoroughly democratic, with only an exception in favor of the larger stockholders where certain offices are concerned. There is a president, a treasurer, a secretary, and counsellors. The names of candidates for admission must first be posted for the general inspection, and, if other conditions are satisfactory, compliance with the following makes a Pioneer of any one: He must subscribe for five shares at £1 each. The entrance fee is one shilling, which goes to the capital and is never returned to the member. Another shilling is placed to his account, and after that he must pay at least threepence a week or three shillings and threepence a quarter until the value of his shares is fully reimbursed. This process is seldom pursued at length, the party generally preferring to win his complete standing by larger instalments. Yet his share in the profits begins with the payment of the first shilling, and it is possible for him to make up the five pounds without further outlay by simply returning his proportion of the dividends. In drawing on deposits, two pounds ten shillings may be called for at pleasure, but greater sums only after previous notice.

In view of such handsome dividends as we have already mentioned, it is surprising to note the disposition of the profits before any division takes place. First, the cost of administration is reserved; then, interest on loans, if any exist; so much per cent. to compensate for the depreciation of the society's fortune; interest on the capital subscribed, never exceeding five per cent. Out of the surplus come the authorized expenditures, increase of the floating capital, purchase of goods, investments. Finally, two and a half per cent. is reserved from the remainder for the educational department. This consists of a library, a reading-room for newspapers, a hall for public meetings, lectures, and social reunions, at which tea, dancing, and singing are in order.

These statistics do not tell the whole story, but they at least show that it is possible for working-men, laboring under far greater difficulties than oppress them anywhere in America, to gain means of culture, and vastly improve their condition, without special legislation for the purpose. They demonstrate the practicability of so uniting the humble means of laboring men and women as, under good management, to build up a business which shall not only rival that of the wealthiest individuals, but which shall also have the glory of raising its contributors to a loftier plane of life, and to perhaps as great a delivery from grinding toil as is compatible with our present industrial instrumentalities.

WHY ARE OUR RAILROADS NOT LUXURIOUS?

We trust the completion of the Pacific Railroad, whenever it takes place, will lead to a radical reform in railroad accommodation. Whenever people will have to spend a week in the cars crossing the great central desert, with no opportunity and no inducement to stop and rest, even corporations, we should think, will acknowledge that they are bound to provide something better for passengers than is now offered them. We ought to have—and anybody who had had no experience of our

railroads, and drew his conclusions about their condition from what he knew of our manners and customs, would suppose that we had —the most comfortable and elegant railroad cars in the world; that the art of getting over great distances with a minimum of fatigue and inconvenience had been carried to a point of perfection amongst us such as is nowhere else witnessed. We have infused into the art of hotel-keeping a completeness and finish which before our day were unknown. Before the appearance of our great hotels, such accommodation as they now furnish to travellers was only attainable in Europe by persons of very great wealth. People of moderate means never sat down to such meals, in such rooms, or enjoyed or thought of enjoying such a variety of conveniences as were supplied before the war in nearly every city in this country for a sum which all but the poorest could afford to pay and did pay. And it is only within the last seven years that the English and French have thought of imitating us in this. The Lord Warden Hotel, Westminster Hotel, and Palace Hotel, and Grand Hotel, and Hotel du Louvre, are all copies of American models, though we admit they have in some respects improved on the originals. In like manner we were the first to do away completely with all distinctions of dress, and set everybody to "dress like a gentleman." This, we believe, is the only country in the world (the remark is, at least, true of the Northern States) in which there is not and never has been a costume peculiar to peasants and farmers or to persons of a certain condition in life. Every man, woman, and child amongst us dresses very nearly like every other man, woman, and child—that is, when they have their best clothes on. In the cities, of course, some wear richer material and indulge in a more fashionable cut, but it may be laid down as a general rule that there is no very marked difference in appearance between a mechanic in his best suit and a clergyman or a judge or a wealthy merchant in his. All dress well—better than any other people, as a whole, ever dressed—and, if anything, too extravagantly.

In like manner we have indulged in such hackney coaches as were never seen in any other country. The genuine American "hack," as it is to be found from Maine to California, a sort of modernized "glass coach," such as people went to court in in Queen Anne's day, surpasses with all its faults any other vehicle of a similar class in the world. It is warmer, better upholstered, more gorgeous to behold, better horsed, driven by a better-dressed rowdy, and costs more than the hack of any other country. It is, in fact, very much such a vehicle as noblemen in the Old World drive about in, barring the dirt. It is, of course, enormously expensive, unnecessarily heavy, and has one horse too many; but then, for some reason or other, the public has never shown a disposition to be content with anything less. We doubt very much whether the cab or fiacre, in which well-to-do people of the middle classes in London and Paris are content to go to parties and the theatre, would, if introduced here, meet with complete success. The hack would still flourish for many a day as the time-honored "carriage" of the American citizen.

The American barber's shop, too, is one of the most marked signs of democratic *exigence*. Nowhere else does a man who wants to be shaved find himself surrounded during the operation with so much buhl, ormolu, upholstery, and mirrors, and stretched on so easy a chair, and relieved of his beard with so much skill and consideration, and scoured with so many unguents, and "vivifiers," and "invigorators," and "purifiers." Anybody who has tried the resources of foreign shaving-shops knows what a barbarous and disgusting process shaving in them is—how coarse, and clumsy, and tedious, and uncomfortable. And the reason is that, in Europe, a small portion of the men have valets to shave them, and a very large portion like to imitate them, and pretend they have valets; so that nearly all shave in their own dressing-rooms, and leave the public barbers to the ignoble crowd. Here, on the other hand, every citizen in any of our large cities, who can raise ten or fifteen cents, can enjoy very much the same luxury which the European dandy enjoys when he gets out of bed, puts on his dressing-gown, and gets his John or his Thomas to put his chin in order for the day, to say nothing of the "Bay rum," of the virtues of which we doubt if any "bloated aristocrat" has any idea.

Now, why is it that while so much of what is the luxury of the few in other countries is here made the comfort of the many; while our people are, in some respects, the most self-indulgent in the world, the least trained in self-denial, they are content, or have to be content with railroad accommodation which may, with propriety and accuracy, be called piggish? How does it happen that while a hotel-keeper ransacks earth and air to provide dainties for anybody who can muster two or three dollars a day for his board and lodging, untold gold cannot find for anybody, on any railroad in the country, a window that opens easily, a stove that warms his feet, a place in which a woman or a decent man can be secure from the presence of rowdies and the squirting of tobacco juice? What is the reason that the average American citizen finds himself, on coming down to the railroad from his palatial hotel, dumped into a small room, dirty as a cattle-pen, close as an oven, and with as little provision for comfort as a police station? Why, when you go on a long journey on any of our great lines, is it impossible to find a seat that is not an instrument of mild torture, in which people's elbows and knees are protected from hard angles of wood, and in which a weary woman can find a place to lean her weary head against? Why, when she is able to sit up no longer, has she to throw herself on the bony shoulder of her "male protector," and snatch a little fitful sleep in postures that are as ludicrous as they are uncomfortable? Why is the American "refreshment saloon" a repulsive den, in which the food is literally thrown to the guests, and gobbled with almost as little profit for soul or body as if it were burnt in honor of Jupiter?

Arguing from analogy, one might fairly expect that in whatever way the Emperor of Russia travelled on railroads in Europe, Tom, Dick, and Harry would, with of course certain modifications, travel here. These gentlemen live at their hotels very much as he lives; drive about in much such carriages as he does; receive much the same kind of attention from the public valets; and have very much his notions of what comfort is. Now the Emperor of Russia, when he travels, has a special train, one car, we suppose like the saloon of a steamboat, in which he sits in a comfortable chair, walks about, or lies down on a sofa. Another carriage is a dining-room, in which he sits down at a well-furnished table to a good dinner, cooked on the train, and he takes this meal with his suite as easily and comfortably as if he were seated in the Winter Palace. Another car is a bedroom in which he can go to bed if he likes. Now, how is it that, with our enormous lines of railroad, our love of luxury, our riches, our power of organization, our inventiveness, our mania for travelling, we have as yet made no approach to the conversion of the railroad car into what it ought to be, and will be yet—a hotel on wheels? And not only this, but we have hardly carried it one degree beyond the common baggage-wagon. A square box, with the rudest kind of windows for the admission of the light—with no constant means of ventilation or of heating the feet—with no protection for the knees or elbows from the hard wood—with no more space for each passenger than is sufficient for a small person to squeeze into—with no provision for change of posture or of place—no arrangement for the supply of any refreshments except pop-corn, apples, and candy, is just the means of locomotion which we might expect an intelligent Red Indian to devise, if we once got him to acknowledge the necessity for any railroads at all. The answers to all these questions we must attempt hereafter.

EDUCATION IN THE LATE REBEL STATES.

The spirit of the great question of reconstruction is, when divested of all side issues, simply this: Will "the South," when re-admitted, be true to the Union, and will the Union men and negroes residing in the late rebellious States be allowed to remain undisturbed in their rights as citizens?

Passing over the promises of loyalty from people whose most frequent utterances at present, whether in the press, on the rostrum, or from the pulpit, are thinly disguised threats to renew rebellion, we would direct observation to the vigorous and apparently well-organized efforts now made in the Southern States to prevent the blacks from exercising their civil rights, by hindering them from learning to read—a subject appealing in many ways to the sympathy and sense of the North.

From the Vicksburg correspondence of the Memphis *Post*, dated

February 28, 1866, we learn that, according to the report of the Freedmen's Bureau of Mississippi, this petty persecution has been carried on with great energy in every part of the State. There are only eleven places in all the State that report schools for freedmen, and the fact that there are so few is certainly not owing to the want of vigorous efforts by the Bureau. In Columbus, the difficulties interposed by the citizens were so many that the schools were very soon closed. Many of the citizens informed their servants that if they sent their children to school, they, the servants, could not retain their places. In fact, this opposition to educating colored people has been uniform through the State, and is evidently organized with ability and sustained with strength. "In several places," continues the report, "the colored people have been allowed to hold *religious* meetings in basements of churches, or in old church buildings that were forsaken by the whites; but whenever they attempted to use these buildings for *schools* the white people have uniformly opposed it," except at Aberdeen, in which place, to its honor be it said, the town council actually encourages the schools. In most of the towns the municipal government is openly hostile to teaching the blacks. The following items of information on this subject are very significant:

"At Oxford the scheme has been rendered totally impracticable by the presence of Rev. Dr. Waddell, president of the Memphis University of Mississippi. The people have driven out from their place the missionary sent there, though he was a Southern man. They have fired four shots at an old Episcopal minister at Okolona, because he was teaching the colored people."

Every species of petty trick or prevarication is resorted to by the families employing negroes to prevent the latter from learning. "Colored persons are engaged as apologies for teachers; the family *promises* to teach; anything is resorted to rather than employ the hated Yankee school-teacher." But it requires only a limited knowledge of human nature to perceive that this opposition to teaching the blacks is the surest of all means to ensure their learning. Few persons are aware of a very singular fact, that within little more than a year the relations between the whites and the blacks in the Southern States, as regards the ability to read and write, are almost reversed. From the muster-rolls of the Union troops of Tennessee it is shown that in that State only one *white* man in eight, nine, or ten, according to his place of residence, can sign his own name; and this, according to General Benjamin F. Butler, who has examined sixty thousand names on similar rolls, is true of all the late rebel States. As the Union men of the South were generally more intelligent and better educated than the rebels, it is evident that this estimate is a very favorable one for the entire white population. In fact, there is not a country in Europe where the peasantry are so illiterate as the native whites of our Southern States—Ireland perhaps excepted, but not Russia or Italy. A paragraph has of late appeared in many American newspapers, lamenting the extreme ignorance of the French peasantry, from which it appears that in France from one-half to two-thirds of the people are unable to read or write. That is to say, the most illiterate Frenchmen are three times better educated than the white native Americans of our Southern States, or, at worst, are fifty per cent. higher in the scale of education! And it is a mistake to suppose that these ignorant Americans are all necessarily poor. In fact, there are very few *poor* whites there, since most of them have as much land as would make any Yankee rich unless he were extremely lazy. Even in Virginia it is a very common thing to find men owning from one to five thousand acres of excellent land who cannot sign their names to a deed.

Those who hold that the whole black race should be excluded from political rights, because some blacks are ignorant, have in the foregoing facts a hard nut to crack. Between white and black ignorance there is for political purposes no difference. Anybody to whom the latter is terrible, is bound to make provision for the former also, and is, in fact, logically precluded from talking of any electoral test whatever, except an intelligence test. While, too, the whites remain in contented ignorance, school-books, literally by the million, are being sent all over the Southern States and are purchased by, or given to, the "contrabands," and the reports recently submitted to Congress show that the books are not distributed in vain. If schools are broken up by town councils and put down by the influence of the reverend Waddells of Secessia, still the primer and the Bible are conned by the pine-knot light in the negro cabin or deep in the silent woods, for the *will* to learn is working in hundreds of thousands of simple minds, and they are still free enough to find the way easier than it was of old. Nothing is stranger than this persistent blindness of the late rebels to the fact that, so long as learning is a forbidden fruit, it will be sought for with a keen appetite. And it is sought for with such eagerness that it is no rash prediction to declare that in two years' time the South will present the extraordinary spectacle of an illiterate race claiming to be more refined and intelligent than one which can read and write!

CLERGYMEN'S SALARIES.

A PROMINENT religious journal, with abundant ability to procure information, and the strongest motives for ensuring its accuracy, publishes the following statement of the rates of compensation paid to clergymen in the State of Connecticut. The figures are taken from the minutes of the General Association. From these minutes it appears that three pastors have no pay whatever; one has $100; one, $200; one, $300; nine have $400; thirty-three, $500; one hundred and four, $1,000; forty, $1,500; sixteen, $2,000; four, $2,500; and three, $3,000 a year. No salary of more than three thousand is mentioned; the average remuneration in the several counties is given thus: in Windham Co., $653; in Tolland Co., $728; in Middlesex Co., $819; in New London, $848; in Litchfield, $880; in Fairfield, $1,044; in Hartford, $1,060; in New Haven, $1,127.

This statement respecting the condition of ministers of religion in New England, and, of all places, in Connecticut, the stronghold of New England orthodoxy, even where it excites no surprise, must awaken serious reflection on the religious state of the community. The largest salary mentioned in the table is insufficient for the support of a man and his family in days like these; and but three ministers receive that. Fifty-six receive what at the best is scarcely more than a pittance; and forty-six receive less than a pittance. These men must eat and drink, and have wherewithal they may be clothed, even if they are not over-anxious about such things. They must have a roof over their heads. They are generally, we may presume, married; at all events marriage is a privilege which cannot be refused them. They have families of children, large in proportion to the smallness of the stipend. They are, moreover, in most cases, educated men, whose mental furniture has cost money, and is so much capital invested in their profession. Their profession demands all their time, as at present conducted. It leaves no leisure for other means of obtaining a livelihood; and if it did leave leisure, it leaves no ability or aptitude for money-making pursuits. Its duties, by their very nature, disqualify men for practical affairs; they carry both mind and will far away into regions remote from every kind of market, even from the market of literature. Their time, their strength, their feelings, sympathies, efforts, even their flaccid purses, are incessantly and mercilessly drawn upon by all sorts of people, who make them do their work for them, and offer them no compensation, often not even gratitude, for important services. The poorest class in the community, they are the most pitifully fleeced class in the community.

It is urged that they are the most privileged class, too; that they are universally honored and beloved; that the best social position is cheerfully awarded to them as by right; that all doors are open to them; that they are admitted to intimacies such as no other class of men are indulged with; that they enjoy the distinction of being reckoned a purely disinterested and self-sacrificing order of men, whose reward is very certain in the next world and whose impecuniosity in this life is abundantly compensated by the wealth of good-will that is lavished upon them! All this is willingly conceded, so far as the social privilege and the parochial affections are concerned, but we cannot see the relevancy of such considerations to the case in hand, so long as all this social privilege and saintly fame amount to so much practical impoverishment. "Fair words butter no parsnips." In this case they cause the transfer of the parsnips to another man's mouth. A reputation for disinterestedness is a very fine thing, but it will not pay the shoemaker, or the schoolmaster, or the stationer, and it goes a very little way towards paying the bookseller. It is fair, perhaps, that one's love for his neighbor should make him rich for the next world, but his neighbor's love for him should put something in his pocket for this world; and this precisely it fails to do.

The argument that, on the whole, ministers receive about as much as they are worth, is plausible at the first glance, but it has no force. For why are they not worth more? Simply because they have no means to make themselves worth more. Their natures are starved by their povetry.

Mental nutriment cannot be obtained, for papers, magazines, pamphlets, books, the only and the indispensable food for the mind, are very expensive. They cannot enlarge their observation or increase their experience of the world by travel; they cannot profit by the stimulus of better minds, for they gain no access to the intellectual centres where such minds congregate. Their health suffers from enforced confinement to one spot summer and winter. No variety of scene or of influence changes their mood or refreshes their spirit. No inspiration from mountain or ocean gives them new hope and vigor. What can be expected from men shut under the cover of an exhausted receiver? Where is the stuff for sermons, or for prayers, or for spiritual consolation and quickening to come from? The spirit is powerful and should be put to its power; ministers should not be so well paid that they can dispense with it, or that it can dispense with them; but certain temporal conditions must be conceded in order that the spirit may work at all.

That these conditions are less faithfully met now than they were in former times, we have no right to say. Probably they are not. Perhaps the clergy are as much respected as they ever were. We have seen no proof that their stipend has anywhere been diminished. But that is not the point. The stipend should be greatly increased to meet the material and the intellectual demands of the time. The scale of prices in the intellectual world has kept up with the scale of prices in the physical world. It costs at least as much, in proportion to the requirements of the last generation, to keep a man's mind fully up to the standard of culture at present maintained, as to keep the man himself up to the same mark of animal comfort. The old salaries, even when eked out as they used to be with the minister's fire-wood or an occasional barrel of potatoes, are not enough, nor anything like enough. Ministers *never were* paid sufficiently; and the reason why they are not paid sufficiently now must, in our judgment, be sought, not in any local or incidental change in the public mind towards them; not in any altered relation between them and their parishioners; not in any disrespect or coldness towards them as a class; but rather in certain general dispositions which we can by no means applaud, but which we must wait on with such patience as we can command.

We account for the general "exploitering" of the clergy, first, by the fact that men will not pay more for any kind of service than they are obliged to in order to have it; and as women, and clergymen, who are supposed to be a cross betwixt men and women, are in the habit of taking what is given them as a favor, making no remonstrance, they are kept without compunction on starvation prices. People wonder how they live; but so long as they do live and do not rebel, it is presumed they are content. It will be soon enough to pay more when they demand more. In the next place, the uneducated lay people—be they farmers, shop-keepers, mechanics, traders, or even merchants—have no comprehension of the wants of intellectual men; no doubt in many respects they fancy their own wants to be greater. They can understand that the minister may need less meat and drink, being of a "spiritual" mind; that he can dispense with carved furniture and heavy draperies, with mirrors and Wilton carpets, with paintings and bronzes, and such like gauds of the world; but they do not understand how necessary it is that he should have books, magazines, society, and, above these even, that intellectual repose, that freedom from anxiety, which to themselves would be simply intolerable. They therefore make provision neither for the things he is supposed not to wish for because he is "unworldly," nor for the things they cannot see that he wants because he is intellectual. They starve his flesh because he is not carnal, and they starve his spirit because they do not know what it is to be spiritual.

But more cogent than either of the two reasons assigned for the low rate of ministerial compensation is, probably, a third reason, namely, a general want of appreciation of ministerial service. That such want of appreciation should be found in New England is very remarkable, and is a strong evidence of the fact that people usually are indifferent to all affairs but their own. In New England no class of men are practically of more value than the clergy, and the same is, to a large degree, the case in all our communities. Besides preaching the Gospel and doing pastoral work in families on all the most trying occasions of life, they are the general patrons of education and the superintendents of charity. They serve diligently on school committees, they supply lecturers for lyceums, they are called on for addresses on all occasions; they perform a vast deal of literary work that seems to belong to nobody in particular; they manage benevolent enterprises and work the associations that are organized for the benefit of the poor, the unfortunate, the abused; they save time and money to the whole community, as the community would soon feel were their efforts to be suspended. In small towns they are useful in keeping alive, even in creating, the taste for literature, art, and cultivated intercourse. They start the book clubs; they form the reading circles; they encourage the debating societies; they lead in refined entertainments. All this is worth money, and, if estimated at its value, would bring money. Such a class of men should not be treated as worthless and unaccountable rubbish.

How it is to end no one can certainly say. We venture the opinion, however, that matters will not go on from bad to worse. The religious sentiment must have organized and instituted expression in the communities of men. When the present profuse experiments in lecturing, lay preaching, "inspirational utterance," and trance speaking shall have been fairly tried, it will be found, we doubt not, that the best way of obtaining wise and useful religious teaching is to have a class of men gifted for it, educated in it, and devoted to it through their lives. We are inclined to believe, too, that the need of such a class will be recognized more as the people advance in intelligence. Increased culture will bring increased appreciation of culture in this highest form of knowledge; and instead of reducing the ministry to yet lower terms, if lower be possible, rational men will supply them with more abundant means of support, will exact of them higher service, and will hold them in greater honor than before.

FLOORS AND FLOOR COVERINGS.

Under ordinary circumstances and in ordinary houses the floor of every room is covered with carpeting. It is generally assumed that the natural state of a room floor is to be covered with carpeting. Floors are finished with sole reference to this sort of covering, and are expected to remain invisible all their days, except at horrid moments of house-cleaning. The ideal of flooring is supposed to be attained when it is brought to such smoothness and solidity as will best ensure the duration of the superimposed textile fabric. The yellow pine, which we have not been able to get since 1861, is only regretted because it was so hard and durable. White answers as well. In the best houses the floors are carefully laid; the width of the planks is limited to two and a half or three inches; they are driven together with tongue-and-groove joints and edgewise nailing to the joists; but all this only to secure a level and permanent surface for the carpet to rest upon, not to be disturbed by warping planks and starting nails. He who would build him a house, if he or his wife be thrifty and thoughtful, instructs his architect to determine the width of rooms with reference to "breadths" of carpeting; the second-floor rooms, at any rate, to be thirteen feet six inches, or fifteen feet, or some multiple of half a yard wide inside the mop boards, since the carpets used there will be "ingrain" or "three-ply" yard-wide stuffs. And then, when the furnishing is in hand and the carpets to be bought and laid down, the carpet-seller's employee comes and measures carefully into angle and recess, and the carpet is sent home an accurate cast of the floor.

Such being our custom, our universal custom, in America (it is very unlike the custom elsewhere, as we shall see), it behoves us to consider, first of all, what good can be got out of the observance of that custom. Nine people in ten will always do what is easiest and cheapest in these matters of decoration, and it is, of course, always easiest and cheapest to do as the world does and to get mechanics to work as they have always worked before. The matter-of-course way is, then, to go to the store and choose a carpet, and have it made up to fit the floor. Are there any principles involved in such a choice?

This one there is, that the carpet must be subdued and not calculated to attract attention; and this one also, that it must be dark rather than light in color. It is a mistaken notion, as we remarked on a former occasion, that the carpet should be the predominant piece of decoration in the room, giving the key-note of color to everything else. Wall-painting or paper is of greater importance; ceiling decoration in color is of greater importance; curtains, if large and of heavy, full-colored fabric, are of greater importance. These are in a better light; they are in a better place to be seen; they are not changed, or only the curtains are changed, by changing seasons; they are not so continually soiled and injured; they are in consequence less rapidly worn out; they are much more susceptible of delicate and varied decoration. A carpet is a hard-worked servant, and is, therefore, not to be in too rich a livery. A carpet is put in just that place of all the room where it can be least easily seen, the light falling on it in every way but a good way. Furniture hides the pattern, soil and wear mar the colors, sweeping with a common broom is exactly the sort of currying one would choose to take all the character out of a design he might not like. All woven fabrics are to be designed with reference to their uses, and those which are used for rough work and liable to rapid defacement should not receive too varied and resplendent chords of color or delicacies of design. Moreover, of all textile fabrics to which ornament is applied, carpets are perhaps the coarsest, and this coarseness of grain interferes with the delicate colors and subtle

forms. The gradations look badly when you can count the stitches and, with them, the successive shades of color which make up the shading. The curves look badly when the eye resolves them into steps and jogs. We are speaking of the more commonly used varieties of carpet. Oriental carpets are delicate in pattern and in color; fine, too, in material; some of them are solemn and rich, and some blaze with brilliant harmonies of color. The Eastern idea of a carpet is splendid enough; but what is the Eastern idea of the use of a carpet? Not to walk on it with the boots which have just come from the street; not to cut it out into shapeless shapes to fit a shapeless room, and then nail it down; not to leave it nailed down from October until May, harrowing it the while with bundles of broom-corn; not to roll about over it bedsteads of half a ton weight, supported on little wheels; but to sit on it, sleep on it, and pray on it.

For common use, then, the best carpet will be that which is the least salient and pronounced in general effect. Rich colors are good—pure red and pure blue—if so mingled in small masses that a dark and grave general effect is produced. Large patterns may be good if not too prominently relieved upon the ground color. Small patterns are safer, because their design is much more apt to be inoffensive and quite as apt to have actual merit. Flower patterns are excluded, as a general thing, because flowers can be but poorly rendered by the carpet-loom, and these are ugly things which would pass off their jagged edges and crude contrasts of color for the beauty of blossoms and leaves. Patterns of imitated relief, projections and depressions with cast shadows, are, of course, inadmissible. Negative laws of choice are of binding force, positive laws much less so; for of the patterns offered the would-be buyer for his selection but few will be passable, and, perhaps, none will be actually good. The chooser's first act will be to put out of the question ninety-five pieces of carpet offered him as each the "newest thing" and latest fashion, and the next to wonder which of the remaining five will be the least insupportable. In this matter his choice will be, if he is wise, of a very grave and simple carpet indeed.

People who, either because they enjoy moving or from some other cause, pack up their belongings every year or two years and flit to a new habitation, are in constant torment because their carpets are so hard to adapt to the sizes of their new rooms. They cut down and fold under, patch out and re adjust, with great want of economy and poor effect. If any device would relieve them and make the carpet that helps furnish one room more easily available for another, it would be a real gain to society. In this matter we might take a hint from the Orientals, different as we found their practice to be in almost all that relates to floor-cloths. All fine carpets made for their own use are made with borders. Borders are essential in all their designs, as they are, indeed, in almost all cases of ornamental design; we found them very necessary in our wall-papering and wall-painting—we shall always find them necessary when it is a question of a really beautiful and significant design for the ornamentation of ceiling or floor. And, in the case immediately before us, the use of a border to our carpets would help us in practical difficulties as well. Suppose the floor to be not just the right width from mop-board to mop-board to be covered exactly by so many breadths of carpet. Suppose it to be very varied in outline by recesses and projections. What matter, so long as we can use a border? Borders agreeing with some kinds of carpeting are for sale at the carpet stores. When these are not available, one carpet will often make a good border for another. If the room is small and to be covered with ingrain carpeting, another piece of ingrain carpeting, split, will make a border eighteen inches wide, which will be wide enough for the widest part. The projection of the chimney-breast will cut into it more than half its width; perhaps, if the hearth is to be left uncovered, the border on that side of the room must be three feet wide; but the other variations in outline of the room will not encroach upon it seriously. In buying carpet for a room, then, the centre part will be covered three yards wide or four yards wide and of convenient length, this parallelogram of carpeting not to be altered in outline to suit the present or any future room, all those alterations and cuttings and doublings under to be the lot of the more easily modified border.

But, after all, these and all other expedients of the kind are but compromises. The true floor is made to be seen and used; the true floor-cloth, like a table-cloth, is made to lay down and take up at pleasure, and to roll up, carry out, and shake once a week. We call ourselves civilized, and broom our nailed-down carpets till the dust flies, and the carpet is ruined. Our bare floors we do not sweep with brooms, but with soft brushes with long handles; well, all our floors should be bare floors when sweeping time comes, and all the carpets hanging out of the back windows. People in Germany and in France have no nailed-down carpets, but waxed or painted floors, and such floor-cloths laid upon them as they need, according to the season, and the permanent or temporary uses of the room. In summer one wants no floor-cloth, except a rug under his writing table, and one at his bed-side. Floors must be made as handsome as we can afford for summer wear. Or, if one likes Chinese matting as well as we do, the Chinese matting that the Chinese use is not in yard-wide rolls to be nailed down, but in square and oblong mats, and very fine it is and beautiful in color. In winter our living rooms will be pleasanter with a parallelogram of the heaviest and softest carpet we can afford in the middle of each room. Probably we could afford better stuff than now, if such a piece were all we had to buy. The furniture next the wall should stand upon the floor, the carpet coming close to the front of sofa and arm-chair, to receive the feet of the sitter. There are several ways of overcoming the only real difficulty in this case, namely, the disposition of the edge to curl up—lining, loading with "tea lead," the application of a heavy fringe, etc., of which the last is usually the best. Experience has shown the practicability of such a plan of floor covering, and those who care for actual beauty in their rooms, if they are masters of the situation, are often found to adopt it in spite of tyrannous custom.

A SUNDAY IN WALES.

At the end of the week, not very long ago, I found myself in Cardiff, an ambitious little Welsh city, which, within the space of forty years, by the prophetic enterprise of the late Marquis of Bute in spending £400,000 of his pocket-money on its docks, has been raised from a beggarly hamlet of feudal reminiscences to be a rich and growing mart with thirty thousand inhabitants. I was anxious to pass the Sunday in an atmosphere of unmitigated Welsh; and Cardiff, I thought, resting on the rim of the sea, with the flags of all nations flying over its docks and the tongues of all nations chattering in its streets, had sunken all Cymmric individuality in the complexities of a bustling seaport town—that medley of wild, wanton, ravenous sea-monsters let loose upon land; that Babel of uproar, dirt, and polyglot profanity; that saddening hotch-potch of whatever flits or floats of the scum of nations. I resolved, with the morning light, to go inland a few miles, up among the mountains of Glamorgan hire, and find a genuine Welsh village, hear a genuine Welsh sermon, eat a genuine Welsh dinner, and see what a genuine Welsh Sunday is like. I had the luck to pitch upon the name of Caerphilly. So to Caerphilly I went.

The train, which seemed half reluctant to disturb the drowsy quiet of Sunday morning along the valley of the Taff, yet tried to appease its conscience by carrying a few Methodist and Baptist exhorters and dropping them tenderly at their several preaching stations, reached Caerphilly just as the more tardy villagers were straggling to their churches. Situated about half a mile from the station, in the midst of a vast circular valley, whose circumference is a coronet of kingly mountains, this quaint, irregular, and very ancient village of eight hundred inhabitants crouches beneath the ruins of the famous old Caerphilly Castle, next to the royal castle at Windsor the largest in the kingdom, and now, in its decay, the most majestic, the most extensive, and the gloomiest of the remains of ancient English architecture. I remembered some lines in "The Norman Horse-Shoe" of Sir Walter Scott:

> "And forth in banded pomp and pride,
> Stout Clare and fiery Neville ride;
> They swore their banners broad should gleam
> In crimson light on Rhymney's stream;
> And vowed Caerphilly's sod should feel
> The Norman charger's spurring heel."

Before alighting from the train I had a glimpse of the immense, solemn walls of the old castle, of its mouldering battlements, of its huge towers, standing in the grandeur of a mighty sorrow and calmly awaiting, age after age, the slow hostility of fate. Though eager at once to visit the wondrous relic, I saw that now was my only chance of being present at a service in Welsh and of hearing a specimen of that celebrated eloquence, the eloquence of the Welsh pulpit. I knew the old castle would keep. I was not so sure that the sermon would. Dropping into a stream of villagers along the road and listening to the incessant click and rattle and bang of their Celtic words, I was told by a man to whom I addressed myself that the best preacher in the place was he of the Baptists—a verdict of rare sectarian magnanimity, as the man was going to another congregation. A brisk walk soon brought me to the Baptist chapel, and as I approached I was made aware that the work had begun in earnest. The two doors were open, a very fervent prayer was being uttered, and many of the congregation had risen and turned about in their pews, bowing their faces upon the pew backs. Several of them, who were not too far rapt in prayer to perceive a stranger standing in the vestibule, condescendingly peeped through their fingers at me, and then pointed to a seat.

The room was nearly square, with a lofty old pulpit at the end opposite the doors, and a gallery running round the other three sides. It was well

filled in every part. The minister was a young Welshman, with thick black hair parted in the middle, with dark, massive, and tough features, and an intense expression. His voice was incisive and sharp. The hard Welsh words were hurled from his tongue like stones from a catapult. There were the Celtic fire and passion; the consciousness that, in the simple minds of his hearers, he was invested with a mysterious authority, an appearance of invincible earnestness and determination. I could easily accept him as a very likely young Druid—if Druids were ever young.

The congregation seemed composed of plain country-people, shopkeepers, miners, farm laborers; and one portion of them, from first to last, enchained my attention. Directly in front of the pulpit was a large square pew, capable of holding about thirty persons, obviously a place of eminent and solemn honor; and on this occasion it was filled with men, mostly old men, all of them apparently being the more advanced and redoubtable saints of the community, the veterans and senators of the spiritual host. The lesser saints and the average sinners were accommodated with subordinate sittings at the sides and back of the room, or were comfortably stowed away in the gallery; but into this great central box, as into a sacred enclosure, had gone the potent, grave, and reverend seniors of the flock; and I found that their function in the exciting exercises of the service was a very important and picturesque one. Some of them were men of strange visage; they seemed a group of the seventeenth century Puritans, confessors, and religious heroes; they had grim, iron old faces, stiffened into preternatural rigidity by the awfulness of their Sabbath occupation, and by the two or three centuries which they had evidently lived; altogether they had the air of men who fasted and prayed; who defied the world, the flesh, and the devil; who kept the eye fixed on one thing with a gaze to be distracted by no terror and by no fascination; who came into the world on purpose to be prophets, apostles, martyrs, and Baptist deacons.

All this time the prayer was going on. Not one word was intelligible to me, and I was left to give my whole attention to the strange tones of the preacher's voice, to the anatomy and cadence of his sentences. There was something weird and impressive in it all. His utterance did not flow, it came forth in jets and gushes. Then at every clause a series of inarticulate guttural sounds issued from the midst of the great pew, and occasionally from other parts of the room. At last, the audible character of the prayer underwent a sudden and startling change: it rose high above the already fervent level, at which I had first heard it, into a sort of ecstacy, and then followed the wildest and most electrical sounds I had ever known. The speaker's voice became transfused by a terrific enthusiasm, the words leapt forth in torrents; they were not a vulgar shriek, they were not a canting bellow; they were a real old magnificent Druidic chant, the sentences taking their places in perfect rhythm, flowing and ending with a cadence so mild, so poetic, so mysterious, that it made the blood thrill in one's veins. The effect on the congregation was wonderful. From the depths of the great pew the responses heaved loud, swift, distinct, and impassioned; they were re-echoed all round the room, and even in the gallery; and when, at last, this devout ecstasy of prayer lapsed into sudden silence, the cries from the whole congregation of amen, and of certain Welsh ejaculations, continued for nearly a minute, like the lingering and passionate reverberations of the speaker's own voice, or as if the people would storm heaven with a love and a desire that could not give over the supplication.

In Cardiff, afterwards, I was told that this stage of vocal and emotional ecstacy is the necessary final act of all Welsh prayers in public, and, as I soon discovered for myself, the necessary climax of all the important passages in the sermon. For ages the people have been accustomed to it. They await its coming as the sybil might have waited for the rushing descent of the god. Their fiery Celtic natures are inflamed and electrified by its magnetic delight. It is a tempestuous spiritual intoxication to them, a spasm of devout frenzy, a rhapsody of heart and brain struggling toward the Highest in an agony of prayer and praise. The Welsh ministers themselves, from childhood accustomed to observe its manifestations, unconsciously cultivate the art of reaching this rapt, impassioned stage. They learn to work themselves up to it whenever they preach or pray, like the lions referred to by Montaigne as goading themselves into madness by the lashings of their own tails. Yet, concerning these Welsh preachers, I do not mean to imply anything affected or disingenuous in their habit; and I can testify that its manifestations are as far as possible from being repulsive.

Next came a hymn. It was abominably sung; nay, it was not sung. Through linked discord long drawn out, it was simply twanged; the venerable patriarchs in the large pew, more especially, employing their great, ancient, sonorous noses as if they thought them originally constructed by the Creator for speaking-trumpets and organ-pipes, and that to contravene the divine ordination would have been impious.

At last came the sermon. The preacher began in a low, almost inaudible tone. His manner was so quiet and informal that I supposed he was "giving out the notices." Soon, however, his words became more clear, his tones more earnest; and this fact was immediately signalized by the responses of the assemblage. Thus he proceeded for about ten minutes, gradually swinging into his theme and warming with his thought, accompanied at every step by the audible sympathy of his audience, until finally he seemed to reach the vantage-ground from which to bound forth into what I have indicated as the ecstatic stage. Now came once more those strange wild notes, that hurricane of oratorical rapture, those indescribably impassioned and rhythmic sentences which I have spoken of as concluding his prayer, only in the sermon borne onward by greater freedom of gesticulation on his part and of bodily movement on the part of his audience. In this torrent of Celtic eloquence he stopped as suddenly as before, and began the next article of his sermon in the same quiet tones. This process of storm and calm was repeated, though at shorter intervals, five times in the course of his address. I have never in any other religious assemblage observed such excitement as was manifested in this little rustic congregation. Moreover, long before the conclusion of the service, I saw what efficient allies the preacher had in the venerable lay senators of the large pew. Their devout and even sepulchral mien cast a sort of subduing shadow over the whole assembly. Their heads were the first to nod and sway in confirmation of the preacher's statements; their voices led the ceaseless rumble and shout in response to every sentence which fell from his lips. Those hard, iron faces became molten, and gleamed with enthusiasm. The first notes of the hymn rose from their midst. They were, in look and speech, in act and attitude, the coriphæi and exemplars of devotion.

The sermon lasted but thirty minutes. I had been able to recognize only four words—Jericho, Jerusalem, and Christmas Evans; but I am bound to confess that it was one of the most interesting, exciting, and profitable sermons I have ever listened to. And the foregoing account is, I believe, a fair description of the general spirit and method of the Dissenting congregations of Wales.

I dare not venture upon a history of the Welsh dinner which I got after the Welsh sermon, or of the magnificent ruins I visited after the Welsh dinner. Later in the day, in a delightful walk of several miles down the noble valley, I was struck with the general external observance of Sunday by all classes of the inhabitants. I encountered many groups of people, all in their decent Sunday garbs; and the little children whom I met saluted the passing stranger with quaint marks of respect, which, to one accustomed to the pranks of London urchins, were quite embarrassing. I also saw along my route multitudes of placards posted against walls and pillars, and nearly all of these were the advertisements of quack doctors tendering their compassionate and confidential assistance to persons of both sexes who might be suffering the penalties of imprudence. In lonely rural scenes, amid the quietude of Sabbath observances and the footfalls of returning worshippers, these saffron and parti-colored proclamations had an ominous significance. They recalled, if they did not confirm, the celebrated verdict of the royal commissioners, that Wales is more addicted to sermonizing and licentiousness than any other country in the world—always excepting Scotland!

THE SOUTH AS IT IS.

FROM OUR SPECIAL CORRESPONDENT.

XXXIII.

BATON ROUGE, La., Feb. 27, 1866.

I STAYED in Donaldsonville three days, weather-bound, and, though it was reasonable to expect very bad walking, I escaped from that dirty, squalid little town as soon as blue sky showed itself, late on Saturday afternoon.

I found no opportunity of talking with any citizens of the place except my landlord, a German Unionist, who considered himself a bad representative of the community; but I met two Northern men, one a lawyer settled there and the other a cotton planter, and the agent of the Bureau gave me some information about the freedmen in his district. He said he had no paupers on his hands, and the negroes were all at work at wages varying from ten to fifteen dollars a month for the best hands. The women on almost every plantation were hired by the year as the men were, and not by the day, and yet the demand for labor was not fully supplied. Cases of violence to negroes were of rare occurrence, and the feelings of the planters and laborers towards each other were better than in 1865. While we were conversing a negro came into the office and asked that a letter should be written to his old employer, Mr. La C. As the lieutenant knew, Mr. La C. had promised the boys a part of the crop if they would stay and work with

him, but at the end of the year he made it out that the hands owed him over $300, and refused to give them their portion. They had worked hard, till they puffed same as a bellows, but Mr. La C.'s hand was locked, and it was no good trying to get so much as a copper out of it. Not if he was offered four thousand dollars he would n't work for him again. While he lived there he had built himself a dwelling-house, a corn-house, and a hen-house, and there was a patch of ground that he had cultivated as a garden. He intended to move his forge to Donaldsonville and work at his trade, whenever he could get a job in the town or on the small plantations, and he wanted authority to move the buildings, and also still to use the garden ground. But the garden belonged to Mr. La C., he was told, and it would be impossible to grant that part of his request; two of the houses he built, on his own showing, seven years ago when a slave; he might take away the corn-house, which was but three months old and built of wood saved from the river, but he must touch nothing for a fortnight. A letter was given him ordering Mr. La C. to permit the removal of a certain corn-house now on his plantation, or to appear within ten days and how cause why it should not be removed, and armed with this the man went away. As a general rule, the officer said, the negroes were willing to listen to reason and justice, and in words, at any rate, paid respect to equitable decisions. The case I had just listened to was one of a great many. In 1865 about one-fifth of all the plantations under cultivation in his district were worked on shares, and he believed that without a single exception, in every case where persons worked under such a contract, they found at the year's end that they were in debt to the employer, or that the amount which he owed them was the merest trifle. The accounts kept by the planter always showed that the expenses of the plantation had eaten up the value of the crops, or that the laborer had violated the contract, or was heavily in debt at the planter's store. But even when he was well satisfied that the accounts were fraudulent it was difficult for him to put his finger on the exact spot where cheating had begun. He thought he should have less trouble from this and other causes during the coming season, and that the condition of the freedmen was improving. This he attributed to the operations of the Bureau, declaring that if the South to-day has anything like food enough to keep her people from starving before a new crop comes in, it is due to the good influence which the Bureau has exerted upon the negroes through its officers and upon the planters through the military.

Northern men in Louisiana might get into difficulties, especially if the military should be withdrawn, for a good many of the people that he heard talk were just as loud-mouthed secessionists as they ever were. In such a little hole as Donaldson you could hear it especially frequent; the young fellows and roughs from all around came in there to drink and play billiards; and, if I had ever noticed it, they were very fond of playing the bluff game in their talk when they knew a Yankee was listening. But he himself intended to stay in Louisiana. It was the place for a young man more money could be made than you could make in the North. That gentleman that I saw come in a few minutes before had been a captain in the United States army, and was running a plantation not far from the town. Some time in January he was riding out to his place and he was shot at from the side of the road. He saw the fellow that did it sneaking off. The ball went just across the back of his neck, grazing his coat-collar. He was going to stay, though, for all that. It was only a certain class that did that kind of thing, and sometimes the other side shot too. There had been a fellow living in Donaldsonville, by the name of Le B——, a notorious bully, that everybody hated, but everybody was afraid of. He had killed two men in fights, and had never been put through for it, and nobody dared say a word to him. It was well understood, so the sheriff had informed him, that there was a reward ready for any one who would kill Le B——, and get him out of the way. But nobody killed him, and during the war he was a rebel, of course, and after the war he was bitter. There was a man by the name of F—— keeping a drinking saloon in town, who had been in one of the Louisiana Union regiments. So, one day Le B—— went into F——'s place, drunk, and began to abuse all Yankees and traitors, and finally he drew a pistol. F—— drew his pistol at once, and shot him dead. They arrested F——, of course; but they only put him under two hundred and fifty dollars bond to appear for trial in May, and nothing would be done to him. It would be different if it had been any other Confederate but Le B—— that was killed, but everybody was too glad to get rid of him.

On the second morning of my stay in his house, the landlord called me aside, and said he knew what my business was, and he was desirous of some conversation with me. He wished to explain to me the political situation in Louisiana, so that I might expose the treachery of Governor Wells. The Union men of the State had taken that man up and made him. They put him on their ticket as lieutenant-governor when a nomination was equivalent to an election. Then, when Governor Hahn was sent to Congress, Wells got into power, and in order to perpetuate it he sold out the party that elected him—sold it out to the rebels. Union men were put out of office all over the State, and red-hot rebels were put into their places, and had everything just as they wanted it. He himself was the Union sheriff of his parish, and of course the rebels wanted to put him out; but a sheriff can only be removed by the Senate, and they could find nothing against him. Resign he would n't; but when he saw how everything was going, how Andy Johnson was doing on a large scale what Governor Wells was doing on a small one, he gave up, and did resign. He was getting more and more discouraged every day. While General Canby was at New Orleans, the loyal men knew they had somebody to look to; but when the military were taken away, and he supposed that would be the next thing done, a loyal man might as well go away from Donaldson, for the rebels already had their heels on the necks of everybody not of their way of thinking; and if they were so bold now, what would they do when the soldiers were gone?

I asked him for some facts in support of his assertions.

Why, were there not men, he said, who openly threatened that, before long, no Yankee would be suffered to live in the town? Were there not men who would never come into his house because he was loyal, and other men who always looked in at the billiard-room windows before they entered, and would not enter at all if a Yankee officer was there? There was a person living on the bayou, a few miles from Donaldson, who had been fined five dollars, in 1861, for not being present at a Confederate muster. He was prosecuted, and judgment was obtained against him, but the fine and the costs were never paid. Here, last week, a rebel justice had endorsed the old writ of seizure, and a constable had actually gone to the man's house and levied on his goods for the amount. The facts had all been made known to General Canby, and he would straighten out these fellows; but what would be the condition of things when there was no General Canby in New Orleans? A neighbor of his, a shopkeeper, was notified, not a month since, to pay his tax. All right, he intended to pay it, he was an honest man; but it is customary to allow ten days after such notifications, and the man, relying on the custom, did not immediately carry in the money. In a day or two he was arrested and carried before the mayor, as big a rebel as could be, who fined him thirty dollars and confined him in jail forty-eight hours as a punishment for refusing to pay his tax. If I thought that was improbable, here was another case that he would prove by two or three good witnesses. When his own tax bill was brought in, he was surprised at the largeness of the amount, and resolved to make some enquiries at the collector's office. But the fate of his neighbor had been a warning to him, and he therefore took two or three military men down with him to hear what he said. He did not come down to refuse to pay his taxes, he told the collector, but they were so much larger than he had been expecting to find them, that he wished to talk the matter over with the collector. He could get no satisfaction from him, and soon came away. By-and-by an officer came from the mayor, and made him go up to the mayor's office, where he was at once charged with refusing to pay his tax. But he was too strong in his witnesses, and they could not effect their purpose. It was such things as these—there were plenty of them—that made him say the rebels had their feet on the loyal men's necks. It would soon be time for the loyal men to leave, before things got to be worse. There was Mr. N——, the lawyer, he had been stopped in the street and threatened with death because he wrote letters to a radical paper.

The facts in this last-mentioned case seem to be these: The newspaper referred to is the *Tribune*, published at New Orleans, and, if I am not misinformed, owned by a number of colored citizens of that city. It maintains the right of the negroes to complete political equality with other men. It has published recently several letters dated at Donaldsonville, for the most part devoted to setting forth the injustice and inexpediency of shutting out the negroes from the polls; but some of the series have touched on matters of local interest, and in one of them reference was made to a citizen of Donaldsonville as trembling at the ghost of a certain man who was described as having been murdered, and whose name was mentioned. The letter-writer might almost as well have mentioned the name of the citizen, too, for it is well known that he killed the other in a quarrel. The citizen, a doctor by profession, accosted Mr. N—— in the street, and demanded of him if he was not the author of the letter in question. In one hand he held a copy of the *Tribune* and a pistol in the other. Mr. N—— said he was not the author. He was commonly said to be the author, he was told, and if it was only certain that he was he should be shot there and then.

The landlord's story about the writ of seizure was confirmed by the lawyer who drew up the papers to be submitted to General Canby and by the

officer who forwarded them; and these gentlemen confirmed also, in all its essential particulars, his account of the mayor's action in reference to the taxes, and drew from it the inference which he had drawn. I asked him how he accounted for the fact that two Northern men, both of whom had served in negro regiments, and who were well acquainted with the community which he described as so hostile to loyalty, were intending to live in it even after the Federal troops are taken away? Neither of these men had done that yet, he replied, and their intentions would be changed. At present they were making money, and the troops were not gone. And though one of them had been shot at, they did not yet know so well as he did the community they were trying to live in.

The rain had hardly ceased when I resumed my journey and was ferried over the river. The levee was wet and slippery, and the afternoon was raw with a north-west wind. I have been told by a Northern man, who expressed some contempt of the natives for never discovering what he pronounced a fact not to be doubted, that an acre of land on the western shore is more valuable by several dollars than equally good land on the eastern, because the season there is warmer and nearly a fortnight longer. The prevailing winds along the coast, he said, are northerly and westerly, and they blow cold from the river, shortening the summer on the eastern bank and retarding the spring. I found the plantations above Donaldsonville larger than those below and the houses more widely separate, so that the road at first was lonesome. The river serves for company, however, with its bends and turns and the plash of its motion, and with its color changing, as one sees it from different points, from silver, through many shades of stone color and dull yellow, to russet and even to red, with patches of blue as the sun shines on the surface and the wind ruffles it. Till half an hour after sunset I walked fast, and then, stopping at the one house in sight, asked leave to stay all night. But the head of the house was away from home. Soon a mule-cart overtook me driven by a negro, who said if I would ride with him as far as he was going he would find me a lodging. I mounted the cart, therefore, and we went on together, he relating his history as we went, for he soon found out that I was from the North, and announced himself as "a whole, thorough-breded Yankee." He was fifty-two years old, and was born and raised in Tennessee. He had never had but two masters. The first was a fine man, Major W——; I must have heard of him? No? well, he was a fine man. He used to be always lending somebody money; 'peard he 'd lent out pecks of silver, and he used to say to him: "Now, master, you 'll lend out all your money till you won't have not a dollar, and some day I 'll see the sheriff come and sell us all up." "Oh no, William." But it was so. The sheriff came and took all the people, and his master had to run off to New Orleans very quiet with him and sell him so as to get a little money. That was the way he came to Louisiana. His wife was left behind, and he took a new one down here. For some years they worked him on the sugar plantation, and then he was made a cooper, and that was his regular trade till the Yankees came. He had done something for his freedom, for whenever the rebels came down in the woods towards the Federal camp, he always left his work, no matter what he was at, and took word to the colonel. And when they began to raise negro soldiers, he started right off for Thibodeauxville, he and another complected fellow, and offered to join the ranks. But the walk swelled up his knees and feet so bad—working in the wet and cold, you see—that they said he was no good for a soldier and would n't take him. That was in 1864. In 1865 he left his master and got work on a place up the road, where the planter promised him one-twelfth of the crop. He worked all the year, found himself a good deal of the time, and how much did I think he got?—and Mr. D—— did n't pay him till the day before yesterday either—how much did I think Mr. D—— gave him for all his share of the crop? And there was nine bales of cotton made too. Just excisely eleven dollars and ten cents!

But he owed Mr. D—— for rations or for goods?

Not a copper. He could prove that Mr. D—— owed him. He let him have a half-barrel of pork, although it was the agreement that Mr. D—— was to feed him. No, there was no bill presented. Old Mr. D—— had his two witnesses there, and called him in as he was going past and offered him the money. He refused to take it; there ought to be over a hundred dollars coming to him, he said, for the pork and all. Then Mr. D—— said the expenses were so great that he himself had n't hardly got five dollars left from his own share; and just think of the old rascal! while he was a-talking he took out his pistol and changed it out of one pocket to another to skeer him, you see. But that did n't skeer him. He had a pistol of his own, and he told Mr. D—— that the pistol was a thing he did n't care about. At last he took the eleven dollars and ten cents and signed his name.

Why did n't he go to the Freedmen's Bureau if he could prove that he was cheated in the settlement?

Well, he 'd been there too much. And he could n't prove how he made the contract. But old Mr. D—— could n't get a colored man to work for him now. One of his friends told him that he was going past the house the other day, and the old man was walking up and down with his hands under his coat behind, and called out to him, "Boy, you want to make hire? You want to make hire?" No, Antone told him. He could n't get anybody to go work for him. Antone knew him, and so did all the colored folks.

He had never been whipped but once in old times, and that was for swimming across the river in trying to save a raft that came floating down. "S'pose you 'd got drowned in that river, you d——d rascal!" his master said—his master owned him, you see—and then he give him, oh, a *fair* whipping. But, gracious goodness, there was licking along that coast! Whoo! They used a hand-saw sometimes; struck with the flat of it; but mostly a whip, or a cat-o'-nine tails, or a strap. The strap was the worst, because it raise a great welt on your skin, and the blood was drawed right through the little holes in the straps. If it was only light he 'd show me a house up above with a big iron ring in the side of it, and the marks of the blood where they whipped the people were on the boards of the house, to be seen to this day. It was a devil owned that place then, but he could n't lick now. He was working this year for a very good man, he said, who gave him his rations and clothes and sixteen dollars a month, and paid the hands their money whenever they asked for it.

It would be long past supper time, he told me, before we reached the house where I could stay, and I therefore stopped at a grocery store to buy some eatables and talked with the storekeeper. He asked for news, but I had none to tell. He never got a paper except by chance, he said. He had heard that the Legislature had passed some bills over the governor's veto, but he did n't know what they were. On this point I was able to give him some information, and he approved the action of the Legislature. Our governor was shaky, must have been shaky, or he never would have vetoed them. Vetoing was the order of the day, though; he reckoned I knew about Johnson's vetoing the Freedmen's Bureau bill. Was n't that a noble piece? I had not seen it, and he proceeded to tell me what it was. He was sorry he had n't the paper with the message in it; every Southern man ought to study it. It took the right ground. It proved that the Bureau concern was a complete tyranny; that it cost more to feed and teach niggers than it cost to support the whole of John Quincy Adams's government. He set it all out, and showed that the radicals were an unconstitutional set, and were keeping the South out of the Union. But they were nowhere. Johnson was doing fine; no doubt about that. He thought we had a right to take our places; so the message said. It was the grandest thing he 'd seen.

We rode five miles, the mule going slowly, and then my guide went to procure me admission to a farm-house a little way from the road, but came back with the statement that no one was at home, and his promise was broken. At the next house I applied in person, but unsuccessfully, and, as it was cold in the night air, I decided to travel no further in the dark, but to sleep in the same house with the driver. It was a negro cabin on a plantation which is in litigation and occupied by but one family. There was only one room for us all, and that a small one, and the family were embarrassed by the presence of a white man as a lodger; but we were received with apparent willingness, and the old couple stripped their own bed to make a pallet for me. A fire of drift-wood smouldered on the hearth, and we sat before it for an hour talking. The husband was younger than his wife, a little black woman with white hair visible under her turban and a troubled expression of countenance. She spoke French better than American, as she called it, for she had been bred in a creole family. The creoles were better masters to live with than the Americans, she said, and the men agreed with her, for though they did not feed or clothe their hands so well as the Americans, they granted more liberty. On the big plantations in old times the hands were never allowed to go anywhere except on the levee in front of the overseer's house, and that made that now they did n't know nothing but just crop. This may account for their ignorance of distances along the road, for I seldom get a correct answer to my enquiries. But, for that matter, a creole family with whom I breakfasted on the following morning, who lived about sixteen miles from Baton Rouge and about the same distance from Donaldsonville, could tell me the distance to neither place.

The old negro, Lewis, told me that the plantation was in court, and that consequently he could make no crop on it this year. Three men claimed it, and none of them would let either of the others give him leave to go to work. My guide explained to Lewis that the reason of their unwillingness was this: when men claimed a farm and another man was living on it, the one of the two men who gave the first order on the place would get it into his hands when the trial came on. That was a rule in law. But it would

be much better for Lewis to move away from there, and get work down where he himself was. His boss would pay him good wages and feed him five pounds a week, and, best of all, would give his money whenever he wanted it—even once a week. Lewis had been thinking he ought to go; he was spending his last dollar there and making nothing, and he had told Mr. L—— so. Mr. L—— would n't make objections to his going either, he thought, but the old woman was too timorous.

"Yes, William," the woman said, "I tell him not to go. Stop where you is, Lewis. Behavior will carry a man. Money thinks it will go furder, but behavior carry you." And she seemed obstinate enough as she shut her eyes and smoked in silence. Lewis changed the conversation, and for some time we talked of the fish of the river, and of the bayous, and of the various reptiles with which Louisiana abounds. I heard such stories of alligators, of scorpions, of moccasin snakes, of rattlesnakes as big as a man's thigh, of the rattlesnake spider, whose bite is more deadly than his namesake's, of the thunder-snake, who can kill a hog, even, and who looks, till you tread on him, like a bit of rotten wood, that I walked more warily all the next day, though as yet I had seen none of these creatures but the scorpion.

Rising at daylight on the next morning, the old woman brought me a tiny cup of very strong coffee, unsweetened, and I went away without breakfast. Lewis, with a readiness to serve me which I have found almost universal among the negroes as soon as they learned me to be a Northern man, walked with me half a mile or more to put me into a road that would shorten the journey. He was anxious to know if it was probable that the negroes would get land of their own, by gift or by purchase. While he had to labor for what the planters would give him, he was n't hardly free from them, he thought. "I 's thankful," he said, "for what I is got. I never 'spected I 'd see it, me;" but still land was a great thing for a man, and made him free and his own man.

"What," I said, "without religion and education?"

Well, he was a member, sinful, he knew that; but he 'd been a member this many year. He was too old to go to his book; but them two little chaps I saw at his house, he wanted them to learn. They knew some reading now, for he sent them to school a while, as long as there was a school. But the people broke it up, took all the doors and windows out, and the teacher went away. That was one of his reasons for wanting to move away, so he could put the children to school. They were not his sons; but if he was earning he would be willing to pay for their schooling.

The children were two light yellow boys, grandsons of his wife. He enquired also about the death of Mr. Lincoln, of which he had heard something, but he did n't know if he was really dead. He expressed wonder that any Yankee should have been the assassin. Though he did know one or two Yankees that were like the rebels in everything; they turned the point of the sword at a colored man's back, though they were good to his face.

I walked then two miles through the fields, which were, in some places, covered with water, and the ditches were brimming full. Getting out upon the levee again, I met the people going to church, some in heavy coaches and some on foot, but most on horseback. The young men wore plated spurs and the tails of their horses were braided and the ends of the braids tied in a knot. They rode in little companies, talking gaily and bowing to the ladies in the carriages. The church was one of the queer little structures common along the levee road, weather-beaten and picturesque, and, I suppose, like nothing between here and Lower Canada. People were waiting at the door as I went by; but the horses of the young men I passed further up were tied before the door of the St. Gabriel grocery. The stores by the roadside were all open and so were many stores in Baton Rouge. At a point nine miles from Baton Rouge I turned my back upon the river and travelled over a direct road to the city. Soon I came to a gently rising ground and good walking, the narrow way for miles together lying in the shade of tall hedges of rose-bushes, which grow in continuous clumps and form a beautiful green wall impervious to anything larger than the small birds. Baton Rouge came into sight long before I reached it, the city being situated on a considerable hill, and the glaring white of two large buildings, the asylum and the capitol, being visible far off. The latter building is ruined, and I am told that the finest part of the city was also destroyed during the war. Certainly what remains is not fine. But I see it without its green trees.

From the reports made to his superiors by the agent of the Bureau stationed here, I take some information about the negroes in the parish of East Baton Rouge:

"Jan. 20, 1866. The majority of the planters in the parish are offering from $12 to $15 per month without clothing."

"Jan. 31. Many of the planters are giving the freedmen a share in the crop. Those who are paying wages generally offer from $12 to $18 per month without clothing. . . . The conduct of the freedmen seems to be very good. I have heard but few complaints of them, and I think nearly all the planters are dealing very fairly with them."

At present the common rate of wages for hands of the first class is $18 a month and rations. Clothing is offered by a few men, but not by all.

"Jan. 2. I have conversed with several of the planters in the parish, and they all agree in saying that they prefer to keep the old colored people on their plantations and support them, as they find they are but little expense, and can often pay their way by doing light work. The mayor of the city informs me that there is not one colored pauper fed by the city. I would state that during the months of September, October, and November, 1865, while the poor of the city were fed by the military authorities, out of 180 paupers there was not one colored."

I called the captain's attention to an editorial article in the Baton Rouge *Advocate* of Feb. 21, with the caption, "The Pauper Question," which, among other things, says:

"Baton Rouge is the great centre of attraction. Before the war there were but six hundred negroes in this place. Now there are as many thousand. . . . We have to support them, nurse them, and bury them, and this at an expense of $6,000."

The article does not expressly say that the paupers crowding in from the adjacent parishes are negroes, but no other impression could be produced by it. The captain said that laborers were scarce, and that for some days he had kept a person employed searching the town for vagrants. He had been able to find three negroes without employment. He had no knowledge of any colored paupers except the sick and aged, and the number of those was extremely small.

I hear of but one opinion held by Northern men living here as to the loyalty of the people. Much that is told me is told on condition that I do not repeat it. The letter, of which I give a copy below, is pronounced by the colonel commanding at this post a concise expression of the feelings entertained by a majority of the citizens. It was sent on the 19th of January to a Mr. Rider, an Englishman, who for the last thirty-five years has resided in East Feliciana:

"We have been informed that you are 'lowing niggers to squat about on your land; or, in other words, you are renting niggers land. One of our committee told you that you would be burnt out, but you would not pay any attention to him. Now, sir, your gin-house is burnt for renting niggers land. If this is not sufficient warning we will burn everything on your place. If that do n't break it up, we will break your neck. If that do n't break it up, we will shoot the niggers. Beware, sir, before it is too late, or you will be waited on by A COMMITTEE.

"The niggers are not to be blamed. You are the villain. C.

(In pencil:) "Since writing the above we have decided to burn more than your gin-house, and will kill you if you do n't break up your infamous nigger camps. COMMITTEE."

Mr. Rider is a gentleman of wealth and respectability, who, it is believed, has never given his neighbors other grounds of complaint than they find in this endeavor to introduce upon his estate a system of labor resembling the English tenant system. It was not his gin-house that was burned, but a corn-house with four hundred bushels of corn. The fire at the gin-house was put out by the negroes. Col. Edgerton sent an officer into East Feliciana to investigate this matter, who succeeded in getting the testimony on oath of one of seven men, planters in that parish, who, having met together, had taken Mr. Rider's affairs into consideration, and had decided on intimidating him. The evidence being sufficient, the colonel proposes to General Canby that these gentlemen be compelled to pay for the property destroyed, and he is confident that the general will adopt the course which he recommends. It is sure of the cordial approval of General T. W. Sherman. General Canby has not yet spoken, but great confidence appears to be placed in him by all Union men whom I meet.

PARIS GOSSIP.

PARIS, March 8, 1866.

THE terrific winds which have raged for some weeks past with such unusual violence in the narrow channel between Calais and Dover, frequently preventing the crossing of the mails, and causing so much misery to travellers and their friends, give special interest to the two plans which have been suggested for obviating the inconveniences and dangers of the rather more than *mauvais quart d'heure* which all must brave who would cross from one to the other of the two shores which geologists tell us were united a few thousands of millions of years ago. The first of these projects proposes to purchase the *Great Eastern*, fit her up with a first-class hotel, a garden, croquet ground, reading-room, and all other desirable appliances of advancing civilization, and keep her constantly plying as a ferry-boat between the French and English coasts. The roughest Channel weather would have no appreciable effect on the steadiness of motion with which the giant

ship would glide over the "chopping seas" that cause so vast an amount of suffering to passengers in the course of a year; while the speed and comfort with which the transit would be made would lead, it is anticipated, on the part of European travelling, to the abandonment of all other passenger routes between England and the Continent, thus rendering the speculation highly remunerative.

The second project for getting rid of the nuisance of the Channel is that of a submarine tunnel between Dover and Calais; and a deputation of the English company, which proposes to undertake that colossal work, is now in this city, and has just had an audience of the Emperor to solicit the Imperial permission to commence certain experimental cuttings under the shore at Calais.

To the great satisfaction of the members of the Skating Club and of all that larger public which dreads the return of cholera with the coming spring, the weather has been much colder during the last few days; but as the goods of life, including "seasonable frost," are very unequally divided in this world, we are still waiting for our share of the thermometrical favors which are being bestowed so lavishly on neighboring Switzerland, where the winter has been so rigorous that much anxiety has been felt for the safety of the three brave Swiss savans who, last autumn, ascended the St. Theodule mountain, between the Matterhorn and Monte Rosa, with a quantity of provisions, fuel, etc., intending to pass the winter on the summit, for the purpose of making meteorological observations. The mountain is 12,000 feet high, and the snows have stopped all communication between the scientific hermits and the world below since the 28th of November. A courageous member of the Swiss Alpine Club, Mr. Alexander Seiler, of Brieg, accompanied by the far-famed Zermatt guide, Zum Taugwald, Jr., determined, a few days ago, to take advantage of a sudden rise of the thermometer, and ascend the mountain to ascertain the fate of the three investigators. The ascent was a very difficult and dangerous one, but was successfully accomplished; and their brave and humane attempt was rewarded by their finding the meteorologic recluses in perfect health and spirits, and so well supplied with creature comforts as to be able to give a most hospitable reception to the welcome invaders of their solitude. The descent, effected with equal success, was celebrated with bell-ringings and bonfires at Zermatt. It is, however, most unlikely that any recurrence of the exceptional temperature which rendered possible a feat hitherto unparalleled, at this season of the year, in the annals of Alpine climbing, will enable the three savans to quit their eyrie before May or even June.

How curious is the contrast between the silence and stillness of that sky-perch among the Alpine giants, broken only by the howling of the wind, and the animation and glitter of this pleasure-loving city—somewhat changed in character, but in no wise slackened by the penitentialities of Lent. Official receptions, snug dinners, and "dancing teas" are in full swing, and the crush of equipages in the fashionable thoroughfares is greater than ever. A day or two ago the Emperor, who greatly enjoys driving about in his latest vehicular acquisition (a very neat mail-cart, in which his Majesty is always accompanied by a friend on the seat beside him, and a servant on the ledge behind), was stopped for full ten minutes at the corner of the Chaussée d'Antin and the Boulevards, in one of those well-nigh inextricable "jams" of carts, carriages, and omnibuses which Paris has so peculiarly happy a knack of getting up. The Emperor was in the very midst of that dense, excited, and shouting crowd, looking on with an amused and slightly quizzical expression of face, while the mass of vehicles was striving to get itself free. It may well be doubted whether any other sovereign of France could have found himself so completely and for so long a time absolutely at the mercy of those about him with such perfect indifference and, above all, with such perfect safety. The Emperor likes, apparently, to see for himself how things are going on. For six weeks past the Parisians, especially the dwellers on the left bank of the Seine, have been greatly excited by the ingenious "dodge" of that cleverest and most daring of civic geniuses, the Prefect of the Seine, who proposed to secure about twenty millions of francs toward the cost of the rebuilding of Paris, so busily going on, by cutting off three or four large slices of the Garden of the Luxembourg, so familiar to the readers of Béranger, Balzac, and Henri Mürger, and selling the same for conversion into new streets. A couple of days ago the Emperor drove over in his mail-car to the garden in question—the largest and most beautiful in Paris—and spent an hour or two in examining the proposed changes. On his return to the Tuileries he wrote to the prefect a few lines (which were published next morning in the *Moniteur*) informing that enterprising functionary that his famous project was not approved, and that the shady groves and whispering alleys (which they are in more senses than one) must be respected. All Paris has heaved a sigh of relief at this termination of projected mutilations. As for the population of "the Latin Quarter," its joy and exultation equal the indignation and despair which had been excited by the ruthless proposition of "that barbarous Haussmann."

The French Academy received, yesterday, a new member, M. Camille Doucet, the well-known writer of the *Dêbats* newspaper. M. Prevost-Paradol will be received into that learned body on the 8th of next month. The intensity of desire with which the greater part of the French people long for a seat amongst "the immortal forty" can hardly be understood by those who have not lived among them; and such is the anxiety to be present at the admission of a new member that it is extremely difficult to obtain tickets. For some weeks past every place for sitting and for standing has been engaged beforehand by the shoals of people of every degree who are anxious to witness the admission of M. Prevost-Paradol.

Vanity is by no means rare among the literary people of any country but it can hardly be denied that the great mass of French *littérateurs* possess that quality in a superlative degree. Third-rate scribblers will expatiate, by the hour together, on their own productions, and will, if connected with the press, complacently assure you that they "have never failed" to produce a smart opening sentence and the concluding sting of the "trait final." Their "betters" in the literary line will not hesitate to refer, in every second sentence, to their own writings, and will, probably, contrive to pay such a compliment to those with whom they deign to converse as shall compel the latter to return the compliment in kind. Nothing can be more amusing than a tourney of this description, where each devotes himself to flattering his neighbor in the hope of being flattered by him in return. I should like to show my readers, as an amusing example of the sort of self-worship referred to, the home of a lady who has achieved some small reputation as a writer. The ante-room is hung with pictures presented to her by artists, and complimentary letters neatly framed and glazed; the library contains all her own books, magnificently bound and conspicuously placed; and the parlor walls are covered with likenesses of herself, of which there cannot be far short of a hundred, from the slight pencil-sketch of some adoring *rapin* to the finished portrait by Ingres, which constitutes the master-piece of the collection. In the embrasure between the two windows is a large flower-stand, composed of shelves, broad at the bottom, narrowing towards the top, and forming a sort of pyramid, lavishly supplied, all the year round, with the rarest plants and flowers; and on the top of this pyramid, as the crown and glory of the whole display, is the bust of the lady herself by Canova. The mistress of this temple of vanity, still a handsome woman, in spite of the wear and tear of nearly seventy years, sits in a large, low chair, with the portrait by Ingres and the beautiful bust just before her eyes, and receives the compliments of the literary people who attend her receptions with the air of a queen in the midst of her court, but taking good care to flatter adroitly the vanity of all who approach her, as the surest means of securing the payment by them of that tribute of flattery which few French people can bear to be deprived of, no matter how truly they may have learned to estimate its value.

STELLA.

ITALIAN FINANCES.

FLORENCE, Feb. 19.

SINCE the transfer of the capital to this one-time homelike refuge for artists and quiet-seeking folk, Florence has become the abode of every species of the world's citizens—ministers, ambassadors, senators and deputies, fortune-seekers, place-hunters, and pickpockets. The "good old days" of the grand duke are over; court gaieties are grim and stately; apartments are as dear as in Fifth Avenue or Park Lane; provisions treble their former price, as unfortunately the city is not large enough, nor the suburbs sufficiently productive, to house and feed us all comfortably. Narrow streets are being enlarged, crooked ones made straight. Every stroke of the workman's hammer desecrates some time-honored stone, causing antiquaries to weep tears of blood. Arnolfo's walls, six centuries old, are to be razed to the ground and in their place Parisian boulevards arise; edilic and political inspirations are alike Napoleonic. Yesterday, General La Marmora informed the House that Italy is not only able to sustain a war on the Mincio but also to bear through a defeat and come out victor in the end. Yet that war will not be waged until Napoleon sanctions it, nor shall we, on the other hand, disarm, as we are called on to do in the name of our impoverished finances. The situation of Italy to-day is far from hopeful, and will grow darker until either war or disarmament is decided on. Despite the 280 millions deficit, the country would send up a worthy response to an appeal for Venice, because, though the state coffers may be empty, the Italians are rich, twice as rich, say statistics, as they were in 1859. The liberation of Venice, the establishment of national independence, would restore national credit, render possible the reduction of the army from 300,000 to 50,000 men,

and, by introducing stability into the newly organized state, enable the Government gradually to balance its revenue and expenditure. Disarmament, at the present moment, is scarcely to be thought of, as the presence of Austria on the Mincio and the Po would necessitate organization of popular forces on the volunteer system, and to this monarchy would not consent for more reasons than one—because the popular attachment to the House of Savoy has declined considerably since 1859; because an armed people would propose and carry certain radical reforms which that monarchy cannot be expected to sanction; and because, in any European crisis, say for example the restoration of the French republic, the dynasty might find itself in a most precarious position. Hence our choice lies between war or a financial abyss.

Besides the Napoleonic *veto*, another circumstance militates against our chances of war, namely, the convention of the 15th of September; and, unless Austria attacks, we may calculate on peace until February, 1867, when, if the Emperor fulfils his share of the bargain, the last French soldier will be withdrawn from Rome. It is natural, therefore, that the nation which, for the last six years, has been making such gigantic sacrifices in order that its army might cope with Austria, which was told but yesterday that it could now sustain a war and yet finds itself compelled to keep the peace, should be in a chronic state of irritation against the "magnanimous ally" who is looked upon as the arbitrator of its destinies. The secrets revealed in the Yellow and Red Books, the knowledge that the courts of Spain and France do intend to preserve the temporal power of the Papacy within its present limits, have not tended to allay this irritation, and the vials of wrath are poured on the devoted head of General La Marmora, the "nominee of the Emperor"—the Emperor himself being too far off for the burning streams to reach him.

"Give us war or an economical peace," cry the public and the press; "propose a financial system that shall save us from dishonor and bankruptcy, or make way for those who can; mend our finances instead of truckling to the Tuileries, or we shall soon be convinced that monarchical institutions are unadapted to our wants, and return to our old plan of barricades." Newspapers are daily being seized for using such menaces as these; the governmental papers taunt the democracy for sending up a House with which it is impossible to govern the country; the opposition papers reply, "You have tried and failed; our time has come." Meanwhile the law of the circumlocution office, "How not to do it," seems the motto of the cabinet and the Chambers alike.

Parliament met on the 27th of November and defeated the Government on a question trivial in itself, but important in its check to ministerial encroachments on the prerogatives of Parliament. The House adjourned on the 19th for the Christmas holidays, which were prolonged until January 22d; adjourned again on February 7th on the plea that no bills were ready for debate, but in reality that its members might enjoy the carnivals of Milan and Turin, and re-opened on Thursday last in a spirit decidedly hostile to the La Marmora cabinet, which, as Ricciardi informed the Premier, with more truth than politeness, "having been turned out at the door, crept back through the window."

That it cannot last long is a fact recognized by all parties, but whether it will be beaten on the "two months' provisional exercise of the budget," or on Signor Scialoja's financial measure, or on the bill for the abolition of religious corporations and administration by the state of ecclesiastical property, cannot yet be seen. The provisional exercise is now under debate; thirty orators are inscribed; four days have passed, and seven honorables have occupied the floor without throwing any light on the subject. The nine committees are divided as to the grant; four would concede the two months as a purely administrative measure; three would limit the grant to one month; two refuse a single day. The cabinet rejects the one month grant as implying a vote of want of confidence; would accept the two months without considering it a vote of confidence; and this question furnishes the orators with a pretext for introducing all sorts of extraneous matter into their speeches. I think the two months will be granted, because the old grant expires on the 28th inst., and then will come the debate on the budget. A motion has just been passed which will shorten the preliminary work so tedious in the Italian parliamentary system. In a general way the minister presents a bill to the House, and hands it to the Speaker to be printed and distributed, and the public fondly hopes day after day for the debate. But it often happens that the bills are pieces of blank paper, to be sent back to the minister, who takes sometimes weeks, sometimes months, to elaborate his "project of law;" once printed, it is distributed among the nine offices into which the House resolves itself afresh every month by lot; discussed by the members, who choose a reporter. These nine reporters form a special commission, who again discuss the bill, and elect one of their number to draw up a report and present it to the House, when the general debate commences. Owing to this circumlocution system, endless time is lost, and as the urgency of the financial system seems at length to have awakened the honorables from their lethargy, a motion has just been passed to the effect that the House shall nominate a commission of fifteen members to study and report on Signor Scialoja's financial measures, without passing them through the committees.

That these measures will be accepted by the House few believe. The new Minister of Finance has had the courage to say to the county: "No more loans, no more expedients; you must pay for your whistle in hard cash; the first necessaries of life, even oil and wine, must be taxed; the expenses of each branch of administration shall be reduced; our system of tax-gathering must be reformed, and even then a deficit of eighty millions will remain to be met." Many good authorities shake their heads and affirm that Scialoja's scheme would cripple the resources of the country, and that the only remedy lies in the confiscation of ecclesiastical property. Here again three schemes are proposed. The Government bill proposes the abolition of all religious corporations, the grant of a pension to male and female members for life, the administration by the state of all ecclesiastical property, the clergy, from archbishop to parish priest, salaried by the state. No, says Minghetti (ex-Minister of Finance, the author of enormous loans which evaporated during his administration and left no trace behind): no! this project violates the aspirations of modern civilization; is opposed to the very spirit of our revolution, which aims at the separation of church and state and objects to a clergy salaried by the latter. Abolish religious corporations within the space of ten years, and in the same time oblige the clergy to transform their *mani morte* into personal property and to hand over a third of all they possess, *i. e.*, six hundred millions, to the state; to provide for the expenses of public worship with the remainder. This proposition, fathered ostensibly by Signor Minghetti, is rumored to have been brought from Rome by Baggio. To it the democrats reply: The idea is not bad; only its application errs. We do object to the union of church and state and to a salaried clergy; but we cannot consent to leave this untold wealth in the hands of ecclesiastical administrators. Let all ecclesiastical property be administered by the communes; let the communal councils contribute a third to the state and employ the remainder in the expenses of public worship, public education, and charitable purposes. Thus our debts will be paid, the rising generation educated, and religion no longer sacrificed to the interests of the Roman shop.

This is the only concise idea yet emanated by our friends on the left, and if they, with the help of the left centre, succeed in overthrowing the present ministry on the financial question, this will be their card if their hope of holding portfolios be realized. The ministerial organs continue to hint at the probable dissolution of the House; but it is a mere scarecrow, as every one knows that if the present members be sent home the country will return two democrats for every one rejected. J. W.

Correspondence.

PHOTOGRAPHS OF FRENCH CELEBRITIES.

To the Editor of The Nation:

A few years ago, while in Paris, I amused myself sometimes in studying the faces of distinguished Frenchmen, chiefly authors and artists, whose photographs were exhibited in the shop windows of the Boulevards. I recorded briefly, at the time, the impressions some of these faces left upon me. Here are some of my jottings, which, perhaps, may not be uninteresting.

C.

AUTHORS.

Alexandre Dumas, Pere.—A face whose features have an unmistakable basis of the negro in them. Bald, bright, jovial, somewhat coarse, and decidedly earthy. Indications of a tough epidermis and a strong constitution. Plenty of self-esteem and vanity.

Victor Hugo.—A magnificent head—the brow piled up square and compact, where all the intellectual organs seem well and evenly developed. Immense ideality, above which the moral faculties arch the head into a well-rounded dome. The hair grey and cut close to the head. Eyes not large, but deep and intense with a soft fire. Large ears. Nose in harmony with the rest of the face, which inclines to squareness. Mouth full of determination, yet expressive of feeling. Thick moustache and very short grey beard.

Lamartine.—As complete a contrast to the last as can well be. A high but retreating brow. Vain, supercilious eyes. Nose long and pointed. Mouth rigid, yet weak. No beard or moustache.

JULES JANIN.—A large head and face, full of joviality and *bonhomie*—suggestive of a portly person and a life of intellectual ease. Looks as if he swam in butter.

THIERS.—A head and figure which perfectly recall the English Punch—or rather a cross between Punch and a Yankee clergyman. Face very compact. Short grey hair; no beard. Wears spectacles, through which he looks intensely senatorial and dignified.

GUIZOT.—Very old and very grave. A large, intellectual brow. Thin grey hair. Eyes not bright; the muscles beneath them swollen and baggy. Thin, fixed mouth. No beard.

THEOPHILE GAUTHIER.—Face indicative of an intellect rather disposed than not to make a pillow of its accompanying indolent temperament. Large, heavy features. Affected slovenliness. Seems as if he required a strong stimulant to set him going, but as if capable of much intellectual power.

MICHELET.—A face of an old man, benevolent, serene, and intellectual, but not revealing any other special trait.

EDMOND ABOUT.—Young, hearty, jovial, witty. Good, handsome eyes. Looks as if he would soon get acquainted with you, and be the best of company.

EUGENE SCRIBE.—A fine-looking old gentleman of the old school. Eyes and mouth full of bright thoughts and fancies.

ALPHONSE KARR.—Broad, high head, and large nose and ears. The close-cropped hair and long pointed beard make him look like an author of the time of Sir Walter Raleigh.

EUGENE PELLETAN.—An intense and serious face, bent downward in thought. Black, piercing eyes, black hair, and thick black beard.

EDMOND TEXIER.—His bald head, round eyes, and aquiline nose give him the look of an eagle. A very earnest and thoughtful face.

EUGENE MIRECOURT.—A good deal of the North American Indian chief in this face. Looks as if ready for a fierce onslaught with tomahawk and scalping-knife. The features and expression not unlike those of Voltaire.

EMILE GIRARDIN.—A shrewd eye; head turned on one side; a look of easy circumstances, self-satisfaction, and indifference to the world.

MADAME GEORGE SAND.—Long, oval face; large dark eyes with drooping lids. Face expressing a combination of a dreamy, voluptuous temperament, great benevolence, and intellectual genius.

ARTISTS AND MUSICAL COMPOSERS.

C. F. DAUBIGNY.—A landscape painter of some note in Paris. A calm, earnest, grave expression. Intellectual development in head and features not remarkable.

GUSTAVE DORÉ.—Rather handsome; dark grey eyes, full of unmistakable genius; a good head; mouth and chin indicating firmness and perseverance.

FELICIEN DAVID.—You would take him for a full-blooded Scotchman. Inclined to baldness; his long thin hair looped over his head. Full, earnest eyes, and full lips.

JEAN LEON GEROME.—A thin, saturnine face; rather high cheek-bones; a proud, sad look; moustache, but no beard.

GUSTAVE COURBET.—A broad, common face, with high cheek-bones; thick, long hair and beard; has a bold, conceited look.

J. B. C. COROT.—A simple, honest, pleasant face, clean-shaved; a coarsely shaped mouth; big burly frame; not the least trace of the poetic about him, though his French admirers claim this quality for his pictures.

THEODORE ROUSSEAU.—A face full of benevolence, honesty, child-like enthusiasm, and modesty. Seems like a man you can hardly help liking. The brow is high, and expressive of calm, quiet thought and calm communion with nature. Dark eyes; wears a large black moustache and beard.

HENRI LEHMAN.—Handsome, proud, cold, aristocratic features; round grey eyes; light, short German hair.

CONSTANTIN TROYON.—Large face; long, large aquiline nose; plenty of beard. A solid, healthy, strong look about him, like one of his favorite oxen. A quiet, self-sustained temperament.

JUSTIN OUVRIER.—A clever landscape painter. Does not look like an artist, but rather like a lawyer or minister of state.

THOMAS COUTURE.—His face gives no indication of his great talent and skill as a painter.

EUGENE DELACROIX.—Neither does Delacroix's face suggest to me the works he has done. A dark, nervous, morbid face, indicating uncertain and unequal effort.

A. G. DECAMPS.—A good face, and a good intellectual head.

J. A. D. INGRES.—Heavy features, baggy cheeks, full lips, a queer conical head, a short and dumpy figure.

ROSA BONHEUR.—A face not expressive of genius. Features somewhat hard and fixed. Expression bright but unsympathetic.

J. L. E. MEISSONIER.—The head is so much inclined forward, and the eyes cast downward, that nothing can be divined of his character and genius. His figure is small.

HALÉVY.—The last face in the world you would take for a musical artist. You might take him for the most dogmatic of doctors, whether of law or physic. You are puzzled to conceive how any music could ever have issued from a man with such a face as that.

ROSSINI.—The veteran composer has grown old. His features do not express what they should. The full, dark eyes, however, still seem to flash with sparkling melody.

GOUNOD.—A good, solid, musical face; good, high head.

AUBER.—Has the nervous, musical temperament chiefly indicated about the brow.

Literature.

LITERARY NOTES.

THE late sale of the library of J. B. Fisher, conducted by Messrs. Leavitt, Strebeigh & Co., which was concluded March 9th inst., is worthy of notice as showing the appreciation of choice books among our collectors. The library was a peculiar one in the superior condition of the books and the care displayed in the selection of choice copies. Its principal features consisted of works on American history and old English literature, the two branches most especially in demand. American history, however, unquestionably bore off the honors of the day, and prices were realized for articles of this description above any previously known. Among the most noticeable lots, from the sums they brought, were: Lot 657, a unique tract printed at Philadelphia by Reinier Jansen, in 1699, "God's protecting Providence, etc., by Jonathan Dickenson," the relation of an escape from shipwreck, and "The Cruelly Devouring Jawes of the Cannibals of Florida," no other copy known, sold for $85 00. Lot 716, "Easton's Narrative of Philip's Indian War," Mr. Munsell's reprint, Albany, 1858, $50 00. Lot 1,169, "Jacob's Life of Capt. Cresap," Cumberland, Md., $31 00. Lot 1,360, "Martin's History of Louisiana," 2 vols., New Orleans, 1827, $22 00. (We may mention that about 150 copies of this book were bought twenty years since at *a cent and a half per volume*, and were sold for waste paper by a bookseller who was present at this sale.) Lot 1,449, "Hutchinson's History of Massachusetts," first London edition, 2 vols., 1760, in boards, uncut, $40 00. Lot 1,605, Gen. Moultrie's "Memoirs of the Southern Revolutionary War," 2 vols., New York, 1802—two dingy looking volumes that used to be common on bookstalls for $1 50 the set—brought $33 00. Lot 1,883, "Proceedings of the Court-Martial on Major André," Philadelphia, 1780, $31 00. Lot 1,945, "Mad. Reidesel's Memoir," New York, G. & C. Carvill, 1827 (usual price a few years since, fifty cents), $21 50. Lot 2,029, "Loyalist Poetry of the Revolution, edited by Winthrop Sargent," Philadelphia, 1857, $77 00. Lot 2,262, "Heywood's History of Tennessee," 8vo, Nashville, 1823, $26 00. We might go on to a great extent quoting similar remarkable prices of which the above are only a sample. Few better investments can be named than those made by curious book-buyers ten or even five years since, and the high prices now current are bringing numerous collections into the market without apparently lessening the demand.

—The irresistibly advancing strides of wholesale trade are rapidly depriving Broadway of the pleasant air of refinement that a leading thoroughfare derives from the intermingling of books, engravings, and works of art with the less intellectual but more substantial wares of everyday commerce. When a dry goods jobber, who counts his annual sales by millions, insanely imagines he can increase his business by parading its insignia in the most frequented streets, a few thousand dollars a year rent make but little difference when the desire to get ahead of his neighbors in less frequented localities is the motive. The consequence is the gradual withdrawal of the book-stores to side streets, and if the rates of the present year continue, in twelve months there will scarcely be a book-store left in the whole length of Broadway. It was not so thirty years ago. To those who can carry their remembrance back so far, Broadway, below the Park, is chiefly characterized by the book and publishing houses that centred there. On the east side alone, between Wall and Ann Streets, "might be seen" (as G. P. R. James says) the famous juvenile book establishment of William B. Gilly; Charles de Behrs' extensive stock of French and foreign books; G. & C. Carvill's emporium of all that was valuable in standard and classical literature; William A. Colman's gallery of pictures, books, and engravings; the time-honored Episcopal publishing house of T. & J. Swords; Messrs. Leavitt,

Lord & Co.'s bustling and active store, full of clergymen and country merchants; Messrs. D. Appleton & Co.'s establishment, then just removed from Clinton Hall, and emerging into notice; and Messrs. Betts & Anstice's retail book-store. The above are all things of the past except Messrs. D. Appleton & Co., who still remain in Broadway, but who are understood to be meditating a flight to quieter regions. At the time mentioned the only book-store above the Park, in Broadway, was that of Mr. Lockwood, near Canal Street, whose enterprise in fixing himself in so distant a locality was admired, though his prudence in so doing was considered very doubtful. A number of "the trade" now driven out of Broadway are finding refuge in Broome Street and its neighborhood. It is felt, however, that this can be but a temporary lodgment, and there is a general desire to concentrate in some locality, such as Bond Street offers, uniting great accessibility with comparative moderation in rents, where a New York Paternoster Row might be established to the convenience of the booksellers and the public.

—The active and prominent publishing house founded in London by the late Mr. John Cassell, and now continued by his surviving partners under the firm of Messrs. Cassell, Petter & Galpin, have just established an agency in New York for the sale of their publications. It is conducted by Mr. Walter Low, a younger branch of the parent stock of the firm of Messrs. Low, Son & Co., well-known for their liberality to American authors, and the enterprise they have shown in fighting their battles on the international copyright question. Mr. Cassell, who died during the past year at an early age, was a man who would have risen to eminence in any profession. His early pursuits were quite disconnected with publishing, but the idea of popular education and enlightenment took possession of his mind, and in carrying it out he showed all the business tact and talent that was wanting in his predecessor in the same enterprise, Charles Knight. Cassell's "Popular Educator," illustrated Bibles, and histories of England, atlases, etc., have reached a currency, while circulating in penny numbers, that the publications of the Useful Knowledge Society could never attain to throughout the whole country. The business establishment of the firm in London has kept pace with the demand, and is now said to be the largest and most complete in its facilities for the production of books in every department in the metropolis. It has lately made a great advance in public notice by securing for English use the wonderful designs of Gustave Doré. The Bible illustrated by that extraordinary artist is reproduced by them with English text, and is now publishing in monthly numbers. These are supplied by Mr. Walter Low at one dollar per number, and are, no doubt, destined to meet with a larger sale than any similar enterprise ever undertaken. They also issue his "Dante's Inferno," "Munchausen's Travels," and a great variety of other illustrated books, particulars of which are given in the catalogue.

—The "History of the Campaigns of the Army of the Potomac," by Mr. William Swinton, announced for publication during the present month by C. B. Richardson, is unavoidably detained by the anxiety of the author to secure every possible corroboration of his narrative from the documentary evidence most liberally placed at his disposal from all quarters. The Duke of Wellington is reported to have said, "When my papers are published many reputations will disappear," and though such results may not follow the appearance of Mr. Swinton's book, it is certain that it is eagerly looked for, especially in military circles. It is understood that the forthcoming work will be subsidiary to a complete standard classical "History of the War of Secession in America," that will probably occupy the time of the author for several years to come, and may be expected to take its rank in libraries as the accepted authority on the momentous subject, which it will treat with the thoroughness demanded by the highest class of historical composition.

—We have already mentioned the beautifully executed edition of the "Dramatic Works of John Marston," the Elizabethan writer, now in progress at Boston. Another piece of evidence is afforded of the intense interest felt in old English literature by the proposals for a reprint of George Chapman's translation of "Homer," issued by the new firm of Messrs. Wiggins & Lunt, of Boston, lately established with the express view of publishing and dealing in antiquarian literature of the most *recherché* kind. Their object in the bringing out of Chapman's "Homer" would be to produce an edition far superior to the only modern English one ever issued, in five small volumes in J.R. Smith's Antiquarian Library. They intend this work—including the "Iliad," "Odyssey," "Hymns," etc., as edited by Rev. R. Hooper, with original introductions by a distinguished American scholar—to form five splendidly printed octavo volumes, executed in the finest style of the typographic art, a small number of copies being printed on large paper for the sake of bibliographical amateurs. Subscribers' names are now received by the publishers.

—The English papers mention the appearance of the first number of "The Bookworm: an Illustrated Literary and Bibliographical Review." We have not heard that any copy has crept across the Atlantic, though the title is promising, and it will no doubt secure a liberal patronage on this side the ocean. When the volumes of "The Philobiblon," a journal of the same description, edited by Mr. George P. Philes, of New York, were noticed in London, it was mentioned reproachfully that nothing of the kind existed there; and we are glad to see that the lovers of old books and sound literature are removing the stigma. With the revival of commercial prosperity in this country, the journal above mentioned, "The Philobiblon," will make its re-appearance. We understand arrangements are nearly ready to that effect. Under its accomplished editor it promises to be a medium of great value to scholars and literary men who love the by-paths of literature.

—With the exception of Arthur Henry Hallam, no English poet of the present century has left a brighter image of himself in the memory of his friends than the late Arthur Hugh Clough. One of the earliest of these was Dr. Arnold, the famous head-master at Rugby, by whom Clough was educated, and who, at the yearly speeches in the last year of Clough's residence, congratulated him on having gained every honor which Rugby could bestow; Mr. Thomas Hughes was another; Mr. F. T. Palgrave another; and Mr. Matthew Arnold, son of the head-master, and present professor of poetry at Oxford, a third. And they have done what they could, which was much, to perpetuate his memory; especially the last, who went a little out of his way, in his "Last Words on Translating Homer," to praise him for his single-hearted love of study, and to speak of his pastoral, "The Bothie of Tober-na-Vuolich," in which he found "some admirable Homeric qualities, out-of-door freshness, life, naturalness, buoyant rapidity." Mr. Arnold has since, and recently, it would seem, done more than this—done, indeed, what no other living English poet could have accomplished—written a monody to commemorate his friend, which is almost unique in English literature. We can recall nothing like it, except one of Mr. Arnold's early poems, "The Scholar Gipsy," which was occasioned by a passage in Glanvil's "Vanity of Dogmatizing," and to which he refers in his monody. The title of the latter, "Thyrsis," leads one to expect a poem of the pastoral order, which it is to a certain extent, but much more and much better, we think, than any mere modern pastoral could be. Here and there are gleams of the old Greek pastoral element, veins of the profuse golden ore of Theocritus and Moschus; but they are richer than in those poets, containing as they do "gems of purest ray serene" in the shape of noble and earnest and sorrowful thoughts. What the poem may suggest to poetical students is the pastoral poetry of England at the beginning of the seventeenth century; as it exists, for instance, in William Browne and the two Fletchers. It has all the freshness and picturesqueness of these writers, with a finish and an art which no poet of their time, save Milton, could have given it. Its nature-painting is not unworthy of the young poet who sang "L'Allegro" and "Il Pensieroso," those two exquisite jewels hung in the ears of antiquity, and who hymned his shipwrecked friend in the one great dirge of our literature, "Lycidas." Its place is somewhere between that and Shelley's "Adonais." The appearance of this poem, after so long a poetical silence on Mr. Arnold's part (eleven years having elapsed since the publication of his last poetical venture, the tragedy of "Merope"), and the intimation that it is from advance sheets, leads us to hope that we may look for a new volume of poems from Mr. Arnold. Admirable in prose, as his volume of essays shows, and, more notably, his recent trenchant paper, "My Countrymen," we prefer him in his earlier and higher walk of poetry, a walk in which he moves alone, in advance of all the younger singers of the time, noble, thoughtful, and self-sustained.

—Whether an editor should collect what an author rejected from his works in his lifetime, is so delicate a matter that we suppose it will never be settled. It involves the question whether authors are, in all cases, the best judges of what they should accept and reject, and it involves—what is no question to us who admire and reverence them—our right to possess all that they have written. That the now general habit of preserving every scrap that ever fell from famous pens results in volumes of indifferent reading, bushels of chaff with but a few grains of wheat therein, is certain; but it is equally certain that once in a while it brings to light valuable additions to literature. The thought that his note-books would ever have been printed would have sent a shiver to the sensitive soul of Nathaniel Hawthorne, and would, perhaps, have driven him to destroy them; yet we cannot blame his friends for printing them, or portions of them, so excellent are they in themselves, and so much light do they shed on his genius and the

methods by which it worked. So with Thackeray's studies for "Denis Duval." They were the merest trifles, but valuable, nevertheless, in that they enabled us to see to what use a master could put them, letting us, as it were, behind the scenes while the stage was being "set." Well or ill, however, as the practice of preserving such *disjecta membra* may be, it prevails, and will prevail, and we who are squeamish must make up our minds to bear it. A case in point will soon be brought before us, in a couple of posthumous volumes by the late Washington Irving, edited by his nephew, Mr. Pierre Irving, and now in course of preparation by Messrs. Hurd & Houghton. Their title is to be "Spanish Papers," and their contents, we hear, a number of articles written by Irving when in Spain, and, later, when engaged upon what may be called his Spanish studies, "The Alhambra" and "The Conquest of Grenada." Some have appeared in magazines and periodicals in this country and in England, while others, if we understand rightly, will be printed from his manuscripts. A portion of the volumes will be made up of letters not included in Mr. Pierre Irving's biography, but written while Irving was in Spain, and bearing upon the character of his work, enough so, at least, to be included among his "Spanish Papers."

—The fact noticed by some old writer, Pliny, we believe, that literature flourishes immediately after great civil convulsions, is repeating itself here since the suppression of the rebellion—a brief period which has witnessed the commencement and projection of more newspapers and periodicals than the ten preceding years. As regards the latter, it seems to be a common opinion that a new magazine is demanded by the reading public, large numbers of whom are not content with the "Atlantic" or "Harper's Monthly." Something which should occupy the ground between the two would, it is argued, be certain to succeed. At any rate two of our New York publishing houses believe so; Messrs. Bunce & Huntington, or rather Mr. Bunce—for we understand he has retired from the firm just named—being hard at work perfecting arrangements for a "Town and Country" magazine, while Messrs. Church, of the *Army and Navy Journal*, are busy with a similar undertaking, the name of which has not been definitely settled. It s not likely that either of these periodicals will be published before next summer, or possibly next fall, for the chief difficulty in these cases, after raising the requisite capital, is to find a corps of good writers, which is no easy task, and to get good "copy" from them, which is not much easier. Both, indeed, are difficult achievements, as, we imagine, the gentlemen in question have by this time discovered, good American writers being as busy as they are scarce. If we may judge by the English magazines, a first-rate serial novel is necessary for success, and this is just what cannot be had here at any price, the prose-writers of America not being novelists, or at best but indifferent ones. If Hawthorne were living, and could be induced to write a romance, we should be willing to ensure the success of the magazine in which it appeared for a very moderate sum. So with Dr. Holmes. But Dr. Holmes is not writing, and cannot be persuaded to, except, perhaps, an occasional poem. In view of this fact, the "Atlantic Monthly" is fain to take up with Mr. Charles Reade, as "Harper's" is with Mr. Dickens, Mr. Wilkie Collins, or Mr. Anybodyelse who happens to be popular in England. Lacking the serial novel, there remain the tale and the essay, in which our writers, though certainly meritorious, are not up to the English standard of excellence. There are scores and scores of clever men and women in London who live by the pen, writing stories, and essays, and miscellaneous papers for the periodicals and literary journals, which are but little thought of there, the talent they show being so common, but which would be warmly welcomed here. There is an ease, a spirit, a finish about English periodical literature, which ours has not attained, and does not promise to attain speedily. These are some of the drawbacks to be considered by the projectors of the embryo magazines. They are serious, but not disheartening, for if our writers are not brilliant, they are not expected to be so by their readers. When the latter demand more, the former will have to give it to them, or give place to those who will. In the meantime, let us have the promised magazines, which may do something towards perfecting our literary education.

—That there is a tide in the affairs of men in authorship as well as most other mundane affairs, the writer of "A Night in the Workhouse" has every reason to acknowledge. A few months ago he was unknown, except, perhaps, among his circle of immediate friends, yet he had written for years, as a judicious reader of his famous article might have perceived from its excellence and finish, and on just such subjects as he handled therein. The golden opportunity came, or rather he went to it, one rainy night in a brougham, and, like the young Dickens who discovered Mr. Pickwick for us, or my Lord Byron before him, who created that *ennuyed* debauchee, Childe Harold, he "woke up one morning and found himself famous." Who can it be? asked his wondering countrymen, who have the good sense to relish the exposure of abuses, even at their own expense, and A answered, Mr. Tom Hughes, and B, Mr. Charles Dickens, and C, whatever writer happened to be uppermost in his mind. There being no reason why the "Casual" should wear his anonymous mask, it was dropped, and Mr. James Greenwood came forward and made his bow to the public for acknowledging his talents, and a mental vow to trespass again on their indulgence. This he has since done in a series of "Starlight Readings," in the *Evening Star*, and still further in a serial story, entitled "The True History of a Little Ragamuffin," to be completed in twelve monthly parts at one shilling each, the first of which was issued on the 1st of March, with a wrapper by Hablot K. Browne (*Phiz*) and a frontispiece and vignette by J. Gordon Thomson. The ragged little hero whose fortunes Mr. Greenwood relates has a brutal father and a drunken stepmother, from whom he escapes to wander through the streets of London by day and to sleep under the Adelphi arches by night, consorting the while with outcasts and thieves, mudlarks and ruffians, experiencing the tender mercies of a London workhouse through a fever, from which he recovers to continue, in other scenes and among more dangerous characters, his ragamuffinly career to the end. If we may judge of Mr. Greenwood by what is written of his serial, he sees with "equal eye" the tragic and comic aspects of the lowest stratum of London life, relieving the general sternness and gloom of his subject with flashes of bright and merry humor, and showing throughout a deal of artistic cleverness. "Since Defoe told the story of Colonel Jack's early experiences," says one of Mr. Greenwood's critics, "there has appeared no such minutely graphic and terribly truthful picture of a London beggar-boy; and though the work of the older novelist is to be preferred for the realism of its most pathetic touches, we are inclined to think that Mr. Greenwood's tale is no less essentially truthful, and no less calculated to maintain a place amongst the literary illustrations of London poverty." The obscurity which hangs over Mr. Greenwood's previous literary career has not been lifted for us, further than that his last work, the one we mean which immediately preceded "A Night in the Workhouse," was "The Hatchet-Throwers," a volume of grotesque humor, published last fall, with illustrations by Ernest Griset, and not very well spoken of at the time.

—The reputation of Byron, which has declined in England as that of Wordsworth has advanced, is still an eminent one in France, where the theatrical element of his genius is strongly sympathized with, and where one of his earliest admirers and latest followers, Lamartine, has been for sometime engaged on the not easy task of writing his life. The last of the many reports in relation to the work was, that the Marchioness de Boissy, better or worse known as the Countess Guiccioli, had placed Byron's letters to herself in the hands of Lamartine, to be used at discretion, a quality, by the way, which he never possessed. It is a canard, which Lamartine is said to have set afloat himself, with what truth we know not, and by which he has certainly profited, if only by the advertisement which it has given to his forthcoming volume. So, at least, the Marchioness de Boissy has asserted, and declared that she held Byron's correspondence sacred, and intended to keep it secret—a laudable intention, which she is now violating for a number of imaginable reasons, one of which may be to anticipate Lamartine, whose facts are frequently drawn from his fancy. At any rate, she is preparing a memoir, a biographical essay, or something of the kind, from which great things are expected. How the Marquis de Boissy, a whimsical and irate French senator, who, in wedding Byron's *chère amie*, more than wedded his dislike of England, views the biographical project, we are left to conjecture. An American or Englishman would hardly care to see his spouse writing the life of his predecessor, but in France, we suppose, they have changed all that.

—John Thompson, a notable man among the wood-engravers of England, of whom he stood at the head for over half a century, died lately at the good old age of eighty-one. The pupil of Branston, he was an associate of the late William Harvey, whose death preceded his own by a few weeks, many of whose drawings he engraved, as likewise those of Stothard, the most graceful and gentle of all England's designers. He also engraved all the cuts in Mulready's "Vicar of Wakefield" and the illustrations in Yarrell's works on natural history, besides Maclise's Britannia on the Bank of England notes, and the postage-stamp designed by Mulready—cutting the last in relief in brass. Unlike too many of his profession, he never subsided into a mere manufacturer of blocks, but, from first to last, was an artist. He directed for some years the class of female students of wood-engraving of the Art School of South Kensington, and presented to the South Kensington Museum a very valuable collection of illustrations of the art of wood-engraving.

—The complete edition of the "Works of Lord Macaulay," edited by his sister, Lady Trevelyan, and recently published by the Longmans, contains a number of papers rejected by Lord Macaulay himself in his lifetime, the most noticeable of which are three articles on Mr. James Mill, the historian of British India, for writing which he afterwards made an apology; an "Introductory Report on the Indian Penal Code," and "Notes on the Indian Penal Code," the results of his short residence in India; and two short poems of no especial merit. The edition, which is the first uniform one, is in eight handsome octavo volumes.

TOWLE'S HENRY V.*

Mr. Towle starts with an error on his very title-page. Henry the Fifth was *not* "heir of France," as Mr. Towle himself is at particular pains to show. He points out the total want of title to the French crown in Edward the Third, who began the English quarrel for that crown; and then he makes it equally clear that if Edward the Third had possessed a title to that crown it would have descended not to Henry the Fifth, but to the Earl of March, in right of his descent from Lionel, Duke of Clarence, who was third son of Edward the Third, while Henry the Fifth was descended from John of Gaunt, Duke of Lancaster, a younger brother of Lionel of Clarence. Henry the Fifth reigned over England in virtue of his father's successful usurpation of the English crown. That success which made a Henry the Fourth King of England out of a Duke of Lancaster who professed to seek only the possession of estates unjustly taken from him by Richard the Second, may have been good reason why all Englishmen, as lovers of order, should support the house of Lancaster; but it could not convey to Henry the Fifth a title to the crown of France. Had Henry the Fifth lived and completed the conquest of France, with Paris as the capital of his empire, he might have been called the "Conqueror," as William the First is so called because of his success in obtaining the throne of England. "What we call purchase, *perquisitio*," says Blackstone, "the feudists called conquest, *conquisitio*, both denoting any means of acquiring an estate out of the common course of inheritance. And this is still the proper phrase in the law of Scotland, as it was among the Norman jurists, who styled the first purchaser (that is, him who brought the estate into the family which at present owns it) the conqueror, or *conquereur*, which seems to be all that was meant by the appellation which was given to William the Norman." Henry the Fifth had as good claim to the French throne as William of Normandy had to that of England—that is, no claim at all; but if he had perfected the work which he began so well, he would have based his right to rule the French not on conquest, according to the common meaning of the word, but on his having entered into possession of his inheritance. All conquerors are fond of legitimacy, and usurping conquerors are particularly fond of it. Even Napoleon the First once astounded some of his counsellors by speaking of his "unfortunate relative, Louis the Sixteenth;" and he justified his use of the words by reference to his marriage to Marie Louise of Austria, who was a connection of Louis. The only reasons for calling Henry the Fifth "Heir of France" are to be found in the arrangement that was made that he should succeed Charles the Sixth as king of that country, which came to nothing, and depended for its worth upon the event of war; and in his having been styled *Heir and Regent of France* in the records of the "Acts of the Privy Council," which is of no more moment than the style of "King of France," which English sovereigns bore down almost to our day, or that of "King of Cyprus and Jerusalem," which Sardinian monarchs bore down to 1859.

Mr. Towle makes some other slips. He speaks of John of Gaunt sometimes as the second son of Edward the Third and at others as his third son. He was the fourth son of Edward the Third. The first four sons of Edward and Philippa were, Edward (the Black Prince), William (who died young), Lionel, and John of Gaunt, Duke of Lancaster. This point is not so trivial a matter as at the first blush it appears to be, for out of this order of births grew that long and extraordinary civil conflict known as the Wars of the Roses—a conflict that never would have taken place had John of Gaunt been the second, or even the third, son of Edward the Third. Had he been the third son of that monarch he would have been heir presumptive of Richard the Second, and his son, Henry of Bolingbroke, would have succeeded to his place, and would have been entitled to the crown, failing heirs of Richard the Second. The Wars of the Roses would have been impossible had the Lancastrian branch of the royal house been founded by the third son of Edward the Third. And we need not tell any one who is acquainted with English history that those wars produced consequences which have closely affected all subsequent time, and that to an extent which it would be difficult to exaggerate. Seldom has it happened that the mere order in which princes were born has been attended with consequences so important as came from the circumstance that John of Gaunt was the junior of three of his brothers.

Another mistake made by our author is in saying that "the only ground which Henry [the Fifth] could with the least reason take [that the French crown was his] was that his father was the heir of an older [elder?] brother of Edward the *Second*, by which claim, as we have seen, Bolingbroke sought to justify his usurpation." We have seen nothing of the kind. Henry the Fourth was incapable of the absurdity of setting up a claim to the throne on the ground of descent from an elder brother of Edward the Second. What he did was this: He claimed the realm and crown of England because of his descent by right line of blood from Henry the Third, thus countenancing the story, known to be utterly unfounded, that Edmund, Earl of Lancaster, son of Henry the Third, was the elder brother of Edward the *First*, but had been set aside in order to advance the latter. It was on his mother's side that Henry the Fourth was descended from Edmund of Lancaster, and his claim to the crown would have been good could he have made it clear that Edmund of Lancaster was the eldest son of Henry the Third. It is strange that he never thought of this claim until after he had obtained the crown through successful fraud, backed by powerful force, and that he did not earlier put it forward is enough to show its worthlessness when he uttered it on the occasion of taking the kingly office, after Richard's deposition. The whole thing reminds us of an attempt that was made by Louis Philippe to show that he was legitimate King not of the French, but of France, because he belonged to the old line! But if Henry the Fourth had clearly made out that he reigned in right of his descent from Edmund of Lancaster, he would thereby have given up all right to the French throne; for the claim of Edward the Third to that throne was based on his mother's power to convey it to her son, and she was not born until the latter part of the reign of Edward the First. She was the wife of Edward the Second; and if Henry the Fourth had been descended from a brother of her husband, such descent could have given to Henry the Fifth, his son, no pretence to reign over the French, even if every member of the French royal family had been dead, and if the Salique law had not prevailed in France.

It is impossible to go back further than Edward the Third to find any ground for the Plantagenet claim to the French succession, unless we assume that a claim could have been set up in behalf of one of the descendants of Marguerite of France, second wife of Edward the First, and such claim would have been fatal to that of Edward the Third and of all other members of the English reigning family. Edward the Second, it may be added, had two elder brothers, but both died in childhood. In one place (p. 161) Mr. Towle states that Henry the Fifth's mother died in 1404; a few pages further on (169) he says she died in 1394, which is the correct date. If she had been alive in 1404 her husband must be considered "a moral bigamist," for he sought the hand of Marie de Berri in 1398-9. Mr. Towle says that Henry the Fourth "married Joan of Navarre, daughter of the King of Aragon," in 1405. How a princess of Navarre could be a daughter of the King of Aragon he does not explain. The lady, who was widow of John, Duke of Brittany, was daughter of Charles le Mauvais, one of the most notoriously infamous characters of the fourteenth century, and she was a French, not a Spanish, princess. She married Henry the Fourth in 1402. Our author says that Henry the Fifth's "grandmother, the Duchess of Lancaster, died in the same year" that his mother died, 1394. A Duchess of Lancaster died in 1394, but she was not Henry the Fifth's grandmother. She was the Princess Constance of Castile, and no more grandmother of Henry the Fifth than was Catherine Swynford, John of Gaunt's mistress, whom he married after Constance's death. In telling a rather poor jest made by Henry the Fifth when he restored the Archbishop of Sens to his diocese, Mr. Towle so writes as to convey the droll impression that it was the practice of French prelates to marry in the fifteenth century, for he says that the archbishop "had been ousted of his diocese because of his Burgundian opinions, and had *left his wife behind*." All that Henry meant by his words to the prelate was that he was wedded to his diocese. We have not a Gradgrindian devotion to facts, but we hold that when facts are supposed to be worth mentioning, they are worth mentioning correctly.

In spite of these slips Mr. Towle's volume has much merit. It is the best history of Henry the Fifth that we have, and the reign of that sovereign was a brilliant time because of Henry's success in war. Henry was a great soldier; and had it been his fortune to live even as long as his father lived—and he died not much beyond middle life—he would have wrought greater changes in the course of Christendom than ever were accomplished by any sovereign; but they would, we are convinced, have been injurious to man-

* "The History of Henry the Fifth, King of England, Lord of Ireland, and Heir of France. By George Makepeace Towle, Author of 'Glimpses of History.'" New York: D. Appleton & Co. 1866.

kind; for they would have involved the disappearance of the English nation through England's absorption into a great French empire, and England is the very country whose degradation to a provincial position the world could have least afforded, her career as a nation having been more beneficial to humanity than that of any other country. But Henry died at about the same age that saw the end of the Macedonian Alexander, and his death was followed by great funeral games in which all that he had nominally gained was profitably lost. Mr. Towle has written his history with spirit, and the general effect of his work is good. It is rather too much in the manner of a eulogy to suit the strict requirements of historical criticism, and some of his endeavors to excuse Henry's proceedings on certain occasions are far-fetched. He cannot, for instance, expect his readers to believe that Henry was animated by a desire to bestow on the French the blessings of order when he invaded their country and cut so many of their throats. This is to apply the ideas of the nineteenth century to the fifteenth century, which is what Mr. Towle fairly protests against when speaking of Henry's treatment of the Lollards. It is to make a Napoleon the Third of the Fifth Henry, whereas the English King looked upon France in a very different light from that in which the French Emperor looks upon Mexico. The two monarchs resemble one another in nothing but selfishness. Ten years hence our author will smile over some portions of his work, and probably he will recast it. The faults it has, it is easy to see, are such as proceed from inexperience. It seldom happens that a young man can write history as it should be written, because he lacks that knowledge of life which is the key to human motives. The more an historian has had to do with affairs, the better will he write of those affairs in which others were actors; and experience in affairs can come only with years. Mr. Towle cannot be classed with great historians, but we fairly can say that this work affords ample evidence that there is in him the material of which historians are made, with the assistance of study, experience, and reflection.

THE LIFE AND TIMES OF JAMES MADISON.*

Mr. Rives's work, of which the second volume has just been issued after an interval of several years from the publication of the first, would be more satisfactory were it either a history or a biography, rather than a mixture of both. We want larger sketches of the nation, its leaders, its classes, and its interests, to be entirely satisfied with the work as a historical one, while to be fully biographical, it ought to enter into a great variety of details, personal and local, without which we can form no familiar acquaintance with any man. We fear that the form in which Mr. Rives has cast his labors will interfere with their merited effect.

At the same time, we may remember that the first volume contains a good deal that is personal to Mr. Madison, while the second treats of a period in his life during which he was almost exclusively a public man. From the beginning of 1785, when this volume opens, to the end of 1788, where it closes, Mr. Madison was not only absorbed in, but we may say identified with, the formation of the Constitution. To this great transaction he devoted himself with an earnestness certainly not surpassed and perhaps not equalled in any of his contemporaries. He toiled or rested, rejoiced or lamented, hoped or feared, according to the movements of the nation in desiring or avoiding, accepting or rejecting, a new frame of government. It was his one predominant object, and to write his biography during these four years is necessarily to write the history of the Constitution.

Jefferson spoke of him as "the main pillar" of the Constitution in the convention then about to decide upon its ratification by Virginia. He had been its main pillar not only from the moment it began to rise, but from the time in which its uncertain foundations were laid. Thirty-four years old in 1785, Madison,

> "Starting in his fervent prime,
> Did first lead forth that enterprise sublime."

Not that it owed its original design to him, but that, cherished in the patriotic purposes of all far-sighted Americans, it entered upon its earliest practical movements under the guidance of Madison. As we read Mr. Rives's volume, and follow the efforts there related, it comes home to us once more that, if it can be said of any man, it can be said of James Madison, that he was the Father of the Constitution.

A summary of his claims to so august a title will be the most effectual analysis of the volume before us:

1. It was on Madison's motion in the Virginia House of Delegates, early in 1785, that commissioners from that State were appointed to confer with others from Maryland on the jurisdiction of the two States over the waters of the Potomac and Chesapeake Bay. He was one of the commissioners. They met at Alexandria and the neighboring Mt. Vernon in the month of March, and at Madison's suggestion, as he afterwards affirmed, they decided to recommend to their respective States a commercial compact by which the disturbances hitherto affecting their trade might be removed. Maryland adopted the recommendation on condition that Pennsylvania and Delaware should be invited to join in the projected compact. The assent of Virginia, though given unconditionally, was delayed by the introduction of another scheme into her Assembly.

2. This was a resolution instructing the Virginia delegates in Congress to propose "a general regulation of the commerce of the United States." Madison was the advocate of this resolution, and when it fell into danger of being rendered ineffectual by certain qualifications, he prepared a substitute, which he induced one of his colleagues to offer, lest his own proposal of it should excite unnecessary opposition, to the effect that commissioners should be appointed from all the States "to consider how far a uniform system in their commercial regulations may be necessary to their common interest and permanent harmony." This was finally adopted by the Legislature in January, 1786, and Madison was appointed one of the Virginia commissioners.

3. At their instance the convention was summoned to meet at Annapolis in the following September. Five States only being represented, the convention broke up, as Madison wrote beforehand, "with the recommendation of another time and place and an intimation of the expediency of extending the plan to other defects of the confederation." To carry this larger purpose into effect, an address was prepared by Hamilton, of New York, which, after being modified by the influence of the Virginia delegates, and, therefore, of Madison, recommended a convention to be held at Philadelphia in the ensuing month of May, "to take into consideration the situation of the United States" and "to devise such further provisions as shall appear necessary to render the Constitution of the Federal Government adequate to the exigencies of the Union."

4. The report from Annapolis being presented to the Legislature of Virginia, Madison introduced the act of Nov. 9, 1786, under which Virginia took the lead in appointing delegates to the Philadelphia convention. If his labors had ended with securing the passage of that noble act, they would have placed him among the very foremost of those who prepared the way of the Constitution.

5. The next great service he performed was in uniting with others to persuade Washington to accept the appointment of a delegate to the convention. The correspondence between the two shows the importance which Washington attached to Madison's opinion in regard to his accepting the appointment. Madison himself was one of the delegates from Virginia.

6. He made all possible preparations for the duty before him. He drew up several papers, one on the great confederations of ancient and modern times, another on the constitutional history of England and other European states, and another still on "The Vices of the Political System of the United States." He wrote elaborate letters to Jefferson, then in Paris; to Randolph, governor of Virginia; and to Washington, upon the work before the approaching convention, setting forth what he afterwards termed "the earliest sketch on paper of a constitutional government for the Union." Thus prepared to bear his part in the national council, he brought with him a wise and discriminating zeal, which rendered him one of the most useful as well as influential members of the convention. In addition to all his regular duties, he took upon himself the charge of recording with his own hand the proceedings of the assembly, concerning which our knowledge would now be sadly insufficient but for his laborious report. Mr. Curtis, in his "History of the Constitution," while regarding Madison's labors as far more arduous than those of any other delegate, is disposed to consider his greatest service as having consisted in meeting the objections to a want of power in the convention to form a wholly new frame of government. But Mr. Rives brings out in full relief the variety of Madison's services and the inestimable value of his suggestions concerning almost every portion of the Constitution. Few if any of his colleagues could have filled his place had he left it. Nor can we recall the difficulties of the convention, or the frequent hazards of its separating without having done its work, without a thrill of pain at the thought of what might have happened but for the calm, unwearied endeavors of Madison to bring those momentous deliberations to a peaceful issue.

7. As soon as the sessions of the convention were over he took his seat in Congress, and bent his efforts to induce that body to fulfil its office in bringing the Constitution before the people. His correspondence, long ago published in the appendix to the ninth volume of Mr. Sparks's edition of

* "History of the Life and Times of James Madison. By William C. Rives. Vol. II." Boston: Little, Brown & Co. 1866.

Washington's writings, shows the magnitude of Madison's Congressional services to the Constitution.

8. He was at the same time the champion of the Constitution before the nation. Hamilton and Jay had been writing in its behalf under the signature of "A Citizen of New York," when they invited Madison to join them, and on his doing so the articles that followed were signed "Publius," and addressed to the people of the United States. Madison's part in the *Federalist* is of singular value, and, as it has been underestimated at times, Mr. Rives has done well in stating and proving its importance.

9. The best part of the volume under review is that which describes Madison's support of the Constitution in the Convention of Virginia. To the decision of this body, for reasons generally known, the country looked with an unusual solicitude. "It is worthy of remark," wrote Madison to Jefferson at the close of 1787, "that in Virginia, where the mass of the people have been so much accustomed to be guided by their rulers on all new and intricate questions, they should on the present, which certainly surpasses the judgment of the greater part of them, not only go before, but contrary to their most popular leaders; and the phenomenon is the more wonderful, as a popular ground is taken by all the adversaries of the new Constitution." At the head of these adversaries, and the most popular among them all, was Patrick Henry, the fervent leader, the commanding orator, and, we must add, the unprincipled public man. He rested his op position to the Constitution as much upon its preamble, which declared it to be ordained by the people, as upon any single point, but he was constantly declaiming against all its principal provisions. Madison, and Madison alone, met him at every turn in the debate—now upon a general question, now upon a question of detail, always ready, always thorough, always the master of the situation. An eye-witness, writing as late as 1857, says:

"The impressions made by the powerful arguments of Madison and the overwhelming eloquence of Henry can never fade from my mind. I thought hem almost supernatural. They seemed raised up by Providence, each in his way, to produce great results: the one by his grave, dignified, and irresistible arguments to convince and enlighten mankind; the other by his brilliant and enrapturing eloquence to lead whithersoever he would. . . . They were both, at all times, great and interesting; but the convention yielded gradually to the convincing and irresistible arguments of Madison, and adopted the Constitution."

It was Chief-Justice Marshall who, on being asked which of all the public speakers he had ever heard was the most eloquent, replied thus: "If eloquence includes persuasion by convincing, Mr. Madison was the most eloquent of all."

Such is a mere outline of the exertions which Mr. Rives has described with an accuracy and a reverence which leave little to be desired from any other writer. He does not neglect the collateral questions in which Madison interested himself, some of which, like the navigation of the Mississippi, had an immediate bearing upon the adoption of the Constitution. Nor does he pass by, though we wish he had dwelt upon them more, the personal occupations and tastes of Madison, his legal studies and writings, his enquiries into population, his interest in natural history and the observation of the world around him. Mr. Rives writes with clearness and dignity, though his expressions are sometimes overstrained, and we miss the charms of a simpler style. He implies that the volume was written before the outbreak of civil war, and takes occasion to express, in language highly honorable to him, "the sincere and sanguine hope that, with the re-establishment of peace, the system founded by our wise and virtuous ancestors will quietly revert to its original principles and beneficent operation, and continue to vindicate to future ages and the enlightened judgment of the world the comprehensive statesmanship and enlarged and noble patriotism in which it was conceived."

ANATOMY AND PHYSIOLOGY FOR SCHOOLS.*

WHILE no branch of study can lay claim to a more absorbing interest or a greater practical importance, we are yet without a work upon human anatomy and physiology at once popular and scientific, sufficiently untechnical to be understood by an intelligent schoolboy, and sufficiently full to answer the questions every such boy will ask. This lack is chargeable to the public indifference; and we have only to be awake to this necessity to give physiology a place in our schools as firmly established as that won but recently by chemistry or physics.

The urgency of the need was a measure of the interest with which we hailed an effort to meet it, such as the work below named seemed to indicate. To the eye the book is attractive. Type, paper, and binding are of the best; the illustrations are profuse, and mostly accurate and well executed—most of those, at least, which we recognize as borrowed from the "Physiology" of Professor J. W. Draper (*père*). Closer examination compels a suspicion that the title-page hardly reveals the author's full scope and purpose; that, under the modest guise of an instructor of youth, he is seeking to undermine the old towers of orthodox medicine, and spring strange heresies upon an unwary public. To this idea the arrangement of the work gives some color; for while many topics of grave moment are lightly touched upon, we find several lectures devoted to the reproduction, *in extenso*, of the author's inaugural thesis upon the origin of urea, and certain papers upon the lungs and skin. Again, in lecture twenty-eight, the liver is disposed of in half a page, and six pages are given to Professor Henry Draper's inaugural thesis upon the spleen. Now, although we would be far from questioning the value of the experiments here embodied, we might doubt the fairness of promulgating them through a channel so foreign to the profession. We are thus forced to believe (and a remark in the preface confirms us) that it is for medical "schools" the work is intended; and as the latest contribution to science, we invite our readers to a taste of its quality.

Upon the various moot points of physiology the author's views are clearly pronounced. Many questions which have been lately agitated are at last definitely settled, commonly, indeed, with no intimation that they had ever been in dispute; others that we had deemed long since at rest are revived, with such change of form and feature as, doubtless, befits a resurrection. To the latter class we shall confine our extracts. Even the worn-out field of descriptive anatomy, which has been tilled for so many years that one would think it might now lie fallow, is made to yield rich harvests of unimagined fruits. It is the more to be regretted that our experimenter should consign to waste whole tracts as here: "The muscles of the fore-arm are all small, and do not give any special marks or contours; . . . we must, therefore, leave the description of them to more extended works." It is a satisfaction, however, that if selection must be made, it should be guided by so just a criterion. It is manifest, from a careful study of these new developments, that our old notions are all at fault. For instance, when told that "all animals are provided with a more or less perfect skeleton" (p. 9), we are at a loss whether to assign the jelly-fishes to the vegetable or the mineral kingdom. The proposition that "the ribs are curved upon themselves so as to form an arc of a circle" (p. 19), seems to imply that a new system of geometry awaits us, and our classification is set all awry by the discovery that the bones of the foot "all belong to the order of long bones" (p. 22). We would refer enquirin ganatomists to Figure 42 and the accompanying descriptions as particularly rich in the new discoveries. Some others of the *original* figures are sadly puzzling, especially where the text fails to enlighten us upon their peculiarities. On the other hand, where the figures seem clear, the novel names perplex us, as, for instance, when an artery familiar as the posterior temporal is termed "the maxillary" (p. 86).

Upon the blood and its circulation much light is thrown. That the clot "*floats* in the serum" (p. 71) is a fact which, in these days of rare blood-letting, we might have waited long to discover. It is interesting to know, too, that "the ventricles, *and especially the left*, force the blood into the arteries," etc. (p. 78). But why dally with such trifles when the following is before us: "The sounds of the heart are caused by the passage of the blood through the valves and their sudden closure. . . . The auricles at the base contract at the same moment; . . . the sound produced is represented by the syllable *lubb*. This is followed by the contraction of the ventricles, which also move together, and produce a sound represented by the syllable *tupp*, shorter, quicker, and sharper than that produced by the auricles?" (p. 81). Physical diagnosis must, henceforward, abate its pretensions to certainty; for it is founded upon the notion—thus made obsolete—that neither "the passage of the blood through the valves," nor yet the action of the auricles, is accompanied, in health, by any appreciable sound. The author adopts what we may call the chemical theory of the circulation, making the capillaries the chief agency concerned, as opposed to the mechanical theory, where the heart is considered the great motive power. Suggested by the earlier physiologists, that theory has been elaborated by Prof. J. W. Draper, who has supported it by many strong arguments. But it was reserved for his disciple to assert that "direct experiment has shown that the force exerted by that organ [the heart] is not sufficient to propel the blood through the capillaries" (p. 91).

The lectures upon the nervous system and the special senses give a faint outline of Professor J. W. Draper's remarkably ingenious, though fanciful, theories. We have also such new facts as that the sense of taste "is situated in the tongue *and not in the palate*" (p. 182). We must entreat an ex-

* "A Text-Book on Anatomy, Physiology, and Hygiene, for the Use of Schools and Families. By John C. Draper, M.D., Professor of Natural History and Physiology in the New York Free Academy, and Professor of Analytical Chemistry in the University of New York. With 170 Illustrations." New York: Harper & Brothers. 1866. 8vo, pp. xviii.—300.

position of the system of logic by which, from the established premises that the blood gains cholesterine in passing through the brain and loses it in passing through the liver, the conclusion is deduced that this element of the bile is produced by the liver for the supply of the brain.

Part third embraces hygiene. Gastronomy is discussed philosophically, mythologically, historically, and etymologically. We learn that "breakfast should, *as its name signifies*, be small in quantity;" and that Jupiter was amorous because he was fed on goat's milk. We are taught that fish makes a people prolific (Malthusians, ponder!) and are initiated into the mysteries of *caviare* and crammed capons. Epicures take comfort in the reflection that the flesh of the latter "has a higher nutritious power, since it is said that one ounce of fat meat will furnish an amount of nutriment equal to that obtained from four ounces of lean meat." But while complacently meditating upon the good dinners we shall hereafter enjoy, in pursuance of this novel doctrine, we are brought up against another of the new style syllogisms: *Major premise*, above; *minor*, on p. 25, wherein it is shown that the white flesh of birds owes its color to fatty degeneration; *conclusion* (p. 239): "The flesh of birds whose meat is dark is much more nutritious than that of the white-fleshed birds." The pages glow with the fires of pent-up knowledge, but we have space only for the closing injunction, which for clearness, conciseness, and cogency must stand unequalled: "Habit is the most powerful of all agents in its effect not only on the digestive, but also on the other systems of the body. It should, therefore, be cultivated to as great an extent as possible, for the body quickly accommodates itself to any given duty, and accomplishes a definite amount of work with far greater ease when it is accustomed to it" (p. 247).

The Origin and Antiquity of Physical Man Scientifically Considered. Proving man to have been contemporary with the mastodon; detailing the history of his development from the domain of the brute, and dispersion by great waves of emigration from Central Asia. By Hudson Tuttle, author of "Arcana of Nature," etc. (Boston: William White & Co. 1866. 12mo, pp. 258.)—There has never been a time when our knowledge of the ancient history of man was increasing with anything like the same rapidity as at present. Several independent branches of enquiry are successfully exploring the darkness of the past. Language is yielding results to ethnology the possibility of which was unsuspected but a few years since. Archæology is finding, even in the well-explored soil of Europe, abundant remains of a period and a mode of life unapproached by the oldest human traditions. The geologists discover bones of men and rude implements, which can have been fashioned only by men's hands, in such situations and with such neighbors that we are threatened with a total overthrow of the hitherto prevailing views respecting the age of our race as a member of creation. The zoölogists are making the development theory, which has been the laughing-stock of more than one generation, a matter no longer to be dismissed with a shrug and a word of contempt. All these are most promising lines of investigation, whose development is to be watched with the highest interest, and from which we shall derive, by-and-bye, results both definite and satisfactory. But they are at present in such an inchoate state as makes them hard to deal with by one not thoroughly and specially versed in them, and particularly hard to treat conjointly and comprehensively. At the same time, with a not unnatural impatience, men are hastening to sum up their results; to close the case and pronounce judgment before the evidence is half in, or the advocates have made their final pleas. Knowing something of one department, or, at second hand, a little of them all, they try to combine their various results, or to construct already a natural history of man. Thus Max Müller, in his last lectures on language, in a "note on words for fir, oak, and beech," attempts to fit together the linguistic and archæological chronologies, and makes an egregious failure. Thus an English clergyman, named Heath, in a paper (reported in full, as "highly interesting," in the London "Reader" of last December) presented to that sapient body, the Anthropological Society, endeavors to explain Grimm's law respecting the mutation of consonants in German by the aid of anthropoid apes and "kitchen-middens," and produces one of the most exquisitely absurd and ludicrous theories, perhaps, that was ever seriously brought before a learned body. The work before us belongs in the same class. Mr. Tuttle attempts to grasp a subject greatly beyond his powers, and meets with such success as might be expected. Weak and pretentious, is the general impression left by it upon the reader. It is well meant, liberal in tone, and shows extensive reading; but is superficial and uncritical, mixing valuable facts with unwarranted assumptions and unfounded theories, and truths well established with unsafe deductions from insufficient data; and it shows misapprehensions of every kind, from those of most fundamental consequence down to such trifles as the writing of *generæ* as would-be plural of *genera!* It is no credit to American scholarship, and can only add to the obscurity which it would fain relieve.

Miss Oona McQuarrie. A sequel to "Alfred Hagart's Household." By Alexander Smith. (Ticknor & Fields, Boston.)—The most serious charge that we have against "Miss Oona McQuarrie" is that, being the sequel to another book, it would seem as if we ought to read that other book before passing judgment upon its supplement. But we plead to have taken all of "Miss Oona" with much fidelity, and every one knows that floating island cannot be eaten for ever. Mr. Smith seems to belong to a class of persons who very correctly believe that a "plain unvarnished tale" of every-day unadventurous life may possess greater charms than a sensation novel with the most elaborate plot, but who also very incorrectly hold that it is an easy thing for any one with a soul above weak desires for accidents, mysteries, and catastrophes to allow his pen to "tell a simple story simply"—and of course entertainingly. But a successful "simple story" requires something more to produce it than a mere contempt of plot. It is not, as Mr. Smith by example would have us believe, a bald relation of commonplaces. It is not a mass of worthless details like these. But it is a work of the highest art, requiring, except perhaps from the few whom genius inspires, hard labor and most courageous immolation of pages of manuscript that are almost good enough. It is very easy to despise Mrs. Southworth, but very difficult to approach Mrs. Gaskell. Among the countless dilettante writers of little, prettyish, namby-pamby stories, who fancy that a love of fine scenery, or a superior taste for poetry, or a flow of language, or a devotion to certain unusual or difficult authors, has qualified them so to do; who of these, we ask, can place his or her own lucubrations beside "Cranford" and not be struck by the difference between a simplicity pregnant with thought and a simplicity pregnant with vapor?

Mr. Smith has a nice eye for the *mise en scène*, and if his characters only fulfilled his good intentions, they would make a charming group against his well-painted Hebridesian background. But it is one thing to *mean* to have a "strong cast," and another thing to have one. There is something almost painful in being able to distinguish so plainly an author's plan for the development of character through the flimsy screen of bad work. To see the poor puppets ticketed off, as it were, and struggling to accomplish their originality, piquancy, pathos, humor, or whatever else was set down for them, and never succeeding, gives the reader an uncomfortable sense of connection with a huge scheme of affectation; or as if he had got into a world where the people had been born not quite finished, and were trying to finish themselves.

The Shadow of Christianity; or, The Genesis of the Christian State. A Treatise for the Times, by the Author of the "Apocatastasis." (Hurd & Houghton, New York; E. P. Dutton & Co., Boston.)—The true state, according to our author, or a genuine democracy, is possible only as an incident of Christianity, and will be in vain sought after by or among any people acknowledging a different faith. From this formula, for which the argument is strong enough, though lacking, it is evident, the support of a complete illustration in the government of any country, the author proceeds to lay down principles with which the American republic must yet square itself before it can resemble the church, whose legitimate offspring it is. He sees a great many equal laws which are very unequal in their operation and effects, especially those which relate to property; and he would have the state limit the accumulation of wealth. In the same view he advocates legalizing the eight-hour system, though the inequalities of a statute of this sort are too palpable to need pointing out. He would have society protect the individual farmer or mechanic against capital by reserving his homestead or house from liability to debt, and the former against himself by restricting him from selling any less than the whole of the homestead thus reserved. In short, our author is a very vigorous protectionist, and challenges political economy to mortal combat for the heresy of competition. Of course, we cannot join him in this absurd tilt at a science which is nothing if not democratic, and which has taught the world that the riches and power of nations are contained in the well-being, intelligence, and industry of the masses. Nor can we, while agreeing with many of his propositions, help believing that, in reasoning out the remainder *à priori*, Adam Smith would have been a much safer starting-point than the Golden Rule.

The Alhambra. Wolfert's Roost, and Other Papers. By Washington Irving. (G. P. Putnam, Hurd & Houghton, New York.)—These are two dainty volumes of the Riverside edition of Irving's works. They are not only adapted to adorn the shelves of any library, but are of a most commodious size and shape for the hand of the reader. The second contains, besides the leading sketch, a variety of others, short and appertaining to many lands. Those made in Paris in 1825 are particularly pleasant reading for their observations on national characteristics.

Venus of Milo. Drawn by T. Hovenden. Photographed by Gellatly & Lecky. (Edward Dechaux, Jr., 653 Broadway, New York.)—Few persons, on first glancing at this photograph, would detect that it was not taken from a plaster cast of the great original. In fact, it copies a very skilful production of the crayon, correct in the general proportions, and conscientious in details, even to the slightest dint that mars the beautiful figure. The face alone does not quite satisfy us, but it does not spoil the *tout ensemble*. The mounting is in the best of taste.

BOOKS RECEIVED.

An Account of the Operations of the Fifth Army Corps at the Battle of Five Forks, etc. By G. K. Warren, late Major-General Volunteers. William M. Franklin, New York.

The Story of the Embarkation of Cromwell and his Friends for New England. [Reprinted from the "New England Historical and Genealogical Register.] D. Clapp & Son, Boston.

Mackenzie's Ten Thousand Receipts in all the Useful and Domestic Arts. Second Edition. T. Ellwood Zell, Philadelphia.

Science.

SCIENTIFIC NOTES.

It has always been hard to get homogeneous glass for optical purposes, especially for the object-glasses of large telescopes. A glass suitable for the use of the optician must be entirely unaffected by exposure to the air and to moisture, and it must be free from bubbles and veins, even the minutest. The optician selects his glass with the greatest care, yet it not unfrequently happens that a costly instrument, when completed, proves unfit for use. It has therefore been a problem of great practical importance to discover some method of preliminary examination, which should reveal the slightest irregularities of refracting power in the glass before attempting to employ it in the construction of a first-class optical instrument.

The investigation of this problem has led Dr. Toepler, of Poppelsdorf, Germany, to the invention of an instrument which not only meets the wants of the optician, but promises also to be of high scientific value as a means of research, since it enables us to detect the slightest variations from perfect homogeneity in any transparent medium. The principle is easily explained. If the rays of light radiating from a brilliant point are brought to a focus by a perfect convex lens, the image formed will be itself a point; but any imperfection in the lens or any lack of homogeneity in the medium through which the rays are transmitted from their source to the image, will cause some of these rays to vary from their normal course and to fall outside of the image. If the eye be placed just beyond the focus, looking towards the lens, we shall see the lens itself as an intensely luminous disc, too bright to admit of any perception of slight irregularities. If now a small, opaque screen be placed at the focus, in such a way as just to cut off the image without covering the pupil of the eye, it is evident that the rays which fall just outside the image will strike upon the pupil, and thus become visible. The illuminated disc will disappear, but every imperfection in it will remain visible in its true form and extent. If the deviation of the rays has been caused not by imperfections in the lens itself but by irregular refractions in the air, we shall see the irregularities of structure which have caused such refractions, be they waves of condensation or of rarefaction.

Constructed on the above principle, but naturally somewhat more complicated in form to make it convenient and accurate in use, Dr. Toepler's instrument has led to some very interesting experiments. The phenomena of the diffusion of gases into one another, which have been so much studied without ever having been seen, are now made visible. Hydrogen and carbonic acid gases, evolved in the cold, instantly diffuse themselves into the surrounding air, as the bubbles of liquid containing them burst. In Dr. Toepler's apparatus each bursting bubble seems a flash of lightning. Ordinary illuminating gas diffuses itself more slowly and looks like a solid brilliant rod of glass. A most extraordinary effect is seen when warm bodies are introduced between the lens and the eye, owing to the waves of air rarefied by heat which they produce. The bodies appear to be covered with lambent flames. The head of a man appears enveloped in sheets of flame, streaming upwards to the height of several feet. The spontaneous evaporation of liquids may also be seen. Ether vapors are denser than air, and hence are seen to flow over the sides of the vessel like molten lava. Alcohol is seen to evaporate rapidly even at 32° F.; but to make the evaporation of water visible a temperature of from 80° to 85° F. is required.

Perhaps the most curious and interesting of all the results as yet obtained by this instrument is that by it sound is made visible. Theoretically, the waves of sound, being waves of rarefaction and of condensation, ought to be rendered visible by the instrument, but the overcoming of the practical difficulties of the experiment, owing to great velocity of the waves, required no little ingenuity. By the employment of the instantaneous light of the electric spark, Dr. Toepler was enabled to see the spheroidal wave of sound, and to observe its reflection. This is literally making sound visible.

The instrument has also been employed in the investigation of the phenomena accompanying the passage of the electric spark through the air, but the interesting results obtained do not admit of intelligible description without the aid of engraved illustrations.

AMERICAN AND EUROPEAN LITERARY BULLETIN,

A Monthly List of the most prominent English, French, and German Publications with occasional notes on Dutch, Danish, Swedish, Italian, Spanish, Portuguese, and other foreign Books, with critical notices, from the best authorities, of important new and forthcoming Publications.

THE CATHOLIC WORLD,

A MONTHLY MAGAZINE

OF

GENERAL LITERATURE AND SCIENC

EDITED BY REV. I. T. HECKER,

AND PUBLISHED WITH THE APPROBATION OF THE

Most Reverend Archbishop of New York.

The second year of THE CATHOLIC WORLD begins with the number for April, 1866. It will in future contain

ORIGINAL ARTICLES,

in addition to TRANSLATIONS and SELECTIONS from the best European periodicals. Measures have been taken to secure, as contributors, the best Catholic English writers, both at home and abroad.

THE CATHOLIC WORLD aims to supply a great literary want, and to make literature a means of disseminating Catholic principles.

NOW READY,

THE CATHOLIC WORLD

FOR APRIL, 1866.

CONTENTS.

I.—THE PRESENT STATE OF THE PATRIARCHATE OF CONSTANTINOPLE. (Original.)
II.—SAINTS OF THE DESERT.
III.—JENIFER'S PRAYER.
IV.—PROPOSED SUBSTITUTES FOR THE STEAM-ENGINE.
V.—CHRISTINE. A Troubadour's Song. (Original.)
VI.—A LETTER TO THE REV. DR. PUSEY ON HIS RECENT EIRENICON. By the Very Rev. Dr. NEWMAN.
VII.—HAVE N'T TIME.
VIII.—THE SONG OF THE SHELL. (Original.)
IX.—ALL-HALLOW EVE; OR, THE TEST OF FUTURITY.
X.—FREDERICK HURTER. (Translation.)
XI.—WORDS OF WISDOM.
XII.—IRELAND AND THE INFORMERS OF 1798.
XIII.—THE LEGEND OF THE LOCKHARTS.
XIV.—REMINISCENCES OF DR. SPRING. (Original.)
XV.—MISCELLANY.
XVI.—NEW PUBLICATIONS.

THE CATHOLIC WORLD is published on CASH PRINCIPLES, *and will be sent to t hose only who pay in advance.* Each number contains

144 LARGE OCTAVO PAGES,

well printed on good paper, and is furnished to subscribers at

FIVE DOLLARS A YEAR.

LAWRENCE KEHOE, Publisher,

145 Nassau Street, New York.

☞ Single copies 50 cents; to be had of all Booksellers and Newsdealers.

Just Published.

BATTLE OF FIVE FORKS, VA.

BY MAJOR-GENERAL G. K. WARREN.

WIDDLETON,

PUBLISHER,

17 MERCER STREET, N. Y.

THE NOCTES AMBROSIANÆ. By Professor Wilson, J. G. Lockhart, James Hogg, and Dr. Maginn. Edited, with Notes, by Dr. R. Shelton Mackenzie. A handsome library edition, on tinted paper, steel portraits and plates. 5 vols. crown 8vo, cloth, extra, $11 25.

CHRISTOPHER NORTH. A Memoir of Professor Wilson, author of "The Noctes Ambrosianæ." Compiled from Family Papers and other sources, by his daughter, Mrs. Gordon. Eight illustrations on wood, and fine steel portrait. 1 vol. small 8vo, laid tinted paper, cloth, extra, $2 50.

NOCTES AND NORTH. Uniform sets, 6 vols. in box, $13 50; sets, half calf or half Turkey, $25.

DR. DORAN'S WORKS.

Dr. Doran, F.S.A., editor of the London *Athenæum*, "is a charming writer, quaint, fresh, genial, correct, satisfactory, delightful. The world owes him a debt of gratitude."—*N. Y. Evening Post.*

Doran's Works are in 9 vols., elegantly printed and bound. Uniform library sets, in box, comprising:

ANNALS OF THE ENGLISH STAGE, from Thomas Betterton to Edmund Kean: Actors, Authors, and Audiences. 2 vols.

TABLE TRAITS, with Something on Them. 1 vol.

HABITS AND MEN, with Remnants of Record touching the Makers of Both. 1 vol.

THE QUEENS OF ENGLAND of the House of Hanover (the Wives of the Four Georges). 2 vols.

KNIGHTS AND THEIR DAYS. 1 vol.

MONARCHS RETIRED FROM BUSINESS. 2 vols.

Sets, cloth, extra, $20; half calf or half Turkey, gilt tops, $35. Cloth vols. sold separately, per vol. $2 25.

PRAED'S POEMS.—The Poems of Winthrop Mackworth Praed. With Memoir by Rev. Derwent Coleridge. A handsome reprint of "Moxon's" authorized and complete edition, containing many poems before unpublished, and steel portrait from miniature by Stuart Newton. Fine tinted paper, 2 vols. crown 8vo, cloth, extra, gilt tops, $4 50; half calf or half Turkey, $8.

THE INGOLDSBY LEGENDS of Mirth and Marvel, by Thos. Ingoldsby, Esq. (the Rev. Richard Harris Barham), with a Memoir of the author. Reprinted from the 10th English edition, with 16 full-page illustrations by Cruikshank and Leech. 2 vols. crown 8vo, cloth, extra, $4 50; half calf or half Turkey, gilt tops, $8.

☞ Our books are kept in stock by the principal booksellers throughout the country, and mailed, post-paid, by publisher on receipt of price.

FINANCIAL REVIEW.

NATION OFFICE, Saturday Evening, March 17, 1866.

No further decline in gold has taken place since we last wrote. The price has fluctuated between 129½ and 131½, closing this evening at 129½. Foreign exchange has fallen to 107⅞ and 108 for bankers' sterling, owing in some degree to the advance in U. S. securities abroad, and in some degree to reshipments of foreign produce for which there is no market here. Government has sold no more gold, and the resolution introduced into the Senate on 13th inst. by Senator Sherman, together with the defeat of the loan bill on the 16th, has encouraged the bulls to buy for a reaction. It is not too much to say that Mr. Sherman's resolution is the most extraordinary of the many extraordinary performances in Congress during the present session. John Sherman is one of the leading men in Congress. He was chairman of the House Committee of Ways and Means for two years. On Mr. Lincoln's election, his name was pressed before the President for the Treasury Department, and he narrowly escaped being selected. In the Senate, he is second only to Mr. Fessenden. It was this senator who, on the 13th, introduced into the Senate a joint resolution declaring that "the aggregate outstanding United States notes, not bearing interest and including fractional currency, shall not be diminished below four hundred and twenty millions; that all surplus in the Treasury exceeding forty millions in coin and forty millions of currency shall be promptly applied to the payment of accruing indebtedness and to the purchase or payment of the interest-bearing debt of the United States; but the amount of interest-bearing legal tender notes shall not be diminished by payment or conversion at a rate exceeding five millions per month."

It is but plain truth to say that this resolution contemplates the permanent inauguration of the paper money system in this country, and the indefinite postponement of a resumption of specie payments. It would take thirty-six years, at this rate, to redeem the interest-bearing legal tender alone. The resolution ought to have been entitled "a plan to degrade permanently the United States currency." There are those in Wall Street who, having watched Congressional matters pretty closely for the past few years, charge that this resolution was merely introduced for effect, and that it was designed to assist some of the cliques in stocks which are managed by friends of Mr. Sherman. Such scandalous insinuations deserve no consideration. But it cannot be denied that the resolution has greatly pained those who are friends equally of Senator Sherman and of a sound currency. Unless we begin to contract now, we never can. The revenue is now largely in excess of the expenditure, taxes are being honestly paid, and there is every reason to believe that, by a re-adjustment and diminution of the present revenue charges, a still larger income may be secured during the year 1866–7. The single disability under which we labor is that our money is worth 25 to 33 per cent. less than the money of other nations; that it is fluctuating and uncertain in value, and that it has the practical effect of converting every kind of business into gambling. Now honest differences may exist among loyal men with regard to the means to be used for the resumption of specie payments. One man may recommend a speedier method than another. One man may urge periodical funding loans; another, such loans as the condition of the money market may justify. Mr. Hooper wants the interest-bearing legal tender first eliminated from the volume of the currency; Secretary McCulloch would reduce the plain legal tender as soon. But no man in all the country, except a few speculators in produce, real estate, stocks, and gold, wants to perpetuate the present system of a fluctuating, depreciated currency—save only John Sherman, of Ohio. It is not very likely that his views will command adherents enough to secure their adoption by Congress. But we shall be much mistaken if this unfortunate resolution do not hereafter prove a grave stumbling-block in the career of the gifted senator from Ohio.

The defeat of the Loan bill in Congress by a majority of two does not discourage the friends of a sound currency. Whether the vote on the bill in its present shape be reconsidered or no, it is considered quite feasible so to amend it as to satisfy the objections of many members who voted against it, not from any unwillingness to contract the currency, but because they disliked some of its minor features. A majority of business men disapprove of the inordinate power conferred by the bill upon the Secretary of the Treasury; were this feature modified, it would, doubtless, command many votes which were registered against it on the 13th. There are many men in Congress, and among them probably must be ranked Mr. Stevens, of Pennsylvania, who are opposed to contraction *in toto*, on the ground that the transition period preceding resumption would necessarily involve commercial and industrial distress. But it is not likely that this class of persons constitutes a majority of the body. The views of the West will probably in the main be found to concur with those of Mr. Wentworth, of Chicago, while Mr. Hooper, Mr. Morrill, and Mr. Raymond may fairly be presumed to speak for the East and the commercial interests. A few days, however, now will settle the question.

Stagnation continues to be the leading feature of all the merchandise markets. Even those articles of foreign growth which are exclusively sold for gold—such as hides, tea, sugar, coffee, spices, etc.—are as dull and as hard of sale at the decline as they were before it occurred. Dry goods, produce, and breadstuffs are quite inanimate. No one buys except "from hand to mouth." No one can tell for a certainty what the policy of Congress may be. Should it favor contraction, a further heavy fall in gold, goods, produce, breadstuffs, and stocks will be inevitable. Should it stop short of contraction, gold and all other articles will quickly rebound from the recent depression. Holders generally quote Mr. Sherman's resolution, and argue that expansion is still the order of the day. Buyers are confident that, notwithstanding all the talk about no contraction, Congress will at last adopt substantially Mr. McCulloch's views. Pending the debate between the two hostile parties, business stagnates and money accumulates in Wall street. Though first-class business paper can be bought at 8 to 9 per cent. per annum, call loans are 5 to 6 per cent. No man dares to embark his means in enterprises requiring time for their development. Thus no new factories are being erected, no new mines opened, no new railroads in progress, no increase of manufactures contemplated, no development of the national resources attempted; but money is flowing into Wall Street to be lent on call to the idle speculators of the Stock Exchange, for the purpose of cornering stocks and assisting the shrewd schemers of that meridian to saddle unsuspecting outsiders with unproductive railway shares at a high price. This state of things will naturally continue until Congress shall have fixed definitely upon a policy for the future.

The following table will show the course of the stock, gold, exchange, and money markets for the week:

	March 10.	March 17.	Advance.	Decline.
United States Sixes of 1881	104⅛	104⅝	⅜	....
5-20 Bonds, old	103	103¼	¼	....
5-20 Bonds of 1865	103	103¼	¼	....
10-40 Bonds	90⅝	90⅞	¼	....
7.30 Notes, second series	99⅛	99⅜	⅜	....
New York Central	91¾	92¾	1	....
Erie Railway	82⅛	82¼	....	¼
Hudson River	104	106	2	....
Reading Railroad	97¼	100¼	2¾	....
Michigan Southern	74	78½	4½	....
Cleveland and Pittsburgh	75¼	78¼	3	....

	March 10.	March 17.	Advance.	Decline.
Chicago and North-western	25⅛	27⅛	2	....
" " " Preferred	52⅛	54¼	1⅛	....
Chicago and Rock Island	107¼	108⅛	¾	....
P., Fort Wayne, and Chicago	89¾	92¾	3	....
Canton	43¼	47⅛	4⅛	....
Cumberland	42¼	44½	2¼	....
Mariposa	11	12	1	....
American Gold	131⅛	129⅛	....	2⅛
Bankers' Bills on London	108⅛	108	....	⅛
Call Loans	7	6	....	1

Prices are uniformly higher than they were a week ago. The advance is mainly due to the resolution introduced into the Senate by Mr. Sherman, which has been regarded in many quarters as foreshadowing a continued policy of expansion, and a defeat of the Secretary's schemes for restoring specie payments. Encouraged by this extraneous aid, as well as by the defeat of the Loan bill last evening, the cliques in the active railway stocks have renewed their efforts, and have succeeded in inflicting severe loss upon the bears. Michigan Southern was done, on Thursday, as high as 79½, as against 66 three weeks ago. An ingenious fiction on the subject of this railroad and its business was published a day or two since in one of the morning papers. It was therein asserted that the road was run for 10 to 15 per cent. less than the New York roads, though every railroad man knows that, with two competing lines to run, the expenses of the Michigan Southern are always in excess of those of ordinary lines. Appalled by their losses, the bears in this stock have generally closed up their interest, and the clique hold 60,000 to 70,000 shares, which they will be happy to sell to any venturesome buyer at a concession from the cash price. New York Central was run up to 93½ this morning, in consequence of the introduction of the bill in the Legislature removing the restriction on fares. Whether the governor will sign the bill or no, remains an open question. Many assert that it would never have been introduced had he not pledged himself to sign it. Others, on the other hand, looking to Mr. Fenton's aspirations to the senatorship, doubt whether he would venture upon a step which would make enemies of nine-tenths of the people along the line of the Central. Erie has become dull and inanimate. The clique have been selling stock freely, and when the "puts" expire it will probably decline. Rock Island is firm but lifeless at the advance. Fort Wayne advanced this morning to 93½ on the declaration of the usual 2½ quarterly dividend, which it seems many people had not expected. Reading has risen on the closing of a long line of shorts by a prominent bear. A speculative advance has been developed in Hudson River and in Canton. The Canton Company are said to have sold, or to be about to sell, a valuable tract of land to Government. Government securities continue firm and tending upwards. There seems fair reason to expect that before very long the five-twenties in London will sell in the neighborhood of 75, if not still higher.

IMPORTANT CHANGE IN THE DIVIDEND PERIODS

OF THE

EQUITABLE

LIFE ASSURANCE SOCIETY

OF THE

UNITED STATES,

92 BROADWAY, NEW YORK.

ACCUMULATED FUND.....$2,000,000.

ANNUAL INCOME.....$1,000,000.

PURELY MUTUAL.

ANNUAL CASH DIVIDENDS.

At the request of their numerous policy-holders, this Society have determined to declare their dividends ANNUALLY IN CASH: the first Dividend will be declared February 1, 1867. The last Dividend declared on the quinquennial plan reduced the premiums in some cases more than 50 per cent., or doubled the policy during the next dividend period. It is believed, for the future, that no Company in this country will be able to present greater advantages in its dividends to persons assuring than this Society, as its total expenditure to cash premium received was, by the last New York Insurance Report, less than that of any of the older American Life Insurance Companies.—*See Superintendent Barnes's Annual Report*, 1865.

The new business of this Society for the past year ($13,623,900) exceeds the new business of any New York Company in any previous year.—*See Superintendent Barnes's Annual Report*, 1865.

Hereafter Dividends on the first annual premium may be used as Cash in the payment of the Second Annual premium, and so on thereafter the dividend on each premium may be applied to the payment of the next succeeding premium. Policy-holders in most other Companies MUST WAIT FOUR OR FIVE YEARS before any advantage can be derived from Dividends.

The success of this Society has not been equalled by any Company either in this country or Europe, the Society's cash accumulation being over

ONE MILLION OF DOLLARS

greater than the most successful Company at the same period in its history, and its annual cash revenue from premiums, at the end of its sixth year, was greater than that of the largest company in the country at the end of its fifteenth.

Non-Forfeiture of Premiums.

In the case of whole life and endowment policies at ordinary ages in force for at least three years, the Society will, on due surrender, issue a Paid-up Policy for the full amount of premiums paid.

The Company will issue Policies on a single life to the extent of $25,000, but only in cases where the physical condition and family history of the applicant are entirely unexceptionable.

Permission is given at all times to visit Europe free of charge.

Extra Permits granted at moderate rates.

Paid Dividends—return premiums, ...	69,160 67

Assets, Jan. 1, 1866, $1,530,877 17.

The comparative growth of this Company is shown by its increased receipts during the past four years, ending 1st November. From

	For premiums.	*For interest.*
November, '61, to November '62	$150,927 18	$35,319 52
November, '62, to November, '63	198,202 68	38,628 50
November, '63, to November, '64	300,196 85	51,768 75
November, '64, to November, '65	551,571 47	67,854 87

A printed list of LOSSES PAID BY THIS COMPANY, of ten pages, will be forwarded on application, and is given chiefly for the purpose of fairly showing the diversity of interests, occupations, and professions represented by its patrons and beneficiaries, as also the widely extended field of its business and its bestowments—to the amount of $944,000; and in addition thereto there has been PAID IN DIVIDENDS $419,000, making a total of more than one and one-third millions of dollars; thus, at the same time, returning to the surviving policy-holders a large percentage of their past investments in premiums, and beneficently providing for the support of the widows and orphans of the deceased.

☞ Active and efficient AGENTS wanted in the Cities and large Towns in the healthy portions of the United States and British Provinces.

J. W. & H. JUDD, GENERAL AGENTS,

151 Broadway, New York.

BUYS AND SELLS INSURANCE SCRIP.

The Nation:

A Weekly Journal of Politics, Literature, Science, and Art.

THIS journal will not be the organ of any party, sect, of body. It will, on the contrary, make an earnest effort to bring to the discussion of political and social questions a really critical spirit, and to wage war upon the vices of violence, exaggeration, and misrepresentation by which so much of the political writing of the day is marred.

The criticism of books and works of art will form one of its most prominent features: and pains will be taken to have this task performed in every case by writers possessing special qualifications for it.

It is intended, in the interest of investors, as well as of the public generally, to have questions of trade and finance treated every week by a writer whose position and character will give his articles an exceptional value, and render them a safe and trustworthy guide.

A special correspondent, who has been selected for his work with care, is pursuing a journey through the South. His letters appear every week, and he is charged with the duty of simply reporting what he sees and hears, leaving the public as far as possible to draw its own inferences.

TERMS:—Six Dollars per annum, in advance; Six months, Four Dollars. When delivered by Carrier in New York or Brooklyn, Fifty Cents additional.

JOSEPH H. RICHARDS,

PUBLISHER,

130 Nassau Street, N. Y.

WILLIAM KNABE & CO.'S

THE BEST SEWING-MACHINES IN THE WORLD.

THE WEED MACHINES,

With all their valuable improvements, entirely overcome all imperfections. They are superior to all others for family and manufacturing purposes, simple in construction, durable in all their parts, and readily understood. They have certainty of stitch on all kinds of fabrics, and are adapted to a wide range of work without change or adjustment, using all kinds of thread. Will hem, fell, bind, gather, braid, tuck, quilt, cord, and, in fact, do all kinds of work required by families or manufacturers. We invite all persons in search of an instrument to execute any kind of sewing now done by machinery to inspect them, and recommend all parties engaging in the sale of sewing-machines to make sure they secure the best by examining the WEED before purchasing. They make the shuttle-stitch, which cannot be excelled for firmness, elasticity, durability, and elegance of finish. They have received the highest premiums in every instance where they have been exhibited in competition with other standard machines. The company being duly licensed, the machines are protected against infringements or litigation.

Reliable agents wanted, to whom we offer great inducements. Every explanation will be cheerfully given to all, whether they wish to purchase or not. Descriptive circulars, together with specimens of their work, will be furnished to all who desire them by mail or otherwise.

Improvements in Piano-fortes.

One of the simplest and most truly valuable improvements yet made in the Piano-forte is that invented and patented by

DECKER BROTHERS, 91 BLEECKER STREET,

in this city. By correcting the only imperfections arising from the use of the full iron-plate, and that, too, by not detracting in the slightest degree from its many positive advantages, the Messrs. DECKER have developed in their instruments a tone at once admirable for its purity, fulness, prolongation, and sweetness, and the high estimation in which their improvement is held is well shown in the rapidly increasing business of their firm.—*Tribune.*

MARVIN'S

PATENT FIRE AND BURGLAR SAFE

Superior to any others in the following particulars:

They are more fire-proof.

They are more burglar-proof.

They are perfectly dry.

They do not lose their fire-proof qualities by age.

Manufactured only by

MARVIN & CO., 265 Broadway.

721 Chestnut Street, Philadelphia.

Send for a descriptive Circular.

Make Your Own Soap with B. T. BABBITT'S Potash, in tin cans, 70 Washington Street, New York. Pure Concentrated Potash or Ready Soap Maker. Warranted double the strength of common Potash, and superior to any other saponifier or lye in the market. Put up in cans of one pound, two pounds, three pounds, six pounds, and twelve pounds, with full directions in English and German for making Hard and Soft Soap. One pound will make fifteen gallons of Soft Soap. No lime is required. Consumers will find this the cheapest Potash in market.

STEINWAY & SONS'

GRAND, SQUARE, AND UPRIGHT PIANO-FORTES

Have taken Thirty-two First Premiums, Gold and Silver Medals, at the Principal Fairs held in this country within the last ten years, and in addition thereto they were awarded a First Prize Medal at the Great International Exhibition in London, 1862, in competition with 269 Pianos from all parts of the World.

That the great superiority of these instruments is now universally conceded is abundantly proven by the FACT that Messrs. Steinways' "scales, improvements, and peculiarities of construction" have been copied by the great majority of the manufacturers of both hemispheres (AS CLOSELY AS COULD BE DONE WITHOUT INFRINGEMENT OF PATENT RIGHTS) and that their instruments are used by the most eminent pianists of Europe and America, who prefer them for their own public and private use, whenever accessible.

STEINWAY & SONS direct special attention to their

PATENT AGRAFFE ARRANGEMENT,

which, having been practically tested in all their grand and highest-priced Square Pianos, and admitted to be one of the greatest improvements of modern times, will hereafter be introduced in EVERY PIANO MANUFACTURED BY THEM WITHOUT INCREASE OF COST to the purchaser, in order that ALL their patrons may reap its benefits.

STEINWAY & SONS' PIANOS are the only American instruments exported to Europe in large numbers, and used in European concert-rooms.

WAREROOMS, 71 & 73 EAST FOURTEENTH ST., between Union Square and Irving Place, New York.

FINANCIAL REVIEW 412

Six Dollars per annum, in advance; Six months, Four Dollars. When delivered by Carrier in New York or Brooklyn, Fifty Cents additional.

JOSEPH H. RICHARDS, PUBLISHER, 130 NASSAU STREET, N. Y.

The Week.

THE Manhattan Club of this city have elected Mr. Johnson an honorary member, and asked him to let himself be painted for them by "one of our first artists," the reason being that they want to adorn their walls with the "form and lineaments of the statesman and patriot, etc." Mr. Johnson has accepted the compliment, and expressed his willingness to sit "for one of our first artists," as soon as that gentleman can be got ready. We believe the public has no right to object to this little interchange of civilities between a club and any public man. But we have a right to mention that the name of every signer of the address, except those of Mr. John Van Buren and Mr. James T. Brady, is that of a man notorious during the whole period of the war as what was then called a "malignant Copperhead." One or two of them are strongly suspected of having been of the party who called on Lord Lyons to solicit the aid of Great Britain in breaking up the Union, and three of them are the reputed owners, and one the well-known editor, of the "organ" which a year ago pronounced Mr. Johnson "an insolent and drunken brute, an insolent and clownish drunkard," with much other stuff of the same sort. The sudden admiration of these "individuals," as the reporters call them, for Mr. Johnson's "form and lineaments" may be fairly set down amongst the "odd instances of strange coincidence."

WE allude in another place to the change of views experienced by the President and his mouthpiece, the Secretary of State, since the latter telegraphed Govs. Sharkey and Marvin that the restoration of the civil authority in the South depended upon the pleasure of Congress. A similar change has been brought to light among the other official documents on reconstruction submitted to Congress. In North Carolina Mr. Seward decided that the members elect of the convention could not take their seats before obtaining pardon. In South Carolina a score of leading members sat through the entire session without being pardoned, and yet their application, though postponed to the day before adjournment, received the distinguished, favorable, and prompt consideration of Mr. Johnson.

THE Executive clemency was again remarkably exercised last week in the pardon of one Thomas Martin, "a notorious blockade-runner." This involves, we are told, the restoration of cotton exceeding two hundred thousand dollars in value, which had been attached by the Treasury Department under the confiscation act. We do not hear of any further pardoning of counterfeiters of the national currency, but the House bill of the 21st inst., for the more effectual punishment of these knaves, must be judged a superfluous bit of legislation so long as the President's weakness for criminals under sentence continues.

THE Republicans of Rhode Island met last week and nominated General Burnside for governor, with no resolutions. It was left for the opposition to show irresolution, which they did by endorsing the policy of the President and then avoiding a nomination. The presumption of success, so far as we remember, has always been in favor of a candidate without a platform as against a platform without a candidate; and as defeat was inevitable on these terms, it seems a pity that it should have been associated in advance with the so-called head of the nation.

A LOAN bill which had grown with various amendments out of that desired by the Secretary of the Treasury has passed the House. The new school of political economists, who believe that the issue of promises-to-pay is a real addition to the wealth of the country, made some singular speeches, which will figure in the notes to some future history of rationalism as "specimens of by-gone delusions." The question remains to be dealt with by the Senate. One thing is certain with regard to our financial policy, and that is, that there is not an enemy of the United States the world over who will hear of our rapid return to specie payments without chagrin hardly less acute than that with which he received the news of Lee's surrender.

THE House, on Wednesday week, by a vote of 79 to 46, passed a bill to facilitate intercourse between all parts of the Union by putting an end to railroad monopolies. It is substantially the same measure as that passed December 19th by the same body, but which was afterwards recalled for revision. It then received 93 against 51 votes. What we took occasion to say at that time in its favor we need not now repeat. More fortunate than certain political ventures, it can count upon becoming law as soon as the Senate shall have added its approval, which we should like to be as swift as it is certain.

THE New York *Times* publishes a more complete account of the fiendish massacres and tortures to which those suspected of fidelity to their country were subjected in Texas during the war than has hitherto appeared. The statements are too shocking to be readily believed, but we have seen refugees who report atrocities committed under their own observation which are not referred to by the correspondent of the *Times*, and which are, if possible, more disgusting. Not only were hundreds of worthy men and innocent women and children murdered in cold blood without form of trial or shadow of provocation, but the manner of their butchery was in many cases as disgraceful to human nature as the worst deeds of the Spaniards in the Netherlands or the Sepoys in the Indian rebellion. The guilty men are now not only living in peace as good citizens of the United States, with the benefit of the Executive clemency, but some of them are taking active part in the work of reconstruction, and in cheering the President by assurances of their sympathy with his indignation at the Yankee radicals and traitors.

THE name of no man attaining equal rank came less before the public during the war than that of Major-General Seth Williams, but

the memory of none who have yet to die will be held more sacred by soldiers than his. Painfully diffident of his own merits, shrinking from note, modest as a girl, in all duty he was great, comprehensive, resolute, and untiring. There is a poetic consistency in the circumstances of his death, and it is none the less to be recorded because so few are aware of it, and because he himself was unconscious of it, that he gave his life for liberty and his country.

We commented last week upon the singularly low estimate placed by the Orthodox Congregationalists of Connecticut upon the value of the services of their ministers. The new Board of Health of this city, in fixing the compensation to be allowed its medical inspectors, proclaims its judgment to be either that the office will have a value to its occupants on account of the opportunities it offers for making money in covert ways, or that a man who has spent the best years of his life in striving to qualify himself by a suitable course of study to be a medical practitioner, and who has established a character for himself which justifies him in assuming public responsibilities of the most difficult and trying character, is worth no more than a lively printer or a clever drayman. The Board includes some of the most distinguished physicians in America, who might have been expected to remember that there is no form of quackery more mischievous than the demagogism which refuses to pay the market wages for services in public offices requiring superior talent and more than usually resolute manliness and integrity. A mistake of the Legislature in this respect is not an example which the Board of Health is called upon to follow.

An "ex-member of the defunct Confederate congress," as the *World* styles Mr. H. S. Foote, is writing letters to that paper in support of Mr. Stewart's policy of universal suffrage and universal amnesty. Mr. Foote was reputed the father, or at least the father-in-law, of that policy, but he disclaims any interest in it except as a Southern man desiring earnestly a reconciliation of the two sections, and believing that Mr. Stewart has hit upon the only way. The *World* is amusingly careful to avoid adopting his views, and smells coercion under the purely voluntary terms of re-admission to the Union. The sight is not uninstructive. The prudent counsel which arises out of the very bosom of the South is opposed by Northern sycophants, who are for ever flattering her false pride and encouraging her blind hostility to her would-be benefactors and saviours.

One cannot sufficiently admire the delicacy of Postmaster Cleveland, of Hartford, in offering to resign his office because, in so far as he owed it to the Union party of the State, he had evidently violated the condition on which it was given him. But when he submits his case to the President, as if the course he has taken might possibly displease that functionary, we fear he is guilty of political trickery. Whether the *quasi* endorsement which he obtained will turn the scales in the approaching Connecticut election, we are not concerned to predict; but we feel sure that the whole procedure will lead to serious reflection on the present system of Government patronage, which it will be the highest effort of patriotism to overthrow. Nothing is more needed than this to resist the corruption of parties, as nothing will tend so strongly to change the test of office from political orthodoxy to simple honesty and ability. In that day of better things a postmaster's share in caucuses and ward meetings, and his vote at the polls, will excite no greater attention than those of any other citizen.

The cholera is likely to be to us what M. Hausmann is to Paris. In view of its approach, those quarters of our great cities which have been heedlessly tolerated till now, will be erased from the map, pierced with new streets, graced with new and ornamental structures, and laid out, it may be, with squares and fountains. Our Health Commissioners have turned their grim gaze upon the Washington Market; and the filthy shambles, which are worthy a new Hercules able to turn the North River through them, we hope will never recover from the attention which will be paid to them. Boston has just bestirred itself to abate a dangerous nuisance caused by the different levels at which some portions of it are built. The remedy involves the filling up a considerable valley, and giving an entirely new character to the lifted area. A public-spirited citizen, we observe, is about to erect a monument in one of the city parks to commemorate the discovery of the anæsthetic properties of ether. Shall we overlook the sanitary properties of the cholera, or do not they also merit a memorial?

Bridging our great rivers is a very gratifying token of national recuperation. The Ohio will presently follow suit to the Hudson, and the Mississippi to the Ohio. A bridge to connect St. Louis with the opposite shore was authorized by the Senate last week, and is really a part of the conception of the Pacific Railroad. It cannot be built too soon.

The Texas Convention has got so far along as to declare the secession ordinance of Feb. 1, 1861, null and void, and to renounce distinctly the right heretofore claimed by the State to secede from the Union. Forty-three members voted yea, and thirty-seven nay, on the question; and one of the majority moved to reconsider, but in vain.

There ought, we think, to be little surprise that leading journals abroad which were unmistakably friendly in our late struggle with revolt should be deceived by the plausible reasoning of the veto message, and conclude that the loyal people of the North are suddenly all wrong, as they were before all right. The fictitious spectacle of a renunciation of power, the assumed reverence for law, and superior devotion to the Union, the specious magnanimity towards a prostrate adversary, were calculated at first blush to captivate the supporters of constitutional freedom everywhere, and to elicit from them expressions in temporary accord with those who, while secretly or even openly hating our republican institutions, were always loudly complaining of our despotic departure from them. But the delusion will scarcely last longer than the first blush; the speech of the 22d of February has partly removed it, and it cannot survive a correct understanding of the real state of public opinion here.

We find in a foreign paper some statistics which may be profitably studied with those presented by us in a late number of The Nation, when comparing the literary fecundity of England and America. In Germany there were published, in 1865, 1,411 works of theology, 83 of philosophy, 935 of belle-lettres, 770 of jurisprudence, 696 of education, 651 of history, 517 of natural sciences, 491 of medicine, 402 of ancient classics, 385 of fine arts, 359 of commercial science. Of writings for youth, for the people, of geography, of agriculture, two hundred in each department; of compilations in mathematics, military art, and technical science, one hundred each. These figures do not include the insignificant publications.

The Italian Chamber of Deputies has ratified the treaty of commerce with the Zollverein, and, by way of emphasizing that provision of it which makes its acceptance equivalent to a recognition of the new kingdom, has voted to send Italy's compliments to Germany with her best wishes for the future relations of the two countries.

The international conference at Constantinople has adjourned after recommending the Porte to prohibit all communication between Egypt and the Arabian ports, if the cholera manifests itself anew at Jidda. We had been led to look for greater results than this, especially since the diplomatic character of the conference was at last recognized by the Turkish Government.

The response of the Emperor Francis Joseph to the address of the Hungarian Diet has chilled the enthusiasm of that body, if it has not dissipated their hopes. Whereas they demanded a responsible ministry and municipal autonomy, as preliminary to a common understanding with Austria, the monarch insists that this understanding must precede every concession on his part, and that the kingdom must be subordinate to the empire. He will not restore the legislation of 1848 unmodified, at least in respect to its establishing a separate Hungarian ministry. But, as the Diet signified their readiness to revise that legis-

lation only through the initiative of such a ministry, it is evident affairs have come to a dead-lock between Pesth and Vienna. Meanwhile Berlin and Vienna want little of coming to sword's points over the Duchies.

BEFORE Mazzini can take his place in the parliament of his native land, it is a question whether his election is legal, seeing that he is an exile; and then, whether he will take the oath of allegiance. The Government is said to be resolved to contest his admission on the ground first mentioned, though if France had not to be consulted a different policy would seem more prudent. It is safe to predict, however, that Mazzini will not compromise his republican principles for the sake of forcing the issue.

IT appears, from measurements made in 1863-4 for enlistments in the Italian army, that of a hundred young men there will be twenty under 1.56 metres, sixty-eight between 1.56 and 1.70 metres, and the remaining twelve will exceed the height last indicated. The average Italian stature is reckoned at 1.626 metres, against 1.653 for the French and 1.644 for the Belgians—or 5 ft. 4, 5, and 4½ in. respectively. The giants of the peninsula are found in Lucca. Leghorn, Ferrara, and Arezzo stand next upon the list.

CONGRESS.

WASHINGTON, March 24, 1866.

CONGRESS is at length making much progress with the solid business of the session. More than half the appropriation bills are already through the House, and yesterday witnessed the final passage of the loan bill, which now goes to the Senate for concurrence, which it will probably receive. The measure was emasculated, by way of compromise, in order to ensure its passage, by limiting the Secretary of the Treasury as to the amount of legal tender currency to be retired or funded in each month. There is now opportunity for the Committee of Ways and Means to bring forward the revised tariff and internal revenue laws, which, it is understood, are only very partially matured as yet.

Although the loan bill passed by the unexpectedly large majority of thirty votes, it was apparent that this was only in consequence of its being amended so as to put far off the evil day of a thorough contraction of the currency. About half the members of the House still adhere to the heresy, much strengthened by the recent steady fall in gold, that we are now going fast enough on the road toward a resumption of specie payments, and that the present volume of currency is little or no greater than the legitimate wants of the country require. This theory, fully and logically acted upon, would go far to ruin the whole country. Nothing could be more disastrous than to build our legislation upon it. Yet Mr. Thaddeus Stevens is so infatuated by it as to declare against any policy of contraction on the ground that it will produce widespread distress and complaint and jeopard the political ascendency of the Republican party.

An interesting discussion arose in the House on Thursday upon a matter apparently trivial on its face, namely, the engraving of portraits of living persons upon United States fractional currency. Mr. Thayer, of Pennsylvania, instanced the fact that Gen. Washington, when the first silver dollar of the United States was struck with his own profile imaged upon it, ordered the die to be destroyed. But now we see upon our current paper money not only the heads of the illustrious men of our country long since gathered to their fathers, but of living secretaries of the Treasury, and even of such subordinate officers as the superintendent of the Currency Printing Bureau, Mr. S. M. Clark. Mr. Thayer illustrated the absurdity and bad taste of this practice by the following

NEW TABLE OF FEDERAL CURRENCY.

2 Clarks make	1 Washington.
2 Washingtons and 1 Clark make	1 Fessenden.
2 Fessendens make	1 Spinner.
2 Spinners make	1 Chase.
2 Chases make	1 Hamilton.
5 Chases make	1 Madison.

When it is recollected that the new five cent issue of fractional currency has the portrait of Superintendent Clark engraved on it, while the ten cent retains that of Washington, the twenty-five cents that of W. P. Fessenden, the fifty cents that of Treasurer Spinner, the one dollar "greenbacks" that of S. P. Chase, while the two and five dollar notes bear the likenesses of Hamilton and Madison, respectively, the propriety of amending our common school arithmetics as above will be appreciated.

The House has passed the customary "buncombe" resolution for adjourning the session of Congress on some indefinite Thursday in May. The new members mostly voted for it, while the old political stagers refused to sanction a resolution which long experience shows cannot be carried into effect earlier than July or even August.

I have to communicate the remarkable fact that "reconstruction" has absolutely slept the entire week, in all its phases, save for the speeches made in the House to-day for home consumption. It is predicted, however, that this is but the calm that precedes the storm, for Monday is the last day, under the provisions of the Constitution, which the President has in which to decide the fate of the Civil Rights bill. A veto is universally anticipated, and such a result would make the wide breach between the views of the President and those of Congress still wider.

DIARY.

Monday, March 19, 1866.—Mr. Sumner presented petitions from citizens of Virginia, Massachusetts, New York, Alabama, etc., for an international copyright. Several petitions against hasty reconstruction were referred. Also, several petitions for increased duties on imports. Mr. Wilson offered a bill to equalize soldiers' bounties. Referred. The bill to provide for an annual inspection into Indian Affairs was passed—yeas, 19; nays, 16. The joint resolution protesting against pardons by foreign governments of criminals on condition of emigrating to the U. S. was passed.

In the House, Mr. Baker offered a constitutional amendment disqualifying all persons engaged in rebellion from ever holding office under the U. S. Government. Mr. Cullom offered a constitutional amendment to the same effect. Mr. Hooper offered a substitute for the loan bill of the Ways and Means Committee. Mr. Kelley offered a bill providing for the issue of legal tender notes, bearing no interest, to liquidate fully the compound-interest notes now in circulation, and prohibiting the reduction of legal tender below $900,000,000. Referred. Mr. Ancona offered a concurrent resolution that Congress adjourn on the —— day of May next. Passed—yeas, 80; nays, 63. Mr. Rogers offered resolutions against the assumption by Congress of the rebel debt or repudiation of the Federal debt. The House refused to admit them—yeas, 48; nays, 50. The loan bill of the Ways and Means Committee came up, on a motion to reconsider the vote by which it was defeated March 16. The motion to reconsider prevailed—yeas, 81; nays, 67. After speeches by Messrs. Broomall, Boutwell, Conkling, and Garfield the bill was recommitted. The civil appropriation bill for the ensuing fiscal year was considered and amended.

March 20.—In the Senate, the Military Academy appropriation bill was reported from the Finance Committee. A resolution was offered appropriating $25,000 for the relief of the destitute colored population of the District of Columbia. Passed—yeas, 33; nays, 5—after striking out the word "colored." The naval appropriation bill was amended and passed. The bill granting to the International Ocean Telegraph Co. the sole right, for fourteen years, to establish telegraphic communication with the West Indies was taken up. Mr. Fessenden and Mr. Sherman moved to strike out the word "sole." Lost—yeas, 14; nays, 16. The bill was laid over.

In the House, the civil appropriation bill for the ensuing year was passed, after striking out a provision to increase the salaries of the officers of the United States Mint at Philadelphia. The bill to relieve United States army officers from prosecution for acts done by them under military authority was opposed by Messrs. Rogers and Ross, and defended by Messrs. Cook, McKee and Smith, the two last of Kentucky. It was then passed—yeas, 112; nays, 31. Mr. Conkling, from the Ways and Means Committee, reported a bill providing that no exemption of United States notes from taxation shall extend to money on hand. It was advocated by Messrs. Conkling, Garfield, and Spalding, and opposed by Mr. Stevens, after which it was recommitted. The Post-office appropriation bill for the fiscal year ensuing was amended and passed. The consular and diplomatic appropriation bill for the same period was considered and amended.

March 21.—In the Senate, several petitions were presented, asking Congress to guarantee republican governments in the States. A bill granting lands to aid in constructing the Northern Kansas Railroad was passed. A bill to punish counterfeiting or altering the securities of the United States was passed. The bill conferring on the International Ocean Telegraph Co. the sole privilege for 14 years of establishing and operating telegraph lines between Florida and the West Indies was passed. The bill placing U. S. vessels at the disposal of officers of quarantine was passed. The bill to carry into effect the treaty of Washington of 9th of August, 1842, by paying Maine and Massachusetts $1 25 per acre for the public lands of those States in possession of settlers under said treaty, was passed. The bill to incorporate the National Mutual Protection Homestead Co. with $3,000,000 capital, for the settlement of certain States, was discussed and laid over.

In the House, the bill authorizing all railroads to carry freight and passengers between the States on equal terms, and receive compensation, provided no railroad be released from the condition of performing such services for the Government free, was passed—yeas, 69; nays, 46. The consular and diplomatic appropriation bill was passed. The bill to reimburse Pennsylvania for war expenses during the invasion of 1863 was debated and laid over.

March 22.—In the Senate, the bill authorizing the construction of a bridge across the Mississippi River at St. Louis was passed. Also a bill to consolidate two district

courts of the United States in Louisiana and California into one judicial district. The case of the validity of the election of John P. Stockton as a senator from New Jersey was taken up, discussed, and laid over.

In the House, a message was received from the President transmitting information respecting the condition of Mexico. The deficiency appropriation bill, with the Senate amendments thereto, was considered, most of the amendments now concurred in, and a committee of conference appointed.

March 23.—In the Senate, bills were offered, to grant land to Arkansas and Missouri for a railway through those States to the Texas boundary; to aid in the construction of a southern branch of the Union Pacific Railway; to donate public lands to the American Forest Tree Propagation and Land Co.; and further to prevent smuggling; all of which were referred. The Senate resumed the consideration of the right of John P. Stockton to a seat as senator from New Jersey, he having been elected by a minority of the Legislature of that State, in joint session, and a protest against the validity of his election being presented to the Senate by the majority of the present Legislature. The Committee on the Judiciary reported in favor of Mr. Stockton's right to the seat. After long debate, in which the report was opposed by Messrs. Clark, Fessenden, Howe, Yates, and Sumner, and advocated by Messrs. Hendricks, Cowan, McDougall, Trumbull, and Stockton, the vote was taken on the resolution of the Judiciary Committee, that Mr. Stockton is entitled to his seat, and carried—yeas, 22; nays, 21. Adjourned to March 26.

In the House, the bill to reimburse to the State of Pennsylvania about $700,000, expended for the United States for war purposes in 1863, was passed—yeas, 85; nays, 35. The loan bill was reported back from the Ways and Means Committee with amendments providing that the Secretary of the Treasury shall not retire more than $10,000,000 of legal tender currency in the first six months after the passage of the act, and not more than $4,000,000 each month thereafter. Mr. Hooper offered a substitute, authorizing the Secretary to retire and cancel Treasury notes and interest-bearing notes, and to issue bonds for the same at par, without, however, increasing the public debt; lost—yeas, 60; nays, 74. The bill of the Ways and Means Committee was then passed—yeas, 83; nays, 53.

March 24.—The Senate was not in session. In the House, speeches on the state of the Union were made by Messrs. Lynch, Myers, Buckland, and Hart. Adjourned to March 26.

THE FREEDMEN.

The draft upon the labor of the District continues. Fifty freedmen were lately sent to Helena, Arkansas, at the request of the assistant commissioner for that State. Numerous applications are made by Northerners who have gone to settle in the South.

The laborers on the Government farms in Maryland, now that these establishments are to be given up, are seeking transportation to Virginia, being driven to this removal by the outrages which still disgrace the State where they are at present.

The American Missionary Association have now eleven colored schools in the Shenandoah Valley, with 1,800 pupils. In Lexington the collegians and populace together made strenuous opposition to establishing one there. In Richmond there are 1,100 blacks attending school.

The assistant commissioner for North Carolina reports a gradual melioration of the condition of the freedmen in that State. Violent outrages are rare, but petty annoyances are numerous, such as stealing or killing their live stock, tearing down their fences, etc. It is difficult to catch the perpetrators, or, if caught, to bring them to justice.

Edgefield district, South Carolina, is one of the largest and most rebellious in the State, and is controlled by two organized gangs of outlaws led by an ex-Confederate major. They have been waging a sort of guerilla warfare upon the peaceful inhabitants, Union and colored, murdering some, despoiling and expelling others. All efforts made by the infantry to surprise these well-mounted desperadoes have proved futile. An efficient cavalry force is needed to hunt them down. The planters of the State are just discovering that there are not enough negroes by half to cultivate the land, and that their labor only is available in the rice-fields. This is a strong security for better treatment. The circular of the Bureau concerning "marriage rules" has been received with satisfaction by the freed people.

There were counted in Georgia, on the 1st of March, 65 freedmen's schools, 98 teachers, 6,767 pupils—an increase over January of 3 schools, 9 teachers, and 198 pupils, notwithstanding the small-pox so interfered with the schools in Macon as to decrease the attendance from 1,222 in January to 818 in February. The last quarter (ending March 1st) has witnessed an increase of 13 schools, 36 teachers, and 2,875 pupils. Last month the freedmen in five localities contributed $341 toward the support of their schools, and during the quarter seven localities contributed $4,662. All this in addition to charitable donations to their suffering poor.

—A law has been passed by the Virginia Legislature "admitting the evidence of negroes in all criminal cases and proceedings at law or in equity in which colored persons are parties, or which arise out of injuries done or attempted or threatened to the person, property, or rights of colored persons, and providing further that all laws in respect to crimes and punishments, and in respect to criminal proceedings, applicable to white persons, shall apply in like manner to colored persons, unless otherwise specially provided." This has been so much approved by the assistant commissioner and Gen. Terry, that all jurisdiction over colored persons in criminal cases has been recommitted to the civil authorities. The agents of the Bureau, however, are instructed to attend in person the trials and preliminary hearing of such cases, not for the purpose of interfering, but to make the necessary suggestions to the party concerned. Any evasion of the law is to be reported at once.

—The assistant commissioner for North Carolina has imitated his associate in Virginia for a like reason. The vagrant act is said to make no distinction on account of color. An act was passed establishing a college for the education of teachers and ministers of the Gospel of the colored race. By another, blacks and whites are required to work on the public roads or be subjected to a fine. Another protects "agricultural laborers" in the share of the crops which belongs to them by contract from sale under execution against their employers or the owners of the land cultivated. The lunatic asylum is reserved exclusively for the whites. The "act concerning negroes, and persons of color, or of mixed blood," makes such persons equal to the whites before the courts in the various processes and suits in law and equity, and qualifies them as witnesses, when not otherwise incompetent, in "all controversies at law and in equity where the rights of person or property of persons of color shall be put in issue, and would be concluded by the judgment or decree of court; and also in pleas of the State, where the violence, fraud, or injury alleged shall be charged to have been done by or to persons of color. In all other civil and criminal cases their evidence shall be deemed inadmissible, unless by the consent of the parties of record; provided, that this section shall not go into effect until jurisdiction in matters relating to freedmen shall be fully committed to the courts of this State; provided further, that no person shall be deemed incompetent to bear testimony in such cases because of being a party to the record or in interest." The criminal laws are extended to all classes, with the same penalty for blacks and whites, except in the case of rape.

—There are in North Carolina 100 schools for the blacks, 132 teachers, and, in the month of January, 10,459 scholars, or 2,000 more than in December. They are located in all the principal towns and are generally regarded with favor. The teachers experience, however, the popular aversion. They and the employees of the Bureau, civil and military, amount to less than two hundred persons—a slender army of regeneration.

—The bill to relieve the destitute people in the District of Columbia passed the Senate on Monday week. It appropriates $25,000 for that purpose. The vote was 33 to 5.

Minor Topics.

There is probably no art which possesses so much interest for the mass of mankind as the art of making a little money go a great way. Even amongst us, where money is, on the whole, got with comparative ease, and, consequently, spent with comparative carelessness, there is no more popular person than the author of any process which promises to enable people to procure all the comforts and most of the luxuries of life with a very small income. But in Europe, where the struggle for life is so much more fierce and bitter than amongst us, the excitement created by anything which looks like a new discovery in the science of living cheaply, is proportionably great. All kinds of books professing to show how to get two shillings' worth for a shilling, how to make a pony do the work of a horse, how to get the milk of a cow out of a goat, how to keep a brougham and give dinners with "a page" as both butler and groom; how to raise vegetables, keep rabbits

and hens, and feed a cow off the quantity of land usually considered only sufficient for the grass of the cow, have, consequently, a tremendous run. Five editions for a work of this kind displaying a fair amount of ingenuity may be fairly calculated on. But then this is not half so interesting, after all, as plans for enabling a large family to present a "genteel" appearance on a small income, or even for enabling a large family to live decently on a small income. A Mrs. Warren, the wife of a hard-worked doctor, has just made a most lucky hit in this way. She first showed "How She Managed Her House on Two Hundred Pounds a Year." This went off like wildfire, and created considerable stir in the newspapers. She has now come out with "Comfort for Small Incomes," and this is making an equally great stir. But the comfort she supplies appears to be very cold comfort after all. Her grand recipe for the evils of poverty seems to be simply not to be disturbed by its inconveniences, and, by way of encouraging people, she shows that she was not. That large class in all countries who desire to bring up large families at a small cost, we are afraid will not find their way made much clearer by hints of this kind. There are, probably, after all, very few poor people, that is, people whose minds have to be constantly occupied with the problem of how to make both ends meet, to the exclusion of most of the nobler subjects of contemplation, who have not by this time become familiar enough with the absolute impossibility of making two children live on the food of one, or of making a coat do duty as a pair of pantaloons, to have little difficulty in feeling tolerably cheerful under the restraints of narrow means. To poor men, the advice to be economical with their coal, to look sharply after their cinders, to live on plain food, to pay for everything in cash, and not to be annoyed when a cheap cook spoils a fondly anticipated dinner, can hardly be said to have an appreciable value. Anybody who writhes under poverty is not likely to be reconciled to his situation by perusing a small volume, or a magazine article, which tells him not to writhe under it. People who are cheerful in spite of their poverty, and for whom bad food, shabby clothes, and an overworked wife, and pinched and repressed children, have no terrors, will not find their cheerfulness increased by hearing the dismal tale of some other cheerful poor man's sufferings. For people who dread poverty and privation, who sigh for splendor, or even "genteel society," and plenty of small change, there is only one way of avoiding discomfort, and that is, to have as few persons dependent on one person's income as possible. No turning or twisting or contriving can materially reduce the amount of food required by a growing boy, or the superficial area per caput which has in all well regulated families to be covered by clothes; and in this fact lies the great and, as we believe, the insurmountable difficulty of making poverty pleasant.

Some ten years ago public attention was for a time a good deal roused to the character of the lodgings of the poor in this city, and there was some discussion of plans looking to an improvement of their condition. Since then Broadway has been lined with marble, a great pleasure ground has been formed, a good many churches have been built, the rowdy fire department has been abolished, and we have gained a carefully instructed, well disciplined, neat, honest, and humane police. Best of all, crimes have not multiplied as population has increased.

Strange to say, however, the number of those who live here in the vilest condition under which, so far as we know, human life can be sustained, has increased and is increasing. The distinguished traveller to whom our readers are indebted for the reports on the subject which we recently published, says that in no barbarian tribe is anything to be seen so filthy, shameless, and utterly and hopelessly degraded. The men and women alike seem to be deaf not only to preaching, but to all ordinary motives to exertion. They habitually look for nothing in life or in eternity better than to allay the immediate gripings of hunger and thirst, room to lie at full length for sleep, and protection against the sting of cold. They care not by what means they secure this, and if chance put means of getting anything more in their way it will be used only in the lowest forms of sensuality. Dead to foul smells, they are equally dead to moral distinctions.

It is needless to say that there are degrees of degradation; that the lowest stage which we have described is reached gradually. The important question is—What are the steps, what especially leads to this moral stupor? Why is the degradation greater here in New York, and why do more sink to the lowest depth here than anywhere else?

We can see but one circumstance peculiar to New York which seems likely to have a marked influence, and that is the extraordinary demand which exists here for shelter. Nowhere else in the world is there nearly so large a proportion of the earnings of all classes required to be paid for mere house-room. There are no houses fit for human beings to lodge in that are not snatched up by those of a happier class than the poorest.

We heard to-day of the family of an invalid soldier whose wife maintained six children mainly on her occasional earnings as a laundress. They are far from being in the demoralized condition of the desperately poor class we have described, yet were glad to be allowed sleeping-room in a stifling cellar at a charge of three dollars a month. Let this woman lose the opportunity of earning what she now has, what will she care for when she has secured necessary food and raiment, except the rent? and where will her struggle for a bare cover and sleeping-room carry her at the last? and into what company, and what must the family come to there? The answer is plain enough. Is it more difficult for Christian men to find a remedy for this great evil? Perhaps it is, but there are two matters of experience which, it seems to us, should throw some light upon it.

One is the effect which has been produced by the establishment of sailors' homes. There was much about the sailors' homes as they were originally managed which was anything but attractive to most seamen. Yet when good food, beds, air, and honest treatment were to be had in them at the same price that was asked for hard and filthy beds, poor food, crowded and noisome quarters, and a general system of swindling at the ordinary lodging-houses, the keepers of the latter soon saw they could not retain their customers. The consequence is, in every large port of the world, there are now sailors' boarding-houses, established and managed from purely mercenary motives, which, in most respects, are as clean and comfortable and honestly conducted as the sailors' homes established for philanthropic reasons alone. The other is the experience of London in dealing with the same evil which we have in the Sixth and Fourth Wards, and in lesser degree in some parts of every large town in the country. A few years ago there were places in London almost if not quite as horrible as those described by our correspondent. To-day, in London, with a population more than three times as large as that of New York, and of which population a far larger proportion is desperately poor, there is not a single lodging-house as miserable as hundreds which are crowded in New York. The process of cure began with the establishment of what were called model lodging-houses. They were on a large scale, and involved a considerable outlay of capital. They furnished as good accommodations in all respects as the lowest lodging-houses, but perhaps no better except in respect to the requirements of decency and cleanliness, at the same charge to lodgers as that made at houses in which the poor boy or girl out of work, sick, feeble, or foolish, yet honestly and virtuously disposed, was obliged to rest on the floor side by side with the most degraded strumpets and thieves. The effect soon was that the keepers of these houses found it necessary, in order to retain their customers, to improve their accommodations; soon after many of them were willing to have the aid of the police in acquiring a reputation of keeping houses to which honest working-men and women, however little they were able to pay, could resort without fear of being robbed or outraged; and the final result is as we have already stated.

It is well, perhaps, to add, though it makes little difference as to the duty involved, that the model lodging-houses themselves are more than self-supporting. They now pay a fair interest on the capital originally invested.

The special attention of the reader is directed to the Financial Review on another page. Its place among the advertisements is by no means significant of its value, but is resorted to only that we may obtain the latest intelligence of the market.

Articles on any of the subjects usually discussed in this journal will be received from any quarter. If used, they will be liberally paid for; if rejected, they will be returned to the writers on the receipt of the requisite amount of postage stamps.

All Communications which pertain to the literary management of The Nation *should be addressed to the Editor.*

THE POWER OF CONGRESS OVER RECONSTRUCTION.

The controversy between the President and Congress, as we have repeatedly said, is not upon the question of the suffrage, nor upon the existence or non-existence of the revolted States, nor upon the propriety of confiscation, nor upon any similar points, though these are important. The issues now in dispute, and which must be determined before any others, are simply two—one a question of power and the other a question of discretion. Who has the power to settle the terms upon which civil government shall be restored at the South? And shall those terms be such as will give absolute sway to unrepentant rebels? These are the vital issues of the day, although, when they are determined, others equally important may possibly arise. The first essential of human life is breath, although food and drink are equally indispensable in the long run. So in public affairs there is always some one problem that must be solved to-day, though twenty others may remain as imperatively demanding attention to-morrow.

Our views upon the question of discretion have been sufficiently stated. But while this branch of the subject appeals most strongly to the popular mind, yet to all far-seeing and thoughtful men the question of *power* must seem of overshadowing importance. This has been the view taken by Congress, which, accordingly, before attempting to shape a policy, passed by an overwhelming majority the concurrent resolution asserting its control *as Congress*, and not merely as two independent assemblies acting separately, over the rehabilitation of the South.

The President has assumed that the disorganized condition of the South demanded the interposition of the Federal Government, and justified the latter in imposing the terms upon which local self-government might be resumed, and in prescribing the mode in which it should be restored. The country has, with substantial unanimity, endorsed the President's theory to this extent, and it cannot now be called in question. Certainly we are not inclined to dispute it, but, on the contrary, think it irrefragably sound.

But is this power lodged in the executive or in the legislative branch of the Federal Government? We pause, as we write the question, to think with what amazement some future Hallam or Macaulay will record the fact that this question was gravely argued in our day—with what difficulty the candid historian will endeavor to show that it was really considered doubtful—what labor it will cost him to present an argument in favor of the Executive's claim which shall not excite the mirth or the contempt of his readers. But we must deal with the present, and must argue the question soberly, albeit with something of the feeling with which we sometimes labor to convince an ignorant boor of the simplest proposition of science. "Well persuaded as I am," says a wise and genial philosopher, "that two and two make four, yet if any learned, sober, and godly man should desire to argue with me thereon, I would patiently listen unto him." Learned, sober, and godly men assert the supreme power of the Executive over the whole subject of reconstruction; with them let us reason.

The arguments in favor of the executive power, so far as we are aware, are only two: First, that under the war power the President has the exclusive right to re-organize civil government, as essential to the restoration of a lasting peace. Second, that the President has, by virtue of his oath to preserve and defend the Constitution, a general power and duty to do whatever is necessary to this end. These are all the *arguments* which we have ever seen upon that side of the question, although it has been *asserted*, without argument, that the President is required by the Constitution to guarantee republican governments to every State.

The claim founded upon the war power has the most plausibility, owing to the inclination of loyal men during the war to submit quietly to the assumption of doubtful powers, under the plea of necessity. But a time has come in which more vigilance must be exercised, and in which the encroachments of the Executive, no matter what may be their motive or their excuse, must be exposed and resisted. The war power lasts only with the war. That which it destroys may remain destroyed after the power itself has ceased, but that which it creates cannot outlive its creator. So strongly has this been felt, that grave doubts were entertained as to the permanency of emancipation by military action, although it was a purely negative act, since freedom is not a quality or privilege, but merely the absence of shackles and restriction. If then, as every Democratic politician insisted, and as many candid Union statesmen feared, the *destruction* of slavery by war did not outlast the war, how much less should the *construction* of a State under the same power be more permanent?

The advocates of this theory profess an extreme aversion to the idea that the rebellious States have in any way lost their *status* in the Union. Yet their doctrine implies that the President may impose any terms upon these States in his absolute discretion. For the ordinary restrictions of the Constitution do not extend to the war power, and if, by virtue of that power, the President can reconstruct civil government in a State at all, he can do so in any form whatsoever that may seem to him good. He may create a despotism just as legitimately as a republic. But the whole idea is a contradiction in terms. The use of the war power to regulate the process of ordinary civil administration is absurd, unless you are dealing with a conquered territory, and are founding a new government by right of conquest; and this the advocates of re-organization, by the war power, are most anxious to disclaim.

The second argument, founded upon the President's official oath, is yet more shallow. Every justice of the peace, every petty constable in the land, is required to swear that he will support the Constitution. According to this argument, it would be the right and the duty of every Dogberry in our police courts to do all things which might, in his judgment, be necessary to preserve the Constitution from injury. When was it ever before suggested that an officer's powers were enlarged by his oath of office beyond the scope of the laws prescribing his duties?

It is admitted on all sides that the vitality of the rebellious States, and their relations with the national Government, were "impaired and suspended" (to use the language of Mr. Johnson himself), and that, as a matter of fact, those States were without any recognizable civil government. The Constitution provides that "the United States shall guarantee to every State in this Union a republican form of government," and it is under this clause that Mr. Johnson is supposed to act. The whole controversy depends upon the meaning of these words. If the President is clothed by the Constitution with this power, then his course is justifiable; but if this power belongs to Congress, then all his labors in reconstruction are so many acts of usurpation, however well meant they may be.

Now where, we would ask, is there any clause in the Constitution giving to the President a general power to carry out provisions like this, involving the exercise of the highest degree of legislative discretion? It is declared that he shall have the *executive* power, but is the discrimination required to decide between conflicting forms of government any more executive in its nature than a decision between various modes of taxation? Can anything be conceived of more peculiarly within the province of legislation? If it is within the power of the executive department to determine uncontrolled such momentous questions as this, we should conceive that a legislature would be soon treated as an empty superfluity. The very existence of the States, including all the machinery by which the election of a Congress is possible, would be absolutely dependent upon the will of one man. So long as he permitted them to exist, they might continue to attend to minor matters; but with a single mandate he could sweep them all out of existence and substitute such governments as he chose to call more truly republican. Neither Congress nor the judiciary could restrain him, for the Supreme Court has repeatedly held that when one department of the government is clothed with a power like this, no other department can dispute its action.

On the other hand, the Constitution expressly gives to Congress authority to make laws for carrying into effect all powers vested by it "in the government of the United States," thus clearly including

within the powers of Congress the guarantee of republican State governments. This construction had the unanimous sanction of the Supreme Court in the famous case of Luther *vs.* Borden (7 Howard) where the doctrine is clearly stated that the legal government of a State is that which Congress recognizes, and where all the power of the President over the subject is treated as derivable from express statutes, and not from any direct delegation of power to him by the Constitution.

To this authority we may add the express declarations of the President himself, through the Secretary of State. On July 24, 1865, Mr. Seward telegraphed to the "provisional governor" of Mississippi: "The government of the State will be *provisional only*, until the civil authorities shall be restored *with the approval of Congress*." So on September 12, 1865, he wrote to Governor Marvin, of Florida: "It must, however, be *distinctly understood* that the restoration to which your proclamation refers *will be subject to the decision of Congress*."

A new light has come to the peculiar friends of the President since these telegrams were written, and, as seems likely, to the President himself. It is now asserted that his action was final, and subject to no decision of Congress. It is boldly asserted that *Congress*, as such, has no rights in the premises. Each house, acting separately, may reject individual members on personal grounds, but may not even exercise the poor right of enquiring whether the conditions which Mr. Johnson himself imposed have been complied with—much less enquire whether those conditions were sufficient. Only *one* of the revolted States has declared its ordinance of secession to have been null and void *from the beginning*. None of those which have been re-organized since April last have squarely treated their legislation while in rebellion as void. None of them have ratified the action of their late conventions by a majority of the votes cast at a popular election. Only one has pretended to make such a ratification at all, and there only 18,000 voted for reunion, though 55,000 voted on the same day for governor and Congress. Yet into all this Congress may not enquire! The Constitution requires that the representatives of every State shall be chosen at a time and in a manner to be prescribed by its legislature. Not one-third of these claimants even pretend to have been chosen at elections thus held; yet it is said Congress cannot reject them! Though Congress may be satisfied that the governments under which they claim, and the States which they represent, have no lawful existence, it cannot reject them! According to this doctrine, if a French army should occupy Texas, and under the pretence of a State organization should elect members of Congress from its own ranks, Congress could do nothing more than to enquire whether the ballots were deposited in an orderly manner, and whether the persons elected were loyal men. God forbid that an American Congress should ever accept this servile doctrine!

THE CRUSADE AGAINST CANADA.

We Americans, or the Northern portion of us at least, seem to submit to the sorrows of the Canadians as well as to the vexations of England with that resignation which men are apt to display in view of the distresses of other people. Indeed, there is not wanting a keen enjoyment of the perplexities of our neighbors and cousins on both sides the water, remembering how much satisfaction they took in the contemplation of our own, especially as the element of ridicule enters so largely into the matter. No intelligent American, we conceive, imagines that either Ireland or Canada is in any serious danger from the Fenian conspiracy, and this gives double relish to the enjoyment of the sight of men frightened at nothing, or next to nothing, who thought it a good joke when we had half the continent on our hands. We will trust that we should not be willing to return evil for evil to the extent that the carnal heart might desire, if we could, nor even to solace ourselves with Lord Byron's witty sophism:

> "Revenge in people 's certainly no virtue;
> But then it's not *my* fault if *others* hurt you!"

—for we don't believe they are going to be hurt. But it can do the English nation and their provincial dependencies no harm to feel, by experience, that insurrection is not an excellent jest when it raises its head against themselves. And they may come to see that the armed secession of half the United States was a circumstance worth fighting against when the mere threat of the separation of Ireland from England causes such an uproar. They held that the South was entirely in the right, and marvelled that we did not let them have their own way in such a trifling particular as the dismemberment of an empire. We might now turn the tables upon them; but we will not. We will observe our own laws, if they did not observe theirs, and will permit no hostile attacks to be made from our frontiers or our ports. And this in the belief that it is quite as much in the interest of the Irish themselves, on both sides the Atlantic, as of the English. But, whether or not, we shall return good for evil, and enforce our own laws even though England did wink at the evasion of hers.

There is a wide difference, however, between our rebellion and that organized by the Irish against England. Our rebels had not the faintest shadow of excuse for their attempt against the United States Government, excepting that they had been spoiled by excessive indulgence; whereas Ireland has had abundant grounds for rising in arms against England any time for the last seven hundred years—less now than in old times, it must be allowed, but yet abundantly sufficient for deep-seated discontent and every rational effort to be rid of them. Until very recent times, it was the avowed aim of England to make the conquered island her bond-maid rather than her adopted daughter. Were it not written down in the statutes at large, it would be hard to believe that such oppressions could be inflicted or be endured. The crops, the cattle, the manufactures, every industry of the Irish, were controlled with a single eye to English profits. Entails and absenteeism brooded like nightmares on the fair breast of the island, and the soil, which only needed common humanity and common sense on the part of its rulers to be made the most fertile of its acreage in Europe, was deformed with the most hideous poverty, and laid waste by the most horrible of famines. The cruelty of the laws against Catholicism, intended to compel obedience to the Established Church, helped to paralyze the hand of industry, and to turn what should be the garden of God into a wilderness. Ireland is a proof, notwithstanding all its disorders and lawless violence, of how much a people will endure before they will rise in resistance to oppression. Still, much of this oppression is now matter of history only, and the actual condition of Ireland is much improved from what it was fifty or even five-and-twenty years ago. Much of the discontent, which seems to have become a chronic disease, proceeds rather from traditional hatreds than from existing wrongs, though there are enough to repair yet.

Redundancy of population and the locking up of the land by entails, mortgages, settlements, jointures, and a multitude of other incumbrances, which made conveyances almost impossible, were two of the great evils under which Ireland suffered. The cruel kindness of the famine, and the emigration which has increased to such proportions as to make agricultural labor hard to get, remedied in some measure the first of these, while the latter was met by the Encumbered Estates Court, by means of which estates long eaten out by debt, and yet held together by the external force of law, were released literally from their bonds, and the land set free from the chains that bound it to poverty and despair. A perfect title could be thus given by the decree of a court, superseding the voluminous title-deeds of the former days by a slip of paper no bigger than a man's hand. This legislation opened the market to large and small English capitalists; land at once and the condition of the laboring classes were improved by this infusion of intelligence and capital. Still, two great mischiefs remain untouched, which must be fruitful of discontent and misery as long as they endure. The one is the enforced maintenance of the Established Church by the millions for the use of a few thousands and the emolument of pastors without flocks. The other, and the more material, is the tenure of land at will by the peasantry, especially in the south of Ireland, whereby they are liable to be turned out of their cabins and small holdings at a short notice, without allowance for any substantial improvements they may have made. This is a just ground of dissatisfaction, and no permanent tranquillity can be hoped for until a remedy has been found for it. It is possible that this very Fenian trouble may have the incidental advantage of teaching legislators that it is easier to prevent disorders by justice than to repress them by force. And if the inevitable failure of the move-

ment shall teach the Irish that it is by moral force, such as O'Connell preached, and not by armed force against impossible odds, that the revolutions they wish to accomplish are to be brought about, the lesson may be worth what it will cost.

AN AMERICAN CEMETERY IN MEXICO.

THERE is a case of a certain grave-yard in Mexico, not far from Maximilian's palace, which we should like to refer to some appropriate official person, corporation, or committee—say, perhaps, to the Congressional Committee on Reconstruction. The last-named general receptacle or sewer of incongruous matters surely contains vastly many less needing "rehabilitation" and "restoration" than this present one, as we shall now proceed to show. In the year 1853, our Government finished a cemetery, situate about two and a half miles from the City of Mexico, alongside the English burial-ground, which was built ten or fifteen years before. Its design was, first, to receive the bones of such unsepultured soldiers of ours as still lay, after six or seven years, on the battle-fields marking our twofold advance, under Taylor and Scott, upon the Mexican stronghold; secondly, to furnish a future burying-place for Americans dying in the country. A Mr. C. C. Goss (whose name, by the way, with the prefix of "*Rev.*," we have lately seen figuring among the rolls of army chaplains on the Union side in the late war) proceeded, by authority, to Mexico, to superintend the opening of the cemetery. He soon began to dredge the chief battle-fields of our national glory, and had the mournful pleasure of amassing a formidable heap of bones. Many of these, however, were apprehended to be the frames of mules and other beasts of burden who had perished on the fields—the more especially as Mr. Goss's accredited terms of contract with the teamsters who raked together and garnered the bones were "so much a load." Careful scrapings and savings, under such circumstances, of anything possibly osseous would naturally take place even among wagoners most profoundly stricken with the sacredness of the cause wherein the heroes fell and with the glory of our republic. And we regret to add that, in memory of their assiduous labors *en chiffoniers*, a vulgar nickname still attaches to the American cemetery in Mexico—witty enough, but too wicked, to record in print.

At length the perishable remains of at least 750 American soldiers (with possible equine interpolations, as we have said) were *supposed* to be collected; and, accordingly, a deposit of them was made in a prominent quarter of the sacred ground, and above them was set a decent monument, a few feet high, hewn from a stone somewhat resembling our Northern granite. One face of this obelisk still bears an inscription which (if we remember aright) runs nearly as follows: *To the memory of the officers and soldiers of the American army who fell by disease and battle in the valleys of Mexico during the years* 1846 *and* 1847. The device on the other side is, however, the more striking one, and is in words and numbers to wit:

The Remains of
750
Are Here Interred
Under an Act
of Congress.

Accordingly, when a new edition of "Greenleaf on Evidence" comes out, under the learned jurist's head of "What may be *Monumenta* or Monuments," the annotator can enrich the list with the hint given by this funeral lithograph: namely, that an act of Congress may sometimes be a "monument," and if not sufficiently so to "live and die under," enough at least to be buried under. Of course, it is hardly necessary to point out the ingenuity wherewith the disputed nature of a portion of the remains is avoided by the use of the simple numerals. "The remains of 750"—well, 750 what? That is as you wish, dear sir. Should you adopt the theory set forth on the obverse face of the memorial stone, reply "750 soldiers." Should a sceptical habit lead you to the *other* theory, which, if more profane, is more popular, there again you are suited.

Everything being in readiness, the cemetery was thrown open and proposals invited for interments. Now, the terms whereon this cemetery has been kept available from that day to this are, that Americans shall pay $40 for each tomb there, while persons of any other nation pay $52. A very good and heavy wall distinctly marks the span of the mortuary premises. Within the enclosure is the modest house of the keeper. He has this domiciliary perquisite, and, besides, the meagre pay of $6 for each grave he may dig—$6 equally for American and foreigner, on the ground that there is no nationality in the grave, whatever there may be in the grave-yard. In this cemetery there have been, beside the initial inhuming of the "750" since the year 1853, a total of about 110 interments, reckoning up to the present time. Now, so far as the grave-digger's earnings go, that interval represents but $660 for the gross receipts of thirteen years. It will be seen, of course, that he must long ago have quietly sacrificed himself to make the necrologic figure 111 instead of 110 had he possessed no other means of support. This would have been obviously rough usage of Schneider, for such is, in fact, the name of the worthy grave-digger. But it so happens that he enjoys another privilege, *virtute officii*, which quite puts him above the mercy of the sanitary condition of the City of Mexico. This privilege is a right of retaining all the ground within the burial-place not actually used and occupied for the purposes of interment as a garden for vegetables. The honest Schneider had always, therefore, a good and prolific soil at his command, and he works it well. He set it out chiefly with cabbages, and, though this circumstance procured the sacred enclosure the well-known epithet of the "American cabbage-ground" from irreverential citizens, yet nothing can be more striking than its omnipresent contrast of growth and decay, life and death, life *out of* death. The moral is very fine; nor can any observer, however satirical, level a word in disparagement of the extraordinary profusion and the first-class quality of our thrifty keeper's vegetable productions.

Now the ossuary over which, as has been said, is fixed the commemorative tablet, is in that part of the enclosure most distant from the entrance. There, also, are the vaults. In consequence, every funeral has to pass through a long double row of cabbages, for a bed of the esculent flourishes on each side of the road leading from the gate to the place of sepulture. There are, indeed, by-paths which flank these vegetable gardens; but of course they do not avoid the agricultural view, and the main road, we repeat, bisects a vigorous cabbage-field, at whose terminus are the few graves. These latter occupy a sorry bit of territory, compared with the stretch of domain assigned to the gross-leaved living tenants of the necropolis. With his cabbages, good man Schneider, impelled perhaps by some family fatalism, which springs from ancestral relish of that delicacy, makes famous sauer-kraut. It is the only sauer-kraut, we believe, in the empire (or republic) of Mexico. At all events, it is the most celebrated, and everybody is loud in praise of Schneider's sauer-kraut. Whether this partiality comes from some popular absurd theory with regard to its origin (for this point, of course, furnishes the standard joke between friends over the pleasant dish) cannot be affirmed. At all events, such is the fact; and we may be sure, therefore, that it is not only in our martial but in our horticultural character that we Americans get toasted at little domestic convivialities in Mexico.

However, perhaps it might now be well to forego the practice of husbandry, for awhile at least, in our national cemetery and burial-place of heroes, and devote the sacred enclosure entirely to the dead. In most respects the grave-yard is in good condition. The substantial wall which surrounds it (and fine walls are an American institution, as foreigners, staring at magnificent stone fences in our country, enclosing very ordinary ground, will testify) is in good preservation, while that of its English neighbor has constantly to be put in repair. The English yard, however, is not used for cultivating cabbages. And ours, too, need not be, provided we give the keeper proper wages for keeping it in order. He need not wholly abandon the agricultural pursuits which have earned him fame and fortune far above his funeral labors. But he can conduct them perhaps in a little different locality; though it must be owned, we fear, his customers would begin to say sadly, "Ah, it's no longer Schneider's sauer-kraut!" Nevertheless, though at this individual sacrifice, the national reputation might not suffer by giving something less of a bucolic and more of a burial character to our Mexican cemetery. The busy gardener now depends, in the more solemn, but less exacting and less lucrative, half of his profession, on receipts which are not only very fluctuating,

but eminently depressing to a man of any ambition, as our statistics have shown. Mexico is, of all cities, most hostile, as everybody knows, to the calling of the coffin-maker and grave-digger. Now poor Schneider ought not to be made to suffer for a sanitary excellence which is not his fault, and which he doubtless laments as heartily as anybody. He should have a regular and sufficient stipend from our Government. And, if it be true that his office is merely a sinecure, that unhappy fact ought not to influence our action in his case; it surely does not in some other cases of sinecures we know of. And, besides, something else might be added to the round of his duties in order to make them equal to the measure of his wages.

This cemetery, at all events, may profitably fall under the view of some "reconstruction" committee. At present our zealous gardener grave-digger has had actually to drum up custom for the yard. Since foreigners may be buried in our grounds, he has sometimes successfully pleaded with our consular representatives in the capital for a reduction of the high rates, in individual cases, that an entombing might take place which would otherwise be refused in favor of less expensive sepulture. The infrequency with which his fee falls to him naturally renders it an object of greater value and exertion.

ACTION AND REACTION.

Whenever an orator or a writer wishes to be at once brilliant and profound, and to impress his hearers or his readers with an overwhelming sense of his erudition and his sagacity, he strikes an attitude and exclaims: "History always repeats herself!" We believe that it is a quotation from somebody or other, we forget whom, if we ever knew; but it is of the less consequence where it comes from, inasmuch as it is untrue. History does nothing of the kind. She does not repeat herself, and never did. She has always too much new matter ready to her hand to make it at all worth her while. There are no two facts of history that exactly resemble each other any more than any two noses or two blades of grass. Human nature, indeed, is the same in all ages, and the effects of its passions on human affairs have certain generic resemblances, but always with distinctive specific differences. As the circumstances, attendant and antecedent, of historical events are never alike, so no repetition of a particular result can be safely prophesied from an imagined or real resemblance in a new set of facts to those which brought it about. Republics have always proceeded from freedom to licentiousness, from licentiousness to anarchy, and from anarchy to despotism. Therefore the American experiment must end as all that have gone before it. The old Federalists, than whom no more honest men or truer patriots ever existed, had fearful misgivings in this direction, and trembled as they read the doom of their own country in that of the Grecian and Roman commonwealths. When the slaveholders' rebellion broke out, every half-fledged politician in Parliament ran cackling about in ecstasy at the certainty, now made doubly sure, that "the republican bubble had burst!" And even old and experienced statesmen gravely prophesied the inevitable downfall of our democratic institutions. Thus far, however, history has not repeated herself. The republic has shown herself strong enough to put down the most formidable rebellion that history records, and yet General Grant is neither dictator nor emperor. Congress still sits. There is no tyranny or violence in the loyal States, and if there be any such in the rebel region, it certainly is not on the side of the victorious government. History certainly does not repeat herself when the dangers men dread are looked for from the vanquished and not the conquerors—when the appalling watchword is said to be not *Væ victis!* but *Væ victoribus!*

Then history teaches us that reaction always follows action, and the last end of a nation is often worse than the first, after a struggle for freedom. Did not the Restoration replace the Commonwealth and Charles II. succeed to Cromwell? Did not Bonaparte inherit the fruits of the French Revolution? And how soon did 1849 devour up the promise of 1848! The American nation rose up against their slave-driving lords and conquered them; but now comes the reaction, and the treason of the vile and the supineness of the good are to deliver it up again into the hands of its old masters. The blood and tears poured out during the four years of the war were all shed in vain. They cry unto heaven from the ground, but man regardeth them not.

> ——"In vain years
> Of death, depopulation, bondage, fears
> Have all been borne and broken by the accord
> Of roused up millions!"

History repeats herself. As it hath been, so shall it ever be. With all respect for the sagacity of those adepts who would cast the horoscope of the future by the lights of the past, we deny both propositions. There is no analogy between any passages in the history of the Old World and that we are now going through of our own. And if there were any, there would be nothing discouraging about it, for England was much better off under Charles II. than under either his father or his grandfather, as was France under Bonaparte than under Louis XV. or any of his predecessors. And though the upheaving of 1848 did not shake the continent of Europe altogether to rights, it left it in better condition than it had ever before been in, and one which makes more possible than ever before yet more beneficent political and social changes. But there is no analogy between the conditions under which the revolutions of the Old World or of antiquity took place and those of the one we have just passed through, or rather which we have yet to complete and consolidate.

We think that less than justice is done to the American people by those who think that they can be cajoled or cheated out of the fruits of their victory over their rebels. They have never been accused of being indifferent to their own interests, we believe, though they sometimes misunderstood them. Had they been truly wise in their generation they would not have suffered the slave power to gain the ascendency in their affairs that it so long exercised. But it is a fact in human nature that men will endure political injuries with amazing patience, in the hope of their curing themselves in some unimaginable way, and in the fear of flying to worser evils that they know not of. Five years ago at this time how black the prospect looked! The noise and outcry of the sympathizers with the rebels made it look as if we were all ready to surrender everything at discretion. But as soon as the echo of the cannonade at Sumter reached the North, the whole scene changed as by enchantment. The Copperheads slunk to their dens. The Northern rebels hid their heads in astonishment. They had not comprehended, any more than their Southern masters, the meaning of the mighty silence which they had disturbed with the barbarous noise

> "Of owls and cuckoos, asses, apes, and dogs."

In an instant, in the twinkling of an eye, all was changed. The people made their majestic purpose known and never wavered nor flinched until they had accomplished it, and put their enemies under their feet. And now, because they have relapsed into grand repose, and the same obscene birds and unclean beasts and venomous reptiles have ventured into the light of day again, making it hideous, is it to be believed that the people which trampled out the rebellion are to be hoodwinked and made again the serfs of the slave power under another name? They deserve better of their friends than that belief. No conspiracy of Southern rebels and Northern traitors, no coalition of pro-slavery Democrats and renegade Republicans, even if it were led by an apostate President, could give the control of this nation again to the States lately in insurrection. The people would crush any such attempt as sternly and effectually as they did the rebellion, though with other weapons. But we have no such conspiracy and no such leading to fear. Wide as differences of opinion may be among public men, there is no just ground to accuse tried Republicans of treason, or the head of the nation of apostacy. Dissidences and disorders are inseparable from the transition state we are now passing through, and they cannot be quieted and reconciled in a moment. But the *teterrima causa belli* being at an end, all moral, political, and economical forces will irresistibly, though gradually, compel a true peace, followed by its natural blessings.

And, indeed, the reaction which is so much feared as always following action has already taken place, and we are living in the midst of it. It was the reaction against slavery which inspired, sometimes without their knowing it, the men of all parties who carried the war against the rebellion through to a successful issue. Under its compulsion slavery was abolished and the organic institutions of the rebel

States forcibly revolutionized. The loyal people know their own meaning, and they will keep the control of their Government in their own hands. The sublime clemency and god-like magnanimity with which they have treated their fallen foes is beyond the capacity of those unhappy men to conceive of. They can attribute such conduct only to weakness or fear. They cannot see in this the very expression of conscious strength and deliberate courage. But let them and their creatures at the North attempt to defeat by indirection the great purpose of the people, and they will learn that the reaction against slavery has not reacted in favor of rebels. They will never rivet the broken links of their shattered chain upon their free limbs again.

"——Quæ bellua ruptis,
Cum semel effugit, reddet se prava catenis?"

What a beast that lacks discourse of reason would refuse to do, the American people are in no danger of doing. And it is small wisdom and mistaken patriotism to assume or to argue that they are.

THE DEBATES IN THE FRENCH PARLIAMENT.—M. DE GIRARDIN.

The annual tournament of eloquence in the French parliament has begun. The only occasion which is offered under the present system to the members of the opposition is the discussion of the address. Once a year only they can bring forward all their grievances; they are then obliged to condense all they have been accumulating; they cannot choose their time nor their opportunity, and must needs serve the French public with a *menu* which is necessarily too full. Who can digest, all at once, a long and magnificent speech of M. Thiers on liberty, a speech of M. Lanjuinais on Algeria, another by M. Jules Favre on the Roman question, a philippic of Pelletan against electoral corruption, a satire of Picard against Imperial functionaries, etc.? It really seems as if the whole system had been so arranged as to disgust the French public with parliamentary debates. The deputies feel very keenly the difficulty of their position; they are obliged to bring in question after question, in quick succession, just as schoolboys recite their lessons one after the other. They jump from Rome to Mexico, from Mexico to Cochin-China, from Cochin-China to Paris, and, as the old proverb says, "a rolling stone gathers no moss."

On the Mexican affair the opposition has met with no success whatever, and we fear that its campaign has not been well conducted. M. Picard was beginning to speak on this point when he was interrupted by M. Rouher, who, in the name of the Government, begged the opposition to postpone the discussion, as negotiations had been entered into with the United States Government, the result of which was not yetknown. After this oracular declaration, M. Rouher sat down, and, after some hesitation, M. Picard declared, in the name of the opposition, that he was willing to wait and would not throw new difficulties in the way of the Government. This sort of coquetting between the ministry and the parliament is very well in its place where there is a real constitutional government, and where the house, sooner or later, is sure of exercising its control over the affairs of the country. But, considering the nature of the Imperial Government and its mode of managing foreign affairs, the course of M. Picard and his friends seems somewhat simple. The secretary of the Mexican legation in Paris said, the other day, "If we can only reach May, we are safe!"

The new president of the House, Walewski, is not equal to his predecessor, Morny. The only resemblance between them is that, like Morny, he owes his great favor to the fact that he is an illegitimate son of the first Bonaparte. His mother was the beautiful Polish Countess Walewska. When he was appointed president of the house, after the death of Morny, some French wit quoted a famous verse of Boileau:

"Chassez le *naturel*, il revient au galop."

M. Walewski finds it very tedious listening to all the debates, and he is very often absent. A few days ago the old veteran Glais-Bizoin, speaking incidentally of Mexico, referred to it as "that empire which is supported by thousands of bayonets." This sentence, pronounced with some emphasis, brought M. Walewski back to himself; and thinking that M. Glais-Bizoin was speaking of the French Empire, he violently interrupted him and called him to order, to the bewilderment of the whole house. M. Glais-Bizoin quietly remarked that he was speaking of Mexico. "Oh! I beg your pardon," said Walewski, with much confusion and amid much laughter.

The same M. Glais-Bizoin excited M. Rouher's wrath to such an extent, at the end of a speech, that the Minister of State got up and exclaimed: "This is no longer politics; this is a *pasquinade*" (which we may, perhaps, translate "buffoonery"). A great tumult followed this interruption, and almost every member in the House took the side of M. Glais-Bizoin. The disorder and the melee was such that M. Walewski, in his despair, closed the debate and left the presidential chair. Curiously enough, Glais-Bizoin was invited to dine the same evening at Rouher's; he did not go, however, and did not think it necessary to send an excuse.

The humor of the House is no longer what it was in former times, when "*les cinq*" composed the whole opposition, and when every word which fell from the ministerial lips was an oracle. The deputies are not indifferent to the progress and agitation of public opinion. One of them, a ministerialist and Bonapartist, said to the present writer some time ago: "I am rather puzzled in my department. I don't know whom I ought to *soigner* (to cajole) most, my prefect or my electors." A great many find it already necessary to pay some attention to the wishes of their electors, and not to put their whole trust in the protection of the once all-powerful *préfet*.

The greatest event of the session is the amendment proposed to the address by forty deputies who do not belong to the real opposition, but who nevertheless claim more liberties for the nation. The amendatory proposition, which at first obtained but forty signatures, has since received eighty, and it may have more when the day of its discussion arrives. This discussion will be very interesting; for the first time the opposition will be silent, and the rights of liberty will be defended by new champions. The formation of this *tiers-parti* may be (without punning) attributed partly to Thiers. The moderation and statesmanlike character of his opposition has made many converts in the majority. If the actual progress is maintained, we should not wonder if even the present Chamber should prove very troublesome to the Imperial despotism before the end of its session.

Outside of Parliament great agitation has been created by the recent articles of M. Emile de Girardin. Girardin may almost be called the most important journalist in France. In his hand the *Presse* became once an important political weapon. Girardin is a dangerous friend, but even a more dangerous enemy. He killed Armand Carrel in a duel; he killed the republicans of the National by his articles. Cavaignac put him in prison after the insurrection of June; once at liberty, he began an almost savage warfare against him. None contributed so much to hinder his election to the presidency, and to promote the election of Louis Bonaparte. After the *coup d'état*, he abandoned politics, and quietly increased in speculation his already large fortune. He has amused himself lately in writing sensational dramas, "Le Supplice d'une Femme" and "Les Deux Sœurs." His restlessness has again brought him back to the field of politics. Girardin is no sentimentalist; he is almost cynical in his utter contempt for political partizanship; he professes no preference for any man or any form of government. "Liberty" is his only motto, and the loyalty which he has shown to the cause of abstract liberty will certainly redeem many of his faults and of his errors. About a month ago, after a silence of many years, he began a series of articles in his paper, the *Presse*, in which he had always preserved great influence. These articles were entitled "Lettres d'un Mort." From his political grave he was looking on France, and he described her agonies with a wonderful and sarcastic eloquence. He warned the Emperor against the imbecility of his counsellors, and prophesied that nothing could save France from a new revolution but liberal reforms. His sharp, clear, thrilling voice was exciting too much attention. The *Presse* received in a week two *avertissements*; the proprietors of the paper were frightened, for after two *avertissements* a paper can be suppressed by the Government. The shareholders asked Girardin to lower his tone; he left them defiantly, and bought an unknown newspaper called the *Liberté*, which was on the point of dying for want of subscribers. He laid aside the sum of one million, and said to his

friends: "I am willing to sink this sum in my new paper before it can be made to pay." Under the present *régime*, and with the stamp duty, no paper can cover its expenses before the shareholders have sacrificed about that sum. So the *Liberté* was started by Girardin alone. It began with six hundred subscribers; after a week it had one thousand; Girardin expects to have twenty thousand before the end of the year. Will he not deserve them? If many men had his pluck and enterprise, France would not be reduced to the melancholy condition in which she finds herself.

SHAKESPEARE.

It needs no bow o'erstrained to wing the shaft
Of wit and wisdom. When true poets sing,
Into the night new constellations spring,
That lure us from our lamps—books rich with craft
Of rhetoric. So, when Shakespeare sang or laughed,
The world with long sweet Alpine echoes thrilled—
Voiceless to learned tongues no Muse had filled
With melody divine. Athirst we quaffed
His airy electric words like heavenly wine.
The mountain summits of that Orient land
Outsoar the level of our praises fine.
All others lie around like tracts of sand,
With here and there a green isle or a palm
That whispers pleasantly when days are calm.

C. P. Cranch.

THE ACTING OF MR. EDWIN BOOTH.

The return of Mr. Booth to the stage has been one of the pleasant features in New York life the past winter. It was pleasant to think that he had so far recovered from his gloom that he could appear in his natural guise before the public; it was pleasant to see the public as welcoming their old favorite again; it was pleasant to witness the delight of thousands who found their choicest entertainment in his acting; and pleasant it was also to know that the New York theatre was to have the benefit of his fine character and his great ability. Mr. Booth has laid out his strength on two characters, the impersonation of which has become almost identified with his person—*Hamlet* and *Richelieu*. The "Hamlet" was the drama that had the stupendous success a year ago. The "Richelieu" was the revival of a favorite *rôle* on a scale of magnificence which placed it as a spectacle side by side with the "Hamlet," the two being probably the most beautiful scenic representations ever given in this country. In the case of Sir Bulwer Lytton's play, this gorgeousness of scenery, furniture, costume, and general stage appointment is in perfect keeping with the play itself, which is brilliant and artificial, marked by no high qualities of genius, and characterized by no attempt to exhibit the working of strong passions or the development of strong characters. All there is in the play may be seen at a glance. It is essentially a spectacle; the more spectacular it is, therefore, the better it is. With "Hamlet" the case is different. Here everything is grand, profound, even tremendous, in its intellectual and moral aspect. The actor has to portray the action of a great soul in a great crisis of its destiny; and the painted pasteboard, the cheap tinsel, the banners, the drawing-room elegances, and the calcium lights are as much out of place in the stern grandeur of the piece, as they would have been in the actual life of the antique time in which the scene of the drama is laid. A severe taste cannot easily become reconciled to a spectacular "Hamlet." The eyes dazzled by the spectacle are in no condition to see the "Hamlet;" and the *Hamlet* himself looks wholly out of place "assisting" at a spectacle.

In "Richelieu," as we have said, there is no such incongruity. Little is required beyond the decorator's art, and a mastery of stage finesse on the part of the actor. In this Mr. Booth is a wonder of skill. His familiarity with stage effects, and his address in employing them, are something exquisite. He dresses his part faultlessly; his disguise is complete; his command of form and countenance is equal to every exigency; his by-play is quick, various, interesting; his postures are easy; his movement is graceful. It is difficult to see how art can do anything more. In personating *Richelieu*, the actor's responsibility is limited to the representation of the author's conception, and that is all given plainly in the text. No original study of character is allowed; there is no room for the display of genius, for there is no room for any great difference of interpretation. The work of creation is all done to hand. If the creation is a false one, that is not the player's fault. It is no affair of his if the *Richelieu* of the play is not precisely the Richelieu of history, if the sentiments are not his sentiments, nor the words such as he would have spoken, nor the passions such as he would have felt. The play exhibits a series of situations, nothing more; and if the actor gets up the situations well, it is enough. Mr. Booth does this eminently well; but, being in a critical mood, we must presume to say that, in our judgment, he does not do it perfectly. The piece was overacted. As the play went on, our thoughts wandered back to the France of the seventeenth century and to the court of Louis XIII., and we could not help asking ourselves if the great soldier, noble statesman, minister, priest, of that stately period conducted himself in this way towards the men and women about him; if he was thus unreserved and familiar, if he gave way in public to such violent bursts of passion, if he raised his voice so high, or allowed himself to be detected in such hysterical spasms of feeling. His schooling of years in self-command and diplomatic reticence was to little purpose if such scenes as Mr. Booth depicts in the fourth act could have taken place. The physical capacities of old age vary so greatly in different persons that it might be rash to decide against an old man's power to indulge in such tremendous explosions of feeling as are exhibited at the Winter Garden, but it must be quite safe to say that an old age like that of Armand Richelieu could not let such pent-up fires escape in physical demonstrations. Mr. Booth presents the character admirably, according to his conception of it; but the conception itself strikes us as faulty. There is more art than genius, more fancy than imagination, more taste than intellect. Art so fine, taste so delicate, fancy so rich and rare, are too good to be dispraised, too precious to be undervalued; the multitude is fascinated by them; they draw the crowds and win the homage So remunerative are they in pence and applause that the temptation to overwork them is no doubt irresistible. Still where the finish is so exquisite, one cannot help wishing the material were a little more solid.

The defect in imaginative power—the power to conceive and create—is most evident in the interpretation which Mr. Booth gives us of *Hamlet*. Far be it from us, modest critics as we are, to revive the old controversy respecting the character of the melancholy prince or the theme which Shakespeare meant to treat when he wrote the play. It is enough for our purpose that a great character is presented, and that a great theme is worked out. The elemental features of the character, too, are thrust forth prominently, and the stray points of the theme are pushed forward with unmistakable force. Whatever else Shakespeare's *Hamlet* may be, whatever we may think of his madness, he is a man of immense intellectual and moral power—no weakling, no morbid sentimentalist, no melancholy dreamer, no moon-struck misanthrope. He is a deep thinker on the mysteries of this life and of the life beyond—a philosopher, a student, a scholar, who is simply too great intellectually to yield to any passion however absorbing and sacred. He could not act as other men would, because he saw too many reasons why he should not. All sides of the case presented themselves to him: he must act from thought, rationally, and reason is for ever suggesting delays and reconsiderations. The intellect must have been immense that could resist such a flood of impulse as stormed through him, but it did resist—it held him bound. And yet, not his intellect more than his conscience: *Hamlet* was too good a man to commit a crime if there was any possibility of helping it. The inducements were terrific in force: the moral sentiment of the age he lived in, the duty of the son to avenge the father, the father's re-appearance from the dead in visible and unmistakable form, recounting in detail the story of his murder and bidding his son avenge it, whetting his purpose to avenge it by repeated visits, the shameful character of the man who had committed the crime—all conspired to drive him to consummate vengeance. What restrained him? Not his weakness, but his power not his lack of will, but the sanctity of his will. He must be sure that he is acting rationally and nobly, with free mind and uncorrupted heart; and of that he cannot be sure. He puts himself off with false pretexts, and squares the account with his conscience by finding fault with his opportunity. The reason he does not stab his uncle at his prayer is really that he has not made up his mind to kill him at all; he is waiting for more proof. The reason he gives to himself, namely, that his uncle would then go to heaven, is simply the fetch by which he comes off without discredit to the general drift of his persuasion. Had the deed to be done been anything else, though ten times huger, he could have done it easily; but *this* deed, no. This intellectual and moral sublimity marches grandly all through the play, teazed by outward irritations, weakened occasionally by nervous exhaustion, slightly distempered by the warfare that waged incessantly within him, but never completely unsettled or broken down. His melancholy was born of thought before it was nursed by sorrow or matured by supernatural visit-

ation; he is outside of everything from the first and superior to everything; he dwells apart with great problems, not merely unconscious of the people about him, but profoundly conscious of spiritual verities within him. Precisely this, we are compelled to say, we miss in the impersonation of Edwin Booth. His *Hamlet* is beautiful, elegant, graceful, exquisitely refined and delicate, but neither intellectually nor morally strong. It is a romantic and sentimental *Hamlet*, pensive but not deeply reflective; sad, with the low-spiritedness of a morbid temperament increased by a tragic experience, not with the settled sorrow of a great soul steeped in thought and agony. He is vacillating and weak; he drifts before circumstances, instead of taking his stand on reason and conscience with a purpose to control fate. His action is that of a man of impulse; his movements are wayward and passive; his gesticulation is feeble; his declamation smooth, easy, balanced, as if no profound emotion was in him. He is distinguished from those about him by the finish of his artistic elaboration, rather than by the grandeur of the traits which he impersonates. It is Mr. Booth that is distinguished from his fellow-actors rather than the *Hamlet* he represents from the other personages of the drama. Is it Shakespeare's *Hamlet* who glides so serenely over the abrupt and awful breaks in the famous meditation on suicide, passes through the fine shocks of experience as if unconscious of their occurrence, and reaches the conclusion so little torn and scarred that when, at the close of the black struggle, he suddenly perceives the white-souled *Ophelia* at her matin worship, he is insensible of the mighty moral chasm between her and himself, and softly murmurs the wish that she might remember *his* sins along with *her own*, as if she had any sins to remember! or as if her blackest sin would not look white as wool against the midnight guilt of the heart that had just been facing self-murder? Is it Shakespeare's *Hamlet* who is so unreserved with his companions, so violent with his mistress, so vehement with his mother? Is it Shakespeare's *Hamlet* who shows so little self-command during the mock play that he must certainly have betrayed himself before it began? Is it Shakespeare's *Hamlet* who rushes into such a paroxysm of rage at the grave? This *Hamlet* is interesting and pitiful, as helpless sorrow always is, especially when it is sentimental. He is not fascinating or impressive, as the grief of a great mind never fails to be.

We have tried to avoid any unnecessary criticism of Shakespeare's own conception. Our purpose has been to take none but the conceded traits of Shakespeare's *Hamlet*, and show that they received less than justice at the hands of Mr. Booth. An analysis of separate readings would, we believe, fortify our judgment considerably; but for this there is no space here. One word sums up our criticism. We regard it as Mr. Booth's misfortune that he is divided between two widely differing schools of acting—the romantic and the natural. The traditions of his youth, his early observation and training, committed him to the romantic or heroic school; his organization, taste, aptitude, perhaps his later study also, incline him to the school of nature. But he seems never to have made a deliberate choice between the two; his favorite plays are romantic; his pet characters are romantic; in his treatment he aims at naturalness; hence the incongruity. Shakespeare's tragedies cannot be acted naturally, for they are entirely out of *our* "nature;" and to play them after the old unnatural style of the last century would be simply intolerable. How then can they be played at all? Even *Richelieu* cannot be acted naturally; for such an episode in French society cannot be reproduced as real to our audiences. There will always remain something that cannot be conveyed by our every-day means of expression, and that must be caricatured by strained action, artificial gesture, and stilted declamation. Mr. Booth does all that man can do; but no man can bring *Hamlet* or *Richelieu* into modern life. We think that if he would abandon the endeavor, and devote his very remarkable talents to studies in the school of nature he would achieve triumphs worthy of the greatest artists of the age.

AN ALMOST LIVING LITERATURE.

Joel Barlow, the distinguished American poet, died in a small village of Poland, having spent the last days of his life, if we are not mistaken, in the house of a poor Jew. American writers of our days, however, who desire to *see* the eastern parts of Europe, need not be deterred from travelling through the lands of the Sarmatians by fears of being overtaken by death or sickness in a lonely, uncomfortable, gloomy tavern or cot. They can, if they so choose, traverse in one or two days, in mail-coaches, rail-cars, and hacks, one of the largest fragments of quartered Poland, by turns sleeping, yawning, and learning from some fellow-traveller all the information necessary for a description or a lecture. Should, however, the object of the traveller be not only to see and to describe, but also to become familiar with the remote regions above mentioned, to study the character, the manners, and social condition of the nations and races inhabiting them—should he venture far away from the locomotive and the *droshka*, we should consider it not only a natural but a common event if he were overtaken somewhere in the gorges of the Carpathian slopes or in the outskirts of the Lithuanian forests not by death, but by a snow-storm, stopped in his excursions for a number of days, and compelled to seek shelter, food, and amusement in the society of a half-civilized-looking Jewish family, whose corrupt German dialect would afford him an easier medium of conversation than the Slavic of the peasants.

Can that Jewish dwelling afford any nourishment for the inquisitive mind of a travelling American scholar? Let him not too soon despair. It shall not surprise us in the least if he discovers in one of the alcoves a private library of no mean dimensions. A Hebrew library belongs to the household of every respectable, or half-respectable, Jewish family in Poland. If our traveller has in his college years acquired, and not yet forgotten, the rudiments of that Semitic tongue, he can amply amuse himself, and no little enlarge his bibliographical knowledge, by deciphering the full titles of those crude folios, quartos, octavos, and duodecimos; else let him study the shorter non-original titles affixed in Latin, Portuguese, German, or Polish, and he will still find plenty of literary entertainment. If there be a timid, bashful, young man in the house, we have no doubt he will be able to give fuller information on the works and their authors, for he will be the student of the family. Our traveller, it is true, must compel him to speak. By all means let him do it.

The Jewish people is the greatest of ethnological phenomena. Its literature is no less a phenomenon. Both are almost coeval with the history of mankind. The people whose cradle was the country between the Euphrates and the river of Egypt, the Lebanon and the Arabian Desert, continues to exist when scattered throughout all climes, from Melbourne to St. Paul and from Archangel to Rio de Janeiro; the literature, whose earliest specimens are the blessings of a Hebrew sheikh dying in Egypt, the warnings of a leader of nomads in the vicinity of the Dead Sea, or the philosophy of a son of Uz, is continued in our days, and not without success, in the hyperborean regions watered by the affluents of the Baltic—the Niemen, the Wilia, and the Vistula. And what strange links are there between the dying words of Jacob and the last numbers of the *Maggid* or of the *Carmel!* Examine the titles of that comparatively so poor collection of books in one of the wilds of Sarmatia, and you will know what Hebrew literary history means. Skip over all that period of Jewish national existence which, in literature, begins with Moses and ends with Josephus, or, as his mediæval Hebrew compiler calls him, Josipon. There is, first, the Mishna, the product of the time of the Antonines, and brought to conclusion in Galilee; there is the Talmud of Jerusalem and the more voluminous one of Babylonia; there are the works—theological, philosophical, poetical, grammatical, or critical—of Isaac of Fez, Maimonides of Egypt, Kalir of Italy, Hallevi and Ebn-Ezra of Spain, Don Abarbanel of Portugal, Kimhi and Gersonides of Provence, Rashi of northern France, Ben-Israel of Holland, Asher and Eibenschütz of Germany, Eiger of Posen, and Elias of Lithuania, with numberless others, some printed in Venice, others in Fürth, others in Amsterdam, and again others, of more modern date, in Vienna, Prague, Warsaw, Lemberg, or Wilna. All these form one literature, and each will be more or less known by every Hebrew scholar of Tunis as well as of Altona, of Saloniki as well as of Cracow.

If your young expounder has had the good fortune to be instructed by a teacher of more general Hebrew culture than the mass of Polish pedagogues of his persuasion, he will introduce you to a department of Hebrew literature less universally accepted, excluded as almost heretical by some, and the more warmly cherished and cultivated by others. He may show you the Hebrew commentaries of the philosopher Mendelssohn ("the man of Dessau"); the epic and lyric poems of his friend Wessely, rivalling in fervor of sentiment and purity of diction the immortal songs of Hallevi; the dramatic masterpiece of the eldest Luzzato; the songs of the two younger; Troplowitz's tragedy, "Saul"; Bloch's descriptive geography; Rappoport's biographies; Reggio's letters; the translations of Letteris; the works of Eichbaum, Slonimski, Mappu. This collection covers little more than one century, but it again takes you over the vast extent of the European continent, from Amsterdam to Odessa.

The works of the last-named Hebrew writer your bashful friend will designate and define with some hesitation. They are romances, the first in the Hebrew language. We have one of them before us, published a few years ago (Wilna, *Anno Mundi* 5613), and entitled "Ahabath Tzion" (The Love of Zion). It is a historical novel, the scene of which is Jerusalem and its environs, in the reign of King Hezekiah, before and during the invasion of Sennacherib. The plot is rather too complicated at the beginning, and too much saturated with love, jealousy, and patriotism; but as a picture

of ancient Hebrew life, as developed in the brilliant biblical pages of the period of Isaiah and his contemporaries, and as a lyrico-dramatic narrative in a style as pure, fluent, rich, and fresh as any Hebrew poetical prose of modern times, it is no mean contribution to the prose fiction department of that literature, and regarded, with no less delight than pride, as one of its gems by the compatriots of the author, a resident of the Lithuanian town of Kowno.

Thus the glowing language in which Moses and Joshua addressed the tribes of Israel gathered around Sinai and Nebo; in which elegies were sung along the streams of Babylon; in which Haï vied with the philosophizing bards of the caliphs, Harizi and Immanuel imitated Hariri and Dante, and Bidrashi's diction eclipsed the most spirited songs of Provence; in which the disciples and followers of Maimonides, from Ben-Tibbon, the Aristotelian, to Maimun, the Kantian philosopher, expounded the various metaphysical systems of so many ages; in which the glowing cantos of Wessely rivalled those of Klopstock,—is now being adapted to new literary wants, and enters into competition with the rich tongues refined by the efforts of a Mickiewicz, a Pushkin, and a Gogol.

ENGLAND.—HOUSE OF COMMONS.—REFORM.—DR. WHEWELL.

London, March 10, 1866.

The day after to-morrow we shall know the great secret of reform. Never within my recollection has a political secret been kept so carefully. Up to the time at which I write, nobody out of the Cabinet knows positively whether the Government intend to propose a six-pound rental or rating franchise, to alter or leave unaltered the existing distribution of seats, or to recommend a lodger's franchise. But I am afraid the explanation of this secresy is a very simple one. There is only one infallible recipe for securing the non-discovery of a secret, and that is that the propounder of the problem should not be aware of its solution. Œdipus, after all, would never have guessed the Sphinx's riddle if the Sphinx had had no conception of what the answer was herself. Now this is the explanation of the Ministry having concealed their intentions so effectually. They have not revealed them to the world for the best of all reasons, namely, that they did not know them themselves. Meanwhile the public await the explanation of the ministerial proposal with the most provoking patience. Possibly, when the bill is actually brought out and the discussion has commenced, the country may grow excited about the matter; but for the present everybody seems to have come to the conclusion that either the Government will not propose any material change in our representative system, or that, if they do, it will not be carried into effect; and, somehow or other, this conviction appears to excite no great amount of public excitement. I may be wrong—I hope I am wrong—but in the face of what I see and hear on every side, I find it impossible to believe we are on the eve of a crisis in our political history. However, a few hours will show. On Thursday last there was a very numerous meeting of the Conservatives at the house of Lord Salisbury, at which it was agreed not to oppose the introduction or the first reading of the reform bill. The first fight, therefore, will take place on the second reading; that is, in all likelihood, not till after the Easter holidays, which commence on Friday week.

So far the new Parliament has not given much indication of any great improvement over its predecessor. It is apparently as turbulent and as much influenced by private considerations. The other night we had the greatest House we have seen this session. The subject under discussion was whether a bill permitting the city of London to remove the civic gas-works to a distance should be allowed to pass its second reading. What the real merits of the question were, I suppose not a score of members could have told in order to save their lives. But, on the one hand, the corporation of London was interested in the success of the measure; and, on the other, the London gas companies considered that their monopoly was endangered by its passage. So both bodies had put every influence into play to secure parliamentary support for their views; and the result was the assemblage of a House of unusual size prepared to vote, but not prepared to listen. The speakers on either side of the question could not obtain a hearing, and all discussion was drowned amidst cries of "divide." In the end, as the corporation of the city happens to be a more united and powerful body than the gas companies, the bill was carried. Mr. Roebuck, who has a sort of license for saying what nobody else would be allowed to utter, told the House frankly that the benches on both sides were packed, and was cheered for the declaration. But notwithstanding these cheers, the division list remained unaltered.

Very few, if any, of the new members have as yet produced much impression within the House. Mr. Mill, indeed, is the only one who has taken any active part in the debates, and his success is of a problematical character. His personal appearance is undoubtedly against him; he is not a man of commanding presence, and the House of Commons, like Queen Elizabeth, has a marvellous fondness for "proper men." Then, too, his voice is feeble, and his manner is too much like that of a schoolmaster addressing his pupils. However, he is a constant attendant at the debates, takes a great interest in the discussions, and will make a useful, though, I suspect, not a brilliant, addition to the legislature. Altogether, my own belief is that very little active work is to be expected from the present Parliament. It is nothing more than a reproduction of the old one, and represents the Palmerstonian régime under which it was elected. Its one hopeful characteristic is the increase amongst its component parts of the advanced liberal element. But though, for well-nigh the first time in our parliamentary history, we have a distinct and influential radical party, yet that party is still too small to produce any great effect in the actual work of legislation.

The chief social event of the week, whose attention, though in a feeble and unsatisfactory manner, has been well-nigh monopolized by the impending reform bill, is the death of Dr. Whewell, the Master of Trinity College, Cambridge. Neither science nor philosophy nor literature will sustain any great loss by the death of the great Cambridge celebrity; but yet, in his own way, he was a representative man. In Mr. Bristed's recollections of an English university, he describes, if I remember rightly, his astonishment that the authorities of Trinity College should have thought it worth while to write to the American Minister of the day, in order to inform him that his young countryman had obtained a scholarship at Trinity. Yet to an Englishman of the academic class this circumstance appears perfectly natural. The great universities of Oxford and Cambridge are part and parcel of our national life to an extent it is difficult for a foreigner to appreciate. And thus the Master of Trinity, the greatest of our colleges, is really a personage outside the bounds of the university. Moreover, Whewell was a man who would have made his mark anywhere in the world. Born the son of a blacksmith, and reared, so tradition said, at a north country forge, he early evinced considerable mathematical talent, and was sent up to Cambridge as a sizar—that is, a poor scholar supported by a college allowance. He rose to be first scholar, then fellow, then lecturer, then tutor, and finally Master of the college. A man of indomitable energy and immense power of application, he continued his self-education, unlike the majority of college celebrities, long after the academic stimulus for exertion had ceased to operate, and became in consequence one of the most wide-read of English men of letters. There were very few subjects of science or learning about which he did not know a good deal, more, perhaps, that he really had mastered thoroughly. At any rate, he has left no work which can be considered a standard authority on the subject-matter of which it treats; and scientific men are disposed to pay small heed to his pretensions to be listened to as an expert. But with all that he was by far the best informed and most thoughtful man in the university wherein his life was spent. A conservative in politics, a staunch upholder of commonplace orthodoxy in religious matters, he was still, in intellectual matters, eminently liberal. Indeed, he had such a love of contradiction, that he could hardly be other than liberal in a community whose whole interests are eminently conservative. Throughout the whole of the American war he was a staunch advocate of the North, chiefly, I think, because it was the fashion in the halls and common rooms of Cambridge to profess a sentimental sympathy for the South. I have been told that once, not very long ago, when one of the younger fellows of his college gave utterence in his presence to some views of this kind, the Master interrupted him, saying: "Sir, you are a very young man, and, what is worse, you are a very silly young man." And this sort of Johnsonian brutality of speech was one of his characteristics. He was bitterly unpopular with the members of his own college during the first years of his mastership; but gradually they learned that his bark was worse than his bite. Besides, whatever else his failings were, he was perfectly loyal in his affection for the grand college over which he presided; and all old Trinity men like myself must bear a kindly feeling towards him on this account. He was anxious—so gossip said—to be made a bishop; but no consideration of this kind could influence him in his assertion of what he held to be the rights of his college. Trinity is a royal foundation; the mastership is in the gift of the Crown; and the house where the master resides is, according to the common opinion, a royal possession. Against this view Dr. Whewell set himself most sturdily. He insisted on every possible occasion that the Lodge—as the master's house is called—belonged to the college, not to the Crown. When the Queen paid a visit to Cambridge in company with Prince Albert, some years ago, Whewell is reported to have given great

offence at court by saying that the college was proud to receive her Majesty in *their* lodge, laying an accent upon the *their*. In the same way, he waged perpetual warfare against the judges during the assize week. It has been the custom from time immemorial for the judges, while stopping at Cambridge, to take up their abode at the Lodge. The master had no objection to the time-honored custom; but he insisted that the judges must come as his invited guests, not as the representatives of the Crown; and as they refused to make this concession, he pursued them with an almost sublime tenacity of purpose. When they arrived he would leave the house, lock up the cupboards, remove the servants—do everything to make their sojourn impossible. He was threatened with injunctions in Chancery, with all sorts of mysterious law proceedings; he knew by his course of action he was throwing away all prospect of preferment; but still he persevered. He was Master of Trinity, and he could recognize no higher duty than that he owed to his college. When he wrote his well-known essay to prove that there was no ground for the popular belief in a plurality of worlds, it was said that he wanted to demonstrate mathematically that not only was he the master of the greatest college in the known world, but that there could not possibly be any world within the universe wherein there was a yet greater college than his own. He had an iron constitution, was a hale, vigorous man of seventy, and might probably have remained master for a score of years longer if he had not been thrown from his horse the other day while out riding. He never recovered from the shock, and died after a few days' illness.

In home matters we have had an incident eminently typical of English character. Lord Brownlow is lord of the manor of a common in Hertfordshire, and claims, whether rightly or not, that he has legal power to enclose it. So he surrounded it with handsome iron palings and turned it into an enclosure. The neighborhood was indignant, and their indignation found a champion in the person of Mr. Augustus Smith, who is proprietor of the Scilly Islands and was lately member for Truro. This gentleman engaged the services of three hundred navvies, chartered a special train from Euston Square, took his gang down at midnight without breathing a word to anybody, and set them to pull down all Lord Brownlow's railings, which they did accordingly. If anybody not a land-owner had committed this outrage on law, he would have been in an awkward scrape; as it is, public sympathy with Mr. Smith, as an aristocratic asserter of popular rights, is so strong that no Hertfordshire jury would find him guilty. We are always declaiming against lynch law, but we can overlook it when its action tallies with our popular sentiments.

PARIS GOSSIP.

PARIS, March 2, 1866.

WE are getting through Lent very merrily. For some years past the rigors of this period of traditional penitentialities have been progressively softened. With a few more modifications in the same direction, we may possibly find that we have softened them away altogether. Some of the numerous dinners that have "created a sensation" during the past week have undoubtedly ignored the prescriptions of the Roman ritual; others, according to the eulogium passed upon them by a noted gastronomer who piques himself upon the exactness of his deportment in matters ecclesiastical, "have happily conciliated the religious duties of the season with the requirements of the most fastidiously delicate palate." The theatres are crowded, "Héloïse Paranquet," the anonymous drama so confidently attributed to the younger Dumas, being still the grand success of the season. Private theatricals, so immensely in vogue during the two preceding winters, are quite out of favor this year, their place being taken by concerts, usually of amateurs, but occasionally given with the aid of the favorite progressional artistes of the hour. Among the amateur singers most in vogue just now are two American ladies, Mrs. Moulton and Mrs. Ronalds, both of whom, being equally clever as skaters and as singers, are in high favor at the Tuileries. Among the "professionals" Patti, Thérésa, Miolan Carvalho, and the new singer Mlle. Mella, are the leading favorites; the latter possessing a magnificent tenor voice, that ought, according to all precedent, to be found only in conjunction with a masculine chest, offering an enigma that is just now exciting the curiosity of the gay world of Paris to its highest pitch. Is the new tenor really a woman, or is she a man in disguise? Her face, hands, and feet are altogether feminine; but many youths of the other sex present, at the age of the new tenor, an appearance as feminine; and, moreover, the musical puzzle, as though designing to irritate still further the curiosity of an enquiring public, persists in making her appearance only in "high-necked" and long-sleeved dresses, that effectually defy the scrutiny to which she is subjected. Look at her, without hearing her, and you would vow she is a woman; hear her, without seeing her, and you would swear she is a man.

But busy as is the fashionable world with dinners, theatres, and concerts, it is assiduous in its church-going. Father Hyacinth's success as Advent-preacher at Notre Dame is being rivalled pretty closely by that of Father Felix, who is preaching the Lenten sermons in that fine old fane, to which the fashionable world is flocking, in elegant toilettes and with missals bound in the most *recherché* styles. The charming young couple, Prince and Princess Hohenzollern—the latter a sister of the King of Portugal—who have just terminated their long visit at the Tuileries, where they are greatly admired and beloved, have been very constant in their attendance at the chapel of the Tuileries, where the Abbé Duguerry is delivering a course of six sermons on the Lord's Prayer, which appear to be giving great satisfaction to his illustrious auditors. The prince is good-looking, amiable, accomplished, and highly educated; the princess, without being a beauty, has a sweet and pleasing face and a fine figure. She is, like all the children of the regretted Queen Maria de Gloria, full of learning and accomplishments. Her manners, graceful, easy, and dignified, are particularly admired; as a fashionable critic lately remarked of her, "The princess is a most accomplished specimen of a royal lady; her fine and dignified deportment seems to be a part of herself, so that it is always the same, and as thoroughly *comme il faut* at mass as in the ball-room." Who but a Frenchman could ever have reached the heights and depths of such an encomium?

The absorbing interests of the toilette are cared for in conjunction with the sackcloth and ashes of this very easy-going Lent with quite as much devotion as during the carnival. The fashionable dressmakers are at work night and day, and the two or three "tip-top" capillary artists are busy from nine in the morning till eleven at night, charging fabulous prices for the half hour they give to each client, and increasing their charges in proportion to the lateness of the hour, their less wealthy customers being obliged to submit to having their heads beautified in the morning, after which operation they are doomed to sit perfectly still for the rest of the day for fear of deranging the wonderful structure built upon them, and the most favored ones being the last to receive the visits of the autocratic artist, and thus being enabled to pass directly from under his hands to the scene of their triumphs, every hair, flower, or ribbon in perfect order.

A curious reaction has commenced here in the side of Paris life which has been so successfully working itself of late years into recognition by the other. While the ladies of the higher walks of society here have been copying the costumes and manners of the *lionnes* of the *demi-monde*, the latter have come to a sudden determination to adopt the severe proprieties of dress and demeanor which were formerly the characteristic of the sphere from which they were excluded; and thus, while a good deal of free and easy "fastness," in dress and in conversation, scandalized people of "the old school" at the last magnificent balls of the defunct carnival, the concluding entertainments given by the queens of the other world were marked by a sobriety of dress and deportment worthy of the most strait-laced circles of "the aristocratic faubourg!" Will the fine ladies of fashionable life follow the lead of their unrecognized sisters in this new phase of their rivalry?

The present extravagance of dress is so ruinous, so fatiguing, and so wanting in that essential of good taste, propriety, that a return to simpler fashions is much to be desired. The great manufacturers of feminine vanities are partly to blame for the system of cumbersome display now in vogue, for they pay heavy sums to the leading dressmakers in order to secure their influence in keeping it up. But these gentry have just received a check in a quarter from which they little expected such a rebuff; for a deputation of the principal silk-weavers of Lyons having obtained, a few days ago, an audience of the Empress, in order to solicit her patronage for some brocaded silks, imitations of those worn at court in the reigns of Louis XIV. and Louis XV.—wonderfully rich and horribly costly—her Majesty replied, with one of her pleasant smiles, "I am sorry that I cannot accede to your request; but many of the ladies who visit us would find it impossible to provide themselves with dresses so costly. There are many husbands who really could not afford to pay such a price for their wives' dresses—my own among the number." On hearing which expression of opinion the deputation opened its eyes rather widely and withdrew, equally charmed with the Empress's manner and disappointed at her decision.

The French people, with all their sharpness, seem to be fully as *victimizable* as their neighbors, and we have lately seen half-a-dozen marriages contracted, or nearly so, with girls of honorable families by clever swindlers, native and foreign. The first of these was a handsome and fashionable-looking personage, who called himself the Baron de Saucy, and contrived to marry a young lady of good family, on whom he had succeeded in passing himself off as the lineal descendant of an old house that boasts of royal

alliances in past days. The baron, however, had no sooner got possession of his wife's fortune than he began to squander it shamefully; the remonstrances of his bride were met by brutal retorts, and one unlucky day, when the unhappy young baroness ventured on a representation rather stronger than usual, the baron went off into a fury, poured out a torrent of the most vulgar oaths, and, bringing a horsewhip into play upon the shoulders of the baroness, displayed so peculiar a talent in the use of that instrument that the latter immediately perceived that her husband could be no other than a circus-groom, as, indeed, was abundantly proved in the course of the investigations which followed this terrible discovery, when it was ascertained that the fascinating baron was one of the grooms of the circus in the Champs Elysées.

The hero of the second of these adventures called himself Prince Kalimachi, and allowed himself to be supposed to have arrived in Marseilles from Turkey, on a diplomatic mission. Struck with the charms of a young lady of Marseilles, the daughter of a rich merchant, the prince pressed his suit, and was accepted. Preparations for the wedding were made on a magnificent scale, and the town was ransacked to furnish a splendid *corbeille* for the bride. A day or two before the one fixed for the wedding, the lady's brother bethought him of enquiring after his future brother-in-law at the Turkish embassy in Paris, and learned that no Prince Kalimachi was known there. The marriage was postponed, and a few further enquiries led to the discovery that the prince, who had procured "upon tick" all the splendid things he had presented to the bride-elect, was a convict who had escaped from the hulks at Constantinople.

A third of the adroit rogues who have been occupying the attention of the police and the public, is an English pickpocket, named Hulme, who has actually succeeded in passing himself off as Prince Etienne-Louis-Charles de Crony-Chanel, marrying, under this title, borrowed from one of the noblest old houses of France, a young lady of good standing, and finding credulous tradesmen to give him credit for several months. But payment being at last required for the debts thus contracted, the truth was discovered; the sharper is in prison, but the unfortunate girl, according to French law, is none the less his legal wife.

The art-loving public has been much excited by the exhibition of the pictures composing the magnificent gallery of the late Count d'Espagnac, and containing a number of *chef-d'œuvres* of all the great masters, and which are passing, as I write, under the auctioneer's hammer.

Two lady "mediums" are in great vogue just now among the members of the Jockey Club, who are staking large sums on the horses which, according to these ladies, are destined to win. STELLA.

Correspondence.

POLITICAL SITUATION FROM A COMMERCIAL STAND-POINT.

TO THE EDITOR OF THE NATION:

The importance of a fixed commercial policy for a young, enterprising community like ours cannot be overestimated; nor can it be denied that a good condition must be a natural one, as you have stated in your issue of this date. And it is not only true as you claim, "that prosperity which does not extend over long periods of time is not prosperity," but this prosperity, in order to be permanent, must not only result to one nation or community, but to all nations. Or, in other words, there can be no enduring peace and permanent well-being for one nation until the principle of justice is recognized by all.

It is not necessary that one form of government should be universal, or that all should profess the same religious belief. But it is necessary that the same principles of justice which dictate that we should do unto others as we would have that they should do unto us, shall be universally accepted as our rule of action not only in our social and political, but in our commercial relations.

It is in regard to our commercial arrangements that we have something to say, as it is in that field that we are most at home and can speak from experience.

We have first to insist that there can be no good excuse for continuing our suspension of specie payments, by which we render it quite impossible for any person to make reasonable calculations as to future results of commercial engagements.

It is clearly bad enough to take the consequences of the decline in the value or cost of gold, as determined by the labor required for its production. That, however, can be measured approximately, and goes on so slowly and regularly that not much harm will result, especially on short contracts. But the mischief which comes from the absence of a standard which has a recognized and somewhat uniform relation to labor, like other commodities is incalculable, and ought never to have been permitted by our Government. Nor would it have been, but for the mistaken notion, born in the days of Andrew Jackson, that the Government must carry on its business with a currency different from and better than that of the people at large, whose transactions are of infinitely more consequence.

Not being able to see that it was not money in any form (much less specie) which was wanted to carry on our war, but men and their labor, the Secretary of the Treasury insisted upon a measure which not only violated every commercial contract then existing, except in California (where they would not be thus imposed upon), but has made nothing but confusion and perplexity ever since. It has increased our public debt, both general and local, at least fifty per cent., and reduced legitimate trade to mere gambling.

Now, as we have already said, we insist upon a return to the standard of measurement as the very first step to be taken by Congress. Reconstruction, important as it may be, is nothing in comparison with the necessity that a young, growing nation like ours should keep good faith with its creditors now and for ever. Let us show the capitalist that we are really in earnest and intend to pay all our obligations by a standard which he can rely upon, and our bonds will not only go to par but beyond that, and thus practically diminish the amount of our debt, besides supplying us at once with the money which has been invested in the war, so that we can go on with our enterprises which now languish for want of means. Let us do as any prudent individual or corporation would do under similar circumstances and then we shall be able to avail ourselves of the wonderful resources of which few even like Sir Morton Peto can measure the full extent. The question of resumption is not formidable when it is considered that it does not by any means involve the payment of specie. Suppose that Mr. McCulloch has authority to make a long loan to meet all his liabilities, immediate and prospective, for one, two, or three years, payable at the option of the holder, in London or New York, in specie funds from time to time as wanted. We will not determine the rate of interest, whether five or six, though we incline to five. Nor would we dictate as to date of payment of the principal, though we should advise by instalments, so as not to require a sinking fund.

Now, it is plain enough to any business man or banker, we hope, that the payments from the United States Treasury in this case need not be made in *specie*. The business of the world at large, which somewhat exceeds Mr. McCulloch's, is not carried on in that way. He has simply to draw upon his banker for *specie funds*, and he can ask his debtors for duties and taxes to pay him in the same funds, *and this is resumption*. But there are too many persons whose interests are opposed to resumption upon any terms, and that is the reason why Congress cannot move a single step in that direction All who owe debts payable in currency are disinclined to accept the reduction in values which would inevitably follow resumption, for that reduction in many cases would be ruinous. We are, therefore, not to expect their consent, although it might involve not more than even ten per cent., unless we can make them some just equivalent. This can be done only by permitting them to pay their currency obligations in future with specie funds, at a premium precisely as if the payment were made now. Whether at 20, 30, or 40 per cent. is not so important as that some point shall be named, so that all old contracts due in currency shall be recognized as different from new ones in specie funds, and treated accordingly. To this the creditors will object, for they say that the debtors have contracted with their eyes open, and in view of the possibility of resumption, and consequent necessity for payment in specie funds instead of currency.

We reply, that the debtors are too numerous and influential to permit a resumption until their interests are regarded, and, therefore, while the creditors would rejoice to obtain 30 or 40 per cent. more than they could now, they will not be allowed to do it. The premium on gold may be less even than at present, so long as our bonds are in the market and sold abroad so as to supply exchange for sale here. But that cannot go on beyond a certain limit, and when that is reached we shall get the reaction, and gold will rise. Let us resume now, and then we can afford to have the bonds go abroad, as they will bring something like their true value. And we are to consider in this connection the consequences of the rapid and cheapened production of gold by newly discovered processes, which, unless we are greatly mistaken, will enable us to pay our debt when it falls due some years hence much easier than we can now. Whether this would be exactly in accordance with our theory that we should do as we would be done by, is a question we will not discuss, as our creditor has at least the benefit of our opinion that he will not be advantaged by the change which we predict, and can exercise his own judgment in the case.

But we should at least avoid the violation of contracts on the part of a great, wealthy nation like our own, and therefore we insist as at first upon resumption and the fulfilment of all our obligations in good faith. W.

Boston, March 15, 1866.

WEST POINTERS AND VOLUNTEERS.

To the Editor of The Nation:

In The Nation for February 22d and March 8th have appeared two communications from a correspondent, under the signature of "West Pointer," in regard to the abuses and defects existing in the United States Military Academy. While the general fairness and truth of the articles cannot be successfully disputed, there is one position taken, essentially erroneous, but too widespread and too important to pass longer unquestioned. It occurs in reply to the charge that the exclusive spirit nurtured by West Point has gained control of the national military establishment.

The position is this. It was due to their own merit alone, and not at all to the force of circumstances, that all the higher offices of the army fell to the graduates of the Military Academy. Against them existed a bitter prejudice at the opening of the war. It was hoped and expected that the coming general, the great "military messiah," would spring from civil life, and in that hope and expectation commander after commander was tried. But such a one failing to show himself, the Government and nation were compelled to fall back upon the graduates of the Military Academy. West Point was a *pis aller*, reluctantly resorted to, and resorted to only because all other agencies failed.

This is honestly believed and frequently said by many intelligent men who have seen the list of generals appointed during the first year of the war and know the commands to which they were assigned. Yet the hastiest examination of such a list would show that the position is not only absolutely false in point of fact, but wants even that decent probability required in works of fiction.

True, in the minds of some influential political leaders there was an intense dislike of West Point; but it was never general enough or powerful enough to prevent the confirmation of a single appointment. And even this feeling was directly due to the words and acts of the graduates of the Military Academy themselves. They failed to comprehend the political situation. The mighty changes which had been going on in the nation had, from its isolation, been almost unfelt by the army. Almost everywhere in it were still current the same ideas about the sacredness of slavery, the same cant about the evils of agitation, the same classification of secessionists and anti-slavery men as alike disunionists. Unconscious of the terrific sweep of the humanitarian questions of the times, they thought to stop their progress. But a movement which had annihilated parties, and had beaten down the prejudices and passions of seventy years, was not likely to be held back long by a few officers of the army. The majority of these soon lent a willing support to the new order of things; those who stood out obstinately were displaced. But the contest, though short, was long enough to embitter against the Military Academy many of that class from which naturally would have come its strongest supporters. Men who had fought for years the cause of a despised race against social persecution and political proscription, who thought finally to realize what they had so long hoped for, prayed for, struggled for, who saw at last with eyes of sight the gates of that Celestial City which they had so long seen with eyes of faith, could hardly be expected to feel amiably disposed toward this new and unlooked-for Apollyon they found in their path. They could hardly be expected to rejoice when, in the East, the Hutchinsons were turned out of the camps for singing anti-slavery songs, and in the West Halleck issued General Order No. 3. It was not strange, though of course to be regretted, that they should speak of "damned West Pointers." Something must be pardoned to human nature.

Yet, in spite of this feeling, with the exception of a few men who gained positions through political influence, the highest offices of the army were originally filled by graduates of the Military Academy. Volunteer regiments clamored for commanders from West Point; volunteer officers preferred to be under them. It was a natural and a just feeling. As an educated military class, they knew the theory of war, if not its practice, and of both theory and practice the rest of the country was totally ignorant. But two or three years of war was sufficient to change all this. The school of active service gave to many of the volunteers a military education with which no professional school could compete. From raw beginners they became masters, comparatively speaking, of the particular branch to which they belonged. It was not pleasant for such men to have their claims ignored, as they often were ignored, in favor of others whose chief recommendation was graduation at West Point. No person who had opportunities for observation can deny that there was a systematic promotion without regard to ability or previous service of the regular officers over the volunteers whenever the two came into competition. It was perhaps honestly done in most cases. Those who recommended the promotion were, doubtless, often unconscious of being influenced by any prejudice; for where men are indisposed to recognize merit outside of certain boundaries it is hard for them to find it. Many of the regular officers did not believe that a general from civil life could be a capable one; some of them were determined that he should not be a successful one. As the educated military class they had, moreover, the ear of the nation, and filled it with their own unfaith. They thus placed a barrier of public opinion and professional prejudice around the higher offices of the army which a volunteer could rarely break through. True it is the great "military messiah" came not from civil life, nor, indeed, from military; hardly even his forerunner. But it is not impertinent to ask, Would he, unlike his divine prototype, have been suffered to be the messiah of the nation he came to save? Would not our modern military Pharisees have doubted him, would they not have rejected him, would they not have crucified him also? Would they have believed that any good could come out of their Nazareth?

"I had supposed, gentlemen," said a major-general of the Army of the James, addressing a group of volunteer officers, and intending to be complimentary,—"I had supposed that no man was fit to be an officer who had not been educated at West Point; but you have gone far to convince me of the contrary." This was a general feeling among the graduates of the Military Academy, though few were silly enough to state it so openly. And the influence of this feeling spread throughout the country so as to cause a systematic injustice in the treatment of volunteer officers, directly by the War Department and indirectly by the people. They were condemned not on the ground that they had proved themselves incompetent, nor that, being civilians, they must be incompetent. The few men who obtained commands in the early part of the war through political influence were in no fair sense representatives of the volunteer service; but they had constantly to encounter much of that spirit which did not wish them to succeed, which refused to co-operate zealously if it abstained from secret endeavors to defeat. This hidden hostility, which would have tried, if it would not have thwarted, the genius of Cæsar or Napoleon, naturally helped materially to break down men who were a long way from being Cæsars or Napoleons. Their failure, if it did not condemn entirely those who afterwards fought their way to positions, was the pretext for excluding them from the highest.

There was no such feeling in regard to the graduates of the Military Academy. If one proved incompetent, his place was immediately taken by another. The nation judged fairly on such matters, and ascribed the failure to the man, not to his education. No one laid the blame upon West Point because Halleck not only besieged Corinth in the most scientific manner after Beauregard had abandoned it, but also violated the plainest elements of military science in making that place, comparatively unimportant, the objective point of a campaign. When Weitzel, a West Pointer, said that Fort Fisher could not be taken, and Terry, a volunteer, went and took it, nobody asserted that the failure of the former was due to his military education, or the success of the latter to his lack of it. But had the position been reversed, how should we have been deluged by the inevitable twaddle about war being a science which must be learned like any other science! For men talked and wrote as if it were not in the power of the Almighty to create a general outside of the graduates of West Point. And while the slightest errors of judgment, the pettiest reverses in petty skirmishes, were treasured up against volunteer commanders, whole army corps were led to useless slaughter, without remonstrance and without reproof, by regular officers, whose brains, to use Randolph's comparison, were like the land about the headwaters of the Monongahela—poor by nature, and rendered still poorer by cultivation.

Among the volunteer officers there was not and is not any jealousy of the Military Academy. None care to deny its merits, or failed to regret in their own case the loss of the advantage furnished by its course of instruction. To its representatives will naturally, in any future war, the highest places be at first accorded. But education, though it can develop ability, can never supply the place of it; it may make a soldier, but it cannot make a general. The graduate of a military school has no right to boast or to claim promotion on that ground over the graduate of twenty battles. When the thunderous flails of war thresh out the pure grains of soldiership from the chaff, let us welcome the result fully and fairly; let the highest places of the army be open, without prejudice and without favor, to every man whom the verdict of the battle-field shows has ability to fill them, whether he be West Pointer or civilian, regular or

Volunteer.

THE DEAN'S ENGLISH.

To the Editor of The Nation:

I cannot think that the critic who, in your last number, reviewed Dean Alford's book on the English language can have read very carefully the work he was reviewing; and I am sure he cannot have seen the very racy critique of it entitled "The Dean's English," written by Mr. G. W. Moon, or he would not have spoken of it "in terms of the highest praise." The book is written, as Mr. Moon has shown, in a very careless and slipshod style, and is an excellent specimen, so far as the Dean's own writing is concerned, of how *not* to write the Queen's English. It is true that, in consequence of Mr. Moon's vigorous attack, the author, in his new edition, has either altered or suppressed no less than twenty-eight passages; but even this revision leaves his book very far from being a model of a good English style. In one of the Dean's sentences, as it originally stood, the pronoun *it* is separated from the noun to which it refers by no less than six-and-twenty other nouns. In another there is such a confusion between *these, they, their*, and *them* that his pitiless critic calculates, by the law of permutations, that the sentence can be read in 10,240 ways. Then the Dean is continually constructing sentences after the following fashion: "I remember when the French band of the Guides was in this country, reading in the *Illustrated News*"—as though the perusal of that entertaining paper had been the occupation of the band while in England. In short, Mr. Moon, who is himself the master of a very correct and idiomatic style, shows conclusively that instead of undertaking to mend his neighbors' English, it behooves our church dignitary first to go to school to learn to mend his own.

I am far from saying that the Dean's book is entirely destitute of good things, though—not to speak of the folly and bad taste of the allusion to America on which your reviewer so justly comments—some of his philological criticisms are very silly. If the book could only be circulated with the accompaniment of his unsparing critic's commentary, it would make a very excellent study; but I am sorry to see it endorsed by a good authority, and the more so as, in consequence, probably, of a declining sale in England, copies have lately been imported into this country in considerable numbers.

A.

Cambridge.

[We spoke of the book as "simply an attempt to correct the vulgarisms, provincialisms, solecisms, and inaccuracies of all sorts current in the speech of everyday life." It is as such that we pronounced it praiseworthy. To its style we made only one allusion, the irony of which we had hoped was perceptible. As a guide in English composition, we did not think it worth notice, and we accordingly confined ourselves to illustrating the condition of the Dean's mind by the aid of his mention of the connection between our morals and our language. It is always tolerably easy to do with a first effort of this kind what Mr. Moon has done with the "Dean's English." A good deal of fun might be made out of one other work on the English language, the value and ability and learning of which nobody will dispute, but which we will not name, by subjecting it to the Moon process. We certainly should not pity the Dean, however, if he had been even more severely handled than he has been; but we think he has done good service by throwing into a popular shape a great number of very valuable hints on slovenly speaking and writing. We trust better qualified men will follow up the work. We need some such book as he has written even more here than in England, as, for the reason, among others, assigned in our review, less attention is paid among us to correctness in speaking, even by educated people. We may add that we know of no one better qualified for the production of such a book than our correspondent "A." himself.—Ed. Nation.]

THE APOLOGY FOR LEONTES.

To the Editor of The Nation:

When a certain Templar saw a new play, entitled "Twelfth Night," he observed in his diary that the jest was a very good one about the steward *Malvolio* making love to his lady-*widow*. Collier in later times, sagaciously explained this, on the supposition that *Olivia's* mourning-dress for her brother had been mistaken for a widow's weeds. This wonderful guess was rejected by White, who suggested that the play, as we have it, might be a recast, and that originally both *Malvolio* and *Sir Andrew* might have hoped for success with a young widow with much less impeachment of their discretion. But neither commentator observed the one word which Shakespeare forgot to alter, and which clearly proves the case—namely, *Olivia's* remark that she would not have *Malvolio* miscarry for half her *dowry*. Shakespeare never mistakes in his real-estate law, and this circumstance of her having been *really* a young widow, possessing a great life estate, but a life estate only, makes the truth of *Maria's* assertion that she had a liking for *Malvolio* very probable. For her steward was evidently a gentleman of reputation and good breeding, and very probably to marry him was the wisest thing she could do, in case she doubted the permanency of the duke's affection Why Shakespeare made the alteration is very plain. For if she were represented as "expers tori," then her passion for the young and beautiful page would have a tint of degradation; but as it is, this frank and wilful first love of hers, as free from baseness as from consideration, is as innocent as a child's eagerness for a new doll, and we are simply glad of *Sebastian's* good luck.

Now, the bearing of this circumstance on the "Winter's Tale" is, that it proves Shakespeare to have occasionally altered his dramas, not merely in subordinate circumstances of plot or language, but in absolutely fundamental matters, and that, accordingly, we must sometimes look for the explanation of things in mere hints and allusions. Moreover, when a play was popular, he may have thought fit, in the player's interest, to add jest or pathos, and to make room therefor by striking out narration of important circumstances, confident that the audience, already familiar with the play, would recollect the facts, although untold; or may have left them for the prologue to state.

Coleridge very truly observes, that while *Othello* is not of a jealous disposition, on the other hand *Leontes* is—a propensity toward vindictive jealousy of those who should be most dear to him is the vice of his nature. But we all have weak points; the peculiarity is, that, except for a minute, neither does his reason nor conscience seem to make any resistance. For no reason appearing, except a few most petty familiarities of gesture in public, he sets about assassinating his dearest friend, and murdering his wife and child, and is unmoved by either reason or entreaty. Doubless he repents when he discovers himself in the wrong, and after many years his wife forgives him. But the point is, that as matters stand, he is not forgivable; he should either have been hung or put in a lunatic asylum. Under these circumstances, for either *Hermione* or *Polixenes* to have loved or trusted him again, he must have had some apology which does not appear on the surface of the story.

The belief in dreams has not altogether perished even yet, and in Shakespeare's times was of more force than now. Antiquarians may enlarge on the prevalence of the trust therein; but it is to us unnecessary, for Shakespeare has pictured so wise and grave a counsellor as *Antigonus* deliberately making up his mind that *Hermione* is guilty, simply on the evidence of a singular dream that happens to himself. But as the fact of *Leontes* having dreamed of his wife's unfaithfulness would simply depend on his own evidence, he, of course, could not mention it publicly, neither could *Hermione* dare to admit the fact, so that in such case all we could expect would be oblique allusion.

> "My life stands in the level of [is aimed at by] your dreams."
>
> "Your actions are my dreams:
> You *had* a bastard by Polixenes,
> And I but *dreamed* it;"

while the matter would naturally be utterly unknown at the time to *Polixenes* as well as to *Camillo*.

If we then accept as the clue of the difficulty the supposition that, long before, *Leontes* had dreamed that his wife was unfaithful with *Polixenes*, had for the jest's sake told her of it, and then had straightway forgotten the circumstance till recalled to his remembrance at an unfortunate time, we may find both an explanation and an excuse therein. For he by no means submits to his own vice of nature at first, but makes desperate struggle until the forgotten circumstance is recalled:

> "Affection! thine intention stabs the centre:
> [That is, emotion, thy aim exactly hits the mark]
> Thou dost make possible *things not so held*,
> Communicat'st with *dreams*;—how can this be?—
> With what 's *unreal* thou co-active art,
> And fellow'st *nothing*. Then, 't is very credent
> Thou may'st co-join with something; and thou dost,
> And that beyond commission [after the deed], and I find it."

If we suppose these words to refer to a dream, they are most intelligible; otherwise they are simply meaningless; and *Leontes* is a man of too clear and vivid intellect to use incoherent and meaningless language, even in that instant. Besides, after this utterance, there is in him no further doubt. So cool and considerate is he that, on *Camillo's* suggestion, he resolves to pretend ignorance for the sake of his son; but his belief not even the oracle shakes, and nothing checks him except his son's death. Even this circumstance would seem to be connected with some untold matter, unless indeed

we suppose him cool and clear-minded enough to connect it with the threat that he should live without an heir.

It may be remarked, on the other side, that he would have mentioned the circumstance of the dream to *Camillo*. To which it may be replied that obviously *Leontes* would not expect that circumstance alone to be admitted for sufficient proof, because he had not admitted it for such himself. When he was wavering between reason and affection on the one hand, and the vice of his nature on the other, the recollection had decided him; but he could not expect that it would decide another.

It is to be observed that in this play there are other marks of alteration. Thus *Paulina* avers her husband to be lost, when she had no apparent reason as yet for so supposing. I have often suspected that it was at first intended that the third scene in the third act should precede the second; in which case the audience at least would know *Antigonus's* fate, although *Paulina* did not. So *Autolycus* has all the marks of an afterthought. He contributes nothing to the action, for any bumpkin's clothes would do as well as his; and it was an obvious matter for *Florizel* (and *Camillo*) to save his mistress's father and brother from *Polixenes's* vengeance; so that he is merely a delightful accident. Indeed, it would seem as if two plays were originally intended; and they were afterward condensed into one, somewhat incoherently.

Waiving, however, these questions, the supposition is proposed, that originally Shakespeare had, perhaps in a dialogue of some length, expounded the circumstance of *Leontes's* dream; that afterward the play grew under his hand; and that, in order to have room to develop the delightful pastoral of the latter scenes, he afterward struck out the statement—perhaps relating it by the prologue, perhaps trusting to its being sufficiently intimated by the tone and bearing of the actors in delivering the quoted passages; perhaps (if the play had been performed in its first shape) considering that the audience would know the fact, although untold. S. T.

Literature.

LITERARY NOTES.

Messrs. Hurd & Houghton have in preparation two books which, if well done, will be valuable contributions to the ever-increasing library of Shakespeariana—"The Authorship of Shakespeare," by Nathaniel Holmes, one of the judges of the Supreme Court of Missouri, and "Shakespeare's Delineation of Insanity, Imbecility, and Suicide," by Dr. O. A. Kellogg, assistant physician of the Utica Insane Asylum. The writer of the first adopts what may be called the Baconian theory of the Shakespeare problem—a theory which derives its name not so much from the great lord chancellor of venal memory, which not even Mr. Hepworth Dixon can wash white, as from the poor lady in whose overwrought brain it was engendered, and who found a kind friend and a tender biographer in the late Nathaniel Hawthorne. Judge Holmes is a believer in Miss Delia Bacon, who was a believer in Lord Bacon, to the extent that it was *he* and not William Shakespeare who wrote Shakespeare's plays. The notion has not even the merit of ingenuity, since it cannot be maintained but by violating all the laws which have hitherto obtained in regard to the value of contemporary testimony. If Shakespeare was the dunce that such a notion would make him, or worse, such a convenient but dishonest man of straw, could it have escaped the penetration of Ben Jonson, who knew him well, and who had a habit of speaking his mind rather freely? Jonson's magnificent poem to his memory, in the first folio, ought to settle the question as to Shakespeare's ability to write the plays which bear his name, and does settle it, we venture to think, with all thoughtful readers of the great poet. Believing, as we do, that the Baconian theory has not a leg to stand upon, we are curious to see what arguments will be used towards its support in Judge Holmes's volume. Dr. Kellogg has a different object in view, as his title indicates, and one with which we can sympathize, since it can hardly fail to add to our knowledge of Shakespeare's knowledge. As Lord Campbell almost proved him a lawyer, on account of his familiarity with legal phrases and usages, Dr. Kellogg will, we suppose, almost prove him a physician, on account of his familiarity with the pathology of disease in general and insanity in particular.

—Dr. T. W. Parsons, of Boston, a Dante scholar of years' standing, has lately finished a translation of the "Inferno." Twenty years ago he published a version of the first seventeen cantos, to which he prefixed an ode, "To a Bust of Dante;" but the volume which contains it has long been out of print. He reprinted a limited edition of it last spring in time for the Dante festival at Florence, where a copy of it figured among the few English renderings there present. Dr. Parsons's version of the "Inferno" may be looked for some time during the present year.

—A small collection of not very rare autographs was sold last week by Messrs. Bangs, Merwin & Co., at the close of a three days' sale of miscellaneous books. Among them was a six-page manuscript of Garrick, the original draft of a letter to James Lacy, manager of Drury Lane Theatre, which realized $4 50, and a two-page letter by the same writer, which brought $6 50; a signature of Washington to a note dated "Headquarters, Middlebrook, Feb. 12th, 1779," went for $11; a signature of John Hancock, $5 50; a letter of General Gates, $3; an original sermon of Cotton Mather, $2 50; two autograph songs of L. E. L., $2 50 each; and a mysterious manuscript of Shelley, $10. The latter, apparently a letter of political abuse, bore the signature of "Philobanleus." Altogether, the prices were lower than the English market rates for such literary curiosities.

—A lot of theatrical portraits will be sold by Messrs. Leavitt, Strebeigh & Co. on the evening of March 30th—a recent importation from the stock of the late Mr. Evans, of London, a well-known print-seller; they are in fine condition, and will undoubtedly bring good prices, portraits of all kinds growing scarcer and dearer here every year. Few actors or actresses of note, from the days of Garrick downward, are omitted from the collection, which contains, among other desirable lots, an original drawing of John Kemble by H. W. Pickersgill, R.A.

—Mr. J. W. Bouton, of this city, has lately received from London a special importation of Gilchrist's "Life of William Blake," copies of which he offers at a moderate price. Glancing over the illustrations of this curious book, which are drawn in fac-simile, by W. J. Linton, from Blake's works, with a number printed from Blake's own plates, one is not at a loss to know why his contemporaries christened him "The Mad Painter," nor why he lived and died in poverty and neglect. He had the elements of a great artist in him, but his art was incomplete and partly irrational. He was at war with all the art of his time—with the polish and high breeding of Reynolds, which was effeminacy in his eyes; with the melodramatic power of Fuseli; even with the simplicity and sweetness of Stothard, who was his friend when they were both young, and for whom after they had parted company he still had a remnant of his old liking. The cause of the estrangement between Blake and Stothard was Chaucer's "Canterbury Pilgrims," which had suggested itself, or was suggested, as the subject of a design to each about the same time, and which both drew, each in his own fashion. Stothard's composition is well known, but Blake's, a reduced outline of which faces the title-page of Mr. Gilchrist's second volume, is very scarce, partly because it was published by Blake himself fifty-six years ago—or attempted to be published, for it never sold—and partly because there was no earthly chance of its holding its own against its more beautiful and very popular rival. It is an odd, not to say a mad, performance, with its long procession of figures setting forth on their pilgrimage from the gateway of the Tabard Inn, into a grim, hilly country, under a dreary, barren sky, into which rises the smoke of thatched cottages, and wherein dark birds are hovering; yet it impresses the imagination strangely, revealing an older world than we live in now, and suggesting "a day that is dead." Many of the portraits, as the Miller's, the Ploughman's, the Shipman's, and especially the Host's and the Wife of Bath's, are admirable interpretations of the text of the poet. Strange, however, as this rare print is, it is conventional compared to the majority of Blake's designs, notably so beside his illustrations of the "Songs of Innocence" and "Songs of Experience," the fruits of his thirty-second and thirty-seventh years, and his illustrations to "The Book of Job," published by him in his seventy-eighth year. The former, though odd in the extreme, possess an undefinable simplicity and tenderness, a feeling of flowers and vines and young children; the latter are full of power and terror. The most memorable of the series are perhaps the dreams and visions which affright Job in his sleep, and the figure of the Behemoth standing in massive greatness on the shore of the primitive world. Never was artist more informed with the ancient Hebraic element than Blake, concerning whose designs Flaxman and Fuseli declared that the time would come when they would be as much sought after and treasured up as those of Michael Angelo, and whose poetry, when intelligible, is almost unique in its simple beauty. "There is something in the madness of this man, Wordsworth said, on one occasion, "which interests me more than the sanity of Lord Byron and Walter Scott." Will not some of our publishers give us, if not a reprint of Blake's works, which, perhaps, is not practicable, least the best of his poems and the substance of Mr. Gilchrist's interesting but rather ill-written biography?

Besides this work, Mr. Bouton has a number of copies of "The History

of Block-Printing and the Early History of Engraving before Dürer," an important bibliographical work, recently published in England by Mr. T. O. Weigel, of Leipzig. It is in two folio volumes, which are illustrated with one hundred and forty-five fac-similes of block-prints and engravings, and various wood-cuts in the text. The edition, which consisted of only three hundred and twenty-five copies, is nearly exhausted.

—Mr. H. G. Bohn has just published "Seymour's Humorous Sketches." Who Seymour was, no reader of the late editions of "The Pickwick Papers" need be told, seeing that Mr. Dickens has given a history of that work and its artist in his preface. For the benefit, however, of any unenlightened person who has not read the latter, we will state that Seymour was the artist who illustrated the beginning of "The Pickwick Papers," which were commenced for the sake of engaging his talents on a serial, and for whose benefit Mr. Dickens created the character of *Winkle*, whose forte is sporting in a mild way, Seymour having a fancy for sporting scenes. The first number was launched, and it made a hit, as everybody knows, but before the second could be finished, Seymour died, by his own hand, leaving Mr. Dickens free to change his plan at will, and bringing forward another artist, Hablot K. Browne (*Phiz*), who has since illustrated most of Mr. Dickens's stories. So much for Seymour's connection with the author of "Pickwick." Of his previous career we know little, except that he was already a popular artist of the caricature school—one who seemed to have a mission to draw comic pictures, or what passed for such, and who was lucky enough to find a publisher who could make it pay both. That Seymour was popular may be gathered from the fact that his sketches, which, we believe, were published singly, were numerous enough to fill five volumes. They would not be considered remarkable now, after Leech and Doyle, and it is not easy to see why they were thirty years ago, for they deal with the most ephemeral oddities, and only in the most obvious manner. The persons whom Seymour held up to caricature were mostly Londoners in search of enjoyment in the country, *soi-disant* sportsmen who knew not how to use a gun, as their dogs often discovered to their cost, and would-be anglers, with lines and rods which they used fruitlessly, sitting all day without a nibble, "under the shade of melancholy boughs," or, worse still, in rickety boats under a drenching rain. We have looked through the whole five volumes, and found but little to smile at, although we have met our old friend Jem Baggs, of "The Wandering Minstrel," and heard again his refusal to move on under sixpence, because he knows "the wally of peace and quietness." The title-page of the second volume—the outside of a booth, at the curtain of which sits an old woman drinking tea—is worthy of remembrance, since it probably gave Mr. Dickens the idea of Mrs. Jarley and her wax figures. A selection from these "Sketches," which were originally drawn on stone, was etched in steel after Seymour's death, and published by Heath. It is from these plates, we presume, that Mr. Bohn has printed his edition, which contains eighty-six etchings, with descriptive letter-press by *Alfred Crowquill*, and a biographical notice of Seymour.

—The lack of full and accurate catalogues of the great libraries of England, particularly of their MSS., has long been a cause of complaint among scholars and those interested in special fields of investigation. The British Museum is sadly deficient in this respect, and likely to remain so for many a year to come. The libraries of the different colleges and societies have fared better, not being so large, yet every now and then somebody mouses out something in them which was not known to be there till then, or, known once, has since been forgotten. The same may be said of the libraries of private collectors, who, as a class, are not given to undue familiarities with their treasures. A case in point occurred a few years since in the library of Mr. John Tollemache, M P. for Cheshire, at one of his seats, Helmingham Hall, Suffolk, where the Rev. Mr. Groome, of Monk Soham, discovered among his MSS. an early English romance of about 1430-50, entitled "Sir Generides," of which not so much as the name had come down to us of the present day. This romance, which is in rhyming couplets, was edited last year by Mr. F. J. Furnival for Mr. Henry Hucks, as the latter's contribution to the Roxburghe Club, though it has not yet been issued, possibly because a dinner (an institution in which all true Englishmen are supposed to delight under all circumstances) is the necessary forerunner of a Roxburghe volume. Not long since, Mr. Henry Bradshaw, of King's College, Cambridge, discovered two torn leaves of an old black-letter copy of the same romance, although in a different measure, namely, the seven-line ballad stanza of Chaucer's time and later, in an old folio in Trinity Library. And about the last of February, Mr. W. Aldis Wright, librarian of Trinity, and an accomplished scholar, found among the papers of Sir John Fenn, the editor of the "Paston Letters," another leaf of the old black-letter romance, a treasure trove which he followed up until he found the whole poem, in a volume of Lydgate's poetry, in the library under his charge. It was bound with Lydgate's "Troy Book," as was also the MS. copy belonging to Mr. Tollemache, a circumstance which has led to the supposition that Lydgate himself was the writer of the romance, which can hardly have been the case, we think—at any rate not of both versions. As Mr. Wright, however, will undoubtedly publish "Sir Generides," we shall be able to express ourselves fully on this point, and possibly at no distant date.

—The Early English Text Society, which so far has done a good and much-needed work by its reprints of rare and curious tracts and manuscripts, has just proposed a series of republications of early dictionaries, as Levins, Huloet, the "Catholicon," Withals, Baret, and Horman. It has also given evidence of a business talent, not usually possessed by clubs of the kind, by inviting similar and kindred societies to take part therein, so that its issues may have a wider circulation than they would otherwise obtain; and the Philological and Camden Societies have joined forces with it, the former for the whole series, and the latter for the first book, Levins, which is to be printed from Lord Manson's copy, A.D. 1483, the MS. of which Mr. Way speaks so highly in the preface to his edition of the "Promptorium," and which, he thinks, may be the author's holograph. The series is to be edited by Mr. Henry B. Wheatley, the author of a curious volume "On Anagrams," and editor of "Hume's Orthographicæ," "Merlin," etc. It will probably be printed at the Clarendon Press.

—Messrs. Trübner & Co. have lately published the first part of a translation of the "Elder" or "Poetic Edda," commonly known as the "Edda of Sœmund the Learned." This, we believe, is the first attempt at a complete translation of these old Norse lays into English. The earliest poetic versions which we recall were made by Thomas Gray, whose spirited "Descent of Odin" will at once recur to his readers. Joseph Cottle, the friend and publisher of Southey and Coleridge, tried his hand at a number of them, but with indifferent success, the best things in his volume being its prose notes. He labored, indeed, under serious disadvantages as a translator, as a later rival pointed out, the work he undertook to translate existing only in Icelandic, of which he knew nothing, and in Latin, of which he knew very little. The Hon. William Herbert, dean of Manchester, the father, we believe, of the late William Henry Herbert ("Frank Forrester"), succeeded better, hitting as he did upon the happy expedient of turning his versions into ballads, one of which, "Thor's Recovery of his War-Hammer," is noticeably well done. This vigorous lay has been more closely rendered in *Once a Week* by Mr. G. W. Dasent, an old worker in this grim and wintry domain of letters. These, so far as we know, are the chief poetic versions, though others may exist in scattered volumes of verse. The best prose translations are in Pigott's "Manual of Scandinavian Mythology." The present version, which is published anonymously, is said to be close and readable, though rather bald and unpoetical.

—Dr. Charles Mackay has lately compiled a work, which is shortly to be published, on "The Lost and Perishing Beauties of the English Language." The ground which it occupies, if thoroughly explored, cannot fail to yield a rich return in the way of obsolete words and phrases, racy and idiomatic turns of expression, which, after performing yeoman's service, have been driven from the speech and the writing of to-day, some being confined to the back slums of ignorance and vice, "the huts where poor men lie," while others have been transported to the colonies, where they linger out the remnants of their once hardy life. Scores of such words, brought over by our ancestors, are still in use here, where we are loth to let them perish, smacking as they do of the age of Shakespeare and King James's Bible. The abundance of the material in old writers is beyond the gleaning of any one man, however well read and painstaking he may be. For this reason, if for no other, Dr. Mackay's book can hardly be more than partially successful.

VICTOR HUGO'S LAST POEMS.*

Some great poets lead quiet and uneventful lives; others are "dowered with the hate of hate, the scorn of scorn"—let us trust with "the love of love" also. Of this latter class is Victor Hugo. The conspirator of December has exiled him from his country and city; and a true Parisian exiled from Paris must feel very like a Peri pitched out of Paradise. The English, while granting him a political refuge, have been the most unsparing and condemnatory of critics. For years and years he was their type of the grotesque and abnormal and vicious, a sort of Walt Whitman, nay, a Walt Whitman as seen through Mr. Harlan's spectacles. People of Mrs. Trollope's calibre, concentrated essences of Philisterism, were especially down upon him. Does

* "Les Chansons des Rues et des Bois." Paris. 1866.

any one recollect that person's "Paris and the Parisians" and her crushing ridicule of "Le Roi s'amuse?" Somehow or other that drama managed to hold its own notwithstanding, and there came a time when its poetry was wedded to music worthy of it, and all the world confessed that the last scene of "Rigoletto" displayed one of the grandest situations in the whole tragic repertory.

No doubt if we take up Victor Hugo in a narrow and one-sided spirit of criticism, that criticism which only looks out for faults and aberrations, no living author, not the poet Tupper himself, presents fairer game. Such another mixture of strength and weakness as "Les Misérables," for instance, cannot be found in the whole range of romance, and by studiously picking out the worst parts of it we might easily prove the author a fit inmate of a lunatic asylum. The volume before us is not free from the hugest absurdities. Thus (p. 311), the bard is constructing for himself a natural church in the woods, somewhat after the fashion of Miss Barrett's "Lost Bower." He finds a wood-louse sleeping under a stone, and compares it to—what does the reader suppose?—the apostle in the Spirit on the Lord's Day! No, we are not joking; here it is in black and white:

"Seul, sous une pierre, un cloporte
Songeait, comme Jean à Pathmos."

This is such stuff as one might expect G. F. Train to write for a Fenian holiday.

In short, Hugo reminds us of Michel Angelo (whose name, if anybody prefers to write in one word, as seems to be the last fashion, we have no objection); or, to take a nearer comparison, of the painter Delacroix—often grand and beautiful, at times running into unconscious caricature and self-burlesque. But we must take the bad with the good, remembering that his faults no less than his merits fitted him for his great work as leader of romanticism and iconoclast of the wretched pseudo-classic school. If Hugo had not conceived such grotesque horrors as "John of Iceland," if he had not made Doña Sol call Hernani "my lion" instead of "my lord," as an ordinary dramatist would have made her, he could not have been the man to upset and tear to pieces the fusty periwigisms which choked French literature.

The prologue to his new "Chansons" may, perhaps, offend a very fastidious taste. It is entitled "Le Cheval." The "horse" is Pegasus, "le grand cheval de gloire," who carries Death athwart the Apocalypse, and eclipses with his wing the moon before Tenedos. Ezekiel and Job have been his mates, as well as Homer and Æschylus. The first of his inspired grooms was Orpheus; the last André Chénier (why *he*, unless to rhyme with *palfrenier?*) Some have been able to mount him; some he has kicked off; Hugo can but hold him by the halter, and, as he struggles with the mighty courser,

"Que fais tu là? me dit Virgile.
Et je répondis, tout couvert
De l'écume du monstre agile:
Maître, je mets Pégase au vert."

He is taking Pegasus to grass. Yes, indeed, and such grass! We have it in the first book ("Jeunesse"), and our first wonder is that any human being of Hugo's age and after Hugo's trials can be so young in soul as he is. The whole three hundred pages are a frolic of youth and love and rural scenery. A babble o' green fields, an' you will; but what a babble! More distinct and eloquent than many a delicately finished piece of oratory. Just look at this tableau of two lovers among the stones of an old abbey:

"Seuls tous deux, ravis, chantants!
Comme on s'aime!
Comme on cueille le printemps
Que Dieu sème!

"Quels rires étincelants
Dans ces ombres
Pleines jadis de fronts blancs,
De cœurs sombres.

On est tout frais mariés,
On s'envoie
Les charmants cris variés
De la joie.

"Purs ébats mêlés au vent
Qui frisonne!
Gaîtés que le noir couvent
Assaisonne!

"On effeuille des jasmins
Sur la pierre
Où l'abbesse joint ses mains
En prière.

"Les tombeaux, de croix marqués,
Tout partie
De ces jeux, un peu piqués
Par l'ortie.

"On se cherche, on se poursuit
On sent croître
Ton aube, amour, dans la nuit
Du vieux cloître.

"*On s'en va en becquetant,*
On s'adore,
On s'embrasse à chaque instant
Puis encore.

"Sous les piliers, les arceaux,
Et les marbres.
C'est l'histoire des oiseaux
Dans les arbres."

Catullus could n't beat that penultimate stanza if he were alive again. Could that be translated literally into English verse? a friend asked us. We will try; there is nothing like trying.

"Two alone with songs of joy,
Adoration!
How they well the spring employ,
God's creation!

"Sparkling laughter, what a burst
In shades roomy,
Filled with pallid faces erst,
With hearts gloomy!

"They are married but to-day,
Interchanging
Joy's delicious converse, gay,
Ever ranging.

"Sports amid the ruffling air,
That rude player!
Gaieties which this dark lair
Makes the gayer.

"Jasmines to the winds are thrown,
O'er tombs playing
Where the abbess carved in stone
Joins hands praying.

"And the cross-marked sepulchres
Their merry-making
(Scratched a bit by thistle-burrs)
Are partaking.

"Hiding, seeking, chase, and flight,
They feel dawning
In the ancient cloister's night,
Love, thy morning.

"As they go they coo and bill,
Wrapt in blisses,
Every moment kiss, and still
Want more kisses.

"Under arches, galleries,
Marbles hoary,
Like the birdies in the trees,
The old story!"

Unfortunately all the melody has tumbled out somehow. But this will happen sometimes—generally, in fact—with translations.

Again, is there any other living man (no, reader, we will *not* except Robert Browning) who could imagine a delicious bit of *renaissance* like this? The wood-spirit—we can see him now, a microscopic Pan, one of those diminutive goblins that Maurice Sand loves to draw for his mother's legends of Brittany—denounces to the young lover his mistress and his friend. They have played him false; they have made an *epidemic of kisses* in the woods, while the unsuspicious adorer was sleeping as sound as if he belonged to the Academy. Then the youth repels with disdain the suggestions of the malicious elf:

"Nain qui me railles,
Gnôme aperçu
Dans les broussailles,
Ailé, bossu;
Face moisie,
Sur toi, boudeur,
La poésie
Tourne en laideur.

He will not listen to the accusation, not he!

"Quel vilain rôle!
Je n'en crois rien,
Vieux petit drôle
Aérien.
Reprends ta danse
Spectre badin;
Reçois quittance
De mon dedain
Où j'enveloppe
Tous tes aïeux
Depuis Esope
Jusqu'à Mayeux."

Still, even youth must have its suspicions and the ideal its complications. These complications inspire a whole section of poems under the main head of "Jeunesse." The best among these is the exposure of modern love *à la mode*. Venal affection has long been a favorite theme for French satirists; but few have treated it so forcibly, none so pithily and quaintly. Unfortunately he must preface it with some fearful rubbish about the simplicity of the olden times, a specimen of his worst sham pedantry, an utter falsification of all possible history. We are sure that the very respectable minor prophet Amos would be disgusted at the *bonnes fortunes* M. Hugo attributes to him; and as to Chramnes, priest of Electra (if there ever was such an individual), receiving Alexander's friend Thais at supper in a tomb, with a ghost for

third party, by way of keeping up the proprieties, we are very certain, from our historical knowledge of that young lady, that she would have seen him and his ghost at a considerable distance first. Even when fairly in his subject the irrepressible mystifier will now and then invent a name for mere sake of the rhyme, just as Poe used to do. We have known a great many queer appellations in and about Lorettedom, but we never heard of a Mademoiselle Amathonte. A few such blemishes apart, the description is perfect. Our fair ones have introduced many variations into the old programme. Our shepherdesses fleece more bankers than they shear lambs. They have realized the application of algebra to courtship. They flirt their fans at so much the hour.

"Palmyre en pleurs, Berthe en délire
S' amourachent par A x B."

In their dreams they behold the leaves—of bank notes trembling in the breeze. We have come to the point where one is robbed by singing birds in the forest of Calzado.* The contrast between the first and second series of poems is thus characteristically set forth in the preface: "Le cœur de l'homme a un recto sur lequel est écrit 'Jeunesse' et un verso sur lequel est écrit 'Sagesse.'"

In the best stanzas of the best poems in "Sagesse," the poet rails at the folly of wars, the wickedness of kings who make them, the madness of the people who sustain them. For six thousand years the nations have delighted in battle. Amid the gleam of steel and the smoke of watch-fires our dark souls are lighted up by the cannon's flame:

"Et cela pour des Altesses,
Qui, vous à peine enterrés,
Se feront des politesses,
Pendant que vous pourrirez."

No nation can bear another near it.

"C'est un Russe! Egorge, assomme,
Un Croate! Fen roulant.
C'est juste. Pourquoi cet homme,
Avait-il un habit blanc?
Celui-ci je le supprime
Et m'en vais, le cœur serein,
Puisqu'il a commis le crime
De naître à droite du Rhin."

We might quaff the fountains, pray in the shade, love and dream under the forest oaks but it is so much pleasanter to kill our brethren.

Too true, old poet! The good time has n't come yet.

LIPPINCOTT'S PRONOUNCING GAZETTEER.†

The preface to the first edition of this work informs us that it was "the aim of the editors, . . . if possible, to produce a geographical dictionary as comprehensive in its plan, as perfect in its arrangement, and as complete and accurate in its execution, as the best dictionary of the English language." The preface to the revised issue, now before us, asserts that "in the attempts to render the present edition of the 'Gazetteer' every way worthy of the favor which has been so liberally bestowed upon the work ever since its first appearance, no expense or labor has been spared. Not only has an appendix containing nearly ten thousand new articles (chiefly relating to the United States) been added, but *every portion of the work has been subjected to a careful revision, and a vast number of such alterations and corrections as the lapse of ten progressive years has rendered necessary have been made.*" The ample title-page promises "the most recent statistical information, *according to the latest census returns of the United States and foreign countries.*"

It is not our intention, and it would not be an easy task, to examine the correctness of the original claims of this valuable book of reference—valuable chiefly on account of its exceeding comprehensiveness—to comparative excellence in its line; but we must forcibly protest against the pretentious assumptions concerning its revision, though we readily admit that, besides the appendix, it contains a large number of new articles, new statistical dates, and other additions or alterations. Not only are these additions or alterations very scanty in proportion to the vast contents of the whole, and far from affecting "every portion of the work," but they are frequently defective or antiquated in themselves, and many of them loosely and inaccurately done. Let us examine, for instance, by reference both to the main work and the supplement, some of the notices of places rendered memorable by the events of our great civil war.

According to the notice on "Pittsburg Landing," the battle fought near that place, in 1862, took place "in April," and according to "Shiloh," "about the 7th of April," while the article "United States," otherwise abounding in mistakes, correctly informs us that it was fought "*on the 6th and 7th* of April." "Fair Oaks" mentions only May 31, the first day of the battle, while "Seven Pines" is not given. Under "Corinth" we read of Rosecrans's victory, but not a word of its once so much talked-of "siege" under Halleck. Gettysburg is made a two-days', instead of a three-days', battle; the name of the vanquished general is given, that of the victor omitted. Fort Pillow is mentioned as "erected," but not as captured, "by the secessionists." According to "Savannah," that town was occupied by Sherman "about the 20th of December, 1864;" according to "United States," on the 21st of that month. Fort Fisher was taken "in January," Wilmington "in February, 1865" (days not given); Petersburg "*about* the 2d of April;" Richmond "on the 2d" (erroneously for "the 3d"); the battle of Bentonville was fought some time "in the spring of 1865." But, stranger than all, not the slightest reference to any military action of the late war is made under the heads "Antietam," "Atlanta," "Bull Run," "Cedar Creek," "Chancellorsville," "Fredericksburg," "Knoxville," "Murfreesborough," "Nashville," "New Orleans," "Perryville," "Pleasant Hill," "Port Royal," "Roanoke Island," "Sharpsburgh," "Spottsylvania Court House," "Springfield," "Williamsburgh," "Winchester," or "Yorktown." Fort Pulaski is nowhere to be discovered.

When the recent history of the United States is thus treated (in a work overflowing with ancient historical dates), it cannot much surprise us to find no allusion to the late warlike affairs in Italy under such heads as "Montebello" or "Magenta;" no mention of the name of Garibaldi under "Caprera," "Palermo," or "Volturno;" no notice of Solferino or Aspromonte (in Naples); no allusion to the surrender of Görgey under "Vilagos," or to his victory under "Szöny;" no notice of Kápolna; no allusion to the Crimean war under "Balaklava," "Taurida," "Crimea," or "Russia," while under "Sevastopol" we find that modern Troy still standing, with its "Malakoff, with the Great and Little Redan, situated near the lines of the allies, and near which there has been, in the present war (*sic*), some severe fighting." But not only the Crimean war is ignored in the "history" attached to "Russia;" the Circassian and the Polish wars, of 1831 as well as of 1863–4, share the same fate; the abolition of serfdom is a fact unknown to the writer of the article, and the fourth class of the Czar's subjects, "consisting of peasants or serfs," is left to "belong, in nearly equal proportions, to the crown and to individual proprietors; and though their different conditions admit of considerable diversity, the great body of them are, to all intents and purposes, little better than slaves. It ought to be observed, however, that the humanity and enlightened liberality of the late (*sic*) emperor, Alexander, formed a new division, to consist of free cultivators;" that "his successor, Nicholas"—elsewhere in the same article called "his *third* brother," and also "the late reigning monarch"—"followed laudably in his steps, and operations are now in progress by means of which, *though at some very distant date*, there is reason to hope that the complete emancipation of the serfs will be effected."

When we add that the histories of "Sleswick," "Holstein," and "Denmark" do not go beyond the year 1850, when the duchies "finally submitted to the authority of their sovereign, the King of Denmark;" that the Government of Prussia is left as it was in 1849; that the history of "Germany" concludes with the attempts of Austria, at the close of the revolutionary period of 1848–51, "to reconstitute the Germanic Confederation," when "various propositions to effect this object" were made, "but no definite result (February, 1852) had been attained;" that the history of Greece, of Spain, of the South American republics, and of most other countries, is treated with the same, if not with greater, disregard to late events; and that "Mexico" speaks of Maximilian without mentioning Juarez, and of the French invasion as having taken place in 1863 instead of 1861—our reader will have an idea of the "careful revision" to which the work has been subjected from a historical point of view.

But now let us see how "complete and accurate" this new edition is in regard to its main object, "the most recent statistical information, according to the latest census returns of the United States and foreign countries." Its deficiencies respecting parts of the Union are excused in the preface on plausible grounds derived from difficulties and temporary changes caused by the late war. But how is it in respect to foreign countries? A few examples will show: The area and population of "Russia" are given as they were in 1851; its latest commercial statistics refer to the year 1853. The area and population of "Sweden" are those of 1850. The same is the case with "Portugal" and "Switzerland." No general statistical table of the present kingdom of Italy is given. The statistical table of Germany contains three separate duchies of Anhalt, one of which ceased to be in 1847 and another

* Namely, the Italian opera of which Señor Calzado was manager for many years, till he was "cotched and sent to prison" for "prigging what war n't his'n" at a card party.

† "A Complete Pronouncing Gazetteer or Geographical Dictionary of the World. . . . Edited by J. Thomas, M.D., and T. Baldwin, assisted by several other gentlemen. Revised edition, with an Appendix containing nearly Ten Thousand New Notices." Philadelphia: J. B. Lippincott & Co. 1866.

in 1863. Referring to the former, a note adds: "Anhalt Kothen, *it is stated*, has recently been absorbed in the other two divisions of Anhalt." The same table states the population of Bavaria to be 4,559,000, instead of 4,807,000 in 1864 (see "Almanach de Gotha" for 1866); of Bremen 74,000, instead of 104,000; of Frankfort 77,000, instead of 91,000; of Hamburg 200,000, instead of 229,000; of Hanover 1,819,000, instead of 1,923,000; of Holstein and Lauenburg 526,000, instead of 602,000; of Nassau 429,000, instead of 468,000; of Prussia, exclusive of the eastern or formerly Polish provinces, 11,775,000, instead of 14,714,000, and so on. The statistics of the "British Empire," being given according to the census of 1851, are, of course, exceedingly defective in all their parts, but monstrously so in some, as, for instance, when the population of New South Wales is stated to be 208,000, instead of 367,000 (according to the census of 1861); of South Australia 37,000, instead of 135,000; and of Victoria 151,000, instead of 573,000. The population of "China" is given as in Johnston's "Dictionary of Geography," but without stating, as that work does, that it refers to an official census of 1825.

It is to that assiduously and scrupulously elaborated "Dictionary of Geography," of which we compare the original edition, that the editors of our "Pronouncing Gazetteer" are indebted for about one-half, if we are not mistaken, of their foreign notices, most of them literally copied, and almost all left in our "revised" edition precisely as they were written by Mr. Johnston, who, as he informs us, adopted the census of 1841 as his statistical guide for Great Britain and Ireland, and for other countries returns published between the years 1837 and 1849. Our "Gazetteer," therefore, which, on its title, bears the date of "1866," and speaks of statistics "according to the latest census returns," in reality embodies, without anywhere alluding to it, returns some twenty or thirty years old, in numberless notices, every word of which is from Johnston's first edition, whose chronological dates, frequently affixed to the figures of population, are moreover carefully omitted. A few examples will elucidate these statements. Thus we find in

JOHNSTON'S DICTIONARY.			LIPPINCOTT'S GAZETTEER (1866).		
Cinisello	Pop. (1843)	2,408	Cinisello	Pop.	2,408
Cirie	" (1838)	3,353	Cirie	"	3,353
Cisterna, Sardinian States	" (1838)	1,962	Cisterna, Sardinian States	"	1,962
Cittadella	" (1843)	6,599	Cittadella	"	6,600
Citta Vecchia, Dalmatia,	" (1845)	3,046	Citta Vecchia	"	3,046
Cividale	" (1843)	6,027	Cividale	"	6,027
Karlsburg	" (1845)	12,300	Karlsburg	"	12,300
Kars	" (1843)	12,000	Kars	"	12,000
Kaschau	" (1845)	15,600	Kaschau	"	15,600

This will suffice to show the character of the revision of "Lippincott's Gazetteer" in many of its parts; the original merits and demerits of this work we have abstained from touching upon, as not belonging to the limited sphere of our review. Its general usefulness is universally known. The neatness and correctness of the print appear to us deserving of the highest commendation.

GUROWSKI'S DIARY.*

If anybody opens this book with the expectation of finding in it a record of the workings of a doubting and bewildered soul in its search after truth, he will be miserably disappointed. Whatever struggles the Count may have gone through in the formation of his opinions, they were either all over before the work before us was composed, or else he has carefully excluded all trace of them from its pages. In the "Diary" he appears before us as a fully illumined believer, and lays the lash over the shoulders of the people around him with all the passion and indignation of certainty.

The present volume is prefaced by a table in three parallel columns, containing, first, the names of persons "mentioned in the book with praise," numbering in all 101; second, of those spoken of "half-and-half," in all 22; and last, of those spoken of with "blame," in all 40. But we are bound to say that this digest, valuable as it may seem, does not give the reader by any means an adequate idea of the manner in which the author has meted out his judgments. The mere list of names is, in fact, most delusive. If we weigh the blame against the praise, as we find it in the body of the work, we shall find that, supposing 101 lbs. of praise to have been distributed amongst the Count's favorites, or 1 lb. a man, at least 200 lbs. of blame are distributed amongst the 40 reprobates, or 5 lbs. a man. What M. Gurowski means by "half-and-half" we do not well know. But if he means a mixture composed of blame and praise in equal parts, we must be allowed to doubt whether even the author himself has paid proper attention to the proportion when he was putting in his ingredients, for it seems to us, as it will, we think, to the reader, that there is but a half-penny worth of praise in it to an intolerable deal of blame. For instance, Mr. Lincoln is one of the gentlemen who has had "half-and-half" dealt out to him, and we find that he was "a great shifter," "a political shuffler;" that "whatever he did was done by halves;" that "he had not an atom of organizing or administrative capacity;" that he was "a baker of generals;" that "he preferred having the army ruined by Meade rather than endanger his own chances of re-election." He is accused, moreover, of having caused the butchery of Olustee in order to secure three votes for the presidency, and M. Gurowski loses no opportunity of mentioning that he does not believe a word he says.

The "praise and blame" there is no mistake about. Forty greater scoundrels, as M. Gurowski describes them, than the gentlemen who incur the former are certainly not to be met with in history. The list includes G. T. Curtis, Thomas Carlyle, Archbishop Hughes, Senator Saulsbury, the Emperor Maximilian, Thurlow Weed, Chief-Justice Taney, Ben. Wood, General McClellan, and all the Cabinet except Secretary Stanton. It would be impossible for us in the space at our disposal to give any idea of the rascalities of which the whole forty persons were guilty. They appear, according to M. Gurowski's account, to have left no stone unturned to bring about the ruin of the country, and the destruction, body and soul, of every man, woman, and child in it. The chief villain of the lot appears to have been Secretary Seward, who had only one virtue, and that was purity in money matters. In all else he was wholly given over to the devil and his works. He had worthy coadjutors in Halleck, Welles, and McCulloch; though it is but right to say that in the author's classification, Welles comes under the head of "half-and-half," and is occasionally called in the body of the work by the pet name of "Neptune-Methuselah-Van-Winkle," or more frequently "Neptune" *tout court*. "Neptune" plays on one occasion a somewhat comical part in preventing the solution of "the question of earthen walls against wooden or iron walls." M. Gurowski declares that, if it should be solved in favor of the earthen fortifications, the result would be due to "Seward-Lincoln's hesitating policy in 1861–2, and to Welles' *big wig*." It is not often that this article of attire enters into the composition of causes to which the great events in history are, it is said, attributable.

Halleck is generally spoken of by our author as "Jomini-Carnot-Corinth-Halleck." Mr. Seward appears under various appellations implying different degrees of iniquity, the lowest being, as well as we remember, "Judas-Iscariot-Seward," and poor General Meade comes in for what is worse than M. Gurowski's abuse, his scorn. Meade seems to have passed his time between one blunder and another, and was really never out of mischief except when he was asleep. One cold night—that of the second of January, 1864—M. Gurowski seems to have been transported with rage at the reflection that Meade and Halleck were warm under the blankets instead of being out in the field freezing with the soldiers, and utters the pious invocation, "Oh how ardently I wish the mothers, sisters, and wives of the people under arms might for a moment become hyenas, tear to pieces our leaders, and thus avenge their children!"

M. Gurowski's praise is, we need hardly say, as unmeasured as his censure. Next to General Wadsworth, to whose memory he dedicates his book, and in whose honor he composed a poem in 1864, at Long Branch, in what we guess—being a little rusty in our Slavonic—to be the Polish tongue, his greatest idol is Mr. Stanton. If his account of this gentleman be true, all we can say is that he is far too good for this world, and deserves translation. How such a pink of perfection managed to preserve his innocence through a long career at the Pennsylvania bar, the Count does not explain; but his time at Washington seems to have been passed in heroic and successful attempts to avoid being contaminated by his colleagues. Wendell Phillips our author is never weary of praising, and appears to consider that at various times during the war he was the only statesman left in the country. On the fifth of December, 1863, we learn that "the small church of abolitionists began to hurrah for Lincoln," to M. Gurowski's regret. "I wonder not," he says, "at Beecher; but wonder at Wendell Phillips, who is not of that small parish. I wrote him." What effect this produced on Mr. Phillips we are not told; but we fear none whatever, for we find our author lamenting a month later over his continuing to "throw his eloquence for Lincoln," although his attention had been called to the "organizatory vacuum in Lincoln."

It is but just to M. Gurowski to say that he has made some excellent hits in his diary. He was one of the first, if not the first, we believe, to expose McClellan and to discern the rising of Grant's star; and there is, too, a vast deal of very unpleasant truth scattered through the book. He pricks a good many bubbles, though with a pitchfork, one of the largest being the widely prevalent notion that the visits of Thurlow Weed, Archbishop Hughes, Mr. Evarts, and Mr. Seward's despatches did a great deal to change the public

* "Diary: 1863, '64, '65. By Adam Gurowski. Washington, D. C." W. H. & O. H. Morrison. 1866.

opinion of Europe about our war. We doubt if they produced the smallest impression on anybody who was not already convinced. Henry Ward Beecher did more than all of them put together could have done in ten years, and Grant and Sherman really did all that was done at all, which reduces the share of the roving diplomatists to a very small compass.

The popular impression on laying down Count Gurowski's volume will be, we think, that the worst crime of which the blood-stained administration of Mr. Lincoln was guilty, was in not having made the Count himself Lieutenant-General, Vice-Admiral, and Secretary of the Treasury and Secretary of State. And if he will allow us to offer him a little advice, which we do with a horrible sense of our own unworthiness, it will be, not to waste so much love as he seems to do upon the American people. For he may depend upon it they are not worthy of it. Any community which fills all its high offices with such unmitigated scoundrels as those whom M. Gurowski describes, can hardly be very pure itself or worth much commiseration. We therefore recommend him to be a man, put up his pocket-handkerchief, lay down his pen, and "let the whole concern," in the expressive language of Mr. Mantalini, "go to the demnition bow-wows."

WARREN AND SHERIDAN AT FIVE FORKS.*

THE public can hardly have forgotten its surprise on learning, in the closing struggle of the rebellion, that Gen. Warren had been relieved from the command of the Fifth Corps by Gen. Sheridan, and had forfeited honorable mention among the heroes of the final victories around Richmond. We believe that the universal impression was that this removal took place in the heat of an engagement, and that it was occasioned by a difference between the two commanders which was peremptorily settled by the superior authority of Gen. Sheridan. The time, which did not permit a court-martial to elucidate the matter, was equally unfavorable for a popular judgment; and, in the prevailing ignorance of the facts, it is not at all strange that the presumption should have been in favor of the brilliant cavalry leader, who to his exploits in the Shenandoah Valley had added the *coup de grace* of a war as well as of a campaign. Few ever knew that Gen. Warren was immediately assigned by Gen. Grant to the defences at City Point and Bermuda Hundred; that, after the evacuation of Richmond and Petersburg, he was put in command of the latter city and of the Southside Railroad; and that, on the third of the following month, he was placed over the Department of Mississippi, the scene of still active hostilities. Failing to obtain of Gen. Sheridan an explanation of his course toward him, or of the Lieutenant-General a military investigation, Gen. Warren undertakes in the pamphlet before us to justify himself to his countrymen in a manner, whatever else may be said of it, dignified and temperate.

Gen. Sheridan's imputations are contained in his official report, and are three in number: that Gen. Warren disappointed the expectations of Gen. Grant in his movements the night before the battle of Five Forks, and ought to have captured a large portion of the enemy's infantry who were checking Sheridan at Dinwiddie C. H.; that he did not exert himself to get up his corps as rapidly as he might, in preparing to join in the attack at Five Forks, and seemed to wish the sun to go down before the necessary dispositions could be made; and that in the ensuing engagement portions of his line gave way under moderate fire, from want of confidence which he took no pains to inspire. Such were the grounds for relieving Gen. Warren at the *close* of a perfectly successful and highly creditable flank movement, which decided the fortune of the day, and in which the Fifth Corps, with a loss of 634 men, captured 3,244 of the enemy, with their arms, 11 regimental colors, and one four-gun battery with its caissons.

1. The night of May 31–April 1 was dark and stormy, and the rough country about Hatcher's Run in a terrible state for army movements. In the immediate neighborhood of the enemy orders had to be transmitted noiselessly from man to man. What were the "expectations" of the Lieutenant-General does not appear, but we have the successive orders of General Meade, to whom General Warren was then reporting. From these it is manifest that he acted promptly and with discretion; but was prevented from moving as he desired to the rear of the enemy at Dinwiddie C. H., because it was understood at headquarters that Sheridan was much more likely to retreat than to hold his ground. His directions were simply to reinforce the latter, which he did at the earliest possible moment; before they were sent by General Meade, the enemy which, according to Sheridan, might have been intercepted, was already in retreat towards Five Forks.

2. The three division commanders of the Fifth Corps testify to the alacrity with which they formed their troops as designated by General Sheridan on the afternoon of April 1st. General Warren himself declares that he was delighted and eager to serve under Sheridan, and promised him to be in readiness to move by 4 P.M. He was as punctual as his word, and the advance began while the sun was two and a half hours high.

3. But two constructions can be placed upon the third imputation: it affects either the loyalty or the courage of General Warren. We are confident that not even the general who turned the rout at Winchester has a right to indulge in this accusation. General Warren was chief of engineers to General Meade at the battle of Gettysburg, and the position of the Union army, which on that field was our only warrant against disaster, was mainly, if not altogether, his choice and his praise. He was already notorious for his intrepidity, and his subsequent promotion to be major-general could hardly have made a coward of him. In this very battle of Five Forks he did, by his personal example and leadership, inspire—not the confidence of his men, for they had smashed the enemy—but their ardor for a renewed and ultimate assault, and his own horse was killed under him close to the rebel breastworks, while the line was taken without a shot. He had previously visited every part of his corps, and stationed himself always where he could best communicate with his subordinates, with utter indifference to his personal safety. As for his loyalty, he is content to put himself upon the country.

No candid person, in our opinion, can read General Warren's defence without feeling that his grievance is a real one. The question of facts is easily settled against General Sheridan, into whose motives, however, it is not our purpose to enter. General Warren goes no further than to express his conviction that he was deliberately removed on the first opportunity. "If," he says, "a victory won by my command, under my direction, could not gain me credit, where the plans made were, as he (General Sheridan) says, 'successfully executed,' and where my efforts and directions were known to almost every one, then nothing could." This credit the public will not fail to bestow when fairly informed. At least it will applaud his soldierly acquiescence in what he deemed most unjust treatment, his solicitude for his good name unmixed with egotism, and this dispassionate vindication of his services, which is also a very clear and valuable contribution to the history of the Army of the Potomac.

* "An Account of the Operations of the Fifth Army Corps, commanded by Major-General G. K. Warren, at the Battle of Five Forks, April 1, 1865, and the Battles and Movements Preliminary to it. By G. K. Warren, late Major-General Volunteers." Wm. M. Franklin, New York.

THE MAGAZINES FOR APRIL.

THE best wine of the "Atlantic Monthly" is neither first nor last in the course, but midway—Mr. Kirk's description of the character and career of M. Sainte-Beuve, "the prince of contemporaneous criticism." The draught is a copious one, but it is pleasant to take, and will excite much valuable reflection.—Next in excellence is Mrs. Stowe's "Chimney-Corner" on the fashions, who sets them, and how far one may properly follow them with a good conscience.—The political article discusses ably the relations of President Johnson and Congress, and of each to the people. It shows that if, according to the theory of the former, the revolted States are, and all along have been, in the Union on equal terms with the loyal, not only is the present Congress a "rump," and its acts invalid, but all the legislation of the war may be impeached by the self-same logic.—The opening article, on the "Last Days of Walter Savage Landor," tells us comparatively little of what we had reason to expect. There are a great many quotations from or about the poet, and, from some verses addressed by him to a young American lady, and "heretofore unpublished," we learn that the writer is a Miss K. F.—"Were they Crickets?" is a weak imagining, in a vein mixed of "Peter Wilkins" and "Micromégas," and with just a suspicion of being intended for a satire on the times.—"Madam Waldoborough's Carriage" is a not bad extravaganza, but is too long in the handling, and there is scarcely enough made of the very capital situation selected for the pivot of the story—a foreigner in Paris, with fifteen sous in his pocket and none at his lodgings, entrapped into riding in a hackney-coach at two francs the hour!—The passages from Hawthorne's note-books are remarkable for glimpses of his habits of observation in his out-of-door wanderings, which make one half wish that the brush had been as much his instrument as the pen. The practice, we may remark by the way, of jotting down the pictures afforded by our daily walks would make truer artists and critics of us all. The hints at "motives" for future elaboration in fiction are full of the fantastic and sombre phantasies which colored all of Hawthorne's work. He was a remorseless anatomist, and took a sort of delight in probing the most repulsive processes of our nature, which, every one wishes to delude himself, do not exist for him.—"A Struggle for Shelter" treats of the difficulty experienced by single women in finding decent, commodious, and reasonable quarters in our chief cities. Clubs, analogous to those for men, are advo-

cated.—"The Late Insurrection in Jamaica" suffers the disadvantage of having been composed before the testimony before the commission had reached this country, and is, therefore, less to be prized for its statements about the unhappy occurrences of last October. Some of the causes of discontent are accurately enumerated, and also the points in which there can be no prejudiced inference from the blacks of Jamaica to the freedmen of the South, that shall deter us from giving them the just measure of their rights.—There are three poems in the present number, Longfellow's being the best, as we conceive.—Mr. Mitchell's and Mr. Charles Reade's stories are still further advanced.

"Harper's Monthly" shows us the "Birds at Home," with curious illustrations. Mr. Abbott indulges his mania for writing history by rehearsing the exploits of our navy in the North Carolina sounds. We had given him credit for better judgment than he displays in lauding the joint proclamation of Burnside and Goldsborough, Feb. 18, 1862, which repudiated any desire on their part to "liberate your slaves, injure your women, and [commit] such like enormities." We doubt if the next governor of Rhode Island considers this specimen of his "pure patriotism" particularly "worthy of historic preservation."—China furnishes a theme for two independent articles. The portraits of Gens. Ward and Burgevine, both Americans, both adventurers without principle, and both, fortunately, put out of existence, are given with an account of their participation in the horrible massacres of which the Middle Kingdom has been the theatre, according as the rebellion achieved success or the Imperial authorities found opportunity for vengeance.—The article on restaurants is unartistic and far from exhausting the subject; but it gives figures which will be welcome to those whose appetites are out of proportion to their purses, and tells besides some wholesome truths about our habits of eating.—The "Ethics of Adulteration" is a plea for certain manufactured products which, it is argued, are none the less worth buying at the price demanded because they are not what they purport to be. The author rebukes the public for examining the brand instead of the quality, and forcing native industry to counterfeit the trade-marks of its foreign competitors.—We should like to learn the ethics of the biographer of Sam Houston, of whom we are told everything that is good and very little that is bad. This sort of misrepresentation cannot be too severely censured, and to give it the currency of a popular magazine is a serious offence against the public morals.—The objections to "Round Dances" are very forcibly set forth in a paper on that subject, in a style much superior to that of ordinary pulpit preaching, and the best, perhaps, that adorns the number.

The "Catholic World," for the first time open to original articles, begins with one that treats of the present state of the patriarchate of Constantinople. The writer aims to show that while this portion of the Greek Church has forfeited the respect of the remainder by its tyrannous and corrupt practices, and rendered itself obnoxious to Rome by its schismatical difference on certain points of a common faith, there is yet no hope of such an alliance with it on the part of Protestant Christendom as the latter seemed to court, some years ago, in order to concentrate the opposition to Catholicism. The future possession of Constantinople by Russia is regarded, in a religious point of view, with complacency, although the Emperor and the Pope are by no means on so friendly terms as the Emperor and this republic, and although there is nothing in the traditions of the Russian Church compatible with the spiritual dominion to which the Holy See lays claim.—"Christine," is a troubadour's song, containing a few good lines, but not exciting an insatiable longing to read the rest of the cantos, which are promised in subsequent numbers.—"The Song of the Shell" is a fair production of the battle-field.—The "Reminiscences of Dr. Spring" are examined by some one having an eye to the weak spots in that autobiography. We have numerous excellent reasons for not agreeing with the reviewer's conclusions "that Dr. Spring has lived in vain."—Among the selected articles are Dr. Newman's reply to Dr. Pusey's Eirenicon, two continued stories, "Ireland and the Informers of 1798," "Proposed Substitutes for the Steam-Engine," etc. The leading book-notice is of Hassard's "Life of Archbishop Hughes."

Mr. Thomas Nast contributes a design to the April number of "Beadle's Monthly," which is not only so far an improvement on the number for March, but also in a very creditable proportion of original articles. Of these the poetry is, as usual, the poorest; but "April-a Year Ago" has decided merit, and the feeling of the "Hymn" at the close will be responded to by every lover of the April martyr.—The best prose article is "A Winter in Pau," the little Gascon town near the Pyrenees out of which issued Henry IV. to ascend the throne of France, and Bernadotte that of Sweden, and which is now represented, not without protest, by M. Larrabure in the Corps Législatif. We learn that Pau is highly favorable to invalids who are troubled with pulmonary complaints; that its climate is dry and equable; and that its chapter of winds is as short as Ireland's chapter of snakes—there are none. The walks are monotonous, the drives a little less so, but the ever-present scenery is magnificent. Living is dear. The neighboring watering-place of Eaux Bonnes among the mountains seems not unlike Mauch Chunk in its peculiar situation.—We are told "What Constitutes Treason" in this country, and what is its punishment by law. The writer makes the customary recommendation of tempering justice with mercy, with an evident leaning toward justice. He omits to guess the probable fate of certain distinguished subjects for either a halter or a pardon.—"The Alligator at Home" and "The Pearl Fisheries," with a paper on "Hydrophobia," are the chief remaining titles that do not belong to stories.

The most marked improvement in "Our Young Folks" is in the illustrations, which are now much more in keeping with the quality of the text than hitherto. Miss Hale's talk about the seasons is very good ground-work for an introduction to botany, provided the child is not left entirely to his own understanding of it. Mrs. Stowe presents another phase of "Young America" in "The History of Tip-Top," who is no other than Number One. Miss Prescott's "Dilly-Dally" is written with great naturalness, as usual, but not always with desirable simplicity. Gail Hamilton contributes an undisguised sermon on "Little Things."

Times hab Badly Change' Ole Massa Now. Song of the Freedmen. By H. G. Spaulding. (Oliver Ditson & Co., Boston.)—On the first page of the sheet this explanation is printed: "The leading melody of this song was heard by the writer in Florida. It was sung by a negro, but the words could not be recognized. In the words here given the writer has attempted to express what seems to him to have been the general feeling of the freedmen at the close of the war." This melody is quite pretty, but is evidently a latter-day composition, a song of the new régime, and an imitation of the popular "negro melody" of white origin. It contains no traces of the peculiarly wild and melancholy character of the old-time plantation songs. But the words are such a happy rendering of the state of the case, in simple and occasionally almost pathetic language, as to place the merits of the piece above many others which have gained popularity.

Driftings from the Stream of Life. A Collection of Fugitive Poems. By Elizabeth Bogart. (Hurd & Houghton, New York; E. P. Dutton & Co., Boston.)—We shall not flatter the author of this collection by placing a higher value on her productions than she herself has done in the preface. Not every log that comes to the boom is worth affixing the owner's mark; but if it cannot be shaped into spar, or plank, or board, or lath, it may, turned adrift, and rescued for firewood, cheer poverty's hearth in the dreary winter. Such we conceive to be the humble mission of this book, with its page on page of sentimental verse, its "harps" innumerable, its "stars," and "moonlight," and "memories," and "hope" that "went by on raven wings, darkening the summer sky." Some mourner's heart may be touched and comforted by the obituary verses, which assuredly were not all composed for others' griefs. In the metrical contest with "J. H. H.," to which we are treated in the appendix, it would be hard to say whether he or "Estelle" gets the worst of it.

Mackenzie's Ten Thousand Receipts in all the Useful and Domestic Arts, etc. Second edition. (T. Ellwood Zell, Philadelphia). We hope the calamity alluded to with such serenity in the preface to this volume—the destruction of "all other books of science in the world"—may be long postponed. That these ten thousand receipts, however, would not compensate for such a loss, does not detract from their present usefulness. We believe that sufficient care has been exercised in preparing them to make them worthy of confidence in the main, though we should feel much safer in following those which pertain to the arts than those for the domestic practice of medicine. The American editor has so far altered the original work as to adapt it to our soil and climate.

BOOKS RECEIVED.

Narrative of an Expedition to the Zambesi and its Tributaries, 1858-1864. By David and Charles Livingstone.—History of Friedrich the Second, called Frederick the Great. By Thomas Carlyle. Vol. VI. and last.—A Text-Book on Physiology. For the use of Schools and Colleges. By John William Draper, M.D.—Harper's Pictorial History of the Great Rebellion. No. 15.—A Child's History of the United States. Vol. III. Part Second. History of the Great Rebellion. By John Bonner.—Maxwell Drewitt. A Novel. By T. G. Trafford. Harper & Brothers, New York.

The Song-Book. Words and Tunes from the Best Poets and Musicians. Selected and Arranged by John Hullah. J. B. Lippincott & Co., Philadelphia; Macmillan & Co., London. (Sheldon & Co., New York.)

Les Travailleurs de la Mer. Par Victor Hugo. Edition spéciale pour les Etats-Unis. F. W. Christern, New York; A. Lacroix, Verboeckhoven et Cie, Bruxelles.

Geological Sketches. By L. Agassiz.—St. Martin's Summer. By Anne H. M. Brewster. Ticknor & Fields, Boston. (B. H. Ticknor, New York.)

Christian Unity and its Recovery. By John S. Davenport.—The Idle Word. Short Religious Essays upon the Gift of Speech, and its Employment in Conversation. By Edward Meyrick Goulburn, D.D. D. Appleton & Co., New York.

The Grahames. By Mrs. Trafford Whitehead.—The Cecilias; or, The Force of Circumstances. By Anne Argyle. American News Company, New York.

Poems in Sunshine and Firelight. By John James Piatt. R. W. Carroll & Co., Cincinnati.

Fine Arts.

A FEW WORDS ABOUT ART CRITICISM.

Mr. Geo. H. Hall's note, published in The Nation a week ago, is a curious proof of the feebleness and insincerity of most American art criticism hitherto. Mr. Hall, it will be seen, does not waste words in trying to prove that his critic lacked knowledge of the matter in hand. He assumes that. He is sure that if the critic will do so and so, he will see so and so, namely, what Mr. Hall saw. He assumes as a thing of course that his critic never did it nor anything equivalent to it, but criticized painting purporting to be from nature without knowledge of the facts of nature.

Of Mr. Hall's color we shall say a word by-and-bye; but a subject of even greater importance is offered for consideration by his evidently real and sincere—not purposely displayed—impression of the worthlessness and insincerity of art criticism. There must have been, it is evident, an immense weight of bad art criticism to have produced that impression. One who had never seen an American newspaper notice, nor heard an allusion to American art, could yet accurately judge from careful reading of Mr. Hall's short note that a great deal of groundless fault-finding and senseless puffery must have gone before. Mr. Hall must have often suffered from praise that he knew to be undeserved, and have felt that it meant nothing, before he could have taken it for granted that blame also must be without meaning.

General art criticism is many-sided, and requires varied knowledge and matured thought on many subjects. There is scarcely anything within the range of human knowledge that may not, at one time or other, directly assist it. There are, especially at the present time, difficulties in it beyond the difficulties of literary criticism: for instance, the absence of such standards of right and wrong as have been tolerably well established in literature; and the fact that, just now, knowledge of art includes knowledge of literature, while literature gets on very well without much reference to art. Excellent judges of books and men may, as we see every day, know very little about art, and wisely distrust their own judgment of it; but an art critic is badly off unless he knows a good deal—and accurately—about books, and something, at least, about men. Now, as it is evident that all human knowledge falls short of ideally perfected knowledge, so it is evident that all human criticism is incomplete, and falls short of being final. But there is a great difference between the criticism of one picture and the criticism of another, and a great difference in criticizing different parts or qualities of the same picture. For instance, in Gérome's great work of the gladiators, "Ave Cæsar," etc., the scene is historically inaccurate. It is evidently the interior of the Flavian amphitheatre that is represented; but below the emperor's seat is inscribed "Vitellius Imp.," and the Coliseum was not built until after the deposition and death of Vitellius. So much is matter of fact, ascertainable fact; but now comes up for consideration that which is clearly matter of opinion, and must always remain so, viz., was the painter warranted in taking this liberty with history? At the present day the majority will say yes; but there have been times in the history of art when such freedom would not have been allowed the historical painter. A different instance is Tissot's picture, sold by auction at Mr. Avery's sale three weeks ago, "Un Tentatif d'Enlèvement." Is it good fencing? It is not, judged by the modern laws of *escrime;* the parry in particular violates all the laws of fence. But perhaps M. Tissot had ascertained that different laws of fence obtained in France in the days of Henry II. It seems unlikely; but until we know, it would not be wise or just to find fault. But, if it were once settled that it is an error, there would remain no question about excuse for it; there could be none; the critic would be justified in blaming what would be either negligence, or, worse, inaccurate perception of a really essential fact. So in an American picture not long ago—a ship riding at anchor in a heavy gale—some of the crew were represented going aloft by the leeward shrouds. Here was no question at all. Bluntness of perception, or else ignorance of the matter in hand, one or the other, caused the blunder, and either should be a disqualification for painting marine subjects.

But when there is question of color, there is perhaps more room for difference of opinion, more chance for even well-informed people to differ in the principles upon which they judge, than in any other quality of art. In the first place, are those the colors of nature? a question to be answered by experience or experiment, and which every intelligent person not color-blind will claim a right to answer for himself. Then, if they are not, as they never are or can be literally, is the painter right in his abstract or rendering? has he sacrificed lesser truths to greater, and insisted on the essential facts? is his work noble and beautiful? We find Mr. Ruskin, certainly not an admirer of art that is not true to nature, praising in a picture of a vintage the idealizing of the actual blackness of the grapes seen among the leaves into purple; but we find no praise given to Canaletto for idealizing the rosy and purple shadows on Venetian palaces into brown and black. And Mr. Ruskin is right. Real insight into nature and real study of nature will lead the painter to get as much as he can of natural beauty on his canvas, sacrificing unessential facts instead. But one person sees so much more of natural beauty in color than another, that they can hardly be judged by the same standard. Besides the many who are wholly or partially color-blind and never find it out, among those who can distinguish colors some see much more delicate gradations than others, some remember slight shades and hues much better than others. One person looks at a natural shadow called "black" or "grey" and sees that it really is warm in color—looks at a distant tree supposed to be green and sees that it is purplish grey—looks at a rock called brown and sees an iridescence of a million colors. To another person shade and shadows are little more than darkness, and to him the essential character of any object is its form.

Mr. Hall's fruit-pieces, as we saw them and studied them at the Somerville art gallery, had merit—the fruit was well rounded, the characters of form and growth well given. But these qualities are of minor importance in a picture of a bunch of grapes hung upon a wall; in such a picture color is everything. Every berry in the real bunch modifies the color of every other, the play of light and interchangeably reflected colors certainly not toning down the whole to greyness of shading, but raising the shadows, by dint of reflection, to richness of color beyond that of the lights. We said of these pictures: "Nor does it seem to us that the beauty of color in natural fruit and flowers has justice done it; the tone of color adopted in all Mr. Hall's works is not pure or bright enough for that." To that expression of opinion we have heard of no dissent, although, of course, there are many who disagree. It is to the particular instance we gave that Mr. Hall objects, namely, "purple is shaded [that is, in his pictures] not with darker purple but with grey." Mr. Hall writes that, if purple grapes are hung against a grey wall, their shadows will be full of grey reflections. It is unnecessary to remind him that that fact is somewhat irrelevant. It is not so that one's work is proved true and beautiful in color. It is perfectly true that there will be grey reflections, but on a few berries only at a time and from one point of view, and the grey will not be wholly unmodified by the purple. We have this statement only to make in conclusion Mr. Hall's renderings of the shade and shadow colors of nature are generally exaggerated abstractions of the darkness or depth of those colors only, their quality being wholly disregarded. Of his many fruit-pieces we do not remember one that has been conceived and painted in full color. This may be of no importance; it was the sole charge we made, and is the sole charge we now make against his paintings of fruit.

Science.

SCIENTIFIC NOTES.

The French decimal system of weights and measures gains favor steadily among the nations of Europe. It is the legal system of France, Italy, Belgium, and Switzerland, and though the German nations still adhere to other measures of length and to their old names of weights, their actual weights have been made easily comparable with the French by the enactment that the pound shall be equal to one-half of a French kilogramme. A government commission has just recommended the introduction of the French system into the Austrian dominions. The metre and the gramme have become universal in books and memoirs upon the experimental sciences written in any European language. For scientific purposes the centigrade thermometer also is almost always employed. In England and in this country an excessively cumbrous and difficult system of weights and measures is still adhered to. In the French system there is a very simple relation between the unit of measure and the unit of weight. A cube of pure water of which the side measures one-hundredth of a metre weighs one gramme, the French unit of weight. The English weights and measures are compared together by the following rules: 277,274 cubic inches constitute an imperial gallon, and the gallon of pure water weighs ten avoirdupois pounds. The troy pound is to the avoirdupois pound as 144 to 175. Under the French system all substances and commodities are sold by the same weights and measures, viz.: the gramme and litre and their decimal multiples. Under our system every different trade seems to have its peculiar weights and measures. Grocers, apothecaries, coal-dealers, liquor-dealers, grain-merchants, and tailors, have all their separate units of weight and measure, and the confusion which results is tolerated only because long

usage has accustomed the community to inconveniences which they believe to be inevitable. We copied our weights and measures directly from England; our system is, therefore, not in any sense a national one, and no national pride will prevent our copying a better one. In fact, we first demonstrated the convenience of a decimal system when, in establishing our coinage, we took the old Spanish dollar for our unit and divided it into dimes and cents. Later, the French applied the decimal system to weights and measures. The English Parliament has taken one step toward the introduction of the metrical system; a very short one to be sure, after the English fashion of making haste slowly, but still a step worthy of attention, and perhaps of imitation. Parliament has sanctioned the legal use of the metrical system; contracts may be made in the terms of this system. The enactment is merely permissive. To second this action of Parliament the British Association for the Advancement of Science made an appropriation for erecting, in conspicuous places, mural tablets, bearing the metre and its subdivisions, with the double object of familiarizing the public with the difference between the yard and the metre, and of presenting accessible standards for purposes of ready comparison. At a recent meeting of the Chemical Society of London a discussion took place on the best material for mural standards of length. Platinum, gilded brass, aluminium bronze, common bronze, gun-metal, cast-iron, and porcelain were all considered, the weight of opinion inclining to the cheaper substances, on the ground that extreme accuracy was not at all essential, and hardly attainable under such circumstances.

The subject has been repeatedly brought to the notice of our own Government and people in years past, and a proposition looking to the general introduction of the French system has been made in Congress during the present session. It is greatly to be wished that a hearty effort might now be made to carry this great measure. In these revolutionary times one more change in the habits of the people will not be hard to make. The metrical system was born of revolution in 1790.

When the chief nations of the world have but a single, uniform system of weights, measures, and coinage, what a simplification will be effected in commerce, travelling, and the affairs of common life! One large part of the curse which fell upon us at Babel will be removed, the arithmetics will have to be re-written, at least a year of life will be saved to every child, and the occupation of countless clerks all the world over will be for ever gone.

—About a year ago two young men, one a German, the other an Englishman, assistants in Dr. Odling's laboratory at London, were killed by inhaling a compound of mercury, called mercuric methide, whose poisonous properties were then not fully understood. It was one of those terrible accidents to which the pioneers in chemistry are inevitably exposed. An ignorant, and apparently malicious, person some time afterwards wrote an article for the "Cosmos" of Paris, accusing Dr. Odling of ignorance, selfishness, and cowardice, and warning young German chemists against the ill-treatment and dangers to which assistants in English laboratories were exposed. A controversy arose about the matter, which has at last drawn from Dr. A. W. Hofmann a very strong letter in defense of Dr. Odling. The immediate point in controversy is of little interest to us, but the strong opinions he expresses concerning English chemistry and chemists are worthy of notice. Dr. Hofmann is a German by birth and education, but he has lived twenty years in London and there attained such eminence that he had no superior among the many distinguished chemists in the great metropolis. He added to his scientific attainments a practical ability which secured to him an ample fortune, mainly in consequence of his study of aniline, the base of the innumerable colors which now bear this name. Last spring he returned to his native country, accepting an appointment as professor of chemistry in the University of Berlin. A very intense and constantly increasing prejudice against England exists throughout Germany, and Dr. Hofmann's strong expressions of feeling are especially interesting in the face of this widespread prejudice. Speaking of the feelings and opinions of a great number of his countrymen employed in the London laboratories whom he had known during his long residence there, Dr. Hofmann says: "Most of them were full of the amiable and honorable character of their employers, of their varied experience and insight into the grand forms of English life which these positions afforded them, and of the advantages which they hoped to derive therefrom in their future careers. Many of them have since made their way from these places to positions of importance in science and manufactures." And again, advising his young countrymen to enter the English laboratories whenever opportunity offers, he says: "In the manifold relations which link chemical science to life in England, they will find an inexhaustible store of instruction and incentive, and in the chemists of England they will become acquainted with the most honorable and trustworthy of men, well representing the great and splendid virtues of the English nation, among which stands uppermost the love of truth."

—The refuse matters and filth of dense populations can be got rid of in various ways. Daily removal in pails, by hand, is the Chinese method, employed with only slight modification in many towns of Europe to this day. In Berlin, for example, the semi-solid refuse is removed from the houses in pails, and emptied into loosely-closed carts, in which it is carried through the city streets out into the country. The labor of this daily removal is performed in many parts of Germany by women—a fact which forcibly illustrates a fundamental difference between German civilization and ours. Another method is that of temporary deposit in a more or less suitable receptacle, which is emptied at considerable intervals. In villages this method produces the manure-heap at each man's door, a species of savings-bank but too familiar to all who have travelled in Switzerland or Germany. In cities this system produces the tight cesspool, which must be periodically cleaned. A third method, of only partial application, may be called, for distinction, the dry-dirt method. Dry loam or ashes are mixed with the fœcal-matters in such quantity as to absorb entirely the emanations which would otherwise be offensive. This method is economical from the farmer's point of view, and by the help of some ingenious mechanical contrivance may be made effectual and useful in the country, or in small towns where the population is not crowded. The modern system of water-draining proceeds on the principle that the refuse of our houses had better be got out of sight as quickly as possible, and washed away through underground pipes into the sea, the lake, or the river, where its abominations can no longer offend us. There can be no question that the first of these methods is the most economical, though the most offensive. By it every constituent of the refuse which is of value to the agriculturist is promptly returned to the soil without waste by volatilization or dilution. There can be as little doubt that the sewage system is the most cleanly and convenient, and therefore the safest and best for crowded cities. But this system is open to two strong objections, one of which is general, and the other especially applicable to inland cities. First, the system is intrinsically wasteful; all the valuable fertilizing constituents of the city refuse, which the farmer and market-gardener so much need, are first diluted with a flood of water and then poured into the sea or the river. So long as it is impossible to utilize these matters without spending upon them more than they are worth, the community must pay a high price for its gain in comfort and health. Secondly, when an inland town pours its sewage into the river on which it lies, the waters of the river are polluted, and unless the river be a very large one, injurious emanations may arise from it, especially when the water is low; the fish may be injured or driven away, and towns lower down upon the same river and drawing their drinking water from the stream will get the benefit of all the sewage of the towns above them. These objections are strong enough, when added to the severe first cost of the underground sewers, to have prevented the introduction in many places of a system otherwise so desirable. A commission was appointed by the Prussian Government, in 1864, to visit England and report upon the system of water-drainage. The report of the commission was adverse to the system. At a convention of some twelve hundred agricultural proprietors, last summer, in Dresden, a discussion of this subject resulted in an almost unanimous condemnation of the sewage system, chiefly, of course, on the ground of its wastefulness. In England a large party has arisen to advocate a return to the cesspool system, in spite of its very grave inconveniences and dangers. Under these circumstances all endeavors to find a practicable method of utilizing sewage waters are of public interest and importance. Dr. Gilbert has very lately communicated to the Chemical Society of London some valuable experiments and estimates upon this subject. The various estimates of the money value of the sewage of large towns are more nearly in accord than we should have been inclined to anticipate. Liebig's original estimate of the value of the London sewage was $0.08 per ton, but in 1863 he reduced his estimate to $0.032 per ton. Mr. Way's estimates for London were $0.04 per ton, and Dr. Hofmann's $0.042 per ton. The sewage of the town of Rugby was found by Dr. Gilbert to be worth on an average $0.033 per ton. Lawes and Gilbert calculated that the sewage of a dense mixed population would be worth $1 60 per head per annum. Dr. Odling deduced from experiments upon the outfall of the great sewers north of the Thames the value of $1 68 per head per annum. It is obvious that the really valuable ingredients of sewage are diluted with such a bulk of water that no labor can be profitably spent upon the sewage. It must flow by gravitation, be disinfected by the soil, and be evaporated by the sun and wind. In short, it must be used for irrigation, if any profit

is to be won from it. But if sewage is to be used for irrigation, two points must first be clearly established. It must be proved that there are crops which will be benefited by the application of sewage, and further, that the offensive constituents of the sewage will be effectually absorbed by the soil of the irrigated field, so that the residual water which drains from them will be clean and sweet. On both these points Dr. Gilbert furnishes satisfactory information. At Rugby, four like parcels of ground, fifteen acres in all, were laid out with grass; three of these fields were irrigated with different proportion of sewage, and one was left in the ordinary condition. The experiments lasted three years, and the following table gives the average weight of green grass raised on each field during these three years:

	Tons.	Cwt.
1. Not irrigated	9	6
2. Irrigated with 3,000 tons sewage	22	5
3. " 6,000 "	30	6
4. " 9,000 "	32	12

In the following year no application of sewage was made, but plots 2, 3, and 4 still retained their luxuriance. Dr. Gilbert made experiments at Rugby and Croydon which proved that only very small quantities of ammonia escaped absorption by the soil of the irrigated fields. Croydon sewage, which contained 6.7 grains of ammonia per gallon before irrigation, gave only 0.21 grains per gallon after. The conclusions at which Dr. Gilbert arrives are briefly these: first, the liberal use of water is essential to the prompt and thorough removal of the refuse matters of large populations; secondly, the discharge of sewage into rivers should not be permitted, because of the danger to the public health, the injury to fish, and the waste of valuable manure, which result therefrom; thirdly, the best mode of purifying and utilizing sewage is to apply it to land; fourthly, grass is the crop best fitted for the application of sewage; fifthly, the general application of town sewage to grass land would greatly increase the production of milk and meat, and, indirectly, would produce, through the consumption of the grass, a large amount of solid manure applicable to all kinds of crops.

Two arguments urged by the opponents of irrigation by sewage waters remain to be considered. It is asserted that a large extent of fields so irrigated would be an intolerable and very dangerous nuisance in the vicinity of cities, and that the troublesome diseases caused by parasitical animals might be greatly increased if the circuit from human food through grass and the grass-eating animal to human food again were made so short and quick.

PUBLISHED THIS WEEK.

CHERRY AND VIOLET:

A Tale of the Great Plague.

By the Author of "Mary Powell."

On laid tinted paper, bevelled boards, red edges or gilt top, $1 75.

The authorship of this volume will attract to it wide attention. The olden times of 1665, when the memorable event occurred with which the story is associated, affords a fine field for the peculiar style of authorship which, in "Mary Powell," has secured for the writer an enviable fame. She has well improved the occasion, and produced a work that cannot fail of exciting great interest.

Other works by this author will follow at short intervals. "The Maiden and Married Life of Mary Powell" will be ready in April.

LATELY PUBLISHED,

By arrangement with the author, a new work by the author of the "Schönberg-Cotta Family," "The Early Dawn," "Diary of Kitty Trevylyan," etc., and in uniform style with them,

WINIFRED BERTRAM

And the World She Lived in.

1 vol. 12mo. Price $1 75. Cabinet edition on tinted paper, finely bound, etc., $1 75; fine edition, demy 8vo, on laid tinted paper, bevelled boards, $2 50.

BY THE SAME AUTHOR.

THE SONG WITHOUT WORDS,

Leaves from a very Old Book.

Dedicated to children. On tinted paper, bound in bevelled boards, etc. Illustrated by Herrick. Square 16mo. $1.

MARY, THE HANDMAID OF THE LORD.

1 vol., tinted paper, extra cloth, bevelled boards, $1 25.

We have the works of this author previously published by us,

"THE SCHÖNBERG-COTTA FAMILY," "THE EARLY DAWN," "DIARY OF KITTY TREVYLYAN,"

In four different editions, at from $1 to $2 per vol.

M. W. DODD,

506 Broadway, N. Y.

Thackeray's Works.

LEYPOLDT & HOLT,

646 Broadway, New York,

WILL PUBLISH

ON WEDNESDAY, MARCH 28th,

the first issues of their edition of THACKERAY'S WORKS, as follows:

NEWCOMES	4 vols.
PENDENNIS	3 vols.
HENRY ESMOND	2 vols.
YELLOW-PLUSH PAPERS and COX'S DIARY	1 vol.

16mo, gilt top, claret-colored morocco cloth, $1 25.

The series will be completed in 30 volumes.

Volumes sent post-paid, on receipt of price.

PROFESSOR WILSON'S NOCTES AMBROSIANÆ.

WIDDLETON,

PUBLISHER,

17 MERCER STREET, N. Y.

THE NOCTES AMBROSIANÆ. By Professor Wilson, J. G. Lockhart, James Hogg, and Dr. Maginn. Edited, with Notes, by Dr. R. Shelton Mackenzie. A handsome library edition, on tinted paper, steel portraits and plates. 5 vols. crown 8vo, cloth, extra, $11 25.

CHRISTOPHER NORTH. A Memoir of Professor Wilson, author of "The Noctes Ambrosianæ." Compiled from Family Papers and other sources, by his daughter, Mrs. Gordon. Eight illustrations on wood, and fine steel portrait. 1 vol. small 8vo, laid tinted paper, cloth, extra, $2 50.

NOCTES AND NORTH. Uniform sets, 6 vols. in box, $13 50; sets, half calf or half Turkey, $25.

DR. DORAN'S WORKS.

Dr. Doran, F.S.A., editor of the London *Athenæum*, "is a charming writer, quaint, fresh, genial, correct, satisfactory, delightful. The world owes him a debt of gratitude."—*N. Y. Evening Post.*

Doran's Works are in 9 vols., elegantly printed and bound. Uniform library sets, in box, comprising:

Annals of the English Stage, from Thomas Betterton to Edmund Kean: Actors, Authors, and Audiences. 2 vols.

Table Traits, with Something on Them. 1 vol.

Habits and Men, with Remnants of Record touching the Makers of Both. 1 vol.

The Queens of England of the House of Hanover (the Wives of the Four Georges). 2 vols.

Knights and their Days. 1 vol.

Monarchs Retired from Business. 2 vols.

Sets, cloth, extra, $20; half calf or half Turkey, gilt tops, $35. Cloth vols. sold separately, per vol. $2 25.

PRAED'S POEMS.—The Poems of Winthrop Mackworth Praed. With Memoir by Rev. Derwent Coleridge. A handsome reprint of "Moxon's" authorized and complete edition, containing many poems before unpublished, and steel portrait from miniature by Stuart Newton. Fine tinted paper, 2 vols. crown 8vo, cloth, extra, gilt tops, $4 50; half calf or half Turkey, $8.

THE INGOLDSBY LEGENDS of Mirth and Marvel, by Thos. Ingoldsby, Esq. (the Rev. Richard Harris Barham), with a Memoir of the author. Reprinted from the 10th English edition, with 16 full-page illustrations by Cruikshank and Leech. 2 vols. crown 8vo, cloth, extra, $4 50; half calf or half Turkey, gilt tops, $8.

☞ Our books are kept in stock by the principal booksellers throughout the country, and mailed, post-paid, by publisher on receipt of price.

Just Received:

VICTOR HUGO'S

"TRAVAILLEURS DE LA MER."

Original Edition, expressly printed for America. 1 vol. 8vo.

Price Two Dollars.

REMOVAL.

MESSRS. GEORGE ROUTLEDGE & SONS,

129 Grand Street, New York,

Will shortly remove from their present location to more commodious premises on the ground floor at

416 Broome Street,

(Corner of Elm St.)

Messrs. George Routledge & Sons have for sale a few copies of

THE IMPERIAL DICTIONARY OF UNIVERSAL BIOGRAPHY. A series of original memoirs of distinguished men, with numerous fine steel portraits. 6 vols. imperial 8vo, cloth, $90.

A New and Cheaper Edition of

STONEHENGE ON THE HORSE IN THE STABLE AND THE FIELD, with 170 Engravings by Barrand, H. Weir, and others. 1 vol. demy 8vo, cloth, $6.

FROISSART'S CHRONICLES of England, France, Spain, and the adjoining Countries, with a Life of the Author, and many illustrations. 2 vols. royal 8vo, cloth, $12.

MEN OF THE TIME, a Biographical Dictionary of eminent living characters of both sexes; a new edition, revised and brought down to the present time. 860 pages, post 8vo, half bound, $6.

LANE'S ARABIAN NIGHTS ENTERTAINMENTS. A new edition. Illustrated with many hundred engravings from designs by William Harvey. 3 vols. 8vo, cloth, $15; half calf, $20; full calf, $25.

GEORGE ROUTLEDGE & SONS,

Broadway, Ludgate Hill, London.

129 Grand Street, New York.

READY TO-DAY, FROM ADVANCE SHEETS:

THE GRAHAMES.

A Novel full of interest and talent. By Mrs. Trafford Whitehead.

12mo. Price $1 75.

Also, we publish, to-day, a NEW AMERICAN NOVEL, entitled

THE CECILIAS; or, THE FORCE OF CIRCUMSTANCES.

By Anna Argyle.

8vo. Price 75 cents.

ECCENTRIC PERSONAGES,

By W. Russell, LL.D.,

Is selling rapidly. The Springfield *Republican* says:

"The book is interesting, and will have readers because all want to know what they can of those who have distinguished themselves by oddity."

The American News Company,

Publishers,

New York.

General Lee's Own Story.

General Robert E. Lee's Story of the Operations of the

ARMY OF NORTHERN VIRGINIA,

Just published in

Part 55, REBELLION RECORD,

Edited by Frank Moore.

Illustrated with Steel Portraits of Maj.-Gen. H. W. Slocum and Maj.-Gen. H. J. Hunt.

Price 60 Cents.

FINANCIAL REVIEW.

Nation Office, Saturday Evening,
March 24, 1866.

A further decline has taken place in gold. To-day it sold as low as 124¾, and closed at 125¼. Notwithstanding the decline, exchange continues dull and heavy at 107½ to 107⅝ for bankers' bills—say two points below the rate at which coin can be shipped as a remittance. These are very remarkable facts. Gold has not been as low since the fall of Fort Wagner, when it was generally supposed at the North that the war was at an end. Exchange has not been as low, with one brief exception, since the war broke out. Government has had nothing to do with the decline in either gold or bills. No more gold has been sold, and no bills have been drawn against any public funds deposited abroad. In both instances the fall must be ascribed to the natural operations of trade. Gold has fallen because the supply has been in excess of the demand; because everybody believes that specie payments are going to be resumed within a given period, and hence everybody, South as well as North, who has hoarded gold is throwing it upon the market for sale; while, on the other hand, no one wants gold for investment, and no one dares to buy gold on speculation. Exchange has fallen because the balance of trade between this country and Europe is in our favor; because we are shipping more cotton and bonds to Europe than we are drawing merchandise from thence; and because our people are steadily withdrawing from London the money sent thither during the war. Gold is quite scarce; throughout the week from 1-16 to 3-16 of 1 per cent. have been paid for its use for a single day. Under these circumstances it would be rash to attempt to set a limit to its probable fall. One set of people say it may decline to 122, another to 120. But it is clear that the arguments in favor of a decline would apply as cogently at 120 as at 127. There has been, as we showed a week or two since, no real increase of the currency for twelve months, and since New Year there has been a commencement of contraction. Confidence once really restored, the legal tenders might rise to par within a year without very much further curtailment of the currency.

In the progress toward par, grave commercial embarrassment would probably be encountered. Houses involved in debt might be compelled to suspend. Speculators loaded with goods and merchandise might be bankrupted. But careful merchants, who had done business for cash, kept small stocks, and sailed close in shore, would merely lose a portion of last year's profits. The process is already initiated. All the merchandise, produce, and dry goods markets continue paralyzed. Staple goods are being reshipped to Europe. A heavy decline in domestics has failed to attract buyers, and severe losses will fall upon manufacturers and their agents. Fancy goods (imported) are being sacrificed, the product of auction sales failing, in many instances, to pay the duty alone. Produce is steadily tending downward; heavy failures among Western speculators in breadstuffs and provisions are inevitable. Even those articles of general merchandise which are sold for gold, and which might be expected to improve on the decline in specie, are no more salable now than they were a few weeks ago. Some of the papers seem to contemplate a panic in merchandise and a crash among the merchants. No such occurrence is probable. The bulk of the trade of the city of New York has been for six months conducted upon such conservative principles that no general crash can be caused by the decline in prices. Speculators in produce and breadstuffs and here and there a few manufacturing companies will fail. But merchants generally have sold for cash, and the profits of last year's trade are generally sufficient to meet any losses from the few sales made on credit this spring.

The Morrill Loan Bill, after a recommitment to the Ways and Means Committee, was again reported to the House yesterday and passed by a large majority. The bill as passed provides that the Secretary of the Treasury shall not contract over 10 millions of greenbacks in the six months next ensuing after the passage of the bill, or over 4 millions in any subsequent month. This concession to the demands of manufacturers and speculators is not likely to satisfy the country; it ought not to satisfy the Senate or the President. At this rate, it would require many years to place the currency in a sound position, and during the whole period of transition the commerce of the country would be liable to severe fluctuations. It was argued by Mr. Boutwell and by several members from Pennsylvania—in the interest of manufacturing companies—that gold is declining fast enough without any legislative measures. No one, it seems, in Congress, thought of the obvious reply, that the decline in gold is due to the general belief that Congress will contract the currency, and that were it once generally understood that the views of Mr. Stevens and Mr. Boutwell were going to prevail, gold would be 150 in a fortnight. It was also urged that contraction would have the effect of closing forges, manufacturing establishments, etc., and that therefore it was unadvisable. But is there any reason for believing that we could contract any less painfully two or five years hence than now? Is it not clear, on the contrary, that the longer the painful process is deferred, the more severe it will prove? In a very short time, as Mr. McCulloch well observed in his report to Congress, if we go on as we are doing, we shall have a commercial crisis compared to which the crash of 1837 and that of 1857 were mere summer showers. It can only be averted by checking at once the tendency to expansion, extravagance, and excessive expenditure—by reducing the currency from its present swollen proportions to something like the normal volume required for the business of the country, and by compelling the banks to reduce their discounts to something like the average before the war. This is what is sought by the Secretary and his supporters in applying to Congress for legislative aid. If they succeed, we shall have one or two years of declining prices and hard times. But when they are over, our American dollar will be as good as the dollar of any other nation, and we may succeed in passing from a paper money régime to

a hard money régime without the crash which such a transition has usually involved.

The following table will show the course of the stock, gold, exchange, and money markets throughout the week:

	March 17.	March 24.	Advance.	Decline.
United States Sixes of 1881	104⅛	104⅞	¾	....
5-20 Bonds, old	103¾	103⅞	⅛	....
5-20 Bonds of 1865	103¾	103¾	....	....
10-40 Bonds	90⅞	90⅝	....	¼
7.30 Notes, second series	99¾	100	¼	....
New York Central	92¾	92¾	....	....
Erie Railway	82½	80⅜	....	1¼
Hudson River	106	109	3	....
Reading Railroad	100¼	101¾	1½	....
Michigan Southern	78½	81½	3	....
Cleveland and Pittsburgh	78¾	79¾	1	....
Chicago and North-western	27½	27½	....	⅜
" " " Preferred	54¼	55⅝	1⅜	....
Chicago and Rock Island	108½	116	7½	....
P., Fort Wayne, and Chicago	92¾	92	....	¾
Canton	47½	47	....	½
Cumberland	44½	44¼	....	¼
Mariposa	12	12	....	....
American Gold	129½	125	....	4½
Bankers' Bills on London	108	107¾	....	¼
Call Loans	6	6	....	....

A further general advance in stocks will be noticed. Encouraged by the failure of the original loan bill in Congress, by the ease of money at this centre, and by the excessive sales of the bears, the cliques have succeeded in running up prices to higher figures than they themselves at one time contemplated. Thus Rock Island, which, a week ago, was dull and dead at 108½, has been since done as high as 118½. In reply to a Washington correspondent, we can only say that if the clique chooses to buy up all the floating stock, as they now seem inclined to do, the price may be put to 120, 150, 200, or 500. Whenever they want to sell, they will have to accept very much lower prices than those now ruling. The present direction will probably pay 5 per cent. dividend in April—no more. Speculators are, however, willing to give 10 per cent. for the April dividend, believing that something extra will be declared. Michigan Southern has sold as high as 83½. The company has not yet been able to pay Mr. Henry Keep the money he lent it in March, 1865, to pay the dividend paid at that time; yet speculators, gambling on the prospect of other men taking their stock off their hands at higher prices, are willing to buy at and above 80. Erie has shown marked weakness. The leading director, who is the greatest stock operator in Wall Street, is understood to have sold large quantities of stock, but not as much as he had previously bought. The expenses of running and keeping up the road in the year 1865 are said to have amounted to $12,000,000; they can hardly be any less this year. New York Central continues pretty firm on the prospect of the passage of the bill allowing the company to charge 3 cents per mile on express trains. Fort Wayne has been neglected. An active movement broke out at one time during the week in Reading, and sales were made as high as 103½. The advance, however, has not been maintained, and, as the Legislature of Pennsylvania has just chartered a rival road, many look for lower prices. A new party is said to have been lately organized in Cleveland and Pittsburgh; the stock sold as high as 82 at one time during the week, but closes lower. As a whole, the tendency of prices is downward, but this tendency is so often counteracted by the operations of cliques and by the oversales of the bears that speculators are losing money on both sides.

FIRST CLASS FIRE INSURANCE
ON THE PARTICIPATION PLAN.
MARKET FIRE INSURANCE COMPANY.
37 WALL STREET, CORNER OF JAUNCEY COURT.

CONDITION OF THE COMPANY.

ABSTRACT OF THE ANNUAL REPORT OF DEC. 31, 1864.

TOTAL ASSETS	$414,729 18
Viz.—Bonds and Mortgages	$134,672 00
Temporary Loans	92,630 00
Real Estate	10,000 00
100 Shares Mer. Ex. Bank	5,000 00
Government Sec., value	144,514 00
Cash on hand	18,042 34
Interest due	3,085 58
Premiums due	6,785 26
PRESENT LIABILITIES	$15,995
NET SURPLUS	198,733 26

This Company will continue, as heretofore, to insure respectable parties against DISASTER BY FIRE
At fair and remunerating rates; extending, according to the terms on its Policies, the advantage of the
PARTICIPATION PLAN OF THE COMPANY,
pursued by it for several years past, with such great success and popularity, and profit to its customers: whereby
(75) SEVENTY-FIVE PER CENT. (75)
of the Profits, instead of being withdrawn from the Company in Dividends to Stockholders, is invested as a "SCRIP FUND," and held for greater protection of its Policyholders; and Scrip, bearing interest, is issued to Customers therefor: thus, IN THIS COMPANY, those who furnish the business, AND PAY THE PREMIUMS, derive the largest share of advantages; and when the accumulations of the SCRIP FUND shall exceed
FIVE HUNDRED THOUSAND DOLLARS,
the excess will be applied to PAY OFF the Scrip IN CASH in the order of its issue.
☞ The liberal and prompt adjustment of Claims for Loss, WHEN FAIR AND SQUARE, is a specialty with this Company.
NOTE.—This Company does not insure on the hazards of RIVER, LAKE, or INLAND NAVIGATION; confining itself strictly to a legitimate FIRE INSURANCE BUSINESS.
ASHER TAYLOR, President.
H. P. FREEMAN, Secretary.

Mr. EDWARD DODGE, late of Clark, Dodge & Co., New York, Mr. H. C. FAHNESTOCK, of our Washington House, and Mr. PITT COOKE, of Sandusky, Ohio, will be resident partners.

We shall give particular attention to the PURCHASE, SALE, and EXCHANGE of GOVERNMENT SECURITIES of all issues; to orders for purchase and sale of STOCKS, BONDS, and GOLD, and to all business of National Banks.

JAY COOKE & CO.

MARCH 1, 1866.

The Nation:

A Weekly Journal of Politics, Literature, Science, and Art.

THIS journal will not be the organ of any party, sect, or body. It will, on the contrary, make an earnest effort to bring to the discussion of political and social questions a really critical spirit, and to wage war upon the vices of violence, exaggeration, and misrepresentation by which so much of the political writing of the day is marred.

The criticism of books and works of art will form one of its most prominent features: and pains will be taken to have this task performed in every case by writers possessing special qualifications for it.

TERMS:—Six Dollars per annum, in advance; Six months, Four Dollars. When delivered by Carrier in New York or Brooklyn, Fifty Cents additional.

JOSEPH H. RICHARDS,
PUBLISHER,
130 Nassau Street, N. Y.

WILLIAM KNABE & CO.'S
Celebrated Gold Medal
GRAND, SQUARE, AND UPRIGHT
PIANOS.

These instruments have been for thirty years before the public, in competition with other instruments of first class makers. They have, throughout that long period, maintained their reputation among the profession and the public as being unsurpassed in every quality found in a first-class Piano.

THE BEST SEWING-MACHINES IN THE WORLD.
THE WEED MACHINES,

With all their valuable improvements, entirely overcome all imperfections. They are superior to all others for family and manufacturing purposes, simple in construction, durable in all their parts, and readily understood. They have certainty of stitch on all kinds of fabrics, and are adapted to a wide range of work without change or adjustment, using all kinds of thread. Will hem, fell, bind, gather, braid, tuck, quilt, cord, and, in fact, do all kinds of work required by families or manufacturers. We invite all persons in search of an instrument to execute any kind of sewing now done by machinery to inspect them, and recommend all parties engaging in the sale of sewing-machines to make sure they secure the best by examining the WEED before purchasing. They make the shuttle-stitch, which cannot be excelled for firmness, elasticity, durability, and elegance of finish. They have received the highest premiums in every instance where they have been exhibited in competition with other standard machines. The company being duly licensed, the machines are protected against infringements or litigation.

Reliable agents wanted, to whom we offer great inducements. Every explanation will be cheerfully given to all, whether they wish to purchase or not. Descriptive circulars, together with specimens of their work, will be furnished to all who desire them by mail or otherwise.

Established in 1785.

Easy of access from New York by Central Railroad of New Jersey to Easton, Pa., and thence seven miles per stage, at 4 P.M.

Spring Term begins April 2 and closes on June 29.

Agents in New York:
MESSRS. A. BININGER & CO.,
92 and 94 Liberty Street.
REV. EDWARD H. REICHEL,
PRINCIPAL.

DEMULCENT SOAP,

FOR CHAPPED AND TENDER HANDS,

FOR TOILET AND BATH USE.

MANUFACTURED ONLY BY

J. C. HULL'S SON,

32 PARK ROW, N. Y.

Upwards o 100 styles of Toilet and Staple Soaps. For sale by all Dealers.

Improvements in Piano-fortes.

One of the simplest and most truly valuable improvements yet made in the Piano-forte is that invented and patented by

DECKER BROTHERS, 91 BLEECKER STREET,

in this city. By correcting the only imperfections arising from the use of the full iron-plate, and that, too, by not detracting in the slightest degree from its many positive advantages, the Messrs. DECKER have developed in their instruments a tone at once admirable for its purity, fulness, prolongation, and sweetness, and the high estimation in which their improvement is held is well shown in the rapidly increasing business of their firm.—*Tribune.*

MARVIN'S

PATENT FIRE AND BURGLAR SAFE:

Superior to any others in the following particulars:
They are more fire-proof.
They are more burglar-proof.
They are perfectly dry.
They do not lose their fire-proof qualities by age.
Manufactured only by

MARVIN & CO., 265 Broadway.

721 Chestnut Street, Philadelphia.

Send for a descriptive Circular.

Make Your Own Soap with B. T. BABBITT'S Potash, in tin cans, 70 Washington Street, New York. Pure Concentrated Potash or Ready Soap Maker. Warranted double the strength of common Potash, and superior to any other saponifier or lye in the market. Put up in cans of one pound, two pounds, three pounds, six pounds, and twelve pounds, with full directions in English and German for making Hard and Soft Soap. One pound will make fifteen gallons of Soft Soap. No lime is required. Consumers will find this the cheapest Potash in market.

B. T. BABBITT,

64, 65, 66, 67, 68, 69, 70, 72, and 74 Washington St., N. Y.

WHEELER & WILSON'S SEWING MACHINES,

625 BROADWAY, N. Y.,

MAKE THE

LOCK-STITCH,

and rank highest on account of the elasticity, permanence, beauty, and general desirableness of the stitching, when done, and the wide range of its application.—*Report of American Institute.*

Lock-Stitch Sewing Machines

FOR FAMILIES AND MANUFACTURERS.

STEINWAY & SONS'

GRAND, SQUARE, AND UPRIGHT PIANO-FORTES

Have taken Thirty-two First Premiums, Gold and Silver Medals, at the Principal Fairs held in this country within the last ten years, and in addition thereto they were awarded a First Prize Medal at the Great International Exhibition in London, 1862, in competition with 269 Pianos from all parts of the World.

That the great superiority of these instruments is now universally conceded is abundantly proven by the FACT that Messrs. Steinways' "scales, improvements, and peculiarities of construction" have been copied by the great majority of the manufacturers of both hemispheres (AS CLOSELY AS COULD BE DONE WITHOUT INFRINGEMENT OF PATENT RIGHTS) and that their instruments are used by the most eminent pianists of Europe and America, who prefer them for their own public and private use, whenever accessible.

STEINWAY & SONS direct special attention to their

PATENT AGRAFFE ARRANGEMENT,

which, having been practically tested in all their grand and highest-priced Square Pianos, and admitted to be one of the greatest improvements of modern times, will hereafter be introduced in EVERY PIANO MANUFACTURED BY THEM WITHOUT INCREASE OF COST to the purchaser, in order that ALL their patrons may reap its benefits.

STEINWAY & SONS' PIANOS are the only American instruments exported to Europe in large numbers, and used in European concert-rooms.

WAREROOMS, 71 & 73 EAST FOURTEENTH ST., between Union Square and Irving Place, New York.

The Week.

THE event of the week has, of course, been the President's message vetoing the civil rights bill. We have commented on it elsewhere It is amongst the most discreditable of our state papers. Its logic is that of a stump speech, and its law would hardly pass current in a college moot court. The President's friends must surely be sorely beset when they point to his statement that a bill for the investment of American negroes with ordinary civil rights is a discrimination against newly arrived foreigners owing allegiance to a foreign power and offering no adequate proof of their intention to make their homes here, as evidence of his statesmanship. Foreigners have to submit to a five years' probation before acquiring citizenship because, first of all, they owe allegiance when they get here to a foreign power, and this they have to cast off unmistakably. Secondly, they all have to give some substantial proof that they mean to live here, and the only proof of this they *can* give is staying here for a few years. The presumption is that a newly arrived stranger will want to go back again; he can only get rid of it by settling down. The negro is born here, owes allegiance to this Government, has never owed it to any other, and is about as likely to quit the country as to turn traitor; so that the two principal reasons for subjecting foreigners to a period of probation are in his case wanting. And then, if laws be intended for the benefit of the weak and obnoxious, which needs protection more, black natives or white foreigners?

THE Senate of the United States, in losing its oldest member, Hon. Solomon Foot, of Vermont, has lost, as in the case of his colleague, Judge Collamore, a legislator who would do honor to any country—simple, dignified, incorruptible, imbued with the highest principles of Christian, republican government. We are reminded by his death, as we have often been before, of the worth of the State which he represented, and its choice of a successor will receive the confidence due from the public to a community rich in men and in an unblemished political record.

AN eight-hour bill has been thrown out in the New York Legislature. In that of Pennsylvania, one has made some progress, and is almost farcical in its absurdity. An attempt was made to bring house-servants under its operation, thus suspending all work in kitchens at two o'clock, and we must say we are sorry it did not succeed, as the fun of the bill would have then been all the greater, while the mischief would have been no greater. Farmers and farm laborers are exempted from its operation, as if they did not need their afternoons for literary pursuits, while lumbermen on the other hand are tied down to eight hours, by which they will be considerably amused. We need hardly say that the lumbermen and everybody else will work as much as they please, all acts to the contrary notwithstanding. The only value these bills have lies in the evidence they afford of the lengths to which demagogues can go in gulling working-men. A similar bill has been defeated in the California House. The Senate passed it with an amendment providing that it should not go into effect until Massachusetts and New York passed similar bills. Hardly a manly or dignified way for senators to deal with the question.

THERE is now a movement on foot in New York to get the Legislature to punish the landlords for asking high rents. This is the proper supplement of the eight-hour movement. Do not let builders work more than eight hours a day; then, if many houses are not built, and house-rents rise, keep the rents down by law, and in this way a rush of capital into the building business will be caused that will be perfectly wonderful, and we shall all have houses for an old song, except the hateful, hard-hearted political economists. It might be well to pass another act compelling all disciples of Adam Smith, Mill, and Ricardo to live in tents and do their own cooking.

WE print on another page a vindication of General Sheridan, in the case of General Warren. We have compared it carefully with the latter's pamphlet, and see no reason to reverse our previous decision. "A staff officer" must perceive the futility of comparing the movement of a victorious enemy on ground not yet debated, with that of the troops which they had just checked, over a region interrupted both by battle and by the weather, and in darkness which was a help in the one instance and a formidable hindrance in the other. The question is not so much what General Grant expected, and what General Sheridan expected in consequence, as whether these expectations were rational in the premises, and whether General Warren failed to order the advance as soon as directed by General Meade and with all possible despatch It is certain that he volunteered to move to Sheridan's rescue twenty minutes before instructions came to send one of his divisions. Thus much of the controversy may be settled by official despatches. Where it is a question of individual veracity concerning motives and moods of mind, General Sheridan undoubtedly has a right to his own impressions, but we do not know what answer can be made to General Warren's contradiction of them.

THEY had a constitutional election in Wisconsin in 1849, from which it never clearly appeared whether the word white was stricken out or not from the fundamental law. The Supreme Court of the State decided last week in the affirmative, and sustained the right of colored citizens to vote. So much the stronger becomes the attitude of the North in exacting impartial suffrage of the revolted States.

THE trichina question will be found fully discussed in our Scientific Notes, and as a correct summing up may there be read of all that is known about it, it may be of some use to those who have been bewildered during the last few weeks by the pork-dealers' theory, and the butchers' theory, and that most confusing theory of all, the reporters' theory. It will be seen that there is more cause for alarm than owners of hogs are perhaps willing to admit.

A GOOD deal is said of General Lee's testimony before the Reconstruction Committee. It did not, however, contain a single fact

of importance, and was given very guardedly. He told the old story of Southern resignation, and gave the usual account of the theory on which he and others joined the secessionist army. He says that he either did take or would have taken the oath of allegiance to the Confederacy; but the question very naturally occurs: Would not this be a useless form if a man is bound by the action of his State? What is the use of an oath of allegiance which another power can at any time force you to break?

The endorsement which the President ought to have written on Postmaster Cleveland's letter, but did not, was this: "The duty of an United States postmaster is to see that the mails are regularly despatched, letters carefully and punctually distributed, the accounts of his office accurately kept, and the complaints of the owners of missing letters thoroughly investigated. His proper place during the day is his post-office; the time he spends at political meetings, or engaged in electioneering, is generally fraudulently abstracted from the public service. It is no business of yours as postmaster what opinions either General Hawley or Mr. English holds. You are concerned with them solely as a private person, and your coming to the conclusion that you ought to support the latter is no more a reason for writing to me about it, or offering me your resignation, than your changing your cook, or quarrelling with your tailor, would be. At the same time, I feel bound to mention that, if I hear of your absenting yourself from your office during business hours for the purpose of taking part in political canvasses, my duty to the public, to which you owe your entire time, will compel me to ask you to retire."

The latest piece of wisdom produced by the presidential organs is the assertion by the Washington *Union* that the unseating of Mr. Stockton by the Senate was "an act of revolution" and "treason." It adds that "if the radicals persevere in their course for the future as swiftly as they have for the past few weeks, they should be arrested for treason." It adds that the "times are critical," a sentiment in which we entirely agree. We must protest against the notion, however, that the radicals are advancing with half the swiftness of their enemies. Philosophers who have in the short period of nine months not only succeeded in wresting from Congress all control over the most important legislative process which any government was ever called upon to perform, but have actually got to the point of denying the right of the Senate to judge of the qualifications of its own members, and of accusing senators of treason for attempting to exercise it, can hardly be outdone in energy and quickness.

Another Jerseyman is blest with a clear conscience. The Hon. James M. Scovel is the fortunate man, and but for so invaluable a possession it is doubtful if he would have been made president of the Senate of New Jersey. For his conscience seems to shade off into self-consciousness and conceit, and his egotism into egoism, and he has been able so to turn the screws on the Republican party as to force them to endorse his flattering opinion of himself. He is just now taking another turn, by which he blocks the election of a successor to Mr. Stockton in the United States Senate, unless the candidate shall be selected from a certain number of gentlemen whom he names; or, in other words, unless a very prominent candidate shall be discarded. We do not credit the insinuation that Mr. Scovel forbears to nominate himself till the auspicious moment arrives, for he declares he is right within the doors of his own conscience, and, as he says, "a man with an empty pocket can defy the world, the flesh, and the devil." But when he adds, "I again take my appeal from the politicians to the people whose servant I am, and who, by the grace of God, I will never betray," we are reminded unpleasantly of a similar speech from President Johnson; and the parallel is not weakened by recent Democratic serenades at Camden.

One step towards supplying the working classes with innocent amusements has been taken in the First Ward of this city, by an association which is about opening a reading and coffee-room to compete with the vile resorts of that locality. The prime object of such an establishment is to provide young men who have no proper homes or tolerable lodgings with a rendezvous in which their social cravings may be satisfied aloof from temptation. Light, warmth, good fare, and a liberal supply of newspapers are all that is needed for this. A regular attendance once secured, the usual attractions of the club may be largely varied by lectures, concerts, stereoscopic exhibitions, and the like. The success of this experiment has a deep interest for the public.

The liquor-dealers of Massachusetts have lost their case before the Supreme Court at Washington, being assured by Justice Wayne that the internal revenue license cannot make that traffic lawful which the State has pronounced unlawful. About twenty-five hundred persons are said to be affected by this decision, and to owe the State, in consequence, nearly half a million of dollars in accumulated fines. Their next and only resort is Congress, whom they hope to persuade to pass Mr. Clay Smith's bill, already noticed by us as embodying an anti-State-rights heresy, and evidently framed in the "Bourbon" interest. The argument of one of their counsel before the Committee of Ways and Means was remarkable in at least one particular—that the prohibition of the sale of liquor in Massachusetts threw a heavier and unjust burthen of taxation on other States. He might as well have added that the tax on manufactures imposed a heavier (and therefore unjust?) burthen on Massachusetts than on Illinois or South Carolina.

The intercepted letter of Clement C. Clay, which is now circulating through the press, does infinite credit to that state prisoner as a Christian moralist and warrior. He will answer for the leader in the St. Albans raid that he is "an honest man, a true soldier, and a patriot," chiefly, it appears, because he was capable of such delicate distinctions as were involved in his plan of "retaliation" upon the North. Lieut. Young had assured Mr. Clay that "his efforts would be to burn towns and farm-houses, not to plunder or rob; but he said, if after firing a town he saw he could take funds from a bank, or anything which might inflict injury on the enemy, and benefit his own Government, he would do so." Mr. Clay's instructions, "oft repeated," were to the same effect; and this Confederate view of honesty and legitimate warfare and patriotism is perhaps the reason why he now languishes at Fort Monroe.

That the people of the South should bear the people of the North ill-will, and should even hate us in their fashion, was only to be expected, at the close of a war in which they had lost their cause and suffered enormous detriment. We have a right, however, to be surprised that their contempt for us is at least as great as ever, and that their belief in their superiority has been unshaken by the events of the past five years. This is General Terry's testimony before the Reconstruction Committee, and that of many other witnesses of high and low degree. It would be curious to learn how much this feeling has been strengthened since the President's "policy" began to transpire, and how much is due to our seeming inability to reap from victory its natural fruits. What, further, are the means by which we shall remove the ignorance on which this contempt is based? Without protection for loyal citizens, black and white, resident and immigrant; without protection for the church and the school-house from the torch of the incendiary; and with rebellious newspapers in full blast and free speech threatened with Judge Lynch, we shall certainly continue to be despised and deserve to be richly. Force was the only thing not despicable in the eyes of Southern whites, and to relax our grasp before submission is complete is to forfeit the respect of those who expected that the loser would pay.

Stephens, the Irish Head Centre, is said to be on his way to this country, and to have advised his followers at home to postpone active operations, and attend to civil pursuits. As nobody was engaged in warlike pursuits unless running away from the police merits that appellation, this advice seems superfluous. But we presume the turn of Canada will now come in earnest, and that the conquest of that country will not be long delayed. The form of government has probably not yet been fixed on, but it will, no doubt, be a limited monarchy of forty or fifty kings, who will all "keep open house."

Mr. Gladstone introduced the Government reform bill in the House of Commons on the 12th ult. The measure postpones the redistribution of seats, and looks simply to a reduction of the franchise—in the county, from £50 to a £14 occupation of a house with or without land, and the same for possessors of copyholds and leaseholds in parliamentary boroughs; in the borough, from £10 to £7 rental. The first reduction will affect considerably the great landholders; the working-men will be the chief gainers by the second, forming from a third to a half of the voters to be added to the constituent body. About two in five of them, according to Mr. Gladstone, will then be represented. He thought it quite likely the opposition would keep the bill from reaching the House of Lords before the middle of July. A free nation, as M. Thiers well remarked across the Channel, is a being compelled to reflect before acting.

The Paris *Débats* was among the liberal journals abroad which were confused by the President's appeal from the radicals to the Constitution in his first veto message. Later intelligence has enabled it to perceive the false distinction between the radicals and the loyal majority of the people. The transparent sophistry which classed Messrs. Sumner and Stevens with the leaders of rebellion was enough to reverse the mistaken judgment of Europe. The conflict of to-day is seen to be a renewal of that of yesterday, and the friends of the one civilization or the other take sides as they did before.

Probably never since midsummer of 1790, when the Champ de Mars was scooped out into a mighty amphitheatre around the *autel de la patrie*, has that field been the scene of such activity as now. Fine weather has greatly favored work on the building for the Exposition of 1867, and the foundation is now completed and the framework beginning to rise. An enterprising photographer, M. Petit, has purchased the monopoly of taking all the views—interior and exterior—of the palace, whether general or in detail. A brother artist has secured the right to erect within the area of the park an international *atelier de photographie*, where the artists of all the world may obtain saloons in which to exhibit their proficiency in taking portraits, etc. This will be a little exposition in itself, and of an art in active operation.

M. Guizot, in welcoming M. Prévost-Paradol to the French Academy, referred to the attachment of his predecessor, M. Ampère, to the city of Rome as a place of residence and as an historical study; and he added in this connection, that enlightened and fair-minded men were reluctant to believe that the future of a people demands the ruin of its past, or that it is impossible to ensure the Romans their just share of social progress and liberty without altering and destroying the situation of the European chief of the Catholic Church. This ought to be comfort to the Pope, coming as it does from so eminent a Protestant; but he has none the less composed a prayer to avert the impending catastrophe—"civitatem istam circumda, tu Domine."

The powers which signed the treaty of Paris have re-assembled, through their representatives, at that city, to take care of the Danubian Principalities, which, like all the petty states of Europe, are generally regarded as incapable of taking care of themselves. In accordance with this theory neither Wallachia nor Moldavia is represented in the conference.

Florence and Turin contended last summer for the honor of entertaining at its next session the International Association for the Advancement of Science. The ancient capital has won, and the association will sit this year at Turin. The new kingdom will be able to furnish it with some exceedingly interesting statistics. Besides those we have noted at various times, it appears that the Italian navy carries one-sixth as many guns as the French, one-tenth as many as the English, and one-sixth *more* than the Austrian. Of steam-vessels it has one-fourth as many as France, one-fifth as many as England, and *twice* as many as Austria. The cost of the naval establishment is one-fourth that of France, one-seventh that of England, and only one-fourth more than that of Austria. Or, if we look at the press of Italy, we find that on December 31, 1865, she counted 372 newspapers; that Florence had 42 periodicals, Naples and Turin 44, Genoa 41, and Milan 51. Some of the names are a curious study. In a given mail the *Inferno* and the *Garden of Mary*, the *Troubadour* and the *Frog*, *Minerva* and the *Ass*, the *Wasp* and the *Devil's Tail*, may be brought in more or less congenial juxtaposition.

The Government in Italy have been a good deal disturbed by demonstrations throughout the peninsula, in which the names of the two Josephs—Mazzini and Garibaldi—have been celebrated together. At Florence a public meeting was held, on the 11th ult., to applaud the election at Messina and to form a committee to work in unison with those great leaders "for the speedy completion of the national revolution." At Palermo the liberal Germans were invited to participate, on the 19th, in a fête in honor of the two republicans.

Hungary, under the lead of Deák, refuses to compromise with Francis Joseph. It must be ministry first, and mutual concessions afterwards. The Emperor's choice is asserted to lie between absolute despotism and sincere constitutionalism.

CONGRESS.

Washington, March 30, 1866.

The Senate chamber, on the transmission of the President's second veto message, was again the scene of profound though subdued excitement. Its reading was uninterrupted by any demonstrations of applause or disapproval, and the thronged galleries sat in hushed expectation of the vote which was expected to follow. But the desire of Senator Trumbull to defend the civil rights bill, of which he was the principal author, against the objections of the President, and a general feeling that nothing would be lost by delay, carried an adjournment of the question to the next day. The decease of Senator Foot intervening postponed the issue to Monday next. The utmost confidence prevails that the bill is to be sustained by the constitutional majority of two-thirds. This belief is strengthened by the scope and tenor of the message—so much more hostile to the style of legislation with which Congress has deemed it proper to guard the rights of the freedmen than was expected by many. Should the bill repass in the Senate, its success in the House is regarded as certain. This result would necessarily part still more widely the executive and legislative branches of the Government, and would perhaps lead to that final and irreparable breach which has all along been predicted, when the President would no longer feel himself bound to carry out the wishes of the party which elected him.

However much of comfort and encouragement may have been derived by the late Democratic party from the present state of things, it is not true that the President contemplates what they most desire—an identification of his administration with their men and measures. On the contrary, the more he is vexed and thwarted in his own favorite policy of reconstruction by the radical majority in Congress, the more fixed and determined does he become to repudiate the Democracy on the one hand and the radical Republicans on the other, and to found, if possible, a new party which shall reject what he deems the heresies of both. This experiment may be hazardous, but it is not unprecedented, and in it there is much reason to believe the President finds the only door of hope for the success of his administration. Relying upon popular support for the national policy which he has marked out for himself, he has long since discarded the expectation of winning the majority in Congress to his views. That majority, too, alienated by the Executive prohibitions put upon its favorite measures, appears no longer to be solicitous of harmony, but is distrustful, defiant, and sometimes needlessly irritating and disrespectful in its bearing toward that co-ordinate branch of the Government which the President represents. A marked sign of this was manifest during the reading of the veto message in the Senate. The leading members of that body paid little or no attention to the message, but were busily and even noisily caucusing among themselves, with rolls of the Senate in their hands, to cast up

the chances of overcoming the veto before its communication to the body was yet finished. The indecorum was once or twice checked by the presiding officer in a call to order.

The defeat of the bankrupt bill in the House is scarcely regarded as final. Its reconsideration will come up on Wednesday, when the narrow majority of fourteen against it may be overcome by the presence of many heretofore absent friends of the bill.

Next to the veto of the civil rights bill, the unseating of a New Jersey senator occupies all tongues. A purely legal question, it was deferred for two months, then settled, as was supposed, in favor of his title to a seat by the one vote of the senator himself—then reconsidered and reversed by one vote, nine Republicans voting in favor of the claimant's right to a seat.

DIARY.

Monday, March 26, 1866.—In the Senate, the entire day was occupied with the question of reconsidering the vote of the next preceding session, by which Mr. Stockton was declared entitled to a seat as a senator from New Jersey. The ground on which the reconsideration was based was that Mr. Stockton had voted in his own favor, thus carrying the resolution by a majority of one. The vote being reconsidered, a motion was put and carried that the vote of Mr. Stockton be not received in determining the question of his seat in the Senate. The question was then laid over.

In the House, Mr. Rogers, of New Jersey, made a speech, in support of his resolutions on the Federal debt, the rebel debt, etc., after which they were laid over till next Monday. The bill to amend the postal laws was amended by striking out the section authorizing the department to sell stamped envelopes at the price of the stamps, and passed. Mr. Dawes reported, from the Committee on Elections, a resolution that Hon. James Brooks is not, and that W. E. Dodge is, entitled to a seat in the House from the Eighth New York District.

March 27.—In the Senate, petitions for an International Copyright Law, for guarantees of a republican form of government, for the right of suffrage to women, for the establishment of a territorial government for Virginia, etc., were presented and referred. Mr. Fessenden, from the Finance Committee, reported the army and post-office appropriation bills from the House, with amendments. A bill to reimburse the State of West Virginia for expenses in calling out troops to suppress rebellion, was reported from the Military Committee. Mr. Stewart offered resolutions as a substitute for his former ones. They propose a constitutional amendment prohibiting discriminations in all the States in civil rights or the elective franchise on account of race or color, and on the adoption of this amendment by any late rebel State, provide for a general amnesty and representation of its people in Congress by their chosen representatives. Mr. Doolittle offered a bill to provide appropriate legislation to enforce the second clause of the Constitutional Amendment abolishing slavery. Referred. A bill transferring the custody of the library of the Smithsonian Institution to the Library of Congress was passed. A bill granting lands to the State of Minnesota to aid in constructing railroads was passed. The consideration of Mr. Stockton's case, as a senator from New Jersey, was resumed. Mr. Johnson moved to postpone until Thursday, to give an opportunity to Senator Wright, of New Jersey, to be present. Lost—yeas, 18; nays, 23. Mr. Stockton spoke nearly all day in defence of his claim to the seat. After debate by several senators, the resolution offered by Mr. Clark, from the minority of the Judiciary Committee, that Mr. Stockton is not entitled to a seat as senator from New Jersey, was adopted—yeas, 22; nays, 21. A motion to reconsider this vote was lost—yeas, 20; nays, 23. A message was received and read from the President, returning with his objections the act to protect all persons in the United States in their civil rights and furnish the means for their vindication.

In the House, a bill for the benefit of the Winnebago Indians was passed. The Senate amendments to the naval appropriation bill were made a special order for April 4. The bankrupt bill was discussed and amended, after which the previous question was demanded on its passage, and it was ordered, when the House adjourned.

March 28.—In the Senate, the decease of Senator Foot, of Vermont, was announced, and no business was done.

In the House, Mr. Morrill reported, from the Ways and Means Committee, a bill to postpone for two months the levy and collection of the income tax for the current year, with a view to an amendment of the law, now being prepared. Passed. On motion of Mr. Raymond, the Judiciary Committee was instructed to enquire into the expediency of reporting a law that no member whose name might be on the roll of the Clerk at the organization of the House shall participate in the election of Speaker or in other business until he has taken the oath prescribed by law. A bill to provide for settlement of the accounts of officers of the Freedmen's Bureau was passed. The vote was taken on the bankrupt bill, and it was lost—yeas, 59; nays, 73. On a motion to reconsider this vote, and to lay the motion to reconsider on the table, the yeas were 59 and the nays 68. Mr. Beaman moved to postpone the motion to reconsider for one week, and it was carried—yeas, 75; nays, 36. A bill to extend the laws of Kansas over all lands in that State reserved for Indian tribes was laid on the table—yeas, 69; nays, 48. Mr. Stevens offered a constitutional amendment authorizing Congress to lay an export duty on cotton. Objected to.

March 29.—The funeral obsequies of Senator Foot were performed in the Senate Chamber, after which both Houses adjourned to Monday, April 2.

THE FREEDMEN.

The Bureau in the District is constantly engaged in sending to good homes in the North such colored people as are out of employment. Hundreds are thus despatched every month. The sanitary measures in Washington are being vigorously carried forward. The Government has altered over several of the barracks about the city into tenement-houses, and these are rented to the poorer colored people at about three dollars per month. These people had been, and still are in some places, paying from six to ten or twelve dollars for miserable cellars, hovels, and huts of one or two rooms. As a result of this action on the part of the Government, the owners of these shanties have lowered their prices and are improving their tenements.

The Secretary of the Freedmen's Savings and Trust Company furnishes us the following items concerning the bank, in order to correct a misstatement which appeared in the columns of The Nation two weeks ago: Total deposits to March 1, 1866, $303,303 94. Of this $96,000 00 has already been returned to depositors, which they for the most part have invested in lands and homesteads for their families. The balance now due depositors amounts to $207,000 00. During February $25,000 00 were deposited, and the amount for March will be even larger. There are only fourteen branches, instead of twenty-nine. In Washington over $25,000 00 have been deposited, instead of only $5,000 00.

From the Lynchburg District, Virginia, the officer reports that the freed people are nearly all at work. From Culpepper County the report is about the same, except that the farmers are obliged to bring their hands from Alexandria. The reports of the officers of the Bureau at Fredericksburg, Tappahannock, Orange C. H., show a favorable state of affairs. The agent for Surrey County reports that the whites are cruel and unjust toward the blacks; that they try to keep the freed people with them by force, pay them as little as possible, beat them, etc. The agent at Brentsville reports that the freed people are working well, and that the whites are disposed to deal somewhat kindly with them. The agent at Stafford C. H. reports that the state of affairs is very good, considering the former relations, though the whites seem to have a real hatred for the blacks. He gives the following illustration:

"William Armstrong, president of the Board of Overseers for Stafford County, when asked, 'In case the United States Government ceased to issue rations to the poor freedmen, whether the county would feed them or not?' answered, 'Not a damned bite will I give them; I would choose hell first!'"

From other parts of the State the reports seem to be more favorable than formerly. The great demand for labor has much to do with this.

From the report of an inspecting tour made through Kentucky by Peter Bonesteel, Esq., as an inspector for the Bureau, we make some extracts. He reports sixty cases of outrage in a limited district alone, "unparalleled in their atrocity and fiendishness; cruelties for which, in no instance, as developed by the testimony, is there the least shadow of excuse or palliation." He says:

"I have classed these outrages as follows: Twenty-three cases of most severe and inhuman whipping of men, four of beating and shooting, two of robbing and shooting, three of robbing, five men shot and killed, two shot and wounded, four beaten to death, one beaten and roasted, three women assaulted and ravished, four women beaten, two women tied up and whipped until insensible, two men and their families beaten and driven from their homes and their property destroyed, two instances of the burning of dwellings and one of the inmates shot. Of these victims twelve men were Union soldiers, and three women the wives of Union soldiers."

The reports from Mississippi are very encouraging. The schools are increasing. Colonel Thomas says the demand for labor protects the freed people from violence. The whites are displaying great energy in obtaining means to cultivate the land.

In regard to the county court which he visited at Natchez, he says:

"I can report no objection to their proceedings, as the freedmen were allowed every privilege granted white men, and in cases where they were too poor to provide attorneys, counsel was assigned to them by the judge.

"The mayor and other officers of the city of Natchez expressed themselves well pleased with the conduct of the freedmen and the Bureau officers."

—A Vicksburg paper states that the Probate Court of Carroll County, Mississippi, apprenticed a colored lad without consulting his father concerning his right of custody; whereupon the latter sued out a writ of *habeas corpus* before Judge Cothran, the action of the Probate Court was pronounced null and void, and the boy ordered to be released.

—On a recent occasion seven or eight colored men and one poor white were seized for theft in Wilmington, N. C., the former strung up on tiptoe, *more servili*, and ordered to be flogged in obedience to the still barbarous law. The agent of the Bureau interfered after three had had sentence executed upon them. The white man was promptly released on bail.

—The colored people of Kentucky met in convention last week at Lexington. Among the resolutions adopted was the following:

"*Resolved*, That we claim each and every right and power guaranteed to every American citizen, including that of suffrage, naturally and legally belonging to us to-day; waiving for the time being the ballot-box and the doctrine of equality before the law, we ask the opportunity, we demand the privilege, of achieving for ourselves and our children, under the regulation of important State and Federal laws, the blessings which pertain to a well-ordered and dignified people."
